The CHAIRMAN : There has not been a sufficient amount of ore turned out on the dumps yet to send it to England, but it is now under consideratiou whether the ore so turned out should be sent to this country or whether it should be treated there by the new process, of which the shareholders may have heard. We are now engaged in obtaining the best information, but it is only lately that we were told ore was being turned out and stored on the dump. Our agent has asked for instructions, and we are considering what instructions we will send.

A SHAREHOLDER : How much gold has been obtained from the mine ?

TREATMENT OF THE ORE.

The CHAIRMAN : We have not received any direct information. We know that there is a backing of 250 ft. containing quartz varying from 1 oz. 2 dwts. to 7 ozs. 7 dwts., but we have received nothing in England. We decided before our last meeting to concentrate all our energies on pushing downwards and cross-cutting until we should come upon the missing lode which we have now accomplished.

A SHAREHOLDER : When will the company be in a position to crush quartz ?

The CHAIRMAN : I think we ought to be so very shortly indeed.

Mr. WEST : What money have you in hand ?

FUNDS SUFFICIENT TO MAKE THE MINE A SUCCESS.

The CHAIRMAN : Counting the calls unpaid we have about 6,300*l.*, or 6,400*l.*, which is quite sufficient to make this mine a paying concern. (Loud cheers.) The solicitor is taking active steps to recover the calls from the persous who owe them. The amount in arrear is less than 5,000*l.*

The SOLICITOR explained that writs have been issued for the recovery of the money. It was not always an easy thing to enforce a judgment.

The CHAIRMAN : Some of the defaulting shareholders are paying by instalments, which we have agreed to accept.

Mr. WEST : How much have we received in money paid on account of calls in arrear ? Who is responsible for Mr. Houghton's report ?

The SECRETARY : About 1,500*l.*

Mr. WEST : The chairman referred to our having lost the lode. In the prospectus it was stated we had six lodes, and which of them is it we have lost ?

SIX LODES BEING WORKED.

The CHAIRMAN : The No. 1. If you read the report you will see that the lodes are numbered, that their position is quite explained, and that we are working them all. I am standing here to give you the best information I can. I firmly believe we have one of the richest mines in the world : only in consequence of various circumstances, the era of prosperity has been deferred. Our mine has only been formed two years, and yet we are just advanced as another mine with which I am connected, and which I am certain will turn out one of the best paying in the world—the Nine Reefs. We have been eight years at work on that mine, and two years at work on Kaboonga, and yet Kaboonga is as far forward at the present time as Nine Reefs. (Cheers.) I think what has been accomplished is very wonderful indeed. Mr. Houghton gave us the report, and he was mistaken as to the time, but I do not believe he was mistaken in the least degree as to the richness of the mine. It is one of the richest mines of the world, and I am quite sure if the shareholders will only have patience they will have the rich dividends foreshadowed by Mr. Houghton. Mr. Houghton came here with a very good reputation. We examined into his credentials, and we were told that his statements were to be trusted. We attached his statement to the prospectus and sent them out.

PRECAUTIONS TO VERIFY MR. HOUGHTON'S REPORT.

We knew a gentleman in an adjoining mine, and we wired to him telling him what Mr. Houghton had said, and asking him to go to the Kaboonga and take up the stuff he found there, and tell us if Mr. Houghton's statements were true. He wired back that they were true. I would like to ask any man in this room, and Mr. West himself, what further precaution we could have taken than that, and I can only repeat what I have said already, that although Mr. Houghton's anticipations have not been actually realised up to the present time, yet the state of the mine warrants us in believing his anticipations will be realised, though at a more distant period than he expected.

Mr. WEST : I am sure the chairman is most kind and most obliging, but I wish to ask to whom is Mr. Houghton responsible for his report—to the promoter or to this company ?

The CHAIRMAN : When I want to ask a military question I do not go to a lawyer. This question is absolutely a legal one, and how can I answer it if Mr. West cannot, he being a solicitor. (Cheers and laughter.)

Mr. WEST : I think we are justified in asking whether the responsibility of the report is to the promoter or to the company. Whose servant was Mr. Houghton ?

The SOLICITOR : The report was accepted by the directors as the report of Mr. Houghton, and they issued it as such. If any responsibility attaches to that step they accept it.

THE MUTUAL AGENCY COMPANY.

Mr. WEST : Who are the Mutual Agency, Limited, to whom we paid 62,000*l.* in cash and 100,000*l.* in shares for this property ? I think the solicitor will be able to tell us, because he witnessed the signatures to the memorandum of association.

The CHAIRMAN : The solicitor tells me that the Mutual Agency Company, Limited, is wound up. The agreement was made to them for the purchase of the property, and I know nothing about them. The agreement was set forth in the prospectus, and there was nothing in it, so far as I am aware, of an extraordinary character.

Mr. WEST : Is E. McMurdo (Col.), 45, Charles Street, Berkley Square, a director of the company ?

The Chairman: He was, but he resigned after the last meeting.

Mr. West: If my information is correct, Col. McMurdo appears to have had all the shares but seven allotted to him—those seven being allotted to the signatories to the articles to whom, I suppose, are merely clerks, and the company was wound up shortly after our enterprise was started. Having got this information from Somerset House, I wanted to know what chance we had of recovering, assuming the prospectus was not right.

The Chairman: In the whole course of my communication with the shareholders I have not concealed a single fact.

Mr. West: Not about the mine. I agree with you.

The Chairman: Or anything I knew in connection with it. I do not admit the responsibility of Mr. Houghton's report. We published it as Mr. Houghton's report, and Mr. Houghton alone is responsible for it. I have shown you that we took every possible precaution to verify his statement. At the last meeting Mr. Tancred, who was on the spot at that time and to whom we wrote, telegraphed back that Mr. Houghton's statements were perfectly correct, and I contend that the recent reports from the mine show that they are substantially so. (Cheers.) In mining enterprises the engineer is always the most sanguine man of the party, and there is hardly an instance in which his views have been absolutely realised. (Hear, hear.) There is not a circumstance in connection with the company which the directors are ashamed of.

MR. WEST'S CONDUCT.

I must express my surprise, that at the moment when the prospects of the mine are brightening, and when we see a rich harvest before us, that a solicitor should get up at this meeting and try and stir up evil passions against the board. (Cheers and uproar.) I will justify the remark. Mr. West was present at the last meeting, when the company he refers to had not been wound up, and when this company was in a state of great distress. We had sunk 250 ft., and our cross-cuts had proved nothing. Why did not Mr. West rise on that occasion? We should then have been obliged to confess that Mr. Houghton was absolutely wrong, and that your prospects were nil; but now when they are brightening, and when dividends are almost in sight, he rises and causes this disturbance. It makes me sick at heart to be on the board.

DIRECTORS WORK FOR NOTHING.

What are we working for? For nothing at all. (Hear, hear.) I am working, and my colleagues are working, because we feel bound in honour to see this company, which has been so much abused, landed in the harbour of safety. (A Voice: "So you ought.") Why should I? Why should I leave my comfortable house in the West End and work for you for nothing? Would any of you do it? (Cheers.) Who would do it and put himself to the inconvenience and badgering at a meeting like this, and give up everything in the shape of monetary reward? (Cheers.) It is against human nature to do it, but my colleagues and I are animated by one feeling, and that is that the shareholders shall see in the future that they were not deceived in the prospectus. I am sure the shareholders will pardon me if I give them

ONE WORD OF WARNING.

Human nature may be tried too much, and I am tempted, after hearing the ungenerous remarks of Mr. West, to resign my position and my colleagues are ready to do the same. You will find it very difficult to get gentlemen in this City to work a company like this for nothing at all.

A Shareholder: We cannot find fault with you. (Cheers.)

The Chairman: We have not asked for your money, and do not intend to do so. As long as I stay on this board I shall give my whole energies to it, and I am sure that in doing so I shall have the regard not only of my own conscience, but the thanks of those amongst the shareholders who know how great the sacrifice is that a man in my position makes to work for them, and work for them for nothing. (Loud cheers.)

MR. WEST COMPLIMENTS THE CHAIRMAN.

Mr. West: I have not made any attack on the chairman, and I admit he has been exceedingly kind. I have only asked questions, and he has given me every information that has been given to the Press. I am rather surprised that he should have attacked the shareholder who gets up to ask questions, though I do not think he meant to do so intentionally. My opinion of the chairman is that if more money were wanted, it would be forthcoming on the strength of his name, and, personally, I took my shares because he was a director. I believe the chairman appreciates the responsibility of the directors to the shareholders, but I do not think I ought to be held up to ridicule.

A Shareholder: Do you think, Mr. Chairman, we ought to get to business?

The Chairman: There is no business. This is an informal meeting to talk over the affairs of the mine. I will only say that I did not intend to hold Mr. West up to ridicule, but only resented the attempt to make the directors responsible for Mr. Houghton's statement. Mr. West is right in saying

I FEEL DEEPLY THE RESPONSIBILITY OF MY POSITION

as a director. I know that a great many did me the honour to put their money in this company because I was a director, and that is why I feel bound to stand by the ship until it is steered in the port. I believe that event will occur very much sooner than some of you anticipate. (Cheers.) I am assured that the reports prove we possess one of the most valuable mines in the world. I believe it with my heart, and since those reports have come to hand, I have considerably increased my holding. I think, notwithstanding some little passages that have occurred, we have had a very instructive, and, perhaps, even an amusing afternoon. (Laughter.) I feel confident that most of you will go away satisfied that you have a good property; and should I be spared to address you when we meet again next July that conviction will have become a certainty. I thank you very much for the manner in which you have listened to my remarks. (Cheers.)

The proceedings closed with a cordial vote of thanks to Col. Malleson for presiding, which was proposed by Mr. West.

THE EAST AREVALO (MEXICAN) MINING CO., LIMITED.

MINE GREATLY IMPROVED—EFFICIENT MANAGEMENT AND ECONOMY—THE PROMISED LAND IN VIEW.

The second ordinary general meeting of the company was held at the Cannon Street Hotel, on Tuesday, for the purpose of receiving the directors' report and balance-sheet, the election of directors and auditors, and transacting the general business of the company—Richard J. Jenkins, Esq., C.E. (chairman of the company), presided.

Mr. G. L. S. Maggiolini (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The Chairman: Gentlemen, it is now my pleasure to address a few words to you before concluding my remarks (as I shall do) with the usual motion for the adoption of the report and accounts, which have been in the hands of the shareholders since 19th inst. The accounts are duly audited and carefully prepared, and with a view to little explanation being necessary in regard to them. It is the

AMBITION OF ALL DIRECTORS

to declare a dividend in a company, and I regret that it is not to-day our happy position to be able to do so, but the circumstances which surround the generality of mining enterprises are of so dubious a nature in their early inception, that it frequently occurs that for two or three years such a position has not been arrived at. I may say that as far as the directors are concerned, my colleagues and I believe that this company is fast coming into a dividend-paying position. We say this in view of the continuously encouraging reports from the mine showing a considerable and progressive improvement, and we trust the time may not be far distant when we will be able to congratulate ourselves upon good and regular dividends on the capital employed in the undertaking. With regard to the position I occupy in this company, it will be in the remembrance of those who were present at the last meeting that my colleague, Mr. Wilson, and I were then appointed directors, as being men of business, and, withal, able to give time to the affairs of the company. I may say, without egotism, that we have given time, and that we have done that, daily and hourly, in our mutual interests, and, we believe, with satisfactory results. (Cheer.) It was necessary, before taking up the position of directors, that we should be satisfied there was something to direct. We carefully investigated the various statements and the reports issued on the inception of the company. And although we found that much progress had not been made in regard to the getting in of the capital, we said that if we were not tied with regard to that we would push ahead vigorously, and prove whether the property was, as represented, one of the most valuable ever offered to the British public.

NOT DIRECTORS WITH LIGHT HEARTS.

After getting an assurance of that kind, Mr. Wilson, my colleague at the last general meeting, to which I refer, truly said, and he spoke for me also, that we did not enter into the responsibility of directors with very light hearts. (Hear, hear.) We believed that there had been considerable apathy, and that was the position when we took office in January, 1888. Immediately after our election as directors the board saw fit to appoint me chairman, thereby endorsing the policy that we had stated to be our policy, namely, that we should proceed vigorously towards the development of the property and towards ascertaining that we had the valuable concern that had been represented. I have gone a little personally into the matter to show you how Mr. Wilson and I became identified with the company. Since then we have been carefully attending to its affairs. We had gentlemen as directors who lived in Cornwall, and who could not regularly attend the meetings, but they attended by correspondence, if not personally. We found ourselves in the position of having in charge of our mine Mr. Charles Burgan. That gentleman had been left in charge by Capt. Josiah Thomas. Capt. Burgan, we had satisfied ourselves, was a man, who, although not very literate, was capable in the mining department, but still not the sort of man who would be likely to show expedition in developing the property. I will now go shortly through the various reports we have received from the mine during the period under review. From Mr. Burgan we received on the 14th March, 1888, a statement to the effect that the assayer to a neighbouring company of great importance sent him the assays of ores taken from our 50 vara level end workings, namely, 23.46 and 89.45 respectively troy silver ounces per ton of 2,240 lbs. We instructed him to prosecute the works with vigour, and increased the funds which the previous directors had allocated to him. We further received other reports from Mr. Burgan, not showing any very great progress in regard to the working of the mine, though we believed they were honest reports, plain, unvarnished statements, and we received them in that view. A large body of shareholders requested the directors to make an arrangement with your late director, Capt. Pridcaux, one of the original directors, a gentleman of very considerable mining experience in Cornwall, and one who had been consulting engineer of the East India Company for Exploration and Mining of Glasgow, and I also understand that he has had considerable mining experience in America (Nevada), so that in that gentleman we had undoubtedly a man capable of proceeding with mining work as vigorously as the funds would permit, and of sending us proper detailed reports.

ENCOURAGING REPORTS FROM CAPT. PRIDEAUX.

You must all have seen the very excellent reports he has been able to send us within a reasonable time after his arrival at the mines. The directors are very much struck with these reports. They see that apparently the ground is improving in practically every direction. I suppose you have had the reports, and looked at them as carefully and anxiously as the directors have done. I will simply refer to one or two points which have most excited our attention. Take the report published 10th January. He says:—"We are also getting ready some mineral from this level (No. 2) to send to the reduction works." An experienced mine captain does not send ore to reduction works unless it will leave a profit. He then points out that with regard to the main shaft, for the moment that shaft is brought to a standstill, because the water came in upon us there from the adjoining company's mine. In two or three months this will cease, and the adit tunnel will take away the water from both mines." Then he concludes, "I may add that the lode in the adit level, which comes into our sett, is at present from a foot wide, worth about

20 marks of silver per ton—(a mark of silver is 8 ozs.)—and altogether our prospects are splendid, and I have no doubt that we shall open up a rich and permanent mine." Those are Mr. Prideaux's words, not mine. You know his position. You know he was an original director, and that he knew all the circumstances connected with the formation of the company, and practically was associated with it in every shape and form. Those are his words, and I hope they have impressed the shareholders as favourably as they have impressed my colleagues and myself. (Cheers.) In his report of December 8th Mr. Prideaux says, "The lode in the Arevals tunnel is worth 150 ozs. of silver per ton." That is a tunnel in an adjoining property that practically taps the lode which we are working upon. On the 19th January he says (and I am a little disappointed, because the time the water has taken to pump is longer than I expected) "I may add that the Aurora tunnel is making good progress towards our property. The last parcel of ore taken from this tunnel yielded 140 ozs. of silver per ton. It is only about 30 ft. from our No. 4 level to where this tunnel will strike our boundary line.

THE MINE AT EVERY POINT SHOWS A STEADY IMPROVEMENT."

I think the reports must be taken as a whole, although the points I have specially mentioned have impressed your directors very much. The report, which was sent for the purposes of the general meeting, is embodied in that of the directors. Mr. Prideaux endorses all that he said before, and brings us up to the latest date—the 29th December, 1888. How did that report originate? As directors of the company, we keep in touch with the mine manager, and we lay down a programme as to the method in which the information shall be sent to us, and in view of that, we laid down for Mr. Prideaux the rule that he should send to us a report as to the state of the property on his arrival, the work done during his administration, and the prospects of the mine.

A GOOD TELEGRAM.

The directors sent this cable to the manager:—"The annual general meeting will be held on the 29th January; send all the news you can about the mine by cable." The answer is this:—"25th January. Mine is opening quite satisfactorily, and showing every indication of improvement, and the third level is also kindly for metal." That is the latest news from the mine as known to your directors. The No. 1 level is at or about 25 varas from the surface (out of our shaft. A vara is 2¾ ft., or to be exact 2 ft. 9¼ ins.): No. 2, 50 varas; No. 3, 75; No. 4, 100; and No. 5, from which we expect some excellent things, 125. From the latest report our shaft has been sunk to 119 varas; and, therefore, there are only about six varas, or at the outside, say 18 ft., to complete the shaft to the 125. There we expect excellent results, for we are told we shall be under an important lode. With regard to the report of the directors—it deals with the operations and development of the mines, Capt. Prideaux's engagement, also his reports, and statements in regard to the directors, of whom there are now four. Capt. Prideaux, under the articles, naturally vacated his seat by accepting an office of profit.

AN INVISIBLE COLLEAGUE.

Mr. G. G. Jones, whom I do not think we have had the pleasure of seeing once at our board meetings during the present year, has resigned, and I do not think, from the point of attendance, that circumstance can be a very great loss to the company. It is not proposed to fill up the vacancies thus created. Article 58 provides that the number shall be not less than three, or more than 12, unless a general meeting shall otherwise determine. We shall be happy to receive any nomination from an important section of the shareholders, but we do not think any further addition necessary. (Hear, hear.) I require that men who come upon boards shall do their duty, and do not approve of ornamental directors, who leave the brunt of the work to other people. (Cheers.) Complaint has been made as to the fees of the auditors. There are, unfortunately, two necessary under this company's articles of association, but that is entirely in the hands of the shareholders. The balance-sheet I do not think requires any explanation, although I am ready to respond to any questions that may be asked. The directors consider that the mine has been very vigorously developed since the accession of Capt. Prideaux, and feel sure, from all the testimonials they have had regarding him, that it could not be in more able hands. I have no doubt that many of you have read what Lord Randolph Churchill said in regard to a then strained political situation, and I think the old saw applies very closely to mining affairs: "The best laid plans of mice and men gang aft agley."

THE PROMISED LAND IN VIEW.

Therefore, I venture to say that although we are in the vale of promises, we have not yet reached the promised land, but it looks as if we would shortly arrive there. I will conclude by moving "That the report and duly audited accounts to the 31st of August, 1888, as printed and circulated among the shareholders, be and are hereby received and adopted." (Cheers.) I will ask my friend and colleague, Mr. Henry Wilson, to second that.

VIEWS OF A DIRECTOR WHO HAS WORKED HARD FOR THE COMPANY.

Mr. HENRY WILSON, director: In seconding the resolution, which I beg to do, it does not seem necessary that I should make any remarks in support of it. The statement made by the chairman, voluminous as it has been, will be sufficient to commend it to your adoption. No doubt some of the gentlemen present will exercise their undoubted privilege of putting questions with a view to elicit information upon any matter either in the accounts or in the report which may seem obscure. Answers will be readily given to these enquiries, and I venture to think they will be of such a nature as will satisfy you that the directors have acted diligently and judiciously in the interests which you have committed to their charge. (Cheers.) I hope that the remarks that the chairman has made with reference to the property will not impress you too favourably. He states the position which has been represented to us as that which the mine occupies to-day, but it is not the intention that you should go away with the impression that your chairman has made to you what is vulgarly called a "bull" speech. (Hear, hear.) Quite the contrary, we are prepared for the uncertainties of mining, and it will be necessary also to bear in mind that the mine, although undergoing a satisfactory process of development, is not yet at that point which we all desire—the point which promises payment of the dividend in the near future. (Hear, hear.)

AUDITOR'S FEE.

Mr. VAN LAUN remarked that the fee of the auditor was exorbitant—31 guineas—and that he should be prepared to move an amendment when that matter came up. The chairman had made a very complete statement, and the report of Capt. Prideaux was the first of an encouraging nature that the shareholders had received. The property seemed formerly to have been thoroughly neglected, in proof of which he called the attention of the shareholders to the statement in the report that the mine was not only full of water, but that the timbers in the shaft had to be replaced; so that two years had passed away whilst the property had been mismanaged. Of course, this was a privileged occasion, and it might not have been the fault of the agent, but his misfortune; but naturally he, as a shareholder, was annoyed, and it was easy to see that the directors were annoyed too. He would suggest that working drawings of the mine should be sent to the shareholders.

NEED FOR ECONOMY.

The CHAIRMAN: All these things are a matter of expense, and we have to husband every farthing. Any shareholder can come to the office, and see such plans as we have, or I will send a sketch to any of them who may desire me to do so.

Mr. ANGEAR (Plymouth) asked whether the balance-sheet could not be made up to a closer date.

The CHAIRMAN said he thought they deserved credit for having brought it up so close, seeing that they were dealing with a mine in Mexico, and were within a year of the last meeting.

Mr. ANGEAR: Have the calls in arrear been paid?

The CHAIRMAN: The bulk of them have.

CORNISH FRIENDS WHO HAVE DISAPPEARED.

Mr. ANGEAR: I see in the prospectus the names of several Cornish gentlemen, who have since deserted the company. Mr. Rabling, for example, had great faith in it. Would it not be well to have an independent report confirming what Capt. Prideaux had said. Many in the West of England would like to have such a report.

Mr. VAN LAUN: I should decidedly oppose that proposal.

A SHAREHOLDER: I know that mines take time to develop, but is anything being received on account of revenue?

The CHAIRMAN: Not at present, though, as Mr. Prideaux reports, we have a quantity of ore available for reduction. An independent report would be expensive, and we have not money to spare. We emphatically trust the reports sent to us by Capt. Prideaux as those of a responsible and serious man.

The report was then adopted unanimously.

Mr. VAN LAUN proposed that Mr. Hercules Nicol, chartered accountant, and Mr. F. Heritage, a shareholder, should be elected auditors at a remuneration of 20 guineas for their joint services.

Mr. ANGEAR seconded the motion, which was carried.

Mr. HUME WEBSTER proposed a vote of thanks to the chairman and directors for their services during the past year. He was sure the London directors had worked very hard, and to them they owed the fact that the position of the company was much more lively than it was a year ago. He wished to include Capt. Prideaux in that motion. (Hear, hear.)

Mr. VAN LAUN seconded the motion, which was carried.

The CHAIRMAN, in returning thanks, said: Our earnest desire and intention is to continue at the helm of this ship until we have brought it safely into port. (Cheers.)

The proceedings then closed.

THE TOLGULLOW UNITED MINES CO., LIMITED.

THE COMPANY TO BE WOUND UP VOLUNTARILY.

AN extraordinary general meeting of the above-named company was held at 6, Queen Street Place, on Friday, the 18th January, for the purpose of considering and if thought fit, passing the following resolution: "That the company be wound up voluntarily, and that Mr. John Garland, the secretary of the company be, and he is hereby appointed liquidator, for the purposes of such winding-up."

Mr. ROBERT HENTY presided, and

Mr. JOHN GARLAND (secretary) read the notice convening the meeting.

The CHAIRMAN: In May last, it will be in the recollection of the shareholders that an extraordinary general meeting was held, and the following resolution was passed:—"That, in the opinion of this meeting it is undesirable to carry on this mine, and the directors be instructed to take steps for the disposal of the mine by auction or otherwise as a going concern; and in the event of their not succeeding in so doing within a term of two months that notice be given to the lessors to terminate the leases, and that the workings be confined to such work only as is required by the terms of the leases, or such as is likely to prove productive, and the expenditure be reduced to the least possible amount that the circumstances will permit." Well, gentlemen, the efforts to dispose of the mine have altogether failed, therefore, we are now called together to confirm a resolution that it be wound up voluntarily, and to appoint liquidators for so doing. There is nothing for me to say upon the subject beyond this—that it has been a misfortune, that it has failed, and we have all been grievously disappointed with the result. There is still a considerable sum of money in hand, and it was the idea of the directors in putting this resolution before the shareholders to save what we could rather than go on spending it, when, in the opinion of those best acquainted with the subject, there would be only a further loss.

Capt. RETALLACK seconded the motion.

Mr. SCHOFIELD: I wish to propose that Mr. Wm. Mitchell be associated with Mr. Garland in the winding-up as liquidator. I am not proposing it from any want of confidence in Mr. Garland, but Mr. Mitchell is a large shareholder, and he would be of very great assistance to Mr. Garland. He is not going into the matter with a view to getting remuneration. He will give his services gratuitously. If his name is coupled with that of Mr. Garland, I think it will be very satisfactory to all parties. I am not sufficiently acquainted with law to know whether you can alter a resolution, but however that may be, I do not think making an addition to a resolution constitutes an alteration. If there is likely to be any legal difficulty I will withdraw the proposition.

The Chairman: I cannot answer that question. I do uot contemplatc any difficulty.

Mr. Lawford (solicitor): I think it would be better to omit the last portion of the resolution altogether, as there is a difference of opinion on the subject.

The Chairman: Well, gentlemen, I will move the resolution in this form: "That thc company bc wound up voluntarily."

The motion was carried unanimously.

Mr. Mitchell expressed his disappointment that the mine had turned out so unfortunate, but they could not see through tlie ground. Mining was a lottery, and he went into it with all the confidence that a man could have. He was sorry that he had introduced a thing that had not turued out satisfactorily.

Mr. Schofield proposed a vote of thanks to the chairman and directors for the attention they had given to the business of thc company. They were here to-day to sign the death warrant, but still, for all that, the thanks of thc shareholders were due to thc directors.

Mr. Mitchell seconded the motion, which was carried unanimously.

The Chairman returned thauks, and was glad that they had comc so peaceably to the end of their troubles.

The proceedings then closed.

THE PORT PHILLIP AND COLONIAL GOLD MINING CO., LIMITED.

VOLUNTARY LIQUIDATION—THE QUESTION OF RE-CONSTRUCTION DISCUSSED.

An ordinary general meeting of the shareholders of this company was held at the Guildhall Tavern, on Monday—J. R. MacDonnell, Esq. (chairman of the company), presiding.

Mr. H. W. Mathias (secretary) read the notice convening the meeting, and the reports of the directors and committee were taken as read.

DIRECTORS REGRET THE DISMAL REPORT.

The Chairman: It is now my duty to move the adoption of the report and accounts as presented to you, and I am sure you will understand from thc nature of things that I cannot say much about it. We have told our story as plainly as we could in the report, and we can only regret that we have such a dismal state of affairs to put before you. On the 19th July Mr. Bland, as you know, telegraphed to say that work had been stopped pending instructions, whereupon we made a special report to the shareholders, and convened an extraordinary meeting, which resulted in thc appoiutment of a committee, who have had meetings with us, and with whose concurrence we consulted a very eminent mining engineer, Mr. Bell-Davies, whose report was not favourable to going on. At any rate, we could not do so, for it was quite clear at an early period that our capital was coming to an end, and we did not want to touch that last shilling which was remaining uncalled. Therefore, the only course open to us to pursue was to wind up the present concern, and endeavour, if possible, to reconstitute it, raising fresh capital. That, however, is a matter that we shall deal with at the special meeting presently. I regret that one little matter was inadvertently omitted from our report—namely, that we have lost the services of our colleaguc, Mr. Freese, who found that the claims upon his time were such that he could not attend, and a few weeks ago he resigned his seat at the board. I have nothing further to say to you that is not in the report, but I shall bc happy to answer any questions.

Mr. Keeble: What is the iteui for income-tax? We have been working at a loss.

The Chairman: That is income-tax on the salaries aud directors' fees.

Mr. Keeble: Surely we do not have to pay income-tax on directors' fees?

The Chairman: Considering that the directors only take a fourth part of what they are entitled to by the deed, I do not think you have much cause for grievance. When we took our full remuneration we paid the tax ourselves.

GIVE IT DECENT BURIAL.

A Shareholder: I imagiue now that the only thing is to give it decent burial.

The Chairman: It may be raised up again, but it is quite certain that it must be buried for a time.

Mr. Dixon seconded the motion, which was carried unanimously.

The Chairman explained that as a matter of form it was necessary to re-elect the retiring directors. The present board, however, would take no fees for the subsequent proceedings.

Messrs. Alfred Cobbett and John Schofield were then re-elected directors, as were also the auditors.

EXTRAORDINARY MEETING.

The proprietors then resolved themselves into an extraordinary general meeting for the purpose of considering, and, if thought desirable and agreed to, of passing the following special resolutions:—

(1.) "That the company be wound up voluntarily, and that a voluntary liquidator or voluntary liquidators be appointed for the winding-up thereof." (2.) "That the voluntary liquidator or voluntary liquidators, if appointed, be authorised to sell the miues, property, and effects of the company in the most advantageous manuer possible, and for such a price as may be determined by a future meeting of the shareholders, to be called for the purpose, and to accept, with the consent of such future meeting, shares, either with or without liability, in any new company, in lieu of cash or payment, or iu part payment, of the purchase money."

The Chairman: I think everybody present understands that, having recommended that the company be wound-up voluntarily, as a first step towards re-construction, it becomes our duty to hold this extraordinary general meeting, for the purpose of passing the necessary resolution for the winding-up, which resolution will have to be confirmed at a second meeting to be held about a fortnight hence. Therefore, without further words, I will move the first resolution.

Mr. Stewart seconded.

EVASIVE REPLIES FROM THE LOCAL MANAGEMENT.

Mr. Wm. R. Crowe said that the committee had received the greatest courtesy at the hands of the directors, and after receiving Mr. Bell-Davies's report, they communicated with parties on the other side, with a view to getting their opinion. It was thought that the management on the other side should assure them, on their own responsibility, whether or not they thought it desirable to go on with thc operations. They, however, returned only evasive answers, and the committee consequently declined to take the responsibility of recommending a continuauce.

The Chairman: I think we could hardly have expected Mr. Hewitsou, the mine manager, to say in so mauy words, "I recommend you to go on." He gave us all the information he could.

Mr. Crowe said he felt bound to differ with the chairman. A man who had been in the employment of the company, receiving the shareholders' money for a long time, ought to have had the candour to say whether he could advise it.

Mr. Dixon: In the report Mr. Hewitson states that "he is nevertheless of the opinion that there is a fair hope of success."

IN FAVOUR OF CONTINUING OPERATIONS.

Mr. J. H. A. Smith said that there were two distinct feelings on the committee. One party, of whom he was one, were strongly in favour of going on, believing that if they put in the money suggested by Mr. Hewitson (and he thought Mr. Hewitson a very competent man), judging by analogy, which was the only thing they had to go upon in mining, they would be repaid. Mr. Hewitson distinctly stated that in nine cases out of 10 in the colony deeper siuking had led to good results. Nine out of 10 was a good average, and they could only hope to be one of the nine, and not the tenth. For these reasons, he, and some other members of the committee, as well as a large number of shareholders, were of opinion that it would not be desirable to abandon the miue. He thought it would be as well to have a plan printed and submitted to the shareholders, and take their opinion upon it before absolutely parting with the property.

Mr. Richard Donagan said that if Mr. Hewitson had stated that nine out of 10 companies sinking below 1,400 ft. had obtained payable gold, then he would say go on, but the depth was not mentioned.

A Shareholder suggested that some independent and competeut person should be scnt out to thc property to report. All they had at present was a report from a few persons who were interested in the operations going on.

The Chairman: That would be a question for the liquidator. We decline the responsibility of sending out an expert which would involve considerable expense.

Mr. Searle asked if in the event of winding-up they could have a guarantee that the remaining 1s. would not be called up.

The Chairman assured him that there was not the slightest chance of that.

Mr. Searle asked for a statement of accounts, and it was pointed out that he would find a full statement in the printed report which had been sent to him.

COMPANY'S PRESENT FINANCIAL CONDITION.

Mr. Crowe: As auditor to the company, and as a professional liquidator, I may tell you that you need have no fear of another call being made. There would be no reason for it at all, because the company on the 31st December had 1,509*l.* on deposit, 858*l.* in the bank, aud a small sum in petty cash, aud there is a bill running for 500*l.*, due in February, which will have to be met. Then there are arrears of call 689*l.* Some of that, however, has since been received.

A Shareholder urged that steps should be taken at once to recover that amount.

The Chairman said the directors would take the necessary steps, but some of the arrears would not be worth the powder and shot.

Mr. J. G. Couchman thought that in deciding to wind-up the company the directors had acted wisely, for an attempt to carry it on upon its present lines would be most undesirable.

The motion was carried unanimously.

Mr. Schofield (director) moved the second resolution, which was seconded by Mr. Peak, and carried.

The proceedings terminated with a vote of thanks to the chairman, directors, and committee.

THE MINING CO. OF IRELAND.

RESULTS OF THE YEAR, A NETT PROFIT OF £790.

(FROM OUR DUBLIN CORRESPONDENT.)

The half-yearly meeting of the above company was held in the Central Hall, Westmoreland Street, in this city, on the 17th ult.—Mr. Abraham Shackleton presiding.

The report of the directors was to the effect that out of the net profit of the half-year, 709*l.* 19s. 6d., the board proposed to write 150*l.* off the Ringsend Lead Works suspense accouut, and to carry forward the balance.

The Chairman, in moving the adoption of the report and statement of accounts, said he felt less reluctance to comply with the request of his colleagues to take the chair than he did at their last half-yearly meetiug. At that time they had to report a considerable loss as the result of the half-year's work—a result which had never before occurred since the present board took charge of their affairs.

STOCKS NOT MUCH REDUCED.

He was glad to be able to submit for their adoption a report showing that the past half-year's operations had produced a profit, not so large as on some former occasions, yet of such an amount as to recoup a substantial portion of the previous half-year's loss. They would, perhaps, expect him to make pleasant predictions as to the future prospects of the company; that he should not do. He did not wish to raise expectations that might not be realised, nor to draw a rose-coloured picture of the future which might prove illusory. The object of these meetings was to review the past, to inform them of actual results, and to take counsel with them as to what course their directors ought to take in the future in the interest of the shareholders, in order to make profit, if possible; and, if such should prove to be incompatible with circumstances, at least to preserve their property from waste or deterioration. The stocks of culm at their collieries had not as yet been much reduced. It was his opinion that the poliey they had adopted of lessening the output and maintaining thc price was the right course to pursue, and would prove successful, leading to the

two results which, they would agree with him, were absolutely necessary, namely, on the one hand, the reduction of the excessive stocks of culm, and, on the other hand, of a preservation of a margin between the cost of production and the price obtained for the article produced, without which it was manifest no profit could be realised. He felt sure the directors might assume that they approved of their action in those respects. As regarded the Luganure mines, the total cessation of mining there, so long foreshadowed at their half-yearly meetings, had nearly arrived, and when those operations were brought to a conclusion, it might be the duty of their directors to endeavour to find a purchaser for their interest in the Glendalough estate, as the management of such a property, apart from mining, was not suitable for such a company to carry on successfully. The manufacturing business carried on at Ringsend and Ballycorus had resulted in a profit, and their directors saw no reason to fear that on any future occasion they should have to report such a loss as they did six months ago.

Mr. FAYLE having seconded the motion,

ADVERSE CRITICISM.

Mr. M'CLEAN said he regretted that the chairman's speech and the report for the half-year were not at all reassuring, and some definite course ought to be pursued as to the future of the company. He believed the directors had done their best in the interests of the company, but their labour only made it plainer that some definite step should be taken. As to the accounts, he found there was a great discrepancy in the profits this half-year, as compared with previous half-years when the sales were not less. Their assets were dwindling away, and their profits getting less.

Mr. KEVANS said the undivided profits had dwindled down by 20,000*l*. since 1876. The time had come to take some action, for if the present directors were not able to make the concern pay, he did not think that anyone else could.

Mr. JOSHUA FAYLE said the stock of coal and culm had been reduced, and he was glad to see that to reduce the stock seemed to be the policy of the shareholders. He sympathised with Mr. Kevans, who paid 23*l*. for his shares 20 years ago, and now the shares were selling at 10s. But the shares of this company were not exceptional as regarded the decrease in value. He (Mr. Fayle) had purchased, about 20 years ago, shares in another company at 4*l*. 10s. per share, and, although that company yielded something like 20,000*l*. per annum for a number of years, it was wound up the other day, and the shareholders got each a few pence per share for their shares.

UNDIVIDED PROFITS.

The CHAIRMAN said the stores and sundries at Ballycorus included the coal which was used in smelting ore. In the last half-year they smelted considerably more ore than in the previous half-year. The fluctuations in the lead market would always affect the prices of lead, and, in consequence, their profits would be correspondingly affected. As regarded the reduction of the undivided profits, they had only once been reduced by the present directors, and that was owing to the loss of about 2,000*l*. last year. With regard to the price of their coal, it should be remembered that it was very valuable for malting purposes, and was used in the district for domestic requirements; one ton of this coal produced as much heat as two tons of Welsh malting coal.

The report having been adopted,

Messrs. Casey and Fayle, the retiring directors, were re-elected, as were Messrs. Clinch and Middleton, the auditors.

This terminated the proceedings.

BLUE HILLS.

PROFIT OF £481.

A SIXTEEN-WEEKLY MEETING of the adventurers in Blue Hills was held at St. Agnes on Friday, 18th January—the purser (Mr. Walter Pike) presided.

The labour costs to 5th January were 1,735*l*. 8s. 6d.; merchants' bills, 252*l*. 17s. 11d.; bank charges, 19*l*. 3s.; lord's dues, 61*l*. 13s. 4d.; total expenditure, 2,069*l*. 2s. 9d. The tin sold amounted to 42 tons 15 cwt., for 2,529*l*. 12s. 7d.; extra carriage, 21*l*. 7s. 8d.; total credits, 2,551*l*. 0s. 3d. This left a profit of 481*l*. 17s. 6d.

The CHAIRMAN said this was a very satisfactory statement of accounts. As far as he could remember, the present was the largest sale of tin they ever made from Blue Hills Mine—(hear, hear)—and he thought if they could have foreseen this last time they might have hesitated about making a call. Now, however, the call had been made, and forgotten, and they had a balance forward of 414*l*.

Capt. RICH pointed out the various improvements made in the last 16 weeks.

In answer to a question from one of the shareholders,

The CHAIRMAN said there had not been more than half-a-dozen transfers of shares since the last meeting. The shares were firmly held, 12 people owning three-quarters of the mine. They had stuck to it through thick and thin, and if the shares went up to 5*l*. he did not believe they would be sold.

The accounts were passed, and the meeting closed.

TINCROFT.

PROFIT OF £1,831—DIVIDEND OF 5s.

A MEETING of the adventurers in Tincroft was held on the mine Thursday—Mr. F. Harvey in the chair.

The statement of accounts, read by the PURSER (Mr. Dabb), showed the labour costs to the 19th of January to have been 6,181*l*. 3s.; merchants' bills, 2,542*l*. 10s. 11d.; dues, 426*l*. 19s. 5d.; minor charges making the total debits 9,569*l*. 3s. 2d. On the credit side, tin had been sold, 168 tons 16 cwt., for 9,445*l*. 3s. 6d.; arsenic, 41 tons, 267*l*. 4s. 3d.; copper, 318 tons 7 cwt., for 1,638*l*. 14s. 6d.; discounts, 49*l*. 3s. 11d., making a total of 11,400*l*. 6s. 2d. Thus there was a profit of 1,831*l*. 3s. on the 16 weeks' working. The balance from last account was 1,423*l*. 10s. 4d., and when a dividend of 5s. per share, absorbing 1,500*l*., has been taken out, there will be a balance to the next account of 1,754*l*. 13s. 4d.

In moving the adoption of the accounts, the CHAIRMAN remarked that he had little to say. He thought they would agree with him that the statement was very favourable. There was an increased quantity of copper credited and a largely increased quantity of tin, and he hoped this state of affairs would continue. On the debit side, only three months' merchants' bills were charged, as against four months' pay, and that should be taken into account in looking at the figures. He was sorry Mr. Bolitho, who usually took the chair at their meetings, was not present, but he was, unfortunately, prevented from being with them. He had the pleasure of proposing "That the accounts be passed and a dividend of 5s. per share declared.

Mr. WICKETT seconded.

The motion was adopted.

A VISIT TO MESSRS. APPLEBY'S ENGINEERING WORKS AT GREENWICH.

ON Monday last the chairman (Alderman Sir Henry A. Isaacs), the managing director (Mr. Nuna D. Davis), engineer (Mr. Henry Louis), and secretary (Mr. W. C. Gould), of the Cerro de Pasco (Transvaal) Goldfields, Limited, Sir Warington Smyth, Sir Charles Craufurd, Bart., Colonel Henderson, Baron Sokoloski, Dr. Gibbon, Mr. Joseph M. Isaacs, and others, were present at East Greenwich to inspect the first 20 head of stamps, out of a battery of 60 heads, at the invitation of Messrs. Charles Appleby and Co., of 89, Cannon Street, E.C., who have constructed this powerful set of crushing machinery under the instructions of the engineer to the Cerro de Pasco Company.

The first 20 head of stamps were erected complete, and were shown at work. They are of the well-known Californian gravitation type, with timber frames, the falling weight per stamp being 900 lbs., and estimated crushing capacity of the 60 heads, 1,000 tons per week.

The mill is complete, with the usual "grizzlies," ore breakers, bins, feeding shoots, automatic feeders, and will be driven by a 300 h.-p. turbine, constructed by Messrs. W. Günther, of Oldham, the power being transmitted from the turbine shaft by means of rope pulleys, instead of belting. The water power is obtained from the Kaap River itself, which is dammed for this purpose. The dam is 300-ft. in length, and 13 ft. in height, with a width of 70 ft. at the base, and provided with the necessary sluices, bye-wash, apron, &c.; the core of the dam is of dressed stone laid in cement, and the body of the dam of hammer-dressed stone. The water-race has a carrying capacity of 7,000 cubic ft. per minute, with a total length of 15,500 ft. from the in-take to the turbine head, giving a total fall of 60 ft. The in-take is lateral, and is provided with gates, by means of which the water supply can be completely controlled.

The whole of this work, which is by far the most important piece of hydraulic engineering yet executed in the Transvaal, is now approaching completion, and everything will be ready by the time the battery arrives at its destined site.

MACHINERY DESCRIBED.

The mill is what is technically known as a "high" mill, in which all the operations are automatic. The ore is brought from the mine in cars, which are dumped by Kaffir workmen upon the "grizzlies," which allow the fine ore to fall direct into the bins, the lumps falling automatically into the ore breakers which feed into the same bins. Thence the ore falls down a shoot into the "Challenge" feeders, which automatically feed the ore into the battery box as required. The ore is crushed in the battery box, where most of the gold is extracted; thence the pulverised ore mixed with sufficient water, or the pulp, as it is termed, runs over amalgamated, electro-silvered copper tables, 15 ft. in length, which complete the extraction of the gold. Amalgamating barrels and pans are also used for the further treatment of the battery sands, &c.

It will be noted from the above brief description that the labour employed is reduced to a minimum, whilst the mill is capable of treating a very large amount of ore. The entire mill will be enclosed in a substantial mill-house, and lighted by electricity.

As soon as completed the machinery will be shipped to the Transvaal, where it will be erected on the company's property, on the banks of the Kaap River.

Among the other special machinery and plant for the extraction of gold from auriferous ores, examined by those present, were several sets of the Newbery-Vautin (Patents) Rapid Chlorination Plant, for which Messrs. Charles Appleby and Co. have numerous orders on hand at present, in addition to those which they have already sent out to South Africa, Queensland, Colorado, New Zealand, and other mining centres.

As a contrast to the massive stamp battery above described, a small 5-head prospector's stamp battery was shown at work, which is destined for the Ophir territory.

Mr. Henry Louis's new design of automatic ore feeder, with "positive delivery," was also inspected, and attracted considerable attention. This feeder is of novel and improved design, and we understand does excellent work.

A small plant of Duncan Ore Concentrators, with which some important experiments affecting the future welfare of some of the most promising mines in the Witwatersrand district, was also examined by those interested, and tests which have been recently made with these machines bid fair to render available much of the refractory matter contained in the ore in this district, which it has been impossible previously to extract on account of deficient water supply—the special point in connection with these concentrators being the small amount of water used, and the facility for dealing with "slimes."

At the conclusion of the examination of the stamps, an inspection was made of the buffet which had been specially erected alongside of the machinery, and

HIGH OPINION EXPRESSED OF THE STAMPS.

Sir CHARLES CRAUFURD, Bart., proposed success to the Cerro de Pasco (Transvaal) Goldfields, Limited, premising his remarks by saying that although he had not cultivated the art of using his tongue he had that of using his eyes. He added: I have recently visited mines and mills in the United States where mining machinery has been carried to

a great pitch, and I eau eonscientiously say that I have never seen anything that will compete with or equal the mill we see before us to-day. (Cheers.) Two and a half tons a day for seven days in the week is a very considerable duty to expcet one stamp-head to do, but looking at the machiuery now before us I think that these stamps will be each equal to such a duty. It will be an extremely good mine that will turn out 1,000 tons a week, but that is what it is eonfidently expceted the Cerro de Pasco (Transvaal) Goldfield property will do. We have every reason to believe that the mines will do their duty, and I have not the least hesitation in expressing the opinion that such stamps we see there to-day will do their duty.

VIEWS OF THE CHAIRMAN.

Sir Henry Isaacs (chairmau of the eompany) said: Having regard to the prominent position I have the honour to occupy in counection with this undertaking, it devolves upon me to aeknowledge the eompliment which has been paid to this eompany by Sir Charles Crauford, aud I am greatly obliged to him and to you for it. I do not doubt your sineerity in responding to his good wishes, for I recognise in many of the persons who are present those who are largely interested in the success of this enterprise. Humanly speaking,

ITS SUCCESS IS ASSURED,

and I will tell you why we have what I believe to be one of the finest properties in the De Kaap district. We have the opinion of one of the most able and oue of the most eonscientious mining engineers in that field to support us. Those who know Mr. Louis, and I believe his tutor in the School of Mines who is here will agree with me—those who know Mr. Louis will be of opinion that we could not have a better authority. In a letter from the President of the School of Mines, received when I made my first enquiries about Mr. Louis, the remark occurs (after he had spoken of his great ability, honesty and industry) :—"That board of directors is not in existenee whieh eould iuduce Mr. Louis to give a report which he eould not give with the utmost conscientiousness." (Cheers.) That is a certificate most valuable to everyone interested in the sueeess of Cerro de Pasco.

MINE OPENS OUT WELL.

I do not doubt the mine will do its duty. It has been spleudidly developed, and our latest reports eonfirm the good opiuion we have formed of it. In our prospectus we spoke of a very large return per ton, and in our arrangement we have so gone to work as to make a very small return sufficient to give a dividend to our shareholders. (Cheers.) When I tell those who are acquainted with mining matters that our ealeulations justify us in saying that 3 to 4 dwts. per ton will pay all our expenses of miniug and milling, and when they refer to what we are justified in assuming the result of our mine to be, they will say that we have a property whieh must satisfy all those who have invested in it. (Cheers.) Mr. Louis says :—"I am not anxious to get at work at too early a date. I want to avoid what has been one of the greatest mistakes in other mines, and that is commencing operatious before we are quite ready."

CONTINUOUS, NOT SPASMODIC WORK.

The directors have supported him in that view, so that when we commence work we shall see that we have sufficient material to eontinue, and not give a satisfactory result for a week or two, and then stop because we have no ore. I hope the shareholders, who have certainly showu very great patienee, will think we have done well in so delaying our work, that when we commencc our operations they will be eontinued. (Cheers.) There is another advantage to the eompany, aud that is the enormous area of our property. I am told by Mr. Louis that it is impossible for us to work so as to use more than a fifth or a sixth of it. and we eontemplate that oue large source of revenue will be the sublettings of portions of our mine, which we are not likely to need. Since I have been on these works I have been approaehed in referenee to the sub-lettings of a portion of our mine. (Cheers.) We have laid ourselves open to underlet portions, and at the same time to supply from our race and dam water power iu order to work them. I searcely need say that that is one great advautage, and seven or eight other mines eould be supplied from our water-race. The water power is obtaiued from the De Kaap river, which is dammed for this purpose. The dam is 300 ft. in length, and 13 ft. in height, with a width of 70 ft. at the base, and provided with the necessary sluiees, bye-wash, apron, &c.; the core of the dam is of dressed stone laid in eement, aud the body of the dam of hammer-dressed stone. The water-race has a carryiug eapacity of 7,000 cubic ft. per minute, with a total length of 15,500 ft. from the iutake to the turbine head, giving a total fall of 60 ft. The intake is lateral, and is provided with gates, by means of which the water supply ean be eompletely controlled. The whole of this work, which is by far the most important piece of hydraulic engineering yet executed in the Transvaal, is now approaching completion, aud everything will be ready by the time the battery arrives at its destiued site.

1,000 TONS A WEEK.

As to the machinery—you ean see it before you—but it represents simply one-third of our mill when completed. When you eonsider a mill three times the size of the one before you, aud think of it fully at work, you may realise what its eapacity for stamping will be. I have no doubt, as Sir Charles Crauford has said, that it will do its duty; neither have I any doubt that the mine will easily turu out the 1,000 tons per week, whieh the stamps are competent to treat. We have gone to work regardless of first eost, because we have determined that everything shall be of the best, and this mill is but one illustration of that poliey. We have gone to this great expense for the purpose of eeonomising the money of our shareholders. We might have proceeded to work at a third of the outlay, but have felt the best eeonomy is efficiency, and it is better to make a judicious outlay at the eommeneement than a series of outlays later on, whieh would mean waste of time and money. We may be asked by shareholders—why did you not get to work earlier, and why do you so strongly urge the policy of eeonomy? Well, economy is everything. A small eeonomy may represent 1 dwt. per ton in the cost of producing our gold, and that penny weight represents something like 10,000*l.* for division among the shareholders. So that I am sure you will appreciate what we have done.

THE MESSRS. APPLEBY COMPLIMENTED.

I beg here, and now, to tender my best thanks to the Messrs. Appleby for the way in whieh they have done their work. (Loud eheers.) They are the finest stamps I have ever seen. (Cheers.) The directors are very much indebted to Mr. Louis from whose designs they are made. I think mining men will appreciate one great advantage that has been gained—by the substitution of timber for iron. Timber is more eostly, but it has this great merit, that it can be easily replaced, whereas any failure on the part of the iron might necessitate the stoppage of operations for a time, and one of the things we waut to avoid is, as I have said, eessation of work. We intend to

LIGHT OUR MILL BY ELECTRICITY,

for which we have the motive power near at hand, and we shall save the many disadvantages which result from a mill of this description lighted by oil. The saving in insuranee alone will more than eompensate the additioual eost of the electric light. I feel that a great deal of responsibility devolves upon me, for very many of my friends have followed me into this venture. I may say it with all modesty—because of their confidence in me. I think those who had so followed me will have occasiou to congratulate themselves, and that those who have not doue so will hereafter have abundant cause for regret. (Cheers.)

DE KAAP MINES HELD IN SMALL ESTEEM.

Mr. Pearse said the De Kaap Mines had been held in little esteem by the public of late, but he attached great importanee to a concern like this, which had laid down proper machinery, and which would set them an example, not merely of success, but of business-like methods in its arrangements. He ventured to think that the British public would hereafter hear a good deal more of the De Kaap goldfields than they had of late. He believed they would take the same position as the mines had done of the Johannesburg district.

The Chairman said that at such a meeting and on sueh premises mining and mechanieal engineers ought to be remembered. They all appreciated the excellent work of Mr. Louis, who he felt, next to himself, was responsible for the starting of this enterprise. Third came Mr. N. Davis, who was the vendor of the property, and represented at this moment the largest shareholder.

A MUCH ABUSED CLASS.

Mr. Louis, speaking on behalf of the mining engineer, said: I represent a much abused class of men. Unfortuuately it has been the custom when anything goes wrong with the mine to blame the manager, so that one is almost afraid to call oneself a mining engineer. With regard to our work—I feel a sort of patriotic pride. It has been said sometimes, "If you want mining machinery, go to America," but I do not think we need go so far. It is true the Americans have had more experience, but we are not above learning, and I hope this mill will show in future that we are capable of doing as good work as they. I believe that 12 months from this date this mill will be showing that it ean do as good work as any that is produced in America.

VIEWS OF MR. APPLEBY.

Mr. Charles Appleby, who was heartily reeeived, spoke on behalf of meehanical engineers, expressing his indebtedness to Mr. Henry Louis for his admirable designs of the stamp mill and other machinery which had been built entirely to his instructions. He was very glad the work had given satisfaction, and he expressed pleasure at seeing so many present at the inspection.

The Chairman: You have certainly carried out the work well. (Cheers.)

Mr. Davis, managing director of the company in the Transvaal, who is about to proceed to the spot, also offered a few words, and stated that he had not sold, and did not intend to sell a single share in the company. He had perfect confidence in its future. The old saying ran "The proof of the pudding is in the eating," and the proof of this mine would be in its returns. He believed that by next June they ought to be making returns from the mine. (Cheers.)

The visitors then returned to London.

George Neal and Company, Limited.—The result of the trading for the six months ending the 31st December last, as reported by the manager, justifies the directors in declaring and paying this (their third dividend) at the rate of 6*l.* per cent. per annum. The directors forcibly impress upon the shareholders the advisability of the introduction of further capital into the business; and, seeing its profitable nature, they suggest that it is essentially more to the interests of the present shareholders to find further capital than to raise it by a public issue. A further sum of from 2,000*l.* to 3,000*l.* capital would enable these further contracts to be taken, and with practically the same staff and plant enable a better dividend to be earned. Expenses have been reduced.

Messrs. Matheson and Co. closed the list of applications for shares in the Delhi, Umballa, Kalka Railway Company on Wednesday at two o'clock p.m.

Type Writing Competition.—The result of the first speed contest (in England), by operators on the Remington Standard Typewriter, held at St. James's Hall, Regent Street, W., January, 9th, 1889, was a follows :—1. Mr. Oliver Wren, first prize; words written, 411; mistakes, 16; total words exclusive of errors, 395; words per minute, 79. 2. Mr. E. D. Lane, second prize; words written, 398; mistakes, 11; total words exclusive of errors, 387; words per minute, 77.4 3. Miss E. B. Farren, third prize; words written, 392; mistakes, 12; total words exclusive of errors, 380; words per minute, 76. 4. Miss Bertha Still, fourth prize; words written, 380; mistakes, 5; total words exclusive of errors, 375; words per minute, 75. Fifth and sixth prizes—Tie. 5. Miss Alice Maling: Words written, 381; mistakes, 14; total words exclusive of errors, 367; words per minute, 73.4; and 6. Mr. Charles Fry, words written, 409; mistakes, 42; total words exclusive of errors, 367; words per minute, 73.4. 7. Mr. J. L. Harmer, seventh prize: words written, 362; mistakes, 10; total words exclusive of errors, 352; words per minute, 70.4 There were 71 other competitors, 57 of whom wrote 50 words and up to 70 per minute. The prizes competed for, and which amounted to nearly 80*l.* in value, were offered by Messrs. Wyckoff, Seamans and Benedict, sole manufacturers and proprietors of the Remington Standard Typewriter, 100, Gracechurch Street, E.C.

THOS. THOMPSON,

STOCK AND SHARE DEALER,

ANGEL COURT, LONDON, E.C.

TELEGRAPHIC ADDRESS—"NOSMOTH, LONDON." **TELEPHONE No. 509.**

Mr. THOMPSON transacts business in all classes of Securities, Bonds (Foreign and Colonial), Banks, Railways, Insurance, Telegraph, Tramway, Gas, Water and all Miscellaneous Shares.

Shares sold at special prices for forward delivery (one, two or three months) on deposit of 20 per cent.

ORDERS BY LETTER OR TELEGRAM PROMPTLY ATTENDED TO.

MR. THOMPSON would suggest to his readers that it appears hardly fair that those taking advantage of the advice contained in this Circular should transact their business through other Brokers. Should the recommendations contained herein prove unprofitable, it is certain that the writer will be blamed, whereas, should they turn out well, he will gain no advantage from those doing their business elsewhere—possibly not even the bare credit of having given good advice.

A BIG BOOM NOW ON.

SHARES AT 6s. GOING TO £4 OR £5.

TETUAN GOLD SHARES HAVE ALREADY COMMENCED TO RISE.

Recommended at 2/3 to 2/9, then at 2/6 to 3/6, then again at 2/9 to 3/9, next at 3/ to 4/, again at 3/3 to 4/3, then at 3/6 to 4/6, afterwards at 3/9 to 5/, next at 4/ to 5/, next again at 4/3 to 5/3, once more at 4/6 to 5/6, then at 5/ to 6/, again at 5/6 to 6/6, next at 5/9 to 6/9, then at 6/ to 7/, last at 6/6 to 7/6, and now at 10/ to 11/.

GOING TO £3 OR EVEN £5.

A MINIMUM OF RISK AND A PROSPECT OF A COMPARATIVELY HUGE PROFIT.

Orders should be sent by Telegram to secure full benefit of advance.

THE PRESS.

"Stocks and Shares," January 12th.

"Tatuan Gold shares have risen, and close at 6s. 6d. to 7s. 6d. An enormous demand for these shares has again sprung up from well-informed quarters, and we have the best ground for stating they will rise again within the next day or two. Verb. sap."

"Stocks and Shares," January 19th.

"Tetuans should be good purchases."

"Financial Times," January 12th.

"Tetuan Gold shares are still recommended as likely to have a further considerable rise."

"Financial Times," January 19th.

"Tetuans have been in good demand by investors, and promise to see a considerably higher price."

"Mining World," January 12th.

"Tetuans are thought to be going higher."

"Mining World," January 19th.

"Tetuan Shares.—There has been an active market in these shares this week, and a rise may be expected within the next few days."

"Mining World," January 26th.

"Tetuan shares have had a large rise during the past week, and the general opinion of the market is that they will go much better. Be this so or not, the steadiness of the market at the moment points strongly in the direction of the opinion of the majority. The rise in these shares has been very remarkable since they were first recommended at about half a crown."

"Whitehall Review," January 10th.

"Tetuans (gold) are amongst the foremost. The price will in all probability soon see an advance."

"Pictorial World," January 12th.

"Tetuan Gold shares have been in good demand, and are likely to rise, on account of the good reports from the mines. Their present price is by no means what they are likely to be."

"Pictorial World," January 19th.

"It is gratifying to note that the investment we recently referred to—viz., Tetuan Gold shares—keeps steadily improving, never having gone back in fact. From between two and three shillings they have slowly advanced to from 6s. 6d. to 7s. 6d., at which, their present price, large transactions have been booked. The advance is likely to continue."

"Bullionist," December 29th.

"Tetuans are firm and being inquired for, so that we look for a subst antial and speedy advance in the quotations for these shares."

"Bullionist," January 19th.

"Tetuan shares are again higher, and though so far they have risen but slowly, it is now to be expected that they will advance with rapid strides. All shares offered have been rapidly picked up, and next week it may be expected will bring very different quotations now ruling."

"Stock Exchange," December 29th.

"Tetuans, notwithstanding the holidays, have maintained their price, and have, in fact, been in such demand as to lead to the belief that they will yet command much higher prices. This impression would seem to be fully justified by the prospects of the mine, which are very encouraging."

"Mining Journal," January 26th.

"Tetuans are being bought in anticipation of a further rise."

"Mining World," January 5th.

"The market for Tetuan shares have been very active, and the firmness of existing quotations points to an advance within the next few days."

"Financial World," January 5th.

"TETUAN.—One of the mysteries of the Mining Market is how the shares of this company, and also other Placer shares, remain at low ebb so long. One explanation, of course, can be found in the mad rush after Witwatersrand shares. Considering the marvellous returns which have been made by other Placer properties, it is, however, difficult to fathom the thick mystery which overhangs the shares of these good properties. With the new year may be expected to be witnessed results unparalleled in the history of mines. Speculators and investors would do well to secure a holding while they are at a low figure. We recommended these some months ago, when they stood only at 2s. 6d., and they have since risen to 6s. 6d. Notwithstanding the rise which has taken place, amounting to over 200 per cent., we venture to assert the rise which is yet to come will prove almost more considerable. The advices from the mines are of the most satisfactory nature, and all those who know the mine best are among the keenest buyers of the shares. The closing price is 6s. 3d. to 6s. 9d."

"Mining News," January 26th.

"It is not surprising to find Tetuans growing stronger. The public are large holders of these shares, and according to latest reports the mine is doing well. We drew attention to these shares when they were selling at 5s. to 6s.; they have nearly doubled in value, but we do not think they have anything like reached their best value."

"Capitalist," January 5th.

"Tetuans continue steady at 6s. 3d. to 7s. 3d., and the price is expected to improve during next week. As regards miscellaneous shares, there is a better feeling all round, the public supporting the market."

"Capitalist," January 19th.

"Tetuan shares are again higher at 7s. to 7s. 6d., and there appears to be every prospect of the price advancing to 10s. within a week."

"Financial News," October 3rd.

"Among the best paying mining properties on the London Market are the Colombian Hydraulic and the Orita, both of which are gravel mines situated in Central America. One result of their success has been the introduction of another hydraulic property in the same part of the world—namely, the Tetuan Gold. If we may rely upon the reports received from the manager, the Tetuan will, before long, also take its place among the dividend-paying list. The manager reports that, exclusive of pockets, gravel is found on the Tetuan worth 40 cents per cubic yard. In California, gravel worth only 5 cents a yard has been worked to a profit, so that, with adequate plant and proper management, the Tetuan should be able to show substantial profits."

"Salon," January.

"Amongst the various mining shares, none perhaps have a better future than the Tetuan Gold shares, which have risen week after week from 2s. 6d. to 7s. 6d., and a further rise is anticipated.

"Financial News," October 16th.

"Tetuan appear to be preparing for a further advance."

"Financial News," November 15th.

"A good demand prevailed for Orita, and Tetuan were also 6d. better, closing at 6s. with a strong tendency."

"London and Brighton," January 10th.

"In coming to the less technical and more practical part of the matter it will be noted that there has been no spasmodic or sudden rushes in the price of Tetuan shares, but, on the contrary, the rise has been of so steady a nature that it has never exceeded 6d. at a time, while it has not been made the subject of any market manipulation. It will not be long, we believe, before they reach 10s., and when they have reached that price the rise is likely to be much more rapid than it has heretofore been."

"Money," January, 12th.

"Tetuan Gold have risen to 6s. 6d. to 7s. 6d., and have again sprung into big demand. A considerable advance is believed to be imminent in these shares."

"Money," January 19th.

"Tetuan gold shares, to which we have directed attention on several occasions, have been largely dealt in, and it is believed they will score a very considerable advance within the next few days. A very favourable telegram has been received, viz., that the gravel will go '30 cents per ton,' a rate which ought to make the company a great success."

"Stock Exchange," January 12th.

"Tetuans are 6d. higher, and close 6s. 6d. to 7s. 6d., with a prospect of a further immediate advance. 10s. is the price talked of for the next fortnight or so, and eventually a much higher figure."

"Stock Exchange," January 19th.

"Tetuan shares have been gradually creeping up, and will go much higher. Report says the further advance will be marked by leaps and bounds."

"Financial Chronicle," January 12th.

"Considering the value of the property, we fail to see any reason why they should not rise to double this figure."

"Court Circular," January 8th.

"Now that the New Year has turned, things speculative have been decidedly more active, especially in mining shares, for which there is a great demand. Tetuans, to which we have before referred, have been largely in request, and can safely be regarded as certain to rise. All the information from the mines is eminently satisfactory, and their present price will, we are assured, be better next week."

"Stock Exchange Times," January 12th.

"Tetuan Gold shares have again come to the fore, and have risen to 6s. 6d. to 7s. 6d., at which price they are being largely bought, and will bring a good profit. We brought these shares under the notice of our readers when at 2s. 6d. They are still good to buy for a considerable advance."

"Mining News," January 12th.

"Tetuans are steady at a slight advance on last week's prices, and there is undoubtedly a strong market for this mine, which will display itself prominently the moment any news of importance is received from the seat of operations."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Money Market Review," December 1st.

"Since the conclusion of the settlement Tetuan Gold shares have again been in demand, and the market presents indications of a further advance. They are still quoted considerably below what is generally considered to be their value."

"Money Market Review," December 8th.

"Tetuan Gold shares continue firm at 5s. 9d., notwithstanding the easier tone of the markets generally."

"Mining Journal," December 8th.

"Amongst other mine shares in the Colonial, Indian and Foreign Markets, Tetuans have kept firm, and bid fair to bear out the market report that the price will go better after the coming account."

"Mining Journal," January 5th.

"Tetuans have been doing well, and close at 6s. 3d. to 7s. 3d., with good prospects ahead."

"Railway News," November 24th.

"Tetuan Gold shares have again risen, closing at 5s. 9d. to 6s. 9d., at which price they are still in large demand, and certain to bring good profits to those who buy at once."

"Railway News," January 5th.

"Hydraulic companies' shares continue in favour with some investors, and a further advance in Tetuan shares is looked for."

"Life," November 22nd.

"Tetuan Gold shares have risen from 5s. 6d. to 6s. 6d., and are in large demand. There is strong reason to believe that there will be a further considerable advance, the prospects of the mine being very promising."

"Investors' Guardian," December 8th.

"Tetuan Gold shares have been in some demand, and have advanced on the week, closing 5s. 9d. to 6s. 9d."

"Society Herald," January 15th.

"Tetuans have advanced from 6s. 6d. to 7s. 6d., and ere I again have an opportunity of referring to them they will have crossed 8s. The shares are scarce for delivery, and if any of my readers who have bought on my advice are allowing their brokers to lend their shares to 'shorts,' they had better look out, for I am reliably informed that there are not enough shares to 'go round,' and someone is bound to be caught. The Mysore-Harnhalli 'corner' ought to be a warning to people not to sell what they haven't got."

"Financial World," January 19th.

"Tetuan.—These shares have been in active demand again this week, many shares changing hands. From what we hear regarding this property, another rise will take place soon in the price of these shares."

"Financial World," January 26th.

"Tetuan Gold.—Investors who are not carried away by the South African whirlwind are appreciating the value of these shares, and much steady buying is going on. A very decided rise is noticeable this week, the price closing at 9s. 6d. to 10s. 6d., with a promise of continued advance."

"The Hawk," January 15th.

"People who like to see their money hatch itself into money, and do not mind waiting during the operation, will not repent the purchase of Tetuan Gold shares at the present low price. Much bigger figures will be the order of the day. I do not think £1 will see the end of their tether by a long way."

"Money Market Review," January 19th.

"Tetuan Gold shares, to which attention has been directed several times of late in these columns, have been largely dealt in, and are considered likely to rise still further. The closing price is 7s. to 8s."

"Whitehall Review," January 17th.

"We referred in our last issue to the advance in Tetuan Gold shares, and, as this is not the first time we have mentioned them, we are glad to note that our opinion as to their worth has been more than maintained. They have risen several shillings since we first referred to them, and their present quotation, 6s. 6d. to 7s. 6d., is a very low figure compared with what they will be in a week or two. Another good report from the mine similar to last received, and they ought to go up with a bit of a jump."

"Pump Court," January 16th.

"We are glad to hear from those who followed our advice in Tetuans, that they have made a good thing, and are very well satisfied with Mercator as a guide. It is always gratifying to know that our readers profit by our advice. Last week Tetuans rose again to 6s. 6d., to 7s. 6d., and we predict a still further rise. We repeat our former advice—to those who have, hold; to those who have not, buy."

"Fun's" Little Joke.

"Mine Joke.—In referring to mining shares, a contemporary states —'Tetuan (Gold) are amongst the foremost, and still continue to rise, which rise is pretty sure to be maintained.' The idea of maintaining a rise reads somewhat strangely to us, as our experience has been that it is the individual who is maintained by a rise—of salary. We are always open to take a rise out of anything or anybody, and we suppose you must purchase stock if you want to 'take the rise' out of Tetuan gold shares."

THOS. THOMPSON,

STOCK AND SHARE DEALER,

ANGEL COURT, LONDON, E.C.

Telegraphic Address: "NOSMOTH, LONDON."
Telephone No. 509.

Mr. THOS. THOMPSON wishes to announce that, having direct communication by cable with the principal South African Mining Brokers, he has special information to place at the disposal of his clients when dealing in Diamond and Gold Shares.

CARPUAN TIN MINE.

IN 12,000 SHARES.

A Desirable Speculation.

I desire to call your attention to this property as a speculation.

About 12 months since a large and well-defined lode was discovered upon a farm called Carpuan, upon the estate of Lord Robartes, in the parish of St. Neot, Cornwall, and a licence, or take note, was obtained for searching for and raising minerals. Subsequently, this lode has been traced for a considerable distance, and proved to be a true fissure vein. A trial pit or shaft has been sunk upon the lode to a depth of 12 ft. only, and here it is found to be 4½ to 5 ft. wide, unusually rich in tin, producing 56 lbs. of this metal per ton of lode stuff. It is now intended to sink further upon the lode, and also to drive a level in the side of the hill (the configuration of the ground being favourable for such operation), and should the lode prove continuous, even as it is, and irrespective of further improvement, it will open one of the richest mines in the eastern part of Cornwall. The property is situate in a rich tin and copper district, being within 2 miles distaut from the Phœnix and Caradon Mines.

Substantial Advantages to Subscribers.

I repeat that I put this before you as a pure speculation. You will observe that this is a Cost Book Company, in 12,000 shares only, and the price per share is 5s. net. Meetings will be held quarterly, so that individual shareholders may watch the course of events, and control the expenditure. The necessary operations to prove the lode, as above suggested, cannot involve a greater cost than £100 per month, but probably not more than £50, therefore a call of 6d. per share per quarter would more than meet the expenditure. In the event of the lode proving as rich as anticipated, it is intended to form a Company, with limited liability, to purchase the property from the present Cost Book Company: the said limited Company to consist of 30,000 shares of £1 each, 24,000 of such shares to be paid as purchase to the shareholders in the present Company, i.e., two fully paid £1 shares for each share held, thus providing £6,000 for working capital.

Personal Inspection.

Having personally inspected the property, I can vouch for the accuraey of the statements made respecting the richness of the lode. The supervision of the mine will be under my own management, assisted by a thoroughly competent local man. All costs and liabilities will be discharged punctually every month, so that no liabilities can accrue.

If, after perusing the above, you are desirous of securing an interest, please acquaint me with the number of shares required, and return same to me together with cheque, and transfer will be prepared and sent to you. Appended is a detailed report by Capt. Knott, who is an expert in tin mining.

Mining Offices:
10, Coleman Street, London, E.C.,
25th January, 1889.

ALFRED THOMAS.

The committee of management will be appointed by the shareholders at their first meeting.

The bankers will be "The Commercial Bank of Cornwall."

Report of Captain R. Knott, an Expert in Tin Mines.

Carpuan Mines, January 22nd, 1889.

I hereby testify that during the last 12 months I have made frequent visits to these mines, situated in the parish of St. Neot, adjoining St. Cleer, Cornwall. This mining property was granted about 12 months since by the Right Honourable Lord Robartes, and it will be seen, as afterwards referred to, that it is of a very high order, being about 1 mile to the west of the Caradon and Phœnix Mines, with all these lodes passing through the property.

The operations up to the present consist of a series of costean pits, which have opened upon three very fine and promising lodes.

No. 1, or south lode, is from 4 to 5 ft. wide, producing rich tin work, Various assays have produced as high as 1 cwt., 1½ cwt., and 2 cwt. of tin to the ton of stuff, and the lode for its whole width, will produce 56 lbs. per ton of lode stuff, and worth in money value about £20 per fm.

No. 2, or middle lode, is a most masterly lode, 6 ft. wide, producing a little tin, but at the present shallow depth it is not enough to value.

No. 3, or north lode, is 4 ft. wide, of a beautifully rich character, and worth for tin £10 per fm.

For your future operations I would suggest running down a shaft upon the course of tin referred to as far as you can go for water, and then I would recommend going to the foot of the hill, and taking up an adit on the course of the lodes, which will unwater the same and make available for profitable working without the aid of steam machinery to the depth of 40 fms.

There are other lodes traversing the sett which can be developed in the same way.

General Remarks. — The district is exceedingly good, the Phœnix and Caradon lodes passing through the property. The tin is of a very high percentage. The ground is congenial for the production of mineral, and water-power is also available for stamping. I consider the property to be a good one, and it is my opinion that by making a small monthly outlay you will shortly open up a very valuable property indeed. (Signed) R. KNOTT.

The Subscription List will open on Monday, 4th February, and close on Tuesday, the 5th February, for the Town, and on Wednesday, the 6th February, 1889, for the Country.

THE CALAVERAS CONSOLIDATED GOLD MINING COMPANY, LIMITED.

CALAVERAS COUNTY, CALIFORNIA.

INCORPORATED UNDER THE COMPANIES' ACTS, WITH LIMITED LIABILITY.

CAPITAL, £110,000,

Divided into 55,000 Preferred, and 55,000 Deferred Shares of £5 each.

The Preferred Shares carry a Preferential Dividend at the rate of 20 per cent. per annum out of the profits of each year, with a right to participate pro rata with the Deferred Shares in the surplus profits of each year after paying a dividend at the like rate on the Deferred Shares, and the preference to continue until the amount of the Dividend paid to the Preferred Shareholders shall amount to 50 per cent. over and above the amount paid up on the Preferred Shares. The Deferred Shares have been issued as paid up to the Vendor in part payment of the Purchase Money of £70,000.

ISSUE OF 55,000 PREFERRED SHARES OF £1 EACH, of which 30,000 Shares (£30,000) of £1 each have been already subscribed for at par by the Directors and their friends, and have been allotted. The Balance of 25,000 Shares are now offered at a premium of 2s. 6d. per Share. Payable—2s. 6d. on Application; 7s. 6d. on Allotment; 2s. 6d. One Month after Allotment; 5s. Two Months after Allotment; and the Balance as required in sums of not more than 2s. 6d. per Share. 2s. 6d. of the amount paid on Allotment will be treated as a premium, and applied by the Directors in full discharge of the expeuses, incident to the printing, advertising, and issuing of this Prospectus, and the Balance to a Reserve Fund.

PROSPECTUS.

THIS Company was formed in July, 1888, for the purpose of purchasing and working the "Calaveras Consolidated" group of six gold mining claims, which make a total length of 7,890 ft. or nearly 1½ miles. The property is located on the west branch of the Great Mother Lode of California, and situated on the south and west slopes of the celebrated Carson Hill, near Angel's Camp, Calaveras County, California.

With the proceeds of 30,000 preferred shares, £1 each, subscribed by the directors and their friends (the prospectus not being advertised), the purchase of the property was duly completed in September last, and the necessary mining and other operations, which are now proceeding, were commenced.

The claims have an average elevation of over 500 ft. above the Stanislaus River. All the ore mined for many years to come can be transported to the mill by gravitation. There is an ample supply of water power to meet all the requirements of the mines and mill, and the total cost of working has been estimated not to exceed $1.70, or 7s. per ton of quartz crushed.

The statements made in this prospectus are based upon the report of Mr. Henry Louis, Assoc. of the Royal School of Mines, London, Fel. Inst. Chem., Member of the American Inst. of Mining Engineers, &c., and general manager to the "Cerro de Pasco" Gold Mining Company, Barberton, who, upon the instructions of Mr. J. Macdonald Cameron, made a thorough inspection of the property in the early part of last year, and spent about a month in this work.

Ignoring for the present the yield of auriferous sulphurets per ton of quartz, which would be sold at a profit on the spot, or treated when the necessary plant is erected, and basing estimates as to profits on even so small an average yield of free gold as $4.44 per ton, as shown by Mr. Louis' millings, 100 head of stamps working for a period of only 10 months in each year should yield gold amounting to the sum of £54,800 per annum.

The managing director, at the request of the board, visited the mines in August last, and, after inspection, informed the board that he was able to confirm Mr. Louis' report, and he has also furnished the board with the following particulars:—

"A glance at the foregoing results* shows an average of 1 oz. 15 dwts. gold, and 5 ozs. 8 dwts. silver per ton of 2,000 lbs.; or a total value per ton of $43.27, which is very encouraging. Nevertheless, it will be more prudent and satisfactory to all concerned, that the directors adhere to the basis of calculation for profits set forth in the prospectus of the Company, which I feel confident will be more than realised when the mill is in full work."

"There is an ample and unfailing supply of wood in the vicinity, which can be procured at reasonable prices, but after the machinery is erected, little of this commodity will be wanted for some years to come, as the composition of the lode stuff is such as to render the timbering of the tunnels and drifts, &c., generally unnecessary."

"Any number of miners can be obtained in the neighbourhood for from $2.50 to $3.00 per day, probably the latter, and will board and lodge themselves, whilst the salubriousness of the climate offers unusual facilities for continuous work."

"In conclusion, I may say that the merits of the property may be summed up as follows:—"

"1.—Your mining claims are in an auriferous district that has already been well tested, and with successful results, that furnish collateral evidence as to their value."

"2.—These claims constitute an unusually large property, extending to nearly one mile and one half, on the strike of what is known as the Mother Lode of California."

"3.—This lode as it passes through your property is of unusual width, and well defined."

"4.—The lode is auriferous, and according to present investigations, is at least so to the extent set forth in your Company's prospectus, which forms the basis of calculations as to profits."

"5.—You have ample water power for all the purposes of your mines and mills."

"6.—For years to come your ore can be transported to the mill by gravitation, and working vigorously, and with careful management the cost per ton for mining, milling, etc., set forth in your Company's prospectus, ought not to be exceeded."

"7.—The salubrious nature of the climate will permit of work being conducted in the mines and mill continuously throughout the year."

The directors propose to commence operations with a 60-stamp mill, the complete equipment of which, with water supply, air-compressing plant, &c., has been estimated to cost £30,000 sterling. With the cash already in hand, and that from the present issue of shares they anticipate placing the mines in a dividend-paying condition during the present year.

The following extracts from letters and cablegrams received from the mine manager since the commencement of active operations show that the actual developments fully sustain the expectations of the directors:—

Letter dated 10th October, 1888.—"Shaft being sunk west side of the reef; October 6th, down 30 ft. Bucket sample from bottom of this shaft assayed in San Francisco showed $24.75 per ton."

Cablegram dated 19th December, 1888.—"The tunnel is in 500 ft.; cross-cut will be started 22nd December. 'A' shaft timbered 100 ft.; started cross-cut."

Cablegram dated 24th December, 1888.—"'A' shaft cross-cut 24 ft. through the ledge to hanging-wall; assays average $10 per ton."

Cablegram dated 3rd January, 1889.—"Bought drill machinery. Mines are looking well."

Cablegram dated 19th January, 1889.—"35 ft. good paying ore in the tunnel cross-cut; no hanging-wall (reached). The 'A' shaft has reached a depth of 175 ft."

Cablegram dated 30th January, 1889.—"Shaft has reached a depth of 200 ft. Will start cross-cut (second from shaft) 4th February."

Full reports of Messrs. Louis and Macdonald Cameron may be seen at the offices of the Company.

The only contracts entered into (with the exception of current contracts relative to the works now proceeding at the mines, of which applicants for shares will be deemed to have had notice, and the publication of any further specification or particulars of which, or any further compliance as regards which, with Sec. 38 of the Companies' Acts, 1867, they will be considered to have waived, and also to have had notice of all such contracts) are one dated the 5th day of July, 1888, between Mr. John Phillip Lawson of the one part, and Mr. Thomas Roberts Ord as trustee for the Company of the other part, and one dated the 23rd day of July, 1888, and made between John Phillip Lawson of the first part, Thomas Roberts Ord of the second part, and the Company of the third part, which may be seen at the offices of the solicitors to the Company, with copies of the memorandum and the articles of association.

No promotion money has been, or will be, paid.

The prospectus and forms of application may be obtained from the bankers, brokers, or solicitors, and at the offices of the Company.

In case no allotment is made, the deposits will be returned in full, and where a less amount is allotted than applied for, the balance of the deposit will be applied towards payment of the amount due on allotment.

London, February, 1889.

* Mr. Macdonald Cameron states that several samples selected by him from various parts of the lode assayed in San Francisco gave an average result as above.

NOTICE ! ! !

THE PAHANG-KABANG, LIMITED.

SUB-CONCESSION from the PAHANG CORPORATION, LIMITED.

The Public is respectfully informed that the publication of the Prospectus of the above Company is unavoidably postponed until Monday next.

It is, however, confidently hoped that a supply of Prospectuses will be ready by Noon to-day, and may be obtained at the Company's Bankers, The Chartered Bank of India, Australia, and China, Hatton Court, Threadneedle Street, E.C., and the National Bank of Scotland, 37, Nicholas Lane, E.C., or at the Company's Offices, 5, Copthall Buildings, E.C.

Telegraphic Address—
"NICHS," LONDON.

"KAPANGAS."—Those interested in these shares should at once consult Mr. Nicholls. The company has considerable funds in hand to vigorously prosecute the important trials recommended by Capt. Hodge. The balance available for distribution or otherwise at the date of the last balance-sheet (July, 1888) was about £16,000, since which time profits have been earned amounting to about £7,000, so that, after deducting the dividend just paid of 6d. per share (£4,725) from these two amounts, there remains a good round sum. THESE ARE FACTS, AND THE FIGURES CAN BE AUTHENTICATED.

Mr. Nicholls is in a position to afford trustworthy information and advice to intending investors and others in the selection of Mining Shares either for Investment or Speculation. Orders by letter or telegram promptly attended to. Send for Price List.

THOS. THOMPSON,

STOCK AND SHARE DEALER,

ANGEL COURT, LONDON, E.C.

TELEGRAPHIC ADDRESS—"NOSMOTH, LONDON." TELEPHONE No. 509.

Mr. THOMPSON transacts business in all classes of Securities, Bonds (Foreign and Colonial), Banks, Railways, Insurance, Telegraph, Tramway, Gas, Water and all Miscellaneous Shares.

Shares sold at special prices for forward delivery (one, two or three months) on deposit of 20 per cent.

ORDERS BY LETTER OR TELEGRAM PROMPTLY ATTENDED TO.

MR. THOMPSON would suggest to his readers that it appears hardly fair that those taking advantage of the advice contained in this Circular should transact their business through other Brokers. Should the recommendations contained herein prove unprofitable, it is certain that the writer will be blamed, whereas, should they turn out well, he will gain no advantage from those doing their business elsewhere—possibly not even the bare credit of having given good advice.

A BIG BOOM NOW ON.

SHARES AT 15s. GOING TO £4 OR £5.

TETUAN GOLD SHARES HAVE ALREADY COMMENCED TO RISE.

Recommended at 2/3 to 2/9, then at 2/6 to 3/6, then again at 2/9 to 3/9, next at 3/ to 4/, again at 3/3 to 4/3, then at 3/6 to 4/6, afterwards at 3/9 to 5/, next at 4/ to 5/, next again at 4/3 to 5/3, once more at 4/6 to 5/6, then at 5/ to 6/, again at 5/6 to 6/6, next at 5/9 to 6/9, then at 6/ to 7/, next at 6/6 to 7/6, then at 10/ to 11/, and now at 14/ to 16/.

GOING TO £3 OR EVEN £5.

A MINIMUM OF RISK AND A PROSPECT OF A COMPARATIVELY HUGE PROFIT.

Orders should be sent by Telegram to secure full benefit of advance.

THE PRESS.

"Stocks and Shares," January 12th.

"Tatuan Gold shares have risen, and close at 6s. 6d. to 7s. 6d. An enormous demand for these shares has again sprung up from well-informed quarters, and we have the best ground for stating they will rise again within the next day or two. Verb. sap."

"Stocks and Shares," January 19th.

"Tetuans should be good purchases."

"Financial Times," January 12th.

"Tetuan Gold shares are still recommended as likely to have a further considerable rise."

"Financial Times," January 19th.

"Tetuans have been in good demand by investors, and promise to see a considerably higher price."

"Mining World," January 12th.

"Tetuans are thought to be going higher."

"Mining World," January 19th.

"Tetuan Shares.—There has been an active market in these shares this week, and a rise may be expected within the next few days."

"Mining World," January 26th.

"Tetuan shares have had a large rise during the past week, and the general opinion of the market is that they will go much better. Be this so or not, the steadiness of the market at the moment points strongly in the direction of the opinion of the majority. The rise in these shares has been very remarkable since they were first recommended at about half a crown."

"Whitehall Review," January 10th.

"Tetuans (gold) are amongst the foremost. The price will in all probability soon see an advance."

"Pictorial World," January 12th.

"Tetuan Gold shares have been in good demand, and are likely to rise, on account of the good reports from the mines. Their present price is by no means what they are likely to be."

"Pictorial World," January 19th.

"It is gratifying to note that the investment we recently referred to—viz., Tetuan Gold shares—keeps steadily improving, never having gone back in fact. From between two and three shillings they have slowly advanced to from 6s. 6d. to 7s. 6d., at which, their present price, large transactions have been booked. The advance is likely to continue."

"Bullionist," December 29th.

"Tetuans are firm and being inquired for, so that we look for a subst antial aud speedy advance in the quotations for these shares."

"Bullionist," January 19th.

"Tetuan shares are again higher, and though so far they have risen but slowly, it is now to be expected that they will advance with rapid strides. All shares offered have beeu rapidly picked up, and next week it may be expected will bring very different quotations now ruling."

"Stock Exchange," December 29th.

"Tetuans, notwithstanding the holidays, have maintained their price, and have, in fact, been in such demand as to lead to the belief that they will yet command much higher prices. This impression would seem to be fully justified by the prospects of the mine, which are very encouraging."

"Mining Journal," January 26th.

"Tetuans are being bought in anticipation of a further rise."

"Mining World," January 5th.

"The market for Tetuan shares have been very active, aud the firmness of existing quotations points to an advance within the next few days."

"Financial World," January 5th.

"Tetuan.—One of the mysteries of the Mining Market is how the shares of this company, and also other Placer shares, remain at low ebb so long. One explanation, of course, can be found in the mad rush after Witwatersrand shares. Considering the marvellous returns which have been made by other Placer properties, it is, however, difficult to fathom the thick mystery which overhangs the shares of these good properties. With the new year may be expected to be witnessed results unparallcled in the history of mines. Speculators and investors would do well to secure a holding while they are at a low figure. We recommended these some months ago, when they stood only at 2s. 6d., and they have since risen to 6s. 6d. Notwithstanding the rise which has taken place, amounting to over 200 per cent., we venture to assert the rise which is yet to come will prove almost more considerable. The advices from the mines are of the most satisfactory nature, and all those who know the mine best are among the keenest buyers of the shares. The closing price is 6s. 3d. to 6s. 9d."

"Mining News," January 26th.

"It is not surprising to find Tetuans growing stronger. The public are large holders of these shares, and according to latest reports the mine is doing well. We drew attention to these shares when they were selling at 5s. to 6s.; they have nearly doubled in value, but we do not think they have anything like reached their best value."

"Capitalist," January 5th.

"Tetuans continue steady at 6s. 3d. to 7s. 3d., and the price is expected to improve during next week. As regards miscellaneous shares, there is a better feeling all round, the public supporting the market."

"Capitalist," January 19th.

"Tetuan shares are again higher at 7s. to 7s. 6d., and there appears to be every prospect of the price advancing to 10s. within a week."

"Financial News," October 3rd.

"Among the best paying mining properties on the London Market are the Colombian Hydraulic and the Orita, both of which are gravel mines situated in Central America. One result of their success has been the introduction of another hydraulic property in the same part of the world—namely, the Tetuan Gold. If we may rely upon the reports received from the manager, the Tetuan will, before long, also take its place among the dividend-paying list. The manager reports that, exclusive of pockets, gravel is found on the Tetuan worth 40 cents per cubic yard. In California, gravel worth only 5 cents a yard has been worked to a profit, so that, with adequate plant and proper management, the Tetuan should be able to show substantial profits."

"Salon," January.

"Amongst the various mining shares, none perhaps have a better future than the Tetuan Gold shares, which have risen week after week from 2s. 6d. to 7s. 6d., and a further rise is anticipated.

"Financial News," October 16th.

"Tetuan appear to be preparing for a further advance."

"Financial News," November 15th.

"A good demand prevailed for Orita, and Tetuan were also 6d. better, closing at 6s. with a strong tendency."

"London and Brighton," January 10th.

"In coming to the less technical and more practical part of the matter it will be noted that there has been no spasmodic or sudden rushes in the price of Tetuan shares, but, on the contrary, the rise has been of so steady a nature that it has never exceeded 6d. at a time, while it has not been made the subject of any market manipulation. It will not be long, we believe, before they reach 10s., and when they have reached that price the rise is likely to be much more rapid than it has heretofore been."

"Money," January, 12th.

"Tetuan Gold have risen to 6s. 6d. to 7s. 6d., and have again sprung into big demand. A considerable advance is believed to be imminent in these shares."

"Money," January 19th.

"Tetuan gold shares, to which we have directed attention on several occasions, have been largely dealt in, and it is believed they will score a very considerable advance within the next few days. A very favourable telegram has been received, viz., that the gravel will go '30 cents per ton,' a rate which ought to make the company a great success."

"Stock Exchange," January 12th.

"Tetuans are 6d. higher, and close 6s. 6d. to 7s. 6d., with a prospect of a further immediate advance. 10s. is the price talked of for the next fortnight or so, and eventually a much higher figure."

"Stock Exchange," January 19th.

"Tetuan shares have been gradually creeping up, and will go much higher. Report says the further advance will be marked by leaps and bounds."

"Financial Chronicle," January 12th.

"Considering the value of the property, we fail to see any reason why they should not rise to double this figure."

"Court Circular," January 8th.

"Now that the New Year has turned, things speculative have been decidedly more active, especially in mining shares, for which there is a great demand. Tetuans, to which we have before referred, have been largely in request, and can safely be regarded as certain to rise. All the information from the mines is eminently satisfactory, and their present price will, we are assured, be better next week."

"Stock Exchange Times," January 12th.

"Tetuan Gold shares have again come to the fore, and have risen to 6s. 6d. to 7s. 6d., at which price they are being largely bought, and will bring a good profit. We brought these shares under the notice of our readers when at 2s. 6d. They are still good to buy for a considerable advance."

"Mining News," January 12th.

"Tetuans are steady at a slight advance on last week's prices, and there is undoubtedly a strong market for this mine, which will display itself prominently the moment any news of importance is received from the seat of operations."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Money Market Review," December 1st.

"Since the conclusion of the settlement Tetuan Gold shares have again been in demand, and the market presents indications of a further advance. They are still quoted considerably below what is generally considered to he their value."

"Money Market Review," December 8th.

"Tetuan Gold shares continue firm at 5s. 9d., notwithstanding the easier tone of the markets generally."

"Mining Journal," December 8th.

"Amongst other mine shares in the Colonial, Indian and Foreign Markets, Tetuans have kept firm, and bid fair to bear out the market report that the price will go better after the coming account."

"Mining Journal," January 5th.

"Tetuans have heen doing well, and close at 6s. 3d. to 7s. 3d., with good prospects ahead."

"Railway News," November 24th.

"Tetuan Gold shares have again risen, closing at 5s. 9d. to 6s. 9d., at which price they are still in large demand, and certain to bring good profits to those who buy at once."

"Railway News," January 5th.

"Hydraulic companies' shares continue in favour with some investors, and a further advance in Tetuan shares is looked for."

"Life," November 22nd.

"Tetuan Gold shares have risen from 5s. 6d. to 6s. 6d., and are in large demand. There is strong reason to believe that there will be a further considerable advance, the prospects of the mine being very promising."

"Investors' Guardian," December 8th.

"Tetuan Gold shares have been in some demand, and have advanced on the week, closing 5s. 9d. to 6s. 9d."

"Society Herald," January 15th.

"Tetuans have advanced from 6s. 6d. to 7s. 6d., and ere I again have an opportunity of referring to them they will have crossed 8s. The shares are scarce for delivery, and if any of my readers who have bought on my advice are allowing their brokers to lend their shares to 'shorts,' they had better look out, for I am reliably informed that there are not enough shares to 'go round,' and someone is bound to be caught. The Mysore-Harnhalli 'corner' ought to be a warning to people not to sell what they haven't got."

"Financial World," January 19th.

"TETUAN.—These shares have been in active demand again this week, many shares changing hands. From what we hear regarding this property, another rise will take place soon in the price of these shares."

"Financial World," January 26th.

"TETUAN GOLD.—Investors who are not carried away by the South African whirlwind are appreciating the value of these shares, and much steady buying is going on. A very decided rise is noticeable this week, the price closing at 9s. 6d. to 10s. 6d., with a promise of continued advance."

"THE HAWK," January 15th.

"People who like to see their money hatch itself into money, and do not mind waiting during the operation, will not repent the purchase of Tetuan Gold shares at the present low price. Much bigger figures will be the order of the day. I do not think £1 will see the end of their tether by a long way."

"Money Market Review," January 19th.

"Tetuan Gold shares, to which attention has been directed several times of late in these columns, have heen largely dealt in, and are considered likely to rise still further. The closing price is 7s. to 8s."

"Whitehall Review," January 17th.

"We referred in our last issue to the advance in Tetuan Gold shares, and, as this is not the first time we have mentioned them, we are glad to note that our opinion as to their worth has been more than maintained. They have risen several shillings since we first referred to them, and their present quotation, 6s. 6d. to 7s. 6d., is a very low figure compared with what they will be in a week or two. Another good report from the mine similar to last received, and they ought to go up with a bit of a jump."

"Pump Court," January 16th.

"We are glad to bear from those who followed our advice in Tetuans, that they have made a good thing, and are very well satisfied with Mercator as a guide. It is always gratifying to know that our readers profit hy our advice. Last week Tetuans rose again to 6s. 6d., to 7s. 6d., and we predict a still further rise. We repeat our former advice—to those who have, hold; to those who have not, buy."

"Fun's" Little Joke.

"MINE Joke.—In referring to mining shares, a contemporary states—'Tetuan (Gold) are amongst the foremost, and still continue to rise, which rise is pretty sure to be maintained.' The idea of maintaining a rise reads somewhat strangely to us, as our experience has been that it is the individual who is maintainecl by a rise—of salary. We are always open to take a rise out of anything or anybody, and we suppose you must purchase stock if you want to 'take the rise' out of Tetuan gold shares."

PROSPECTUS.

THE Ketchau (Pahang) Corporation, Limited, has been formed to acquire the very valuable mining and other rights granted by concession direct from H.H. the Sultan of Pahang over the entire district of Ketchau, in the State of Pahang, on the eastern side of the Malay Peninsula; to exploit, develop, and work the mines and minerals upon the property; to take on lease, grant, or license any other properties in the State of Pahang, and to carry on the business of planting, and to farm, improve and cultivate the surface of the lands of the corporation from time to time, and further to sell, lease, or otherwise dispose of portions of the property to other companies or individuals.

The concession is for 55 years, and is in favour of Syed Junied bin Omar al-Junied and Syed Mahomed bin Ahmed al-Sagoff, both of Singapore. The rights which it grants extend over an area of about 200 square miles, and the estate is bounded on two sides by rivers, one of which (the Pahang River, which is the principal river of the Malay Peninsula) is navigable from its mouth by steamers, so that the district is in water communication with any port in the world, and particularly is easily accessible from Singapore. The estate is stated to contain numerous and extensive lodes of gold, silver and tin. The surface of the property consists of rich agricultural land, capable of growing tea, coffee, tapioca, tobacco, rattan, and other tropical products. Almost the whole of the estate is covered with timber, much of which is available for mining, building and fuel purposes; in fact, the supplies in this respect may be considered unlimited.

The concession grants the use of all rivers and streams within the districts of Ketchau and its neighbourhood, and all other waters of rivers and streams, for the purposes of the said mining operations, free from all taxes or charges, and also the right to use all the wood for fuel, and all timber, stone, and clay earth required for building, completing aud maintaining the works of the Company. The whole is subject to a royalty of 10 per cent. upon the produce, payable to the Sultan of Pahang.

The climate of the country is stated to be suitable for Europeans (similar, in fact, to that of Singapore).

The mineral resources of Pahang are as yet only in the commencement of proper development. In almost every part of the State, and particularly in the districts adjoining Ketchau, gold and tin have been found to exist. Mr. Skinner, in "The Eastern Geography," says:—"The chief importance of Pahang lies in its mineral wealth, its reputation for gold and tin combined being unrivalled, both for the metals' widespread yield, their quantity and their fineness."

Upon the Ketchau property gold mining has been carried on for some 600 years, the work having been done chiefly by the Chinese and Siamese. Some of the old workings are 400 ft. deep by 300 ft. long and 400 ft. wide, proving the great depth of the lodes on the property. The gold-bearing reefs cross the country from north-east to south-west, the lodes being well-defined, and yielding up to 2 ozs. of gold to the ton. The ore is easily treated, so that the working should not cost more than 10s. per ton of quartz crushed, and estimating the produce of the quartz at only an average of ½ oz. to the ton, a 30-stamp mill would produce a net revenue to the Company for working the gold alone of £22,500 per annum, or about 15 per cent. upon the capital of the Company.

Alluvial gold is also met with over a great portion of the estate, which could be worked on tribute by the natives at considerable additional profit to the Company.

In addition to the gold, however, the deposits of tin existing upon the property should be worked on tribute, and it is estimated that from this source and the cultivation of the surface lands, including the sale of wood, rattan, &c., a large annual profit income would be made. The tin is stated to exist both in lode and stream, and the latter can be separated with very simple appliances constructed on the spot, and it is believed that such quantities of this are immediately available that a considerable income is derivable from this source at once.

The Pahang River, which communicates with the property, is also well suited for trading purposes, and there are a great many small Chinese boats on the river living by trade, profits being made by buying gold, tin, &c. All the materials and produce of the property can be readily transported by water at a cheap rate. An important feature is that as the river runs throughout the whole length of the concession, it will save the cost of constructing main roads upon the property, and not only so, but it provides water-power sufficient to enable the Company to run almost any number of stamps which can be erected for treating the mineral produce.

The property is reported on by Capt. Skewis, of Brentor, Devon (the expert who originally reported upon the property of the Pahang Corporation, Limited), and by Messrs. Henderson and Stuart, consulting engineers.

Capt. Skewis, in his report, says:—"A variety of lodes of tin, silver, gold, and other minerals pass through the concession, and a very considerable number of alluvial deposits of the same minerals, which the natives work at considerable profit, are to be found on the estate. I congratulate you on having secured a property of such magnitude and great value."

Messrs. Henderson and Stuart in their report say:—"You have a large and valuable estate in a new country, with a watercourse throughout its entire length, with old workings scattered through the estate, and with a large and successful estate near you. It is suitable for planting, and has abundance of valuable timber, and by prospecting the gold and tin and opening up the ancient workings, there is certain to be a substantial return for the money carefully invested, besides a large increase in the value of the estate, which is large enough to be resold in portions at a great profit to your Company."

Chinese, Javanese, and Malay labour can be obtained in abundance. Wages vary from $6 to $10 a month.

The price to be paid for the property is £100,000, payable as to the whole amount thereof in shares, or, at the sole option of the directors of the Company, in cash or partly in cash and partly in shares. The vendor, who is the promoter, will pay all expenses down to allotment.

The following contracts have been entered into, viz:—Contract dated 22nd January, 1889, and made between Syed Junied bin Omar al-Junied and Syed Mahomed bin Ahmed al-Sagoff of the one part and Joseph Cumming Bates of the other part. Contract dated 28th January, 1889, and made between Joseph Cumming Bates of the one part, and William Richard May, as trustee for the Company, of the other part. These contracts, or copies of them, together with a copy of a translation of the concession, the memorandum and articles of association, Capt. Skewis's report, Messrs. Henderson and Stuart's report, and a plan of the property, can be seen at the office of the solicitor of the Company. It is believed that no other contracts within section 38 of the Companies Act, 1868, exist, but in order to avoid any question upon this point subscribers shall be deemed to waive all right to any further notice of contracts, and applications for shares will be received only on this condition.

The statements in this prospectus are entirely taken from documents, reports and plans submitted to the directors, and open to the inspection of any intending applicant for shares.

Applications for shares should be made on the form accompanying the prospectus, to be forwarded to the Company's bankers, or to the brokers, accompanied by a remittance for the amount of the deposit. Prospectuses and forms of application may be obtained from the Company's bankers, brokers, solicitor, or secretary.

Telegraphic Address—

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

SOUTH AFRICANS AGAIN TO THE FORE, BUT HATTON GARDEN FAILS TO SUPPORT ITS PETS—BIG BUSINESS IN INDIANS — COPPER SHARES UNSTEADY — FOREIGN SHARES IN DEMAND.

South African mines have again been in the asceudant. New companies have come out almost daily, though it is shrewdly suspected by the public, who have really been given no time to examine the prospectuses, that they are syndicated, and that the idea is to inducc them hereafter to come in at a premium. Whatever the public do, they should be very careful about touching companies that have no registered office iu London, where the transfer business can be conducted in an approved fashion. Stress is laid upon this in an article we devote in our present impression to the Randt companies. Some attention has been excited during the week by properties hailing from Swazieland, and it is asserted that the De Kaap district is coming to the front. Investors should not be too anxious to buy shares of miues in the De Kaap district at par, which probably a little later on they will be able to get at a thumping discount.

The general tenour of the South African market has been to decline. With two or three exceptions there has been a marked fall —notably in Salisburys. This is directly the reverse of what took place last week, when African shares were all up. Hatton Garden must be chid for not supporting its pets with the same paternal care as that hitherto manifested. Diamond shares have been quiet.

A big business has been done in Indian Gold Mines, and no wonder, seeing the splendid crushings that have come from Mysore and Ooregum. Shares are in good demand, and there is likely to be a better market as time goes on.

There has also been a move in Australian mines, which are certainly very low in priee, but have this week manifested firmness.

Copper shares have been shaky, Rio Tintos especially, and Panulcillos have been pressed for sale. The market for copper has been somewhat unsteady. We give the views of M. Secrétan in another column.

Foreign mines have been in good demand, notably Tetuan, which at one time advanced to 17s., but close at 14s. to 15s. to-night. Market opinion is still favourable to these shares. The Hydraulic mines generally have been purchased, notably Colombian and Orita. Montanas, after being stroug, showed unsteadiness, and relapsed, and Pahaug Corporation Shares have lost a eonsiderable part of their late remarkable rise. There has been a good deal of business iu La Luz, and market opinion is most hopeful as to the prospeet of a substantial rise iu the shares. From Victory the news comes that the stamps are ready, and a satisfaetory state of things in the bottom of the Don Pedro shaft has caused a substantial rise iu the shares. There is another favourable telegram from New Emma, but the shares have not moved upon it. Cheap shares generally have been in demand. Amongst these, considering the excellent prospects of the undertaking, Moruyas deserve to rank. The opinion of the brokers is that they will go higher.

Home mines have. as usual, been featureless. In regard to what we said last week about Wheal Owles we are glad to find ourselves in unison with several Western papers. They are of the opinion that the proceedings of the management were extremely high-handed.

Africans.

There has, on the whole been more business done this week than ever; but it is a eertain fact that the public are takiug profits, and therefore prices cannot be maintained. We have repeatedly advised holders of the higher prieed shares to realise and invest iu properties that have not as yet been so much iuflated. The following have risen :—Horo Exploration, $\frac{5}{16}$; Bankets, $\frac{1}{4}$; City and Suburban, 40s.; Durban Roodepoort, $\frac{7}{8}$; Luipaard's Vlei, $\frac{1}{8}$; Mays, $\frac{1}{2}$; Nabob, $\frac{5}{8}$; Simmer and Jaek, $\frac{1}{4}$; and Wemmer's, $\frac{1}{4}$; whilst Imperials have fallen $\frac{1}{8}$; Orientals, $\frac{1}{8}$; Pigg's Peak, $\frac{5}{16}$; Republics, 6d.; Sheba, $\frac{1}{16}$; Thomas ordinary and preference shares, $\frac{1}{8}$; Johannesburg Waterworks, $\frac{5}{16}$; Moodies, partly paid, $\frac{1}{8}$; and fully paid, $\frac{1}{16}$; Bantjes, $\frac{1}{8}$; Blackreef, $\frac{1}{2}$; Bothas, $\frac{3}{16}$; Central Langlaagtes, $\frac{1}{4}$; Cornucopia, $\frac{3}{16}$; Dournkop, $\frac{3}{16}$; De Villiers (Robinson's), 1; Evelyns, 1; Geldenhuis, $\frac{1}{2}$; Goldfields of South Africa, $\frac{1}{16}$; Golden Kopje, $\frac{1}{4}$; Great Britain, 1s.; Henry Nourse, $\frac{1}{2}$; Johannesberg, Pioneer, $1\frac{1}{2}$; Jubilee, $1\frac{1}{2}$; Knight's, $\frac{5}{16}$; Mainreef, $\frac{5}{8}$; Modderfontein, $\frac{1}{8}$; Morkel, $\frac{3}{8}$; Moss Rose, $\frac{5}{8}$; Oosthuizen, $\frac{1}{2}$; Royals, 1; Salisbury, 4; Spes Bona, 1; Stanhope, $\frac{3}{4}$; Star, $\frac{1}{4}$; Van Ryn, $\frac{7}{16}$; Vogelstruis, $\frac{5}{8}$; Wolhuters, $\frac{1}{8}$.

The closing prices are as follows :—

Wemmers	15¼	—	15½
Wolhuters	4¾	—	5

Diamonds.

The market for diamond shares opened at the commencement of the week with a decidedly weak tendency. Buyers coming in, however, prices improved considerably, but leave off this evening very little firmer than on last Friday. The following shares have risen: Anglo-African, ⅛; New Jagersfontein, ¼; United ⅛; while De Beers have fallen ⅛; New Consolidated, 1s.; London and Orange Free State Exploration, 25s.; London and South African Exploration ¼; and Read's Drift, ¼. The prices close as follows:—

Anglo African	4⅜	—	4⅝
Bultfontein, new shares—	4¼	—	4⅜
Central Dorsfontein	8	—	10
De Beers Consolidated	17	—	17⅛xd
Gordon Diamond	19/	—	21/
Griqualand West	6⅜	—	6½
New Consolidated	22/	—	24/
New Jagersfontein	14¾	—	15¼
South African (Pullinger)	16/	—	17/
Spes Bona (Bultfontein)	6/6	—	7/6
United	2½	—	2⅝
United Jagersfontein	18/	—	19/
London and Orange Free State Explor.	5½	—	5¾
London and South African Exploration	16½	—	16¾ x rights xd
Read's Drift Land Co.	2	—	2½

Indians.

We have repeatedly advised a purchase of these shares and only last week we stated that there was "every prospect of higher prices ere long." This week there has been a decided improvement all round, and from what we hear direct from India there is every reason to expect a good rise in all shares on the main lodes of the Colar district. The following have risen:—Balaghat (fully paid), 1/16; Devala Moyar, 6d.; Goldfields, 1/16; Mysore Gold, ⅛; Ooregum Preference, ⅛; whilst Nundydroogs have fallen ⅛, and South East Mysore, 1s.

Foreign Shares.

A considerable amount of business has been doing in several of the foreign shares this week, and consequently prices have risen. Attention has been chiefly directed to Don Pedro, Orita, Tetuan and Victory, many thousands of shares changing hands. The following show a rise:—Coromandel, 6d.; Don Pedro, 5/16; New California, 6d.; Orita, ⅛; Tetuan, 3s. 6d.; Victory, 1s. 6d.; whilst a fall is shown in Barretts of 6d.; Callao Bis, 1s.; Carlisle, 6d.; Colombian, 1/16; Dickens Custer, 6d.; El Callao, ¼; Empire, 2s.; Montana, ⅛; Palmarejo, 6d.; Venezuelan Austin, ⅛; and Viso, 1s.

Australians.

There has been but very little doing in these shares, the chief attraction being Etheridge United, some thousands of whose shares have changed hands. Prices, however, remain very much the same as when last quoted, the only exception being a rise of 1s. each in Cumberland, Day Dawn Block, and Mosman; other shares remain without change.

Copper.

A great deal of speculative business has been transacted in the leading Copper shares since last we wrote, and in consequence the market has seen many ups and downs, the latter, however, preponderating, as the following prices will show:—Capes have fallen ¼, Copiapo, ⅜; Libiola, ⅝; Mason and Barry, ⅜; Panulcillo, ¼; Quebrada, ¼; and Rio Tinto, 20s., while there is not a single rise to note.

The following list shows the principal changes in the mine which have taken place:—

	Last Week.		This Week.	
Cook's Kitchen	11¼	11¾	11½	12
Dolcoath	102½	103½	103	104

LATEST FROM THE MINES.

Indian Mines.

Balaghat-Mysore.—Cable from Mr. A. S. B. Oakley:—"Crushing, January, 103 tons quartz, 196 ozs. gold. During the first fortnight only five heads working, owing to repairs to mill."

Indian Consolidated.—A telegram from the Colar section of the property announces that during the month of January 215 tons of quartz were crushed which yielded 115 ozs. of gold.

Mysore.—Telegram, dated 6th February, gives last month's return of gold as follows:—"2,066 tons of quartz produced 2,193 ozs. of gold, also 153 ozs. obtained from tailings.

Nine Reefs.—The secretary reports the receipt of a telegram from Capt. Bennetts, stating that the result of the clean-up for the month of January is 130 ozs. of gold.

Nundydroog.—Telegram, dated 6th February, gives last month's return of gold as follows:—"370 tons of quartz produced 581 ozs. of gold."

Ooregum.—The directors have sold the gold obtained in the month of December, which realised 2,829*l*. 13s. A telegram, dated February 4th, gives last month's return of gold as follows:—"454 tons of quartz produced 839 ozs. of gold."

Colonial Mines.

Cumberland.—With regard to January there was no crushing, but 20 heads of stamps will start work on 18th February.

Day Dawn Block and Wyndham.—The result of the crushing for the fortnight ending 2nd inst. is as follows:—309 tons crushed; yield of gold 496 ozs.; approx. value, 1,720*l*.; fortnight's expenses, 1,250*l*.; 15 head of stamps only.

Day Dawn P.C.—The following cablegram gives the result of this company's crushing for the fortnight ending February 2nd, viz.:—"880 tons, 710 ozs." (Estimated value, 2,414*l*.) "Had to crush a quantity of inferior quality stone."

Durham and Lord Byron Amalgamated.—The following cable from the manager at the mines, dated Georgetown, February 4th:—"Cleaned up February 1st, 412 ozs."

MOUNT ALBION.—Telegram from the manager :—"To 24th January, ore raised, 890 tons, containiug 43,000 ozs. silver. Ore smelted, 570 tons, producing 108 tons silver-lead bullion, containing 26,000 ozs. silver. Shipped per Taroba, 61 tons silver-lead bullion, containing 18,000 ozs. silver."

NO. 2 QUEEN GOLD.—Cablegram from the mine, dated Charters Towers, 5th February :—"During the month of January, 800 tons crushed for the public ; 98 tons for company, 52 ozs. gold. No grindings."

FOREIGN MINES.

ANGLO-MEXICAN.—From advices just received from the mine, the superintendent reports that for the month ending January 20th the output is $66,520.

COLOMBIAN HYDRAULIC.—A dividend of 1s. per share has been declared payable on the 26th inst.

DON PEDRO.—Telegram, dated Marianna, 4th February :—"Down to 50 fm. cross-cut roof ; will get on the floor most likely in a few days ; progressing favourably."

HOOVER HILL.—The secretary has just received the following cable from the mine : "191 ozs. shipped."—PARKIN.

LA LUZ.—Cable received from the superintendent at the mines : "Am well pleased with the property, which is very extensive, and qnite sufficient for two or three companies to work well. Impossible for one company to work this vast property all at once."

LA TRINIDAD.—Cablegram from Mr. Harvey, the general manager :—"Shipped on 28th January 12 silver bars, of the value of $17,290. The first and second class concentrates have been treated. The mill has run 20 days only, caused by strike of miners. The result is 24 bars, inclusive of last shipment. Stores have been opened, and cash will be paid to Mexicans every Tuesday. Believe this will bring all the miners wanted. Hope we will now be able to run 30 days steadily."

MESQUITAL DEL ORO.—The following cablegrams have been received from the mine :—"Fifteen stamps ran 577 hours (Jannary). Quantity of ore crushed was 429 tons. Bullion produced at clean up, 319 ozs. Sans holed 190. Mine much improved, 85 and Acerada."

ROCKY BAR WIDE WEST.—Cablegram from the mine :—"For month of January, mined and milled 550 tons, yielding 308 ozs. bar gold. Estimate reduction in expenses and addition in output February." The estimated value of this bullion is $4,650.

UNITED MEXICAN.—Telegram : "Gross returns, San Cayetano property, week ending 2nd February, $8,300 ; net returns San Cayetano property, week ending 26th January, $3,150 ; gross returns El Cubo property, week ending 2nd February, $1,110 ; Loss El Cubo property, week ending 26th January, $4,730. Decline only temporary ; mine of Santa Monica remains unchanged."

VENEZUELAN-AUSTIN.—A telegram has been received from the mining superintendent in Venezuela :—"Total tons crushed is 1,780 ; gross yield being 1,350 ozs. Mill working 17 days ; average nnmber of stamps at work is 38."

VICTORY.—Cablegram from Mr. Larchin : "The mine continues to improve. Shall be working with five stamps by next week."

HOME MINES.

TOLGULLOW UNITED.—It has been decided to wind up this company, and sell the machiuery.

REDRUTH.—At Redruth tin ticketing yesterday 176 tons realised 9,836*l*. The Penpoll Company were the largest purchasers, securing 48 tons. The average price, omitting secondary parcels, was about 56*l*. 10s., a slight improvement on last sale.

FOR LATEST PRICES
AND ALL PARTICULARS OF FOREIGN AND HOME MINES
SEE PAGES 228 AND 229.

METALS.

COPPER has been dull. The market for G.M.C. has been steady, the syndicate brokers being buyers at 77*l*. 10s. cash. Small business for various February prompts from 78*l*. to 77*l*. 15s., closing sellers at the lower price. 100 tons cash done to-day at 77*l*. 10s. Forward prompts almost nominal. Sellers for March at 77*l*. ; three months, sellers, 72*l*. ; buyers, 70*l*. All the year, sellers' option, 62*l*. One sale for 17th April made at 74*l*. We quote English tough at 78*l*. to 80*l*. Best selected, 79*l*. to 81*l*. Strong sheets, 82*l*. India sheets, 79*l*. to 80*l*. Yellow metal sheets, 7d. to 7¼d. Ore, regulus, &c., 13s. to 16s. per unit.

TIN has been irregular. Straits falling from 98*l*. 5s. to 96*l*. 15s. improving to 97*l*. 2s. 6d., and falling again to 96*l*. cash, closing at 95*l*. 12s. 6d. cash, three months about 15s. over cash. Australian, 5s. to 7s. 6d. more than Straits. The Dutch market has been firm. Banca quoted 58½fl., to 58¾fl. ; and Billiton, 58¼fl. to 58½fl. ; English ingots were put up to 101*l*., but have declined to 99*l*.

TIN PLATES are easier to buy, and quoted 13s., 13s. 3d. for ordinary coke, Liverpool. The stocks are 299,485 boxes, against 308,461 boxes last month.

SPELTER quiet. 17*l*. 17s. 6d. sellers for ordinary brands, ex ship here.

SHEET ZINC. Of 120 tons in public sale yesterday, 45 tons sold at 19*l*. 15s.

LEAD has been dull. Soft Spanish sellers, 12*l*. 17s. 6d. ; soft English, 13*l*., 13*l*. 5s. ; L.B., 14*l*. net at the works.

Wolverhampton and Staffordshire Bank	—	bonus 2s. 6d. per share.
Weymouth and Portland Railway	98*l*.	4*l*. 9s. per cent.

THE MONTANA CO., LIMITED.

MONTHLY RETURN.

THE secretary of the Montana Company, Limited, begs to state that the following information has been received by cablegram from the resident director at the mine :—Total weight of ore crushed during January, 6,725 tons ; yield from the three mills, $100,500 ; working expenses for the month, $54,000. Hoisting machinery working satisfactorily at both shafts.

MINERS ENTOMBED SINCE TUESDAY.—Although nearly 50 men are continuously engaged night and day in endeavouring to release their comrades, John Rule and William Bant, who have been buried since Tuesday beneath a mass of fallen débris in Drakewalls Mine, they had not succeeded in reaching them up to a late hour on Thursday evening. Knocking was heard as late as noon on the same day, so that hopes are entertained that both men are still alive, although it is feared that they are suffering from want of food and water.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (6th Feb.)—The lode iu the 40-fm. level east is from 4 to 5 ft. wide, and will produce 6 tons of good ore per fm. The several stopes in the back of same level are producing their usual quantities of tin and copper ores. Cook's stopes will produce 10 tons of mixed ores per fm. In the 40-fm. level west of junction the lode produces from 3 to 4 tons of mixed ore per fm. In the same level east of junction the lode produces 6 tons per fm. The large lode in bottom of the 30 recently opened on, produces a large quantity of arsenical mundic, together with some rich copper ore, and has a very promising appearauce for the future.—T. Gregory.

BLUE HILLS.—The important improvement in the 66-fm. level recently reported continues, aud it is satisfactory to observe extends also to the 66-fm. level east, fast approaching East Blue Hills boundary. Special and late information states that the lode in the eastern end is looking most promising, being now 1½ ft. wide, containing good stones of tin, with a very encouraging appearance.

BULLER AND BASSET (5th Feb.)—Copper Hill main shaft: The shaftmeu are making very fair progress with the clearage of the 84-fm. level; the distance cleared during the week is 5 fms. We hope to get through the present choke very quickly, when we shall ascertain more of the nature and quality of the lode. Machinery: The machinery is iu the usual good working order.—J. H. James.

D'ERESBY.—The No. 9 north of Gors shaft is still opening very well. Should this great lode change into lead altogether, which it may do at any time, especially as it is on the junction of two great lodes, it will be one of the richest mines in North Wales. A course of lead 12 ft. wide may seem too much to hope for, and yet such a thing has happened many times under similar conditions. In the south end at No. 9 they are cross-cutting to the line of No. 2 sump, which is on the foot-wall of the lode, and there may be 2 or 3 fms. to drive; but lead is expected in the cross-cut every day. There is no change reported in the other points.

DRAKEWALLS (7th Feb.)—There is no important change to notice in either of the drivages at the bottom of the 147-fm. levels, owing to a breakage of one of the plates in connection with the main pumping rod; this has been repaired, and we hope to get the water pumped out from the bottom of the mine by the end of the week. In the 132 driving east the lode continues hard for exploration, and does not contain a sufficieut quantity of mineral to be of any marketable value. In the 132 west of engine shaft the lode has a very promising appearance, and continues to yield 4 tons of copper and mundic ore per fm. The lode in stoping the north side of the drivage at the 132 west is of a very promising character; it is composed of strong capel, aud will produce 7 tons of copper and mundic ores per fm. We have put the new calciuer to work, which, I am pleased to say, is working exceedingly well. We are taking out foundations and have commenced building another set of chambers and flues for the arsenic. All other surface work is being pushed on well. At the sampling to-morrow we shall sample computed 75 tons of copper ore. —H. Rodda.

EAST BLUE HILLS.—The lode in the 30-fm. level west is increasiug in size, and maintains its value, as also do the stopes in the back of the level. The improvement in the 66-fm. level east in Blue Hills is of great importance for this mine. A general meeting will be held next week, when no call will be required.

EAST GRASSINGTON.—Manager's report, dated 6th February:—East shaft: The lode in the 47-fm. level west is passing through the same nip seeu in the levels above at the corresponding distance from the shaft, and immediately west of which is the eastern end of No. 3 ore body, exteuding westward for a considerable distance towards the heave, aud now rich iu the drivages east and west of No. 3 sump. In a few feet further driving we hope to reach this ore ground, and also drain the sump. A stope in back of this level yieldiug 8 cwt. of lead ore per fm. In the intermediate level west of No. 2 sump below Auty's workings the lode continues to open out most satisfactorily, and is to-day 2½ ft. wide, easy for progress, the filling matter being soft lime, spar and gossan, intermixed with boulders of blue and grey lead ores, worth 20 cwt. per fm. An eucouraging feature is this run of ore ground, extendiug westward considerably further than anything seen in either of the upper levels. The lode in the same level east is 2 ft. wide; somewhat spare for progress, yielding 14 cwt. of lead ore per fm. In this drivage west of No. 3 sump the lode continues in two divisions; the house of lime rock appears to be gradually thinning out, and the main leader is carrying a solid branch of blue lead ore, worth 35 cwt. per fm. In the same level cast the lode has slightly improved, and worth 10 cwt. of lead ore per fm. A stope in back of the 37-fm. level in a lode 2 ft. wide, aud worth 10 cwt. of lead ore per fm. Harris main engine shaft: Taking in consideration the extreme hardness of the couutry rock, excellent progress is being made in sinking this shaft; now down 17 ft. below the 37-fm. level. On surface the pumpiug connections with this shaft have been completed, also the bob-pit at east shaft, and are now fixing the T bob; and the pulleys and flat-rods, and the rest of the pit work, will be proceeded with as fast as received from the foundry. The machinery throughout the mine is in excellent order, and working smoothly. We weighed off a parcel of smelted lead last week, and will commence smelting agaiu early next week.

ECTON (6th Feb.)—At Swanslow the north cross-cut is making fair progress, but is not yet far enough to cut the lode, the end lets out a little water. Clayton 80 west still carries strong spar in the end, but is dry and tight, we have cut the second saddle without any increase in the ore; the next saddle is the most important one. In water bank we are sinking on the lode, and so far find the ores are stronger as we go down, especially the blende. Next week I propose to move the men and put them to drive a new cross-cut to the lode from the 45-fm. level, over the top of the black winze, where I expect to find the lode richer, as there is a short cross vein there which should feed it, it will be only some 3 fms. to cross-cut to the lode. Yesterday aud to-day we are pumping in Clayton, it being more than a month siuce the pumps were worked, and I am wishful to keep them in working order, as well as prevent the water rising to do any damage to the lower levels. Taking advantage of having steam up I have sent all our miners into Clayton for the two days to make good examination of the ore we cut at the 110 just before stoppiug the engines; so far as we can see the pocket of ore is very good, my great fear is that it may dip away to the west, in which case it would come into an exhausted stope, if it should dip north and east there is pleuty of whole ground for a good large body.—A. Ludlam.

GREAT FORTUNE.—The winze referred to last week is opening up good stoping ground, which will increase the returns. Preparations are being made for the drainage of the 10-fm. level, as stated last week.

HOLWAY UNITED (5th Feb.)—The 70 east we have more favourable ground coming in the foot of the forebreast here, composed of thin beds of rock wherein are laces of lead ore. The 60 level No. 2 west of level engine is opening small cavities containing blende and looking very likely to open into a strong course of blende again. The 80-level, No. 3 west of Roskell's is producing good lead and blende, and looks likely to further improve. Roskell's shaft: We are busy raising the column to remove the working barrel therefrom.—H. Hotchkiss.

MARKE VALLEY (7th Feb.)—Since eompleting the cutting of plat at the 84, the men have been engaged in casiug and dividing the shaft from the 60 down, and we hope by the middle of another week to have got the ground penthouse at the latter level taken out and the shaft cleared for hauling from the bottom, this will cause some little delay in drawing from the upper levels, but no effort will be spared to make that as short as possible. The different ends and stopes, as reported at the last meeting, are being continued, and we see no change in either of the bargains requiring special remark to-day.—W. George.

MID-DEVON (2nd Feb.)—Surface: The pumping wheel is now workiug satisfactorily, and kept as near as possible to five revolutions per minute, which is slowly draining water from A shaft. A shaft: The 80 bucket has been connected to shaft rod, and water is now 12 ft. below the 80. C shaft: The 60 east has been driven by niue men 1 fm. 2 ft.; total distance from shaft, 25 fms. 3 ft. 6 ins. The strata is rather hard, but very congenial, chiefly capel with intervening veins of garnet, chlorite, axinite, quartz, and in places copper ore in saving quantities. The 50 east: No. 2 and 3 stopes and extreme point of drivage worked on by six, six, and two men are respectively worth 10*l*., 15*l*., aud 9*l*. per cubic fm. for copper ore. The latter has slightly declined, but retains promising features.—J. Neill.

PHŒNIX UNITED (5th Feb.)—At the close of the setting report the manager states: We have at various points throughout the mine 14 pitches, at tributes varying from 7s. 6d. to 11s. iu the £ for tin.

PRINCE OF WALES.—The sinking of the shaft below the 155-fm. level is now goiug down on the course of both the flat aud main lodes, which, according to the latest report, is described as one compact well-defined lode 12 ft. wide, producing saviug work for the stamps. aud showing every indication of improving as they sink. All the other points present the same favourable appearance.

PRINCE ROYAL.—The work of clearing the adit level is proceeding satisfactorily, but necessarily requires some time before the machinery will be ready for pumping. The general meeting will be held next week, when full details will be given.

ROMAN GRAVELS (7th Feb.)—We have been through the underground workings to-day, but have nothing new to report from the principal points under operation. In the 135 south, as stated a few days ago, we have good reason for believing that a good bunch of ore is being passed over. A rich branch is to be seen along the foot of the drivage, which only rises up the forebreast for 12 to 18 ins. The main footwall portion has not been seen further south thau in the stopes, and since we are of opinion that it carries the main deposit (as was the case at the level above) the drivage is being inclined to the west for the purpose of reaching it as soon as possible. A rich run of ore was found at the 125 over head, and in advance of the present 135 forebreast, so that there cannot be any reason to doubt but that a good bunch will be met with at the latter level also. The stopes in the back of this level are without material change since last week. At the 125 south we have passed through a nice branch of lead ore and blende, but the drivage will be continued in its present direction till the footwall be reached. The stopes in back of this level are just as when last reported. There is no change in the drivage at the 110 south. The stopes in back of the level are producing their usual quantity of lead ore. The lode at the 110 north of old shaft is about 3 ft. wide, carrying a nice branch of lead ore, worth quite 1 ton a fm. The 80 north-west on caunter is also worth 1 ton of lead ore a fm. We are getting everythiug in readiness for changing the pit work in main shaft as fast as circumstances will permit. Our carriers are bringing up the pumps from Minsterley Station day by day, and as soon as the new pit work arrives we shall be ready to proceed.—A. Waters and Son.

RUSSELL UNITED (6th Feb.)—It is very pleasing to report, after so many delays, that the water has been drained to the 80, and that shortly after the driving west was resumed an improvement in the lode was met with; since then the end has been driven 4 fms.; worth 5*l*. per fm. The leading part is more than 2 ft. wide, producing 20 lbs. of tin to the ton, and with a strong capel by the side is better defined, and looks more promising for continuance than I have before seen in the mine. By extending the cross-cut at this level 6 fms. further south we have intersected another lode 2 ft. wide, composed of mundic and capels in which we find good traces of tin. But while this may possibly be a part branched off from the south lode, as seen in the 67, we did not consider it to be what we were driving for, and therefore decided on continuing the drivage further, resulting, it is now thought, in our just pricking into the main part. Although not yet far enough to admit of an opinion being formed of what it is likely to be, but when cut through it shall be duly reported upon. I am also pleased to report that the machinery continues to work very satisfactorily.—W. George.

SOUTH CONDURROW (6th Feb.)—We are urging on the sinking of Marshall's shaft below the 108-fm. level. The lode iu the 108 end west is worth 6*l*. per fm.; the rise in the back of this level is worth 6*l*. per fm. The 93 east of Kiug's is worth 7*l*. per fm. The back of the 80 east is worth 7*l*. per fm. The stopes in the back of the 70 on the north part of the lode is worth 18*l*. per fm. The stope in the back of the 60 is worth 12*l*. per fm. The 50 end east is worth 12*l*. per fm. The stope in the back of this level is worth 15*l*. per fm. The 40 end east yields low quality tinstone. Two stopes in the back of the 40 are worth 10*l*. per fm.—W. Rich, W. Williams, H. King.

SOUTH DARREN (7th Feb.)—The 142 end east contains spots of lead and copper, but not to value. The 142 end west continues worth 15 cwt. of silver-lead ore per fm. One stope in this level is worth 12 cwt. of silver-lead, with a mixture of copper. Auother stope in this level is worth 15 cwt. of silver-lead. The 110 end east contains a small branch of lead. The stope in this level is worth 10 cwt. of

silver-lead ore. The 100 end west is still in a large lode, with a good mixture of lead and copper throughout. Two stopes in this level are worth 12 cwt. of lead and 12 cwt. of copper each.—J. Mitchell.

TIN ERA (5th Feb.)—We continue to force on the deep adit cross-cut north as fast as possible, but there is no change to report this week. The ventilating machinery still goes satisfactorily, and shall shortly require additional air-pipes.—R. Knott.

TREGEMBO (6th Feb.)—The plat is nearly completed in the 42 at Pennick's. We expect to open up a good piece of tinny ground both east and west of said shaft quickly. We are preparing pit-work to sink the sump shaft next month. The 42 east of sump is worth 5*l*. 10s. per fm. Two stopes in the back of said level are worth together 11*l*. per fm. The 42 west end looks more promising. No other changes in the bargains.—T. Hodge.

WEARDALE.—Ore dressing interfered with by snowstorm. Ore raised for the week, 65 tons; ore dressed for the week, 94 tons; ore, &c., smelted for the week, 158 tons, producing 76 tons of pig lead.

WEST GODOLPHIN (6th Feb.)—We are making very fair progress in sinking the engine shaft. No change in the rock worthy of note. In the ends there is nothing new to note.—T. Hodge.

WHEAL CREBOR.—The ore discovered at the 200-fm. level is increasing as the level is driven, and although not yet of much value is producing saving work, particularly in the western end. In the eastern end the lode is more productive for mundic. The agent considers this to be an important feature. The lode in the 170 west is also presenting a most favourable appearance, and from its increasing size and present kindly constituents the agent is expecting from that point an early improvement for copper ore. The monthly produce of both copper ore and mundic is fairly maintained.

WHEAL GRENVILLE (7th Feb.)—The water is now 2 fms. below the 165-fm. level, and forking satisfactorily. We are now draining a long pool. I have nothing new in the bargains to report.—T. Hodge.

WHEAL METAL AND FLOW.—The Metal lode is improving, producing tinstuff worth 28 lbs. of tin to the ton. The tin is reported to be disseminated throughout the lode and going east towards the old tin ground, which was so enormously rich in past years. The operations for the increase of water in the Flow are being continued, and better stuff is now being produced from it.

WHEAL UNY.—The lode in the 180-fm. east maintains its value, from which good tinstuff is now being raised. All other points present the same favourable appearance as last reported. A parcel of tin will be sold in a day or two.

FOREIGN MINING INTELLIGENCE.

BRATSBERG (28th Jan.)—Hoffnung Mine: No. 2 adit level is yielding about 1 ton per fm.; the lode in the rise in the back of this level is now worth 1 ton per fm.; rising here will be suspended for a time. The winze in the bottom of No. 2 adit level is producing 1½ tons per fm. We are pleased to notice a gradual improvement in the lode at No. 3 adit level, now worth 1½ ton per fm.; the rise in the back of this level is unproductive. At the mid-level at Ball's shaft the lode is yielding ½ ton per fm.; its general appearance encourages us to hope that the recent falling off in the produce at this point will be only temporary. No. 4 is worth ½ ton per fm.; good progress is being made in driving here. No. 5 level west is yielding about ½ ton per fm. The lode looks exceedingly well, and it is surprising it does not make more ore. But little has been made in driving No. 5 level east on account of re-arranging the tramroad, hence there is no change to notice in the lode. The mid level at Murchison's is worth ¾ ton per fm., whilst the rise in the shallow workings is unproductive; 86 mines are employed. Johannes Mine: During the past month the cross-cut has been driven 13.75 metres, highly mineralised branches are still being met with. The winze on the lode from the shallow workings was sunk only 3.30 metres during the past month. Ten miners are employed here. Næsmark Mine: Barker's shaft was sunk during the past month 6.30 metres; the lode is unchanged since last report. During January month we estimate that 160 tons 20 per cent. ore was mined.—J. D. Holman.

CALLAO BIS (Jan. 10th).—Unda shaft: The cross-cut driving north in the 250-ft. level has been driven 15 ft.; total from level, 25 ft. We have, and are still in small seams of quartz, which seem to belong to some lode matter. The water, which before was coming from the end of No. 2 level, is almost wholly drained by this drivage, and for this reason I have decided to continue driving on a little further. In No. 1, or 200-ft. level, I have driven on a small seam of quartz, 7 ft. This seam was first seen in the shaft, and continued down to this level; and I find in this drivage it begins to open out larger, with a little colour in the mineral; it is now 9 ins. thick. Sosa-y-Mendez: The cross-cut has been driven 16 ft., making a total of 100 ft. Nothing has been met with since we cut through the quartz, and I have stopped the cross-cutting for the time, and starting to drive on the quartz. 4 ft. has been driven, all in solid quartz, of about 6 to 8 ft. thick.—G. W. Eustice.

CARLISLE.—Cablegram received from the manager:—"During January the mill worked 27 days, and the yield was as follows:—Bullion, $18,200; concentrates, &c., $600; total, $18,800. The working expenses for the month were $14,500."

— (8th Jan).—Report for December—Mill: Lost time during month is due to general repairs and also to repairing mill engine, which has not been thoroughly overhauled for several months. Mine: First level—We have timbered this level for about 30 ft. east and 50 ft. west of main shaft, and have prepared the stopes for the speedy extraction of ore. The ore is fair grade averaging about $6 per ton in gold, silver, being very free milling. We have continued stoping both east and west in No. 1 Discovery winze below point marked X, the increased mill run being due entirely to ore extracted there, which will average $8 to $10 per ton, and is also very free milling. We have been removing caved ground and débris around No. 2 winze above this level, thus exposing a large body of very fair grade ore left standing in F.W. of lode by old company, which we hope to begin stoping during latter part of month. We have sunk a winze half-way between No. 2 and 3 winzes on 1st level, connecting same with main stopes below; this has been all the way in low-grade ore, with the exception of a few feet. 2nd level: During the early part of the month we cleared out all the ore broken, and again filled the stopes. Stoping will commence here again to-morrow, or the day after. 3rd level; Two men have been stoping the block of ground standing east of No. 4 Winze, the ore averaging $4 to $6 per ton. No work has been done in the east end of these stopes, the ore being of two low grade. 4th level: With the exception of driving a few feet eastwardly, with no improvement to report, no work has been done during the month. Concentrates: Hereafter I shall ship all concentrates as fast as produced. I am endeavouring to obtain better prices and rates for them, but so far with little success.—J. H. Longmaid.

CHONTALES.—The directors have received advices from their manager, via New York, dated 4th January, who reports:—The Consnelito main level was driven during the past month 9 varas, and rise put up 6 varas; the ground in the rise at present is a little better for progress, but there is no other change in the mine to notice.

COLAR CENTRAL (15th Jan.)—Low's engine shaft: The 200 east cross-cut has been driven 11 ft.; total distance from shaft, 126½ ft. No change here of any importance to note; ground still hard and breaks very short in blasting. The 200-ft. north drive from cross-cut east has been driven 8 ft. from the cross-cut, and shows some quartz in the end, but very mixed up with the country rock, and of no value. This end should, however, be driven on to see if the quartz may not become more favourable and settled. Better speed will, I hope, be attained here, but we have been handicapped at present in blasting, because the end is so near the 200 ft. cross-cut, and the levels interfere with each other. The 200 ft. cross-cut has been driven 10½ ft.; total distance from shaft, 131 ft. We have about 33 ft. further to drive to hole to Darlington's shaft, and we have a good deal of water in this drift, which I think comes principally from Darlington's shaft; the ground is hard and unproductive. Underlay shaft: The 171-ft. level has been driven 3 ft. by hand labour; distance from cross-cut, 43 ft. East boundary shaft is now timbered and secured for 27 ft. from surface; the shaft has also been cut down for another 20 ft. ready for timbering. I hope after this depth we may be able to do without timber. We propose to sink to the 100-ft. level and cross-cut to prove the quartz seen at surface. The new boiler has arrived close to our works, and will I trust be delivered to us by the transport agent during the ensuing week, when the work of fixing it will be at once proceeded with. All the machinery at surface is working very satisfactorily, and the firewood consumption is now I think cut down to the lowest possible limit.—A. S. B. Oakley.

COLOMBIAN HYDRAULIC (21st Dec.)—The following are the details of the operations during the month of November:—Run No. 152: We have cleaned up, after a run of 718 hours, the whole of the main sluice; during the last three days we were interrupted two or three times with heavy showers, which delayed us considerably. The result is $8,349.975, which, with $1,058.57 purchased gold, makes a total of $9,408.545, or about 1.881*l*., for a cost of $3,920.06, leaving a profit of $5,488.48, or about 1,097*l*. 14s. The mine: During the last nine days of this run we were compelled to turn the monitor on to the Baharrequeros banks, as all our fronts, both on the north and south, were completely blocked with heavy falls of sandstone and large quantities of heavy stones. We find we have now got grade enough to run the Baharrequeros Mine, and during the coming run we intend to devote about 15 days in doing so. The fronts to the south remain very much the same, but on the north I regret to say the bedrock is rising exceedingly fast, and that it will take us two or three weeks yet to reach the high banks in that direction; at the same time there is no sign of the bedrock rising in the centre of the channel. The lower sandstreak is getting somewhat thicker at the foot of the Baharrequeros banks, and I have sunk a shaft there in line with our deep cut, and find that if there is gravel to be worked there it can only be done by drifting; the sandstreak at the shaft is about 26 ft. thick. The rich streak: We are filling all the old workings of this up with stones, and most carefully cleaning out every corner; this is occupying all the men I can spare from the mine and ditches, but as soon as possible I shall drive side tunnels into the upper rich streak.—T. P. Sharman.

COROMANDEL (28th Dec.)—I beg to hand you the following report for month ending 22nd inst. The main shaft was sunk by 12 men 14 ft.; the total depth is now 106 ft. The shaft is being timbered up, and chamber cut for a 100-ft. level; this will now be known as our 280-ft. level. We have a flinty vein in bottom of shaft, and a change of strata coming in under it, and as a gold-bearing class of ground it is the best seen in the shaft. We rose on the new reef 7 ft.; no change in the reef; it was suspended; these men (two) are now clearing the 80-ft. level cross-cut south to Golden Pah ground. We broke a few stones of gold from a pillar of ground in the west branch at the 80-ft. level. All surface work is being pushed, and all machinery working well.—F. Hodge.

CORTEZ (13th Jan.)—During the past week the work done on the mines has been as follows:—The Boss tunnel: Advanced 37 ft., and face of drift is now in lime and spar. Main tunnel: East drift advanced 12 ft.; several large pieces of quartz, heavily charged with metal, were taken from this drift during the week. Middle tunnel: West drift upraised 5 ft. on ore body, and extracted 7 tons of ore from the vein on which we upraised. Shall make connections with upper tunnel, west drift winze, during the coming week; have done 17 days labour, and extracted 8 tons of ore from extreme west of same drift. Caps Breast: Have stoped about 70 tons of this ore, which is stored in drift; shall not hoist it till our facilities for hoisting through the extension of incline are complete. Upper tunnel: West winze sunk 5 ft.; extracted 30 tons of ore, of an average value of $50.00 per ton. North-east upraise: Extracted 50 tons of ore, of an average value of $70.00 per ton. North-west upraise: Extracted 70 tons of ore; average value, $150.00 per ton. Have started to drift east on ledge drift; now in 10 ft., all in good ore. Hauled to mill, 173 tons of ore; treated at mill, 183 tons of ore. Our ore houses and chutes at mine are now full of ore, and it would be an easy matter to double our present output of ore, had we reduction works of sufficient capacity to treat that amount of ore. Bullion shipped: 12 bars, containing 14,613 fine ozs. silver, and 7.89 ozs. gold.—Welsh.

DENVER (26th Jan.)—Since last writing (11th Jan.) the west drift has been advanced 19 ft., making a total of 253 ft. from cross-cut, on the course of the lode which is still pinched by the hard country rock, and is without ore of appreciable value. The east drift has gone forward in the same time 22½ ft.; making a total of 160½ ft. from cross-cut. The lode presents a better appearance in this direction, the end being in a strong and well-defined vein, 4 ft. wide with an increased flow of water, which would seem to point to an open vein. The veinstuff is well mineralised, but rather coarse. I am hopeful we shall see a change of grade as we proceed with explora-

tions. The 250 east is also in a strong vein and presents not an unfavourble appearance.—A. Rickard.

DEVALA-MOYAR (14th Jan.)—The pyrites winze is down 21 ft.; the lode is regular, and averages 2 ft. wide, most of which is pyrites of fair quality. The cross-cut from the deep tunnel 100 ft. west of the winze has struck the lode and penetrated 6 ft. without reaching the north wall; the lode will yield 2 tons pyrites to the fm. When we have ascertained the width of the lode in the extreme ends both east and west of pyrites winze we shall commence stoping out the quartz, sending the free milling portion to the stamps, but reserving the heavy pyrites for the present.—J. Williams.

EAGLEHAWK CONSODIDATED.—The secretary sends us the following abstract of reports received from the mine, dated the 15th and 22nd December :—The reef at the 550-ft. level has proved to be 13 ft. thick, and although it is solid and full of metal, the colour of gold has only been found at present. The object of driving here is in order to drain the reef which was in the shaft higher up, and consequently the water dropped down the shaft, and retarded the working; this will be taken up now in the cistern from this level. The rise at the 450-ft. level has broken through to the higher level, giving good air, and after the holidays driving north here will be continued.

EASTERN MYSORE (15th Jan.)—The following report has been received from the superintendent :—Mining operations : South section, Nora shaft—In the cross-cut west we have a branch of quartz about 8 in. wide, not any part of the main lode; this is a counter, the main part being still ahead of us. We are now able to do better labour, having cleared out the level and put things in shape. Cross-cut east: I have started this to a full pare of men. From present appearances of the ground we should do good speed, so that we may be able to reach the lode in the quickest possible time; we have everything in our favour, the pumps working very well and smoothly. Jaines' shaft : I have decided to put a lift of pumps in this shaft to fork out the water; there being now some 50 ft.; with the bullock whim our headway can be made. The cost of putting down these pumps will not be very great. We have it all in the ground. I shall work the lift by a wire rope attached to the sweep rod of the engine that works the other pumps. I am very anxious to see what is in the cross-cut east, and to ascertain for myself what is the best to be done. The little quartz on the surface shows visible gold, and as I judge the lode to be 1 ft. wide, it ought not to be stopped. Air shaft: I have been underground here, but found the shaft very unsafe in consequence thereof. I shall have to repair the shaft before touching the lode. I find the lode in the bottom of the shaft, north end, to be about 18 ins. wide, and there is another part of the lode thrown a little to the west; this can be seen by a small cross-cut down. In my opinion, we should thoroughly prospect this lode very much more than it is now. It presents a most favourable opinion. I shall, as soon as the shaft is repaired, sink in it, and prove it fairly. North section. St. Stephen's shaft : I am very pleased to say at the end of the old works, and there are indications of a change. Up against the hanging-wall a small seam of quartz is making, and I hope, on a few feet more sinking, we shall again have the lode. I am positive it is there. I never saw such a strong and massive lode as this is to be thus suddenly destroyed; it is only for a while we shall have to search for it. There is likewise a change in the stone—more of an elvan than trap, and with facces of quartz; in fact, looking very much more cheering. Muscoom shaft : I have started a drift south from the bottom of the downright shaft in a lode about 2½ ft. to 5 ft. wide. We are in 8 ft. or thereabouts, and I must say this is the best prospect I have yet seen at this part of the property. I have washed some of the lode and found gold. This drive will determine if the main part of the lode is not out west, and what has been hitherto done has only been in one part of the lode. The grouud is very favourable for driving; I think we can drive 15 ft. per week. It certainly presents a very promising appearance indeed, and I think we shall open out something of value. All the stuff taken is being saved. North boundary line : Judging from surface, which is considerably broken, and likewise the strong reefs cropping out, I have put some men to trench to ascertaiu if this broken ground is not a part of old workings. I, for my part, firmly believe we shall bring to view lodes that in depth will pay. The strata of the ground is different from the other part of the mine, especially St. Stephen's part. Should we come across any old workings I will at once let you know. I can honestly say you have a good chance of success.

EAST KAPANGA.—The agent at Coromandel writes on December 29th :—The tributers are driving and stoping above the adit level on our several reefs. They have done a large amount of work, and judging from the kindly character of the formation enclosing the reefs, they are sanguine of making any day a rich discovery of gold.

GARFIELD (12th Jan.)—The mill has been working steadily, and doing good duty. To-day a shipment of four bars bullion was made, weighing 482 lbs. (avoir.) of the estimated net value $4,313.74, silver at 92½c.—Hooper.

INDIAN CONSOLIDATED (14th Jan).—Phœnix section : Since my last report we have driven a cross-cut east 4 ft. In the first 2 ft. we intersected a branch of quartz 3 ins. wide, after which it passed into hard gneiss, devoid of any lode matter whatever; we have now turned our attention to the west to see if there is any lode in this direction. Tunnel driving in the south end of stope has been advanced 7 ft.; the lode, although containing more pyrites, has much reduced in size, and at the present time is only 1 ft. wide; shall now commence to stope the back of this drive to see if the lode will make larger higher up. The stopes working throughout the mine appear to be of little better quality, but, generally speaking, it is not quite so easy for blasting. Stopes in back of No. 1 and midway tunnels the lode will average fully 5 ft. wide. Stopes in back of tramway tunnel continue the same width as for some time past, 14 ft. Some of the pillars alluded to in my last have been completed, and the most dangerous pieces of rock have been secured. Prospecting : The Korrumber has been chiefly eugaged the past fortnight in prospecting Gifford's reef; our object will be to wash along the back for some length to ascertain the most promising spot to develop. Mr. R. B. Johnston, the mill manager, reports that during the month of December 716 tons of quartz were crushed, which yielded 139 ozs. 9 dwts. of gold.—J. Williams.

— (14th Jan.)—Colar section—No. 5 shaft: The 360-ft. level driving south of shaft has advanced 13 ft. 6 ins., or 33 ft. 6 ins. from shaft. The reef in the forebreast has got into the same run of quartz as we have in the 300 south stope, showing at times a little free gold, and assaying 14 dwts. 13 grs. per ton stone. The 360-ft. level driving north of shaft has advanced 13 ft., or 27 ft. 6 ins. from shaft; there is nothing to value at present in this drive. The 300-ft. level driving south of shaft has advanced 2 ft. 2 ins., or 66 ft. 9 ins. from shaft; the reef in the end is still unsettled, but shows visible gold in some of the veins, assaying 12 dwts. 10 grs. per tou stone. The 300-ft. level driving north of shaft has advanced 1 ft. 6 ins., or 71 ft. 10 ins. from shaft; there is a little quartz showing in the bottom of the drive, but nothing to value. The stope in the bottom of the 300 north level continues in a reef 2 ft. 6 ins. wide, assaying 9 dwts. 3 grs. per ton stone. The stope in the bottom of the 300-ft. level south is producing good stone for the mill; reef 2 ft. wide, assaying 1 oz. per ton stone. The stope in the back of the 300-ft. level south continues in a reef from 9 ins. to 2 ft. wide, assaying 16 dwts. 8 grs. per ton stone. The 230-ft. level driving south of shaft has advanced 11 ft., or 66 ft. 2 ins. from shaft; from the appearance of the rock in this drive we shall speedily have the same run of quartz here as we have in the 360-ft. and 300-ft. levels; should this prove correct we have two good sections of payable quartz better than anything we have had in the mine before. I shall be able to speak more fully on this in my next report. Lode at present 1 ft. wide, assaying 2 dwts. 14 grs. per ton stone. Davey shaft : This shaft has been sunk 8 ft., or 167 ft. 1 in. from surface; the reef is again settling, showing good hard foot and hanging-walls, with veins of quartz throughout it. I am now hoping this will permanently improve; quartz from panning gives traces of gold. Trial shaft north-west of main shaft : The level driving north-west has advanced 5 ft., or 46 ft. from shaft; nothing being met with, we have commenced to sink a new shaft further north, which has been sunk 25 ft. from surface. Surface : Milled for December, 178 tons; quartz yielding 101 ozs. 17 dwts. gold. Battery, engines, boilers and plant generally in good condition and running well.—T. R. Davey.

KAPANGA (28th Dec.)—I beg to hand you the following report for the month endiug 22nd inst. :—500-ft. level: We have driven west from Scotty's towards the Kapanga 18 ft. with no sign of reef. The rise above 500 on Kapanga has been extended 20 ft.; now up 102 ft.; there is no change in the reef to notice. The 420 south in Scotty's by four men was advanced 30 ft., and as we near the run of gold goes down in the level above the reef is much improving. The stopes above the 420 on Kapanga are worth about 1 oz. of gold per ton, working by six men. The stopes above the intermediate on Scotty's by four men yield about 1 oz. per ton. The intermediate south on Scotty's was driven by four men 22 ft. The stopes above the 300 on Scotty's are worth 1¼ ozs. per ton; reef 9½ins. wide. We are still driving cross-cut towards hanging-wall of Scotty's. If nothing met with soon the 300 will be resumed on the footwall. In stoping north of rise above the 225-ft. level the quartz is payable. We stamped for the month 160 tons of quartz, which yielded 259 ozs. 7 dwts., and sold at 59s. 5d. per oz. The machinery is all working well both above and below grouud.—F. Hodge.

MESQUITAL DEL ORO (4th Jan.)—Work done in the mine during the week was as follows :—Acerada level : Driven 6 ft; total, 74 ft.; reef still improving. 85 level east : Driveu 6 ft. 6 ins.; total, 539 ft. 6 ins. 137 level east : Driven 4 ft.; total, 536 ft. 6 ins.; reef looks well, and shows free gold. 137 level east, winze C : Sunk 3 ft, 6 ins.; total, 33 ft.; reef looks well. Sans shaft : Sunk 8 ft. 6 ins. below 137 level; total, 276 ft.; the reef still continues in the shaft, and looks well; good average ore. 190 level east : Driven 5 ft.; total, 365 ft.; still looks well. 190 level west : Driven 2 ft.; total, 276 ft. 6 ins.; the reef is a little broken up with waste rock the past week. 190 level west, winze No. 1 : Sunk 2 ft. 6 ins.; total, 44 ft. 6 ins.; reef shows well. 256 level east : Driven 6 ft. 6 ins.; total, 216 ft. 256 level west : Driven 5 ft. 6 ins.; total, 142 ft.; the reef looks well, and shows free gold. San Miguel tunnel : Driven 12 ft.; total, 1,654 ft. 6 ins. Stope 137 east : Still looks well, and on a good average ore.

MONTE DEL ORO.—The following are the results received of assays made in London of eight samples taken from differeut parts of the mine, viz. :—No. 1, from the 186-ft. level north, assayed 2 ozs. 6 dwts. 9 grs. gold per ton. No. 2, from the 186-ft. level south, assayed 7 dwts. 20 grs. gold per ton. No. 3, from the cross-cut west at 186-ft. level, assayed 5 dwts. 21 grs. gold per ton. No. 4, from the winze No. 1, assayed 4 dwts. gold per ton. No. 5, from the 186-ft. level north, assayed 6 dwts. 13 grs. gold per ton. No. 6, from the 186-ft. level south, assayed 3 dwts. 6 grs. gold per ton. No. 7, from the cross-cut west at 186-ft. level, assayed 3 dwts. 22 grs. gold per ton. No. 8, from the winze No. 1, assayed 3 dwts. 22 grs. gold per ton.

MONTE DEL ORO.—The following are the results received of assays made in London of nine samples taken from different parts of the mine, viz. :—No. 1. Sample of quartz standing around shaft No. 6 assayed 1 oz. 6 dwts. 3 grs. gold per ton. No. 2. Sample from south end assayed 2 dwts. gold per ton. No. 3. Sample from cross-cut west assayed 2 dwts. gold per ton. No. 4. Sample from quartz broken in sinking fork in winze No. 1, none. No. 5. Dup of soft stuff from No. 6 shaft assayed 9 dwts. 3 grs. gold per ton. No. 6. Dup of quartz from No. 6 shaft assayed 2 ozs. 4 dwts. 2 grs. gold per ton. No. 7. Dup from south end assayed 3 dwts. 22 grs. gold per ton. No. 8. Dup from cross-cut west assayed 1 dwt. 7 grs. gold per ton. No. 9. Dup from quartz from fork in winze No. 1 assayed 1 dwt. 7 grs. gold per ton.

MOUNT MORGAN EXTENDED.—The directors have received from the local committee report No. 29, dated Rockhamptou, 27th December, which states :—Respecting rich assays from tunnel No. 1, the assays you refer to were obtained from stone extracted from A reef, south drive, about on a level with the floor of the drive, showing the following assay results, viz., 4 ozs. 0 dwts. 11 grs. gold, 1 oz. 0 dwts. 3 grs. silver from hard mundic stone; 3 ozs. 15 dwts. 3 grs. gold, 2 ozs. 11 dwts. 11 grs. silver from hard mundic stone; 1 oz. 8 dwts. 14 grs. gold, 1 oz. 1dwt. 5 grs. silver from hard browner stone. In April 1888, Josephs, of Gympie, treated a ton of this stone by mercury, and obtained therefrom 6 dwts. of gold to the ton. In June, 1888, Lymburner, of Gympie, treated 2 tons. of this stone by chlorination, and obtained therefrom an average of 4 dwts. to the ton of gold. In June, 1888, also the United Pyrites Company of Sandhurst, Victoria, treated a ton of this stone by mercury, and obtained therefrom nearly 10 dwts. to the ton of gold. In all these cases the tailings were carefully dealt with, so that no gold was lost over about 1 dwt. to the ton. I have made the above prices of the business to show you that I have already attended to the matter as meutioned at the various times in preceding reports. The rich assays, in my opinion, points to the probability that richer ore will be found in working out this part

of our mine either above or below the points from which they were taken. Everything tends to lead us to hope that below the water level richer stone will be found in various of our veins. If I can do as well with the stone generally as the mills above referred to did with the samples sent, I have little doubt as to my ultimate success in coming on to the richer patches, with the sinews of war provided by treating the poorer ore. Thanks to your action, when we go to work raising stone our rock-drills will make the expense of that work much lighter than hand labour. On December 8th we broke through on the winze connecting No. 5 tunnel with No. 2 tunnel by down reef F, which will give us grand air. As soon as I start the mill I shall spend most of my time at the mine, and camp on the ground till I have made it a success. I think that by Christmas we shall have very nearly finished the storm bye-wash, the earthworks of the incline road to mill, and the timber trenel road across from No. 1 tunnel to the foot of the incline road. The contractors have nearly finished the erection of the engine. They have got the boiler into its exact place set ready for the brickwork. I have closed with the Otis Company, Melbourne, for the stonebreaker; also for the roller crushing mill, and I am happy to tell you that I am going to get it at a much cheaper rate than I expected. Since I last wrote I have purchased for the water supply an 8-h.-p. boiler, and Cornish steam pump cost 150*l*. I have also purchased a 6-h.-p. horizontal winding engine for the incline road; cost 138*l*. Our two mineral trucks will cost us about 16*l*. each. Respecting the lode containing copper, referred to in various correspondence, this lode exists in No. 1 tunnel, is first cut at about 77 ft. from entrance, and is about 114 ft. from entrance. My recent tests show that over the whole of this distance, 37 ft. (which appears to be the width of the copper bearing strata), it will pay us to treat the ore for copper by the simple methods I purpose to adopt, taking toll of it as it were previous to treating for gold, and rendering the ore more suitable for such gold treatment. My success in this respect will depend on the ore improving as we open it out, because at the point where the tunnel cuts it it only shows about 2 dwts. of gold to assay. I am going to put a winze down out of No. 4 tunnel into this lode, cutting down into No. 1 tunnel at about 94 ft. from its entrance. For the whole of the 37 ft. above referred to, the ore shows an average of about 3¼ per cent. of copper; I hope to save about 1 per cent. of this at least by my treatment, equal to between 3 or 4 dwts. of gold. I may risk being called a "too sanguine" man in my views. I cannot help saying that I consider the prospects of the mine are good, and that I hope that next year will bring us successful reward for our labours.

MYSORE (Jan. 15th).—Mining operations: In the 466 ft. north of Taylor's shaft three rock-drills are employed, one driving north of the cross-cut on the wide lode. The end south of the cross-cut has been holed to the incline shaft; the lode is 3 ft. 6 ins. wide, assaying 1 oz. 2 dwts. 20 grs. One drill is employed in the Italian stope, where the lode is about 2 ft. 6 ins. wide, estimated to be worth 1½ ozs. to the ton. One drill is employed making the level good from the cross-cut to the north end of the Italian stope; we expect to complete in this week, and then we will commence to drive north on the lode. The 400-ft. level north of Taylor's shaft was driven in the past fortnight 28 ft. 9 ins.; total, 519 ft. 4 ins.; the lode is 2 ft. 6 ins. wide, assaying 3 ozs. 17 dwts. 17 grs. Below the 400, 20 ft. 10 ins. were driven; total, 73 ft. 6 ins.; the lode is 3 ft. wide, assaying 3 ozs. 19 dwts. 17 grs. The 296-ft. level north of Taylor's shaft was driven 27 ft.; total, 569 ft. 8 ins.; the lode is 4 ft. wide, assaying 4 ozs. 18 dwts. The 296-ft. level south of Plummer's shaft on the west branch was driven 4 ft. 10 ins.; total, 71 ft. 4 ins.; the lode is 4 ft. wide, assaying 11 dwts. 18 grs. The 236-ft. level north of Taylor's shaft was driven 28 ft. 11 ins.; total, 359 ft. 6 ins.; the lode is 2 ft. 6 ins. wide, assaying 4 ozs. 18 dwts. The 236-ft. level south of Plummer's and the 173 south of Williams' continue to be in barren rock. Tennant's: In the 180, both north end and south end, the rock is hard and compact; the lode in the north end is 9 ins. wide, assaying 14 dwts. 1 gr.; in the south end it is 1 ft. wide, assaying 6 dwts. 12 grs. McTaggart's shaft: The 152-ft. level south end contains a good-looking lode, 2 ft. wide, assaying 13 dwts. 1 gr. Schaw's shaft: The 160-ft. level, driving a cross-cut east, 2 ft. 1 in. was cut; total, 82 ft. 9 ins.; the coolies employed here are of little use for driving so hard rock, but they are the best we can get. In the 220 ft., south of Schaw's, the end is in good-looking quartz, 2 ft. wide, assaying 11 dwts. 18 grs. We are working three stopes by rock-drills, two in the back of the 400 north of Taylor's shaft, where the lode averages 4 ft. wide, assaying 2 ozs. 17 dwts. 11 grs.; and one below the 296 north of Taylor's shaft, in a lode 3 ft. 6 ins. wide, assaying 1 oz. 15 dwts. 22 grs. Italians are stoping in the back of the 400 south of Taylor's shaft; on the west branch the lode is 5 ft. wide, assays 2 ozs. 8 dwts. 8 grs. Sinking: Taylor's shaft is down 331 ft.; there is no lode. In consequence of tapping the water in the Italian stope and the incline shaft, the bottom of Taylor's shaft has been flooded, and recently no work has been done in sinking. The winze in the bottom of the 296 south of Plummer's shaft has been holed to the back of the stope; the men are now stoping out the ore in each end. Tennant's shaft shows a promising-looking lode, 1 ft. 6 ins. wide, assaying 13 dwts. 1 gr. Schaw's shaft is in a lode 2 ft. 6 ins. wide, assaying 5 dwts. 5 grs. The new shaft north of Taylor's was sunk 11 ft. 2 ins.; total, 50 ft. 9 ins.; the rock is harder than we expected when we commenced this work, but as soon as it is got into rock sufficiently compact rock-drills will be employed, when no doubt much better speed will be obtained. We are getting on very well with the erection of the tailings machinery, and the work generally at surface is satisfactory. The rock-drills are doing good duty, and the stamp mill is working very well. Assay of sample from mill 5th January, 2 ozs. 13 dwts. 13 grs. Assay of sample from mill 10th January, 2 ozs. 1 dwt. 18 grs.—B. D. PLUMMER.

MYSORE REEFS (15th Jan.)—Fortnightly report: Harvey's shaft: The 320-ft. level north has been driven 14 ft. 3 ins., which makes a distance of 16 ft. 3 ins. from shaft. The 320-ft. level south has also been extended 14 ft. 3 ins.; the rock is very hard and sterile, but I hope to make better progress in the next two weeks. Cross-cut west at the 250-ft. level from the plat has been extended 17 ft. 9 ins., now 96 ft. 6 ins. from plat.; the rock is without any change. Rise and stope in back of 250-ft. level north: We have cut into the foot or eastern part a little, but seeing no improvement in this direction this is suspended, and the men with the rock-drill put to drive the No. 2 cross-cut east of this level. A sample of the pyrites broken here gave, according to assay, 2 dwts. 14 grs. of gold a ton. The No. 2 cross-cut east of the 250-ft. level has been advanced in one week by 12 natives 14 ft. 6 ins., making a distance of 99 ft. 9 ins. from level. The last 6 ft. driven has been through white quartz, which has the appearance of a deposit of quartz formed in the trap rock; a sample from it gave, according to assay, a trace of gold. Taylor's engine shaft: This shaft is now securely timbered to the 110-ft. level; last week we fixed a donkey pump to contend with the water, and are working it with compressed air. I am in hopes of being able to keep the water with this until the pumping engine is ready. The winding engine will be ready for work in a few days. This will facilitate the sinking, as we shall be able to get away the débris in less time than we can at present with the tackle. Since we placed the pump in position five days ago we have sunk 5 ft. 9 ins., which makes a depth of 122 ft. 3 ins. from surface. The 110-ft. level north of shaft has been extended 15 ft., now 69 ft. 6 ins. from shaft; the lode is 2 ft. wide, composed of schist and quartz. A sample of the quartz gave, according to assay, 1 dwt. 7 grs. of gold a ton. This is now suspended, and the men put to stope in the back south of winze. Stope in back of this level north of winze, the branch of quartz is 4 ins. wide, and assays 15 dwts. of gold a ton.—M. SCANTLEBURY.

MYSORE WEST (15th Jan.)—At the 300 the reef appears to be faulted, which I regard as a promising feature. We have a few strings of quartz where the reef should be, and these strings produce a trace of gold. There is no doubt whatever but we shall strike the body of the reef in advancing north and south, and it is more likely to be auriferous than had it gone down in one unchangeable mass. What we want to see is rapid change, and among so many changes as we are having here, I have no doubt whatever that one of these changes will be the right and proper change required to fulfil our hopes. Such has been the result throughout the profitable mines on this field. The quartz reported on 8th inst. in the 225 north appears as a great body, and produces a strong show of gold. I have an opinion that this will improve as we advance into it.—Capt. TREGAY.

NEW CALIFORNIA.—Report for the first half of January:—The 1,900-ft. level west, in 355½ ft.; the lode is in somewhat unsettled ground, at times yielding good ore, and in the end there is a width of 4 ft. which would pay to stope. The indications point towards a further improvement. The 1,900-ft. level east, in 50 ft.; this drift is advancing on a strong vein, which is now yielding 5 tons of milling ore to the fm., the grade of which is rather low, but in itself it is very encouraging to further development. The 1,800-ft. level west, in 833 ft. Winze No. 2 down 50 ft.; the drift has opened up a very rich run of stoping ground, and the winze has shown a continuity of the same to the full extent of its depth. The drift being now in far enough, the men are now engaged in working upwards to connect with the winze (No. 4) in the 1,700 level. The 1,700-ft. level west, in 1,028 ft. Winze down 62 ft.; there is a great improvement in the lode; it is now 3 ft. wide. The vein matter will make a fair grade milling material. Good progress is being made in sinking for connections, and we expect to get through by the end of the month. The winze is going down in a barren part of the lode, having, to all appearance, come upon the horse which disturbed the vein for a short time in the level below, but there is good ore on either side of it. The 1,600-ft. level east, in 508 ft.; the lode is steadily improving, and the drift is now in good pay, yielding 6 tons of milling ore per fm. The 1,600-ft. level west, in 907½ ft.; having encountered a hard and barren bar of ground in this drift, work was suspended pending the developments of the other drifts, which are exploring the ground in the same direction at other levels. The 1,500-ft. level west of Hidden Treasure shaft, in 247 ft.; the lode in the drift is very much pinched, but in the back it seems to open out again, and shows 6 ins. of good vein stuff. We expect the vein will shortly make downwards. The 1,400-ft. level rise east of shaft, up 105 ft.; continues in low-grade ore. The 600-ft. level, drift east of cross-cut, hanging-wall vein, in 8 ft.; this drift is being extended on a small, but promising vein, found on the south side of the porphyry dyke.—A. RICKARD.

— Managers statement of returns for the month of December:—Total, 355,86 tons, averaging $12.65 per ton, equal $4,503.41. The clean up comprises shipments from December 11th to January 12th (inclusive), and consists, with the exception of a little from tributers, of ore obtained in the drifts and winzes or from the development workings, which will show, in itself, a significant success in discoveries. The ground laid open during the course of the month remains intact. Stoping was suspended from the want of ventilation at the 1,800 level, as was remarked in our weekly letter, and which will account for the comparatively small production. Owing to delay at the smelters, a certain quantity of concentrates produced during this time could not be included in the foregoing, which makes so much the less. The amount of gold obtained from the 355.86 tons produced is approximated as follows:—

									Ozs.
Mill gold from 331.36 tons (including amount obtained from custom)								...	153.53
				Au.	Ag.	Cu.			
Smelting ore	9.828	,,	assay ozs.	5.21	18.90	2.40 p.t.	... ...	51.20	
,, ,,	6.130	,,	,, ,,	2.10	7.60 tr.	,,	... ...	12.87	
,, ,,	8.536	,,	,, ,,	3.20	11.10 tr.	,,	... ...	27.31	
Concentrates	27,144	,,	,, ,,	.73	5.02 tr.	,,	... ...	19.89	111.27
									264.80

To receipts from the mines we have to add $739.33 from profit on custom milling, making a total of $5,242.79, and cheques drawn amount to $6,985.29. The costs on mine development and exploration account are $2,106.74. From these figures will be seen that, notwithstading our very small output, the ordinary mine costs are fully covered.

The manager wrote Jan 25th:—Connection at the 1,800 level has been completed, and now we have good ventilation in all the workings and have resumed work in the stopes. Since that time we have put on the men required to bring up our output to 40 tons per day, and from the present outlook this can be more than maintained. We have cleaned up to-day with a result of 122 ozs. from 226 tons of ore treated. For a ten days' run this is at the rate of 366 ozs. for the month, so you see that our position has sensibly improved. The work underground is progressing very satisfactorily; as a further improvement we have now a very fine lode in the 1,700 west drift. With this find in the 1,700 we feel very sanguine of finding a further continuation of the ore body and increased height, i.e., there is now more probability of the ore ground reaching from level to level than we have yet found it; moreover, the 1,700 drift is now getting beyond all the workings, and is practically in entirely new ground. The 1,900 west presents to-day a better appearance, the ground becoming more

settled, and everything pointing to great improvement in the lode.—A. Rickard.

NEW EBERHARDT.—The mine manager reports, under date January 12th, as follows :—South cross-cut from surface drivings has been advanced for the two weeks, 8 ft. ; total length 31 ft. This cross-cut still continues in the low-grade quartz ; if a change for the better is not met with very soon, I shall move the men to some other point. South drivings : The drivings have not materially changed since my last report. The small seam of ore still continues, and, at times, promises to open out. Amount of ore taken out for the two weeks and put on ore dump, 11 tons, average assay value of same $51 per ton. West drift from north shaft No. 1 has been advanced 11 ft. ; total length, 39 ft. The rock in this drift is very hard and tough owiug to considerable white spar coming in, which necessarily makes our progress a little slow. Although our prospects at this point are not quite so favourable as they were some time since, yet I have not lost hope of finding ore in this direction. North shaft, No. 2 : As mentioned, in my report of 29th ult., I have started a drift at the 50-ft. level in this shaft, running it in a south-westerly direction ; it has been advanced for the two weeks 13 ft. The face of the drift is at present in hard black lime. North shaft, No. 3, has been extended down 11 ft. ; total depth 46 ft. The material passed through has been broken lime with spots and bunches of quartz of no material value. East cross-cut from bottom Gore incline has been advanced 17 ft. ; total length, 94 ft. ; the ground in this cross-cut has become considerably harder than it has been heretofore. The face of the drift at present is nearly all lime, and I have hopes of soon getting entirely out of the quarzite.

NEW GUSTON.—The following cable has been received from Mr. Schwarz, the mine superintendent, viz. :—"Shipped five cars (50 tons). Another car now ready for shipment." This cable shows that the snow-block on the railroad, which delayed shipments during part of January, has been removed.

— Mr. Schwarz reports in his letter, dated 19th January last :—We seem to have quite a body of ore on the 4th level. Many assays have returned from 100 to 1,270 ozs. of silver per ton. The cross-cut, started on No. 5 level from main drift, about 12 ft. north of shaft, looks very favourable, and I expect to find ore body about 40 ft. to east of shaft. The ore body in the 4th level appears to be of considerably larger dimensions than in No. 3 level immediately above. In a previous letter, the mine superintendent reports that, in prospecting No. 1 level, he had discovered a new ore-body, which looks very encouraging. As the Silverton Sampling Works are shut down for the winter, the ore is now shipped direct to Denver, hence its precise value cannot be ascertained until the returns come in from the Denver smelters, which takes about six weeks from date of shipment.

NEW HOOVER HILL (21st Jan.)—Broil's shaft : Drift going north at the 230 has not improved since my last report. The 170 drift going north continues about the same as when last reported. The stope below the 130 : The ore is only moderate grade. The drift going south : There is a good deal of quartz showing, but poor. We are breaking fair ore in the stope below the 70. Mill and machinery continue to work well.

NINE REEFS (14th Jan.)—Mining operations—Malleson lode, main shaft : The 310 ft. level north, driven by one miner and six coolies, has advanced 3 ft. 6 ins. ; a total distance of 75 ft. 6 ins. ; vein 5 ft. wide ; assay, 7 dwts. 3 grs. gold per ton. Morrison's shaft, sinking by one miner and eight coolies : During the past week the men of this shaft have been engaged in putting in brace, winch, &c. The vein in shaft is over 6 ft. wide : the assay 18 dwts. 6 grs. gold per ton. The 185-ft. level north, Morrison's shaft, driven by three coolies : In consequence of absence of other coolies, has advanced 1 ft. 10 ins. ; a total distance from Morrison's shaft of 135 ft. 1 in. ; the vein is 3 ft. wide ; the assay, 7 dwts. 3 grs. gold per ton. Baynard shaft, 310 ft. level north, driven by one miner and six coolies. has advanced 4 ft. ; a total distance from shaft of 30 ft. The vein is 1 ft. wide ; assay, 6 dwts., 12 grs. gold per ton. The 310-ft. level south, driven by one miner and six coolies, has advanced 5 ft., a total distance of 32 ft. ; the vein is 5 ft. wide ; assay, 9 dwts. 18 grs. gold per ton. Stopes : No. 1 stope in back of 185-ft. level north of main shaft by one miner and eight coolies ; vein 6 ft. wide ; assay, 3 dwts. 22 grs. gold per ton. No. 2 stope, also in back of 185-ft. level north of main shaft, by eight coolies ; vein 6 ft. wide ; assay, 3 dwts. 6 grs. gold per ton. No. 3 stope in bottom of 195-ft. level south, Baynard shaft, by one miner and 12 coolies ; vein 4 ft. wide, assay, 11 dwts. 17 grs. gold per ton. No. 4 stope in bottom 185-ft. level south, main shaft, by one miner and 16 coolies ; vein 4 ft. 6 ins. wide ; assay, 9 dwts. 18 grs. gold per ton. No. 5 stope in bottom 185-ft. level—north main shaft—by 16 coolies ; vein 6 ft. wide ; assay, 4 dwts. 13 grs. gold per ton. No. 6 stope in back 310-ft. level north, main shaft. by six coolies ; vein 6 ft. wide. New stope : No assay received. Champion lode, Vyvyan shaft : The 145 level south, by six coolies, has advanced 6 ft. ; a total distance from shaft of 280 ft. ; the vein is 1 ft. 6 ins. wide; assay, 1 dwt. 23 grs. gold per ton. South stope, in back this level, south of Vyvyan shaft, by six coolies : The vein is 1 ft. 8 ins. wide ; assay, 18 dwts. 7 grs. gold per ton. The north stope, in the back of the 145-ft. level north of Vyvyan shaft by eight coolies : vein 1 ft. 6 ins. wide ; assay, 2 ozs. 7 dwts. gold per ton. Milling : The stamps have been running fairly well, the quantity stamped being : From main shaft, 152 tons 8 cwt.; Vyvyan 16 tons ; a total quantity of 168 tons 8 cwt. The assay from the battery, 11 dwts. 1 gr. gold per ton. Tailings ; 6 dwts. 12 grs. gold per ton.—Capt. Bennetts.

NORTH COROMANDEL (29th Dec.)—The tributers continue prospecting the surface and trenching in various directions, with the object of finding the rich Golconda reef, which is on our northern boundary line. The surface at this point is overlaid with a deposit of blue tufa, which makes the prospecting slow.

NORTH MEXICAN (18th Jan.)—The timberman sent by Mr. Hofmann is here now. I have graded the ground for the new shaft, and began to sink to meet the rise from below to get on as fast as possible. The timberman is timbering the new shaft himself below. I ordered an amount of timbers to the saw mill, which will be coming in next week. To start with, I have the timbers I had sawed at the mill, also all the good timber that is in the flume from the Gloria. It is better to use that timber than to leave it there to rot. So now the new San Nicholas shaft will be sunk quickly.—R. S. Carlyle.

NUNDYDROOG (15th Jan.)—Mining operations ; Webb's shaft is down 393 ft. 9 ins., Taylor's shaft 347 ft. 8 ins. The 300-ft. level north has been driven 20 ft. 8 ins. The rock is barren in each of these workings. The 370-ft. level north of Webb's shaft has been driven between 40 and 50 ft. For some time it had an appearance much like the regular vein, and we were hopeful it would become productive, but from diallings made this week it is found to run a few points too much to the east. It is for the present suspended, and the drill is employed cutting down the rock to the west in search of quartz. At present it is quite barren, but there is a band similar to the rock found in the bottom of Webb's shaft. The stopes between the 300 and 370 south of Webb's shaft contain a fine-looking lode, 4 ft. wide, assaying 2 ozs. 4 dwts. 12 grs. The lode in the 300-ft. level south of Webb's shaft has been driven 89 ft. 11 ins. ; the quartz is 3 ft. wide, assaying 1 oz. 13 dwts. The lode in the intermediate level is 2 ft. wide, assaying 14 dwts. 6 grs. The stope in the bottom of the 300 south of Webb's is in quartz 1 ft. 8 ins. wide, assaying 1 oz. 7 dwts. 6 grs. The rise in the back of the 230 north of Webb's shaft is 2 ft. wide, assaying 2 ozs. 14 dwts. 6 grs. The middle level between the 230 ft. and the 166 ft. shows a band of quartz 1 ft. 8 ins. wide, assaying 3 ozs. 5 dwts. The stope in the bottom of the 166 south of Webb's shaft is small, but we expect it will get wider as it is carried further south ; it will assay 1 oz. 11 dwts. 12 grs. The stamping is going on as usual, but the amalgam resulting has not been, so far this month, quite so good. All other work is satisfactory. Assay of weekly samples from the mill :—Rough quartz, 1 oz. 19 dwts. ; smalls, 19 dwts. 12 grs.—B. D. Plummer.

ORITA (16th Dec.)—The following are the details of the operations during the month of November :—Run No. 38 : On the 13th I cleaned up after a run of 532 hours, $7,385.20 ; of this, $1,483 came from the under-current. Cost accounts (five weeks) $2,157.62, showing a profit of $5,230.58 on the run. The new tail sluice below the under-current has not been cleaned up. I may mention this is the first year we have been able to make 12 remittances, and as I gave it as my belief that this year's work would show an improvement on last, I may state that in 1886 our returns were about $9,677, in 1877 $22,000, and the present has been $57,673. Run No. 39 : I am very sorry to say on the 15th we had a very bad break on the syphon pipe at the toe of the alto, and it will take me at least 12 days to repair it ; also some pipe that I intended to use at another point must go make good the damage done by the slide. Mine : I am taking advantage of the water being off to drift in, cut, and move pipe.—H. J. Prender.

OSCAR (2nd Feb.)—Oscar lode : The shaft has been sunk 6 metres, or 20 ft. through dioritic rock and chloritic slate, intermixed with bunches of quartz and strings of carbonate of lime, in which a little iron pyrites is met with. There is not so much of the country rock mixed with the lode as hitherto, and it appears to be dipping a few degrees to the west of north instead of north as before. In one of these strings of lime we have seen a little visible gold, in fact, half a dozen stones broken on the footwall in the bottom of the shaft will yield 1 oz. of gold. We have put the men to stope on the footwall for a few days to see if this leader with the visible gold will lead to something richer. The 400-ft. level west has been extended 14 ft. ; lode similar in composition to that in shaft, but shows more quartz. No. 3 lode in cross-cut has been driven 27 ft., and is now 22.20 metres from cross-cut ; the lode, although producing some very good quartz, is somewhat pinched, and the men have not been able to advance as fast as we would wish. Daw's lode : The shaft has been sunk 17 ft., and is 11 ft. below bottom level. A great change has taken place during the last week. We may say for the last 200 ft. the lode has been composed of fragments of gabbro, with a little slate, and two small veins of quartz, each about 1 in. in width. The one on the footwall carrying a little visible gold. Now we have on the footwall about a foot of decomposed rock, through which very small strings of quartz are seen. Judging from former similar cases met with in this mine this will undoubtedly lead us in a very short time into a good lode of quartz. Bottom level south has been extended 17 ft. The quartz in top of level is about 6 ins., while in the bottom it is nearly 18 ins. We have about 35 ft. more to drive to come in under the winze, being sunk from upper levels, and the winze has to be sunk 23 ft. to reach the required depth. The 170 ft. north level has been driven 11 ft. We have driven through the shoot of quartz, and have now put the men to rise and stope a few metres to prove its extent and value. We are reserving the stuff for treatment this month. We have crushed 161 tons from this lode, which has produced 51½ ozs. J. Daw, jun.

OURO PRETO (14th Jan.)—Passagem—Stoping : No less than 263 cubic metres, or nearly 800 tons of lode stuff were quarried in the line of stopes at the 265 south-west. Intrusive bars of schist and quartzite have appeared in the lode at times, but these do not last for any distance, and the lode in this section continues of a strong productive character. The erection of the tailings' machinery is being pushed on as rapidly as possible, and the Pelton wheel, as well as the intermediate gearing, are in position, and all fixed on good solid framework. The masons have been put to cut out some blocks of quartzite in the river, which I think will answer very well for bed of a Francfort mill.

PALMAREJO.—The directors have received the following returns for months of November and December :—Amount of ore milled, 834.85 tons ; assay value of same, $38,562. Amount of ore shipped to Europe, 1.65 tons ; assay value of same, $4,145.11. Amount of concentrates shipped to Europe, 13.5 tons ; assay value of same, $32,260. Dios Padre tunnel has been driven 103 ft., total length of driving being 582 ft.

PESTARENA UNITED. — The gold returns for the month of January were as follows :—From Pestarena District : 408 ozs. 2 dwts. 4 grs. from 452 tons of ore, equal to 18 dwts. 1 gr. per ton. Val Toppa : 175 ozs. 11 dwts. 22 grs. from 363 tons, equal to 9 dwts. 15 grs. ; total, 583 ozs. 14 dwts. 2 grs. obtained from 815 tons of ore amalgamated, showing an average yield of 14 dwts. 7 grs. to the ton.

POTOSI (10th Jan.)—I beg to submit the following as my report of progress made in our mining operations since 26th December :—New lode : No. 2 tunnel has been extended another 10 ft. since last reported, which makes the total length of same 97 ft. The lode at this point is fully 2½ ft. wide, of solid quartz, of the same value as when last reported. No. 3 tunnel has now a length of 121 ft., which shows 17 ft. during the past fortnight. The ground has become a little more favourable for driving, but the lode, which is now about 20 ins. wide, consists of gossany quartz for the most part, which I doubt not will turn out favourably when we make a trial crushing from this lode shortly. No. 2 new lode : We continue to make favourable progress in driving the adit level north-east upon the footwall of this lode, and the whole of the quartz being broken from this point for the entire width of

the end (4½ ft.) is being accumulated for an early mill test. We purpose commencing the driviug of a deeper level upon this lode in the course of two or three days, having already succeeded in tracing up the lode to a most suitable point for so doing. Potosi Viejo, Zeiler's shaft: The present depth of this is 22½ ft. below the bottom level, and the lode continues to make regular and well defined, of the same size and value of quartz. The Christmas holidays have affected our operations throughout, as the miners, as well as surface hands, have lost considerable time during the past fortnight. Socorro lode: To-mo rrow we commence driving a cross-cut adit south frou the valley with the view of intersecting this lode, and then extending same thereon, with the object of communicating same with the bottom of No. 3 level. When this is communicated, all hoisting by manual labour to this depth—26 fms. below surface—will be obviated, as well as admitting of the quartz from this point being trammed direct to the mill. In the winze sinking below No. 2 level south of shaft, which is dowu 10 ft. below the level, the lode is 2 ft. wide, and shows visible gold. Within the coming week we hope to commence delivering quartz to the extent of not less than 50 tons for a trial crushing from each of the four lodes we are developing; the delivery of which has been contracted for at $3 per ton. In about a fortnight's time, therefore, provided the weather continues favourable to transport by means of beasts of burden, we shall be able to say when these test crushings will be accomplished. We hope and believe they will turn out satisfactorily.—PRYOR.

RUBY AND DUNDERBERG CONSOLIDATED (13th Jan.)—Dunderberg: There is no change to report since my last communication. In the upraise we have had very hard ground, and have been able to make an advance of 7 ft. only; total raised, 70 ft. To-day the ground has the appearance of coming in softer. We have 28 tributers and six contractors at work in the mine. Lord Byron Mine: We have nine tributers at work in this mine. The day before yesterday two tributers struck a small open cave, which at present has a lot of loose lime at the bottom. When this is cleared away we may find ore here, but it will be some days before we can find out.

VICTORY.—The following information, dated El Callao Mine, 9th January, has been received from Mr. Larchin, one of the directors, who is now at the mine:—Mr. Russell is writing you by this mail, and he will, I suppose, explain fully the nature of the improvement, which, I may add, was already kuown here—as I passed through I heard of it. For some time the indications of a change for the better have been very plain, and a considerable increase of water has had to be contended with, but during the last few days every foot sunk has continued to improve the appearance of the lode, and the ore in the bottom of the shaft to-day is better than any they can show here. I made several trials of the ore in different depths, and am bringing along the results, together with some of the ore tested. The ore in which no gold is visible runs over an ounce, and the bottom of the shaft will naturally run higher as there is visible and coarse gold in it. — Mr. Russell, in his usual fortnightly report, says:—Since 25th December the shaft has been sunk a depth of 9 ft., making a total of 165 ft. from platform, timbered, &c., to the bottom. I am glad to be able to inform you that we have now cut something good, although not the lode. I think we will not have much further to sink before cutting it. The stone we are now getting shows no free gold, but pans out very well. By next mail I hope to send you an assay of it.

VOGELSTRUIS (10th Jan.)—No. 2 shaft: Some week or two ago we cut the south reef in this shaft. We have now driven several feet on it east and west; and in each end have a reef averaging 16 ins. to 18 ins. wide. Some of the pannings we have taken have given excellent results—in fact as high as anything we have yet had. These high prospects are, however, often misleading, and I am desirous of leaving the test samples till the month end, when the usual assays will be made. The dyke in the drainage level is giving us considerable trouble, so much so that we have to drive off a second drift to give relief to the pressure on the breasting down timber in the drift faces. The other mining work is going on as usual, and will be more fully referred to in the bi-monthly report next week. Battery: A full force of men are still employed in the erectiou of the battery. The rainy weather is somewhat againust outdoor work, but we hope to place the roof on next week. The date of its completion (owing to misfits of certain parts, &c.), I cannot yet anticipate; six weeks more, however, should about accomplish it.

THE YURUARI COMPANY, LIMITED.

THE assistant secretary advises receipt of the mail from the mines, dated Chile, 9th January. The superiutendeut, in his letter, states with reference to the miue:—I am pleased to state that a number of miners returned from their Christmas holiday, and commenced work again on the 2nd January. I have instructed the mine captain to employ all of them to break quartz for the mill. As soon as a further batch turn up, I will proceed with No. 8 rise west, so as to hole Potosi as soon as possible. We are still experiencing difficulty here with regard to ventilation. We started the mill to-day with 40 stamps on some quartz of good appearance, the result obtained from which will be reported in my next. I enclose assays of the nine bags of tailings despatched to your address, showing an average of about 6½ dwts. per ton. The yield for December, although small, was more than sufficient to cover working expenses. A meeting of the Mutual Union Association has taken place, with a view to the reduction of miners' wages. At the request of the Governor of the Territory, all the mining companies have agreed to forward exhibits to the Paris Exhibition. A plan showing work done during December has been received, and can be seen at the offices of the company. We annex mine report:—

MINE REPORT.

January 8th.—During the month of December I mined and raised to the surface 600 tons of quartz. That the quantity of quartz raised was so small was duc to the scarcity of miners during the earlier part of the month, and to their staying away altogether after December 20th for the Christmas holidays. The following are the places from which quartz was broken during December:—Stope No. 8 west: During the first week of December I continued to work away the under part of the lode in the manner described iu my last report, but discontinued to do so for the present in accordance with your instructions. There has been no change in the condition of the lode since last month. Rise from back of drift No. 8 west: Progress during December, 7 ft. I commenced to rise up in the back of No. 8 level at a distance of 600 ft. from the centre of the shaft, beating away the ground for a length of 75 ft., but had to cease working here owing to a scarcity of miners and the bad ventilation. I have laid air pipes up to this place, and am now ready, as soon as the compressor can be set to work, to re-commence rising; the lode is about 3 ft. wide in this place, and shows visible gold. No. 9 winze east: Progress made during December 20 ft.; total depth, 79 ft. Rise from back of No. 10 drift east: Progress during December, 3 ft.; total depth, 28 ft. The winze holed through into the rise on December 19th. I am now stoping away from both sides, and have a lode from 2 ft. to 4 ft. wide, containing quartz of fair quality. I am at present laying a tramway in No. 10 level, which will be completed in two days. I shall then put in a chute at the bottom of the winze, which will enable me to remove the quartz more quickly to the shaft. No. 11 stope east: Progress during December, 5 ft.; the lode varies from 3 to 5 ft. in thickness, the quartz showing here and there visible gold. No. 12 stope east: Progress during December, 5 ft.; the lode varies from 1 to 3 ft. in thickness, but shows signs of opening out towards the upper part of the stope. The quartz contains visible gold in places. In the lower part of the stope the lode is very narrow, and of a poor character. I am afraid I shall soon have to stop working here, and confine my operations to the upper part of the stope where the lode is wider aud of a better quality. Some of the pump rods being in a bad state from decay, I had to take out a length of about 60 ft. in all, and replace them by new ones. The pump is at present working very well and keeping the mine dry. When the stopes which we are at present working on are worked out, we shall have no place open from whioh we can break quartz, unless in the meantime levels are driven and winzes sunk, so as to open up the ground. I should strongly advise the carrying out of such works on the western side of the mine, as I consider that there is a better prospect of opening up good ground in that direction than towards the eastern side of the mine.—W. ROGERS.

We are advised by the assistant secretary that their Trinidad agents telegraph:—"Cabled advices of produce for January cannot arrive here before next steamer, as last bullion train left the mines on the 25th January." The assistant secretary adds that by letter under date 9th January, Mr. Aikman advises an improvement in the mine, and anticipates much better returns shortly.

COMMERCIAL NOTES.

(*Continued from page 227.*)

RAILWAYS.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year:—Increases:—Caledonian, 4,389*l.*; Eastern and Midlands, 69*l.*; Great Northern, 3,755*l.*; Great Western, 3,340*l.*; Hull and Barnsley, 1,410*l.*; London and North-Western, 9,108*l.*; London and South-Western, 2,738*l.*; London, Chatham and Dover, 1,453*l.*; Manchester and Sheffield, 2,131*l.*; Metropolitan, 512*l.*; Midland, 7,992*l.*; North British, 1,030*l.*; North-Eastern, 11,832*l.*; and North Staffordshire, 673*l.*

The Great Eastern Railway traffic return for the past week exhibits an increase of 3,012*l.*; the Lancashire and Yorkshire, an increase of 3,043*l.*, and the Metropolitan District an increase of 200*l.*

The Brighton Railway traffic return for the week ended February 2nd exhibits an increase of 2,854*l.*, and the South-Eastern an increase of 1,711*l.*

The Mexican Railway traffic receipts for the week ended February 2nd amounted to 18,000*l.*, against 15,300*l.* in 1888, showing an increase of 2,700*l.* For the fourth week in January the gross earnings of the Mexican Central Railway were $195,435, against $164,612 last year. The Canadian Pacific Railway receipts for the 10 days ended January 31st were $301,000, against $259,000 last year. The gross earnings of the Denver and Rio Grande Railroad for the fourth week of January were $174,000, against $155,100 for 1888.

The gross earnings of the Mexican Central Railway Co. for the fourth week in January were $195,435, or $30,823 more than in 1888.

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Increases: London Street, 201*l.*; Provincial, 713*l.*; London, 496*l.*; North Metropolitan, 1,119*l.*; Belfast, 231*l.*; Southampton, 31*l.*; London Southern, 26*l.*; Sheffield, 105*l.*; Calcutta, 30*l.*; Imperial, 48*l.*; Sunderland, 140*l.*; Swansea, 28*l.*; Continental Metropolitan, 438*l.*; Glasgow, 178*l.*; South London, 72*l.*; Gothenburg, 41*l.*; Bristol, 219*l.*; Calais, 15*l.*; German, 262*l.*—Decreases:—Hull, 3*l.*, and Bordeaux, 29*l.*

FREDK. WM. MANSELL & CO.,

STOCK BROKERS AND MINING SHARE DEALERS,

43, PALMERSTON BUILDINGS, OLD BROAD STREET, E.C.

"NOTES ON INVESTMENTS"

The OLDEST and SAFEST GUIDE to INVESTORS and SPECULATORS

PUBLISHED FORTNIGHTLY. FREE ON APPLICATION.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes, and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

O. D.—Buy some more.

J. T. G.—No. 1 good for a further rise. No. 2 should be sold. No. 3 held. Do not think of selling No. 3. Wait till mine sets to work in the spring.

J. W.—See last week's issue.

J. T. H.—Goldfields of Uruguay has made its final call. We are led to think well of the concern.

B. T.—New Emmas are 18s. paid. No call likely to be made this year. Prospects very fine.

South African.—The Press was refused admittance to the meeting of the London and Pretoria Mining Syndicate, Limited, on Monday. This is always a bad sign.

C. M.—You will find exactly what you want in our central pages.

W. J.—We anticipate 30 per cent.

Inquirer (Blackpool).—This broker usually offers a price above the market. When you telegraph "Will take it," he replies, "I offer to sell you"—a mere dodge, as you will see.

John T.—No deep sinking at present.

W. T.—A good purchase. Will rise.

Sam H.—Take your profit.

Chas. W.—The capital was increased last May by 50,000*l.*

C. W. H.—The chairman is much abused, but is doing his work well, and, we believe, in the interests of the shareholders.

M.—Have seen their highest; sell.

J. M. H.—No London office; beware!

C.—A harpy, who seeks to profit by every boom, no matter by what means. South Africa is his game at present.

J. W.—Respectable so far as we know.

J. N.—The money will be returned and the issue cancelled.

John S.—Do not sell in despair. Wait a little.

Ignorant.—Nos. 1, 4, and 5 should be sold. Nos. 2, 3, 6, and 7 should be held for the rise.

C. J.—A pure speculation. Do not hold as an investment, or your money will be lost.

E. N.—You should write to your broker in Manchester that unless a certified transfer is sent you on Monday you will apply for a warrant. It is nothing less than robbery for any broker or dealer to delay delivery so long, and he certainly does not study the interests of his clients.

C. (Hants.)—Your position is very clear. You purchased for mid-December account; your dealer is supposed to have purchased the shares, and the seller had 10 days from December 13th to deliver, failing which they should have been bought in.

Stocks (Birmingham).—Certainly.

Stupid.—It is often the case that such people advertise false prices to get the country people to write them, and so try to persuade the unwary to buy their own rubbish.

West Moodie Shareholder.—Our reporter was refused admission to the meeting yesterday.

Eagle.—No. 1: A good property. Last return 1.250 ozs. No. 2: Also good, but like No. 1, very risky to touch. Price too high in our opinion.

H. M. H.—No. 1 is still working, and prospects are very good. All depends on price of lead. No. 2: Wound up. No quotations for No. 1 at present.

A. (Bradford).—No. 1: Report speaks well of it as a valuable property, but take your profit when chance is presented. No. 2: A doubtful rumour. No. 3: Answered by No. 1. No, 4: Pressure of sales to realise profits.

The Mining World.

LONDON: SATURDAY, 9th February, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

LARGE CRUSHINGS FROM INDIA.

Our last week's forecast in respect to Indian crushings for the month of January has turned out perfectly correct. In fact, the returns are rather better than we anticipated. Mysore leads the way with an increase on the month of 432 tons crushed, and of 870 ozs. of gold produced, being a cash increase of upwards of 3,000*l.* This confirms the statement made at the recent meeting, that a larger area of stoping ground is now available, and that henceforward the returns may be expected to increase.

Ooregum has never yet gone behind on a crushing it has once made. Its motto is "Onward." The excess in the returns, as compared with the previous month, is 57 tons crushed and 85 ozs. of gold produced. Competent experts regard this mine as the best of the Indian group, and there is much in the reports to warrant this assumption. The position for the new shaft has been selected, and the extensive runs of rich ore ground in various parts of the mine warrant the most vigorous development that can be given to it.

Balaghat return is not so favourable, for while the crushing has been 12 tons in excess of the previous month, the yield has falleu short by 99 ozs.

Nundydroog is the only exception to the general advance. It shows a decrease of 30 tons in the ore crushed, and 104 ozs. in the gold produced.

It should be borne in mind that this time last year, Ooregum, Balaghat, Nine Reefs and Indian Consolidated were not making any crushings whatever. The latter it is true had made some experimental attempts to ascertain the value of its ore, but the number of tons put through the mill was small. The Nine Reefs Company would do well to give the number of tons crushed as well as the ozs. of gold produced, so that some opiniou might be formed of the value of its quartz. We gather incidentally from all this that the coolies are doing their work better, and that the general administration of the mines, like the underground prospects, has improved.

The subjoiued table may be useful for purposes of reference:—

Indian Gold Minings—Crushings Compared.

Mines.	Crushings for Jan., 1889. Tons.	Ozs.	Crushings, Dec., 1888. Tons.	Ozs.	Crushings for Jan., 1888. Tons.	Ozs.
Mysore	2,066	2,376	1,634	1,506	1,556	1,385
Ooregum	454	839	397	754	Nil	Nil
Balaghat	103	196	115	295	—	—
Nundydroog	370	581	400	685	184	384
Nine Reefs	Not given	130	Nil	Nil	Nil	Nil
Indian Consolidated ...	215	115	178	101	Nil	Nil

DEARER MONEY.

The change so long expected in the Money Market has at length set in, and the more sharply because so long delayed. It was thought last week that the market had found its "bottom," and this week has, we think, proved it. The accumulating calls upon the market, coupled with the increasing force of the revenue payments, have at length told with effect upon the superabundant supply of capital until lately afloat, and the value has improved. The Bank has thus gained the upper hand, and ought to take advantage of it to strengthen its position while it can to meet any possible drain of gold later in the year. Discount has improved to $2\frac{3}{8}$, $\frac{1}{2}$ per cent. and money at call, and for short loans, to $2\frac{1}{2}$, 3 per cent. The favourable effect of the change is at once seen in the exchanges; bills on continental cities being more offered at rates in our favour. At the same time, however, although small amounts of gold have been flowing in, brought up to 165,000*l.*, by an influx of 100,000*l.*, a heavy withdrawal took place yesterday of 360,000*l.*, for Lisbon and the Cape. It is possible that this may have been hurried, in view of dearer money, but it may portend a demand in connection with the transference of capital to the South African Goldfields. The Bank of France has further reduced its rate to 3 per cent., now the "International" rate. The Bank return shows only a small improvement in the reserve to 14,500,000*l.*, or $47\frac{1}{4}$ per cent. of the

liabilities. The chief feature is the depletion of the private deposits by 2,300,000*l.* to the small total of 22,500,000*l.* by revenue payments and redemption of securities.

THE RAND GOLD COMPANIES.

ADVICE TO INVESTORS.

THE speculative or investing public who have been dealing in Witwatersrand shares will, we hope, begin now to appreciate the advice we have so long and so often given to them, to deal only in the shares of those companies which have been incorporated in England, and at whose offices not only correct and authoritative information, but, what is of more consequence, payment of dividends can be obtained. We hear it said, and we have no doubt there is good foundation for the statement, that fully 100,000*l.* of dividends declared by Rand companies, without offices in England, have been paid to the former holders of shares whose names remained on the register, instead of to the present holders of the share-certificates, who have not been able to get transfers of the shares registered in their names in the Transvaal. We should like to know what chance there is of the real owners of the shares in this country ever being able to recover those dividends from the parties who have collected them in Johannesberg or Pretoria. The process would be about as easy as the proverbial "getting butter out of a dog's mouth." Another disadvantage of being a holder of shares in companies not domiciled in England is that there is no possibility of getting any voice in their affairs. Shareholders' meetings are called in South Africa at a few days' notice, and the shareholders on the spot can do what they like with the company and its property. Already several companies have watered their capitals, immensely to the disadvantage of absent shareholders, and there seems to be reason for apprehending the possibility of cliques of shareholders on the spot collusively selling the best parts of their properties to confederates for an old song, leaving for absent shareholders only something which may be worthless. Then, again, with regard to companies directed in the Transvaal, there is no one here to vouch for the correctness of the intelligence which is disseminated as to the working, the returns, and prospects of their mines.

Against all this, look at the very different position in which stand the holders of shares in English companies for gold mining in the Witwatersrand. The shares being transferable here, transferees can get at once on the register, and their dividends will be paid direct to themselves as the registered owners. The meetings of the company being held here, shareholders receive notice of them in time to attend, and they have every opportunity of seeing that no tricks are played with the company's capital or property.

Then, as to getting correct information as to what is being done at the mines, assuming the English direction to be respectable and the management in honest hands, reliance can safely be placed upon all statements which may be published. We, of course, do not mean to say that the shares should be bought of every Witwatersrand gold company which has been incorporated in England, and which is directed and managed here; we would only point to one or two conspicuous examples, such as, say, the Goldfields of South Africa, Limited, the Durban-Roodeport Company, and particularly the Vogelstruis Gold Mining Company, Limited.

Not only does the Vogelstruis possess a first-class English board, and first-class English managers (Messrs. John Taylor and Sons), but its local director in the Transvaal is Mr. G. A. Tilney, chairman of the Crown Reef Company, and the engineer in charge is Capt. Charles Rowe—who is recognised as a capable miner. At the same time, the property possessed by the Vogelstruis Company—a mynpacht of 548 acres, with a clear length of more than 1¼ miles on the main and other reefs—is held to be not inferior in any respect to the best of the Witwatersrand properties, whilst its capital is proportionately as low as the capital of any of the companies which are making such prodigious returns. Seeing that the Vogelstruis Company's mill is to be in work by the end of this month, and that there are stated to be very large supplies of rich ore ready to be crushed, it would not surprise us to see the shares of that company rise shortly to a very high figure

M. SECRÉTAN SPEAKS.

IT can scarcely fail to have been observed that the chief burden of the discussion on the copper question has been furnished by the detractors of the syndicate, or the Société des Métaux, as the French prefer their combination to be called. The views of M. Secrétan have been pretty generally known to those most interested in the discussion, but have not been expressed in a way that the public could easily understand. In the discussion, particularly in this country, far too much has been said of the consumer; far too little of the producer. The position of the latter during the four or five years that preceded the advent of the syndicate is rarely referred to, and the fact is not brought prominently forward that even at present prices copper is less than it was measured over a long period of years prior to the great fall which culminated in Chili bars being quoted at 38, and culminated also in the closing of many foreign mines, along with the utter extinguishment of the copper industry in this country. It was time that the views of M. Secrétan should be clearly set before the public, and so thought a representative of *Le Temps*, who interviewed the head and front of the syndicate in Paris the other day. The views of M. Secrétan are briefly as follows:—

The detractors of the syndicate, he said, affirm two things. First, that production is enormously increasing; and secondly, that consumption is diminishing in about the same proportion. M. Secrétan addressed himself to the task in the presence of the interviewer, and in the teeth of his searching questions, to the demolition of the first proposition and to the annihilation of the second. Production, he declares, has not augmented, because the companies have sold their produce under contracts to the syndicate at figures agreed upon. Against the diminished production of these mines under the contracts (and they, we know, embrace all whose figures are worthy of individual reckoning) has to be set the production of mines re-opened or newly discovered. The production of the latter has not reached the enforced deficiency of the former. Several causes are also at work to diminish production, as, for example, strikes, transport difficulties, fires, cavings in, and supplies. In the second place, M. Secrétan denies that consumption is diminished. He maintains that its normal and regular rate of progression has gone on. Some manufacturers have been led to keep short supplies by the predicted fall in copper, and as the result have seen their sales diminish, whilst many workshops have not kept ample stocks, as of yore. But, on the other hand, well managed establishments have seen their affairs prosper in a striking degree, and this, he declares, it is easy for him to prove.

If, then, production has not augmented (which he roundly declares to be a fact), and if consumption has followed its ordinary course, it was only natural for the interviewer to ask, "How is it that the published stocks show such a considerable increase?"—for these on the face of them give a direct contradiction to the positive and the negative propositions of M. Secrétan. First of all, he replies, that old stocks were not brought into requisition until 1888; that in the face of the predicted drop in copper, and the collapse of the syndicate, all these old stocks were used up to avoid the necessity of buying new supplies. Such old stocks are now exhausted, and must now give place to the new. But, meanwhile, *the old stocks have never figured in the statistics*, so that augmentation of stocks is not real, if the comparison be made with all the stocks that existed formerly. Manufacturers will return to their ordinary custom of keeping supplies in advance of their requirements, instead of, as now, scraping their yards for old copper in the vain hope that the predictions of the syndicate's enemies will come to pass. M. Secrétan points out that, whereas statistics formerly quoted only included Chili bars and rare descriptions of copper—to-day they include copper of every description and wherever found. And, besides, the contracting companies, instead of delivering their stocks as they are bound to do under the contract, used to retain any portion of them at pleasure for ulterior purposes of their own. At present all that they produce goes to swell the statistics, which are constantly hurled at the head of the syndicate. To quote the striking language of M. Secrétan, "Le stock n'a pas augmenté: il est simplement déplacé." The "makers of statistics" exercise a wise discretion in keeping these facts from the public.

Having demonstrated to his own satisfaction (whether he has done so to our readers must be left to them to decide) his positive and negative propositions, M. Secrétan carries the war into the enemies' camp, and declares that stocks will not augment. First, because the maximum production is fairly well known, and next, because the new contracts provide for a lessened production if necessary. Consumption will not diminish, because of the increasing demands that will be made upon it for electrical purposes, which are long past the experimental stage, and have now entered the domain of practical commerce. Then, again, he attaches importance to sulphate of copper, which is recognised as the cure for the disease of the vine, the potato, &c.; and copper so employed, as he truly remarks, disappears for ever, and can never figure in "old stocks" again. Many modern inventions have copper at their base, and must employ that metal in ever-increasing quantities. The whole situation he regards as absolutely reassuring, both from the point of view of production and consumption. "If," says M. Secrétan, in conclusion, "I have proved, and I think I have, beyond contradiction, that production is absolutely limited, and that consumption must augment in notable proportions, I shall have dispersed the alarms which the detractors of the syndicate have sown, and proved that we can face the future with calmness and confidence." Our readers who have repeatedly heard the one side of the copper question, have now before them the other. The verdict may be left to their common sense.

THE BOARD OF TRADE RETURNS.

THE New Year has opened favourably. The statistics produced by the Customs' authorities afford evidence of the improvement in trade, which the railway traffics, the banker's clearing-house, and other available information have led us to believe apart from the more general absence of "complaint." British and Irish exports for January reached 20,479,000*l.*, or an increase of over 10 per cent., while the imports were 38,023,000, or an increase of over 9 per cent., and the re-shipments 5,614,000*l.*, being no less than 41½ per cent. better than for the corresponding month. All classes and sub-divisions under exports show an increase, the largest being in raw material mainly coal and wool, the latter an increase of not far

short of 100 per cent. Machinery shows the next increase, doubtless for mining purposes. On the import side food products, free and dutiable, together with raw materials for textile and sundry manufactures, show the most important increase, but the augmentation in foreign manufactured articles is a consideration not to be lost sight of, while the only decline to note is in chemicals and oils. Cotton shows a very slight increase, but wool a large one. Wheat figures for nearly 15 per cent. increase in quantity, and 29¼ per cent. in value. The arrivals of nitrate have increased from a little over 2,000 tons to nearly 9,000 tons, of the value of 96,500*l.*, or an increase of 345 and 435 per cent. respectively. As regards minerals, metals, and metal manufactures, the total arrivals have been valued at 2,157,000*l.*, ol 93,000*l.* increase, while the exports (including manufactures) have been 3,056,000*l.*, or an increase of 85,000*l.* The machinery and millwork shipped was valued at 1,112,000*l.*, or an increase of 276,000*l.*

The following table gives the results as regards metals, &c. :—

Article.	Quantity Tons.	Value £	Increase or decrease per Cent. Quantity.	Value.
Exports.				
Coal and coke ...	2,226,928	1,059,683	+23.1	+40.8.

"WOULD YOU BE WILLING TO SELL?"

A LADY SHAREHOLDER, in the Goldfields of Uruguay, Limited—a concern which is rapidly coming to the front—has sent us a letter which she has received from the firm of Hughes, Chemery and Co., tinplate and metal merchants, No. 83, Gracechurch Street, London, which is to the following effect :—

"DEAR MADAM,—A client of ours is desirous of purchasing a few shares in the goldfields of Uruguay Co. As we notice by the register that you hold some shares in this company, and as there is very little market for them, we shall be glad to know if you would be willing to sell, in which case would you kindly let us have an offer for two or three days, for any that you might be disposed to sell and oblige,

Yours faithfully,

HUGHES, CHEMERY & Co.

Our correspondent has not been struck (as she should have been) with either the benevolence or the disinterestedness of the writer of this letter. She really imagines that Messrs. Hughes, Chemery and Co. have some personal motive to serve, and fails to appreciate their kindness in asking for an offer of her shares for two or three days, during which time these gentlemen may see how matters stand on the market, and to what extent their unsolicited benevolence may be carried. Perhaps after all our correspondent is right in retaining her shares ; for, as she truly remarks, "I do not see why, after having held them for about a year, I should part with them just at a time when the company is beginning to give a good account of itself, and when they are likely to go to a premium." It is pretty clear that Messrs. Hughes, Chemery and Co. will not get the shares they want from our correspondent, and neither will they from any of our readers who may hold them, if they know in which direction their pecuniary interests lie.

A MODEL SHAREHOLDERS' MEETING.

THE step Mr. Deering and Mr. Lewis Levy (large shareholders in the Great She Gold Mining Company, Limited), took last Wednesday is to be commended to the notice of shareholders in other companies whose directors cause them uneasiness by prolonged silence. The tone and temper of the meeting were alike admirable. The meeting was called in no hostile spirit to the board, but simply from the point of view of business men, who naturally desire to see some definite result obtained before the last shot leaves the locker. The speeches of Mr. Deering, who presided, and Mr. Lewis Levy, who was the chief exponent of the shareholders' views, were models of what such discourses should be. There was no loss of temper, no wild declamation, and no unnecessary feeling infused into the proceedings. The calm, matter-of-fact statement of Mr. Levy in particular could have had no other effect amongst the business men he addressed than that which he wished, viz., the appointment of a small committee to confer with the directors in a friendly way as to the present position and prospects of the company. We, of course, assume that this committee, at the earliest possible date, will report to another meeting of shareholders. Mr. Cooper was present as a director, and delivered a really effective defence for his colleagues. As he spoke, one could only wonder why the facts he stated had not been summarised in a circular and sent to the shareholders. Had that been done, the meeting of Wednesday last possibly need not have been called.

BIRD'S SWAZIELAND CONCESSION, LIMITED.

THE territory acquired by this company embraces 45 square miles. That is the first point that will strike the attention of investors ; and the second is the smallness of the capital—only 30,000*l.* In the same district there is the Pigg's Peak property, 60 miles, capital 200,000*l.* ; Forbes Reef, 80 miles, capital 400,000*l.* ; and Swaziland Gold Estates, 40 miles, capital 200,000*l.* These properties, therefore, would appear to be heavily handicapped, as compared with the one with which we are now dealing. The present is an issue of 10,000 shares of 1*l.* each, of which 7,500*l.* is set apart for working capital. The concession is granted on favourable terms, and is renewable. The property is to the south of Pigg's Peak and Forbes Concession, whilst the road to Delagoa Bay, a rising port of East Africa, runs near the boundary of the concession. We are quite content to believe that "recent exploration and development of many parts of Swaziland prove it to be a country very rich in auriferous deposits, and the directors consider that this company having secured a large tract of land at a very low price (as compared with that paid by other companies for property in the immediate neighbourhood) has every prospect of obtaining profitable returns." We also attach importance to the personnel of the board, which will have the benefit of the advice and experience that Mr. Alfred E. Ann has gained in his long and honourable connection with mining affairs. The concession confers exclusive mining rights to all minerals on this extensive tract, and the business of the company will be to prospect those portions of the property which promise to yield either gold or precious stones. It will also devote its attention to agricultural pursuits, and appears from all points of view to have before it prospects of success fully equal to concerns started with very much larger capital issues. The lists closed for London yesterday, and to-day they close for the country.

A TOBACCO COMPANY THAT CAN BE SPARED.—ANGLO-SUMATRA.

THE Anglo-Sumatra Tobacco, Limited, in the present rush of Investments, can well be spared. In the first place, the directors are remarkable for nothing in particular, and none of them appear to have had experience in the business they propose to conduct. The lands have been selected by "a gentleman of experience," but the prospectus is silent as to this individual's name. Is he ashamed to have it announced in connection with this undertaking ? If not, why is it not published ? We see little prospect of 15,500*l.* being realised as profit in the first year of trading, much less the 31,000*l.* predicted as the result of year No. 2. In fact, we shall be surprised if the first two years show any profit at all. This view is not altered by the copious reports given about the Sumatra tobacco trade in general—reports which have no reference to this concern in particular. In fact our adverse view is strengthened very much by the fact, that the person upon whose judgment in the selection of lands almost everything hinges, is anonymous. In the long run we think it will be found that the vendor, who is to receive 60,000*l.* in cash, will be considerably more fortunate in his investment than the shareholders will be in theirs.

THE NEWBERY-VAUTIN (PATENTS) GOLD EXTRACTION CO., LIMITED.

THE progress of this company under the distinguished direction of Mr. Birkin and his colleagues has been of a remarkable—we had almost said a unique—character. Taking the cash and the value of the shares distributed as well, the dividends, Mr. Birkin estimates, have been between 50 and 60 per cent. "In fact," said the chairman, "we have paid at the rate of 115 per cent. per annum if you keep your shares in the subsidiary companies until they get to par." The actual distribution has been as follows :—An interim cash dividend, at the rate of 15 per cent. per annum, amounting to 7,312*l.* 5s. 3d., and the distribution amongst the shareholders of 100,000 fully paid-up shares in subsiduary companies, after deducting income-tax. Up to the present time no less than 50 patents have been taken out for the company, of which number 26 have already been issued, and the remaining 24 are on the way to being granted. In the course of his remarks the chairman reviewed the work already done in the United States, Australia, New Zealand, South Africa, and other countries. He also stated that since the directors had last met the shareholders Messrs. Newbery and Vautin had succeeded in developing an entirely new idea, not merely an improvement, on the present process of the company, but one which would supplement it, and probably prove of infinite value. That the directors work hard is proved by the fact that they have held 140 board meetings, lasting from two to five hours. Mr. Vautin is at present in Africa on the company's business, and on a similar mission Mr. Newbery has gone to Australia. At Mount Morgan Mine, in Queensland, 1,500 tons per week of ore are being treated by this process with results which have astonished the mining and commercial world.

HOPE FOR KOHINOOR AND DONALDSON.

THE shareholders who entered the room in which the Kohinoor and Donaldson meeting was held on Thursday, in depressed spirits, left that room considerably elated by what the chairman was able to lay before them. Under the wise administration of the present board, and notably of Mr. Hopkins, at home, and of Mr. Vivian on the spot, this company, it would seem, is raising its head once more. It appears from what was said, that the property has had a rough

handling from the former manager, and we shall be glad to hear and to publish any explanation Mr. Alfred Rickard may have to give as to the condition in which it is alleged he left the mines and their machinery. Mr. Alfred Rickard is trusted by English shareholders in other concerns, and in justice to himself, we think he is bound to give the explanation which is called for. Be this as it may, the fact remains that when Mr. Rickard left the mines, and Mr. Vivian reigned in his stead, the ore that previously could be found nowhere was discovered everywhere. Almost at every point of Mr. Vivian's pick this ore was to be found —we are now referring to the Champion Mine—and so remarkable a change has come over the spirit of the dream, that the chairman speaks with confidence of a monthly profit, even with present appliances, of 700*l.* to 800*l.*, and of 10,000 tons of ore being available, which can be got out at once. Mr. Vivian's son, who is at present in charge, and who is employed in mines by Mr. Mackay, the millionaire, at a large salary, declares that in all his life he never saw any mine equal to the Champion, and "to say that it is rich is a feeble expression." It is not as though one point only were rich, but there are ten points, and, as Mr. Vivian said, it is outside the bounds of possibility that the whole of them should become poor at once. We cannot forbear adding a word expressive of the regret we feel at the untimely death of Mr. Francis A. Sands, the promoter of the company. The views he always expressed as to the wealth of these three mines—the Champion, the Donaldson, and the Kohinoor—appear now to be in a fair way of realisation.

PROGRESS OF THE YURUARI CO.

THE latest report from the Yuruari mines, which will be found in another column, written by the superintendent, Mr. Aikman, must be considered satisfactory. The directors purpose sending out plant for treating the tailings, to which he refers, estimated at between 100,000 tons and 150,000 tons—the result of workings extending over about eight years. These tailings must have become oxidised to a large extent by exposure to the atmosphere, and their treatment will probably be less difficult. The directors are considering what sort of plant they will send out, and before they finally decide will test it upon samples of ore from the mines. The tailings upon assay have shown results varying between 5 dwts. and 11 dwts. per ton, and it is estimated that the cost of treatment will not exceed 1 dwt. Mr. Aikman writes in good spirits, and indicates his ability to double the returns recently made. January is always a broken month at the mines in Venezula, owing to the prolougation of the Christmas holidays—some of the miners not returning until about the end of the month. But, nevertheless, an improvement is anticipated upon the returns for December. The February return, it is expected, will be more than doubled (1,200 ozs.)

With reference to the all-important question of railway communication, we understand that negotiations are now in progress which well-informed persons consider will result in the line from British Guayana being put in hand with a view to construction at the earliest date. The projected railway will go through the heart of the gold-bearing formation lying south-west of Yuruari. It is gratifying to note the increase of gold sent weekly to Demerara. Much inconvenience has been caused by the frequent alterations in the dates of sailings from Bolivar, because the date when mails and telegrams are received is left uncertain. By an official notice from the Yuruari Company, it will be seen that the next telegram, giving the produce for January, is due on the 18th February.

ARBEY WOOD-WOOL CO., LIMITED.

AS an alternative to mining investments, the Arbey Wood-Wool Company comes with good credentials. The business it is proposed to take over is that of Messrs. Ferdinand Arbey and Sons, of Paris and Bolton, who are well known as manufacturers of wood-cutting machinery, who have patent rights for the production of wood-wool and all the necessary appurtenances of the trade, which will pass under the control of the company. Wood-wool is described as consisting of fine long shavings of pine or other wood which may be of any desired breadth or thickness, and the uses to which it is applied are for packing delicate and breakable goods, for bedding, upholstery, railway carriage seats, and a variety of other purposes. For example, the French Government employs wood-wool to fill the mattresses used by the Army and the German Government is placing contracts for the same purpose. It has been used for volunteer encampments in this country, and has been well reported upon by persons high in military authority. To its sanitary properties, the medical officer of health for Bolton has borne testimony. It is recommended for adoption in hospitals, workhouses, prisons, &c., and for packing fruit and the like, its importance is generally recognised, and was particularly so at the recent fruit growers conference at the Crystal Palace. The orders for the machinery, which is made in Bolton, have been very large, and the prospectus of the company, which is very full in information needed by investors, mentions some of the leading manufacturing firms of the country as those that have given orders for it. Apart from all this, a very satisfactory report has been prepared by Messrs. Abel and Imray on the validity of the patents. It is proposed to establish works in London, Birmingham, The Potteries, Manchester, Glasgow, and Dublin, and with six machines working it is estimated that a balance of profit at each centre will be left of 2,103*l.*, or a nett profit of 12,618*l.*, which would be equal to a dividend of over 25 per cent. on the capital of 50,000*l.* A satisfactory certificate is signed by Mr. W. G. Gribbon, a chartered accountant, and the estimates generally appear to be well within the mark. The consideration given for the patent rights, including the benefit of all improvements and additions which may be made by the vendors from time to time has been fixed at 25,000*l.*, of which one-half will be taken in fully-paid shares. A good working board has been formed, and the fact that Mr. J. Y. Watson, of Copthall Buildings, has become the broker, will give satisfaction to a wide circle of investors. The list of applications will open on Tuesday and close on Thursday.

THE METROPOLITAN COAL CONSUMERS' ASSOCIATION, LIMITED.

HOPE FOR THE LONDON HOUSEHOLDER.

THE Metropolitan Coal Consumers' Association, Limited, is a praiseworthy attempt to emancipate the family coalscuttle from the various untoward influences that have hitherto held it in check. If influential names, if a good executive and finance committee, and if a well devised and practical system can commend themselves to the usually inert London public, success should crown the effort now to be made. Otherwise we fear that the aforesaid family coalscuttle will still remain in bonds, for the hour of its redemption will not have been struck. Between the coal proprietor on the one side, and the retail merchant on the other, the coal consumer of London has been financially crucified between two thieves. He has been helpless. It has scarcely needed a combination to be formed against him—the only question has been which body should plunder him the most ruthlessly. The prospectus anticipates that the plundering is to be accentuated, and that "further heavy advances" in coal will take place. It calls upon the Londoner to take arms, and offers to place within his grasp the weapons of self-defence. It proposes to bring the producer and consumer face to face—in a word, it is a well conceived attempt to abolish the middle man. At the present time the consumer gives his orders to a firm whom he can trust, but who charges him the maximum price of the day; or he selects a cheap firm he does not know, and finds his cellar encumbered with a material which refuses to submit to the ordinary rules of combustion. Whilst the supply lasts (and it does so for a long time, simply because it will not burn) Paterfamilias has a lively time with the members of his family. Sometimes human nature asserts itself above religious training, and the language that is employed in the kitchen and anon in the parlour leads one to the sad conclusion that the earlier lessons of the Sunday-school are forgotten. This association therefore proposes not only to brighten the family hearth, but to sweeten the domestic temper, and that it can do so under the proposed arrangement is proved by the remarkable success of co-operative societies in the provinces. The association will purchase coal at the pit's mouth; it will supply this coal to the members plus the cost of carriage, &c., and plus also a fixed profit of 1s. 6d. per ton. It will have capital with which to work, and it will offer to its supporters the triune advantages of the best coal, of a cheap market, and of a satisfactory investment. The coal brought into London during 1888 was nearly seven and a-half million tons, and about five million tons of seaborne coal also entered the port of London during the same period. Now, should only 400,000 tons of coal per annum be supplied to domestic consumers at a profit of 1s. 6d. per ton, 6 per cent. can be paid on the preference, and upwards of 10 per cent. on the ordinary capital of the association. The capital is 250,000*l.*, and the full arrangements with reference to it will be found in another part of our present impression. About 2,000 persons have consented to become the patrons of the association, some of them being persons of rank, and all of them moving in influential circles of society. The general scheme is one which, on all grounds can be commended, and it remains to be seen whether Londoners will take advantage of this most practical effort to provide them with one of the greatest comforts of life on the dual basis of consumers and investors, and whether they will, as we have before said, seize this chance of emancipating the family coalscuttle from the harpies who up till now have held it in bondage.

THE SWAZIELAND GOLD EXPLORATION AND LAND CO., LIMITED.

THE names which face the prospectus of this company will give confidence to investors, and notably the first of them, Mr. E. A. Pontifex, chairman of the Cape Copper Company. He has colleagues of experience and ability, with a Colonial board to aid them. The bankers are the Alliance Bank, and the broker Mr. J. Y. Watson, who is so well-known in connection with large mining transactions. The property is in a district somewhat neglected by the investor hitherto, but which is likely, under careful development, to come very much to the front. The area embraced by the property comprises 156 square miles, and it is held under a favourable concession (renewable) for 50 years. On three sides there are rivers, and the importance of this statement will be best understood by those who are acquainted with mining matters. All the necessary facilities exist for rapid development, and the object of the company is to

explore and open up this immense tract of country, and to sell or let mining rights to subsidiary companies or individuals, upon terms to be arranged—in fact, the working capital will be exclusively applied to prospecting and developing purposes. The mineral wealth of Swazieland is known and realised on the spot. The Forbes Mining Company has had an output of 17,000 ozs. of gold, worth 63,000*l*., and the shares are quoted at a considerable premium. Under circumstances, equally favourable, this company appears to have been started, and the property has been reported upon by experts of repute whose united testimony is a great encouragement to proceed. A further inducement in the same direction is the result of assays made, which have shown samples of ore taken from the property to be of exceptional richness. The capital is 150,000*l*., of which 50,000*l*. will be allotted as fully paid to the vendor, and the balance of the purchase-money (75,000*l*.) is payable in cash or shares at the option of the directors—25,000*l*. being reserved for working capital. The list of applications for shares closed last Thursday.

WEST MOODIE'S GOLD.

In our issue of January 26th we had to say some plain things with reference to the West Moodie's Gold Exploration Company, Limited, the motto of whose directors appears to be "keep it dark." A meeting of the company was held yesterday, and upon our representative presenting himself for admission he was refused, and informed that reporters were not allowed to be present. The transactions of the West Moodie's directors are evidently conducted in a corner, and they appear resolved that the absent shareholders shall be deprived of all possibility of learning, by means of an independent report, what they are about. They even go so far afield as the Westminster Palace Hotel to hold their meeting, and call it for the unusual and unbusinesslike hour of 4.30 p.m., when they know that City men will be answering their letters. We have little doubt that in the end the West Moodie's Company will be wound up, and this is a result we shall extremely regret for the sake of the shareholders, because under better management we are of opinion that possibly something might have been saved out of the wreck.

NORTHWICH SALT CO., LIMITED.

With a capital of 100,000*l*., in 20,000 shares of 5*l*. each, this company has been formed to purchase 27 acres of freehold land, with the salt deposits underlying, at Lostock Gralam, on the north bank of Wade Brook, near Northwich, Cheshire, and to erect thereon works for raising and manufacturing salt and other chemical products. The property is situated in the midst of the salt district, and possesses excellent railway and canal facilities. According to careful estimates, the salt is about 150 ft. from the surface, and about 130 ft. in thickness, which represents (calculating the net profit at a minimum of 6*s*. per ton) a revenue of 20,000*l*. per annum. Salt is now about 18s. per ton, and the cost of production does not exceed 5s. 6d. per ton. A profit of 12s. 6d. per ton, on a weekly output of 1,000 tons, represents 625*l*. per week, or 32,500*l*. per annum. With salt, however, at 12s. per ton, and the same output—which, it is said, could be easily doubled by the erection of additional pans — the profits should show over 15 per cent. on the shares. As regards the productiveness of the Northwich beds, Mr. Thomas Ward, J.P., the well-known salt expert and manager of the Salt Union, states:—"I have come to the conclusion that the Northwich beds occupy at least three square miles, and contain in the aggregate, 900,000,000 tons—the upper bed 380,000,000, the lower, 520,000,000." The price to be paid to the vendor has been fixed at 84,000*l*., of which two-thirds will be payable in cash and the remainder in fully paid shares. The company also offer for immediate subscription 20,000*l*., in 8 per Cent. First Mortgage Debenture Bonds of 50*l*. each, payable 10*l*. on application, 20*l*. on allotment, and the balance one month after allotment. These bonds will be secured on the entire property of the company, and the interest will be payable half-yearly.

THE KETCHAU (PAHANG) CORPORATION, LIMITED.

The company is formed with a capital of 150,000*l*., in 150,000 shares of 1*l*. each, of which 100,000 shares are now offered for subscription. It acquires, direct from the Sultan, very valuable mining and other rights over the entire district of Ketchau, in the state of Pahang, on the eastern side of the Malay Peninsula. Gold and tin are found in many parts of the State, and particularly in Ketchau. Mr. Skinner, in "The Eastern Geography," says, "the chief importance of Pahang lies in its mineral wealth, its reputation for gold and tin combined being unrivalled." Gold mining has been carried on in the Ketchau property for 600 years or more, the work having been done chiefly by the Chinese and the Siamese. Some of the old workings are of extraordinary extent, many of them being 400 ft. deep by 300 ft. long, and 400 ft. wide, and they exhibited beyond doubt the great thickness of the lodes. The lodes on the gold reefs are well-defined, and yield up to 2 ozs. to the ton, and, as the ore is easily worked, it is estimated that the cost of working will not exceed 10s. per ton of quartz. On this estimate is based a calculation of a net return of 22,500*l*. per annum from gold mining alone. This will be equal to 15 per cent. on the capital. Tin, silver and other minerals are found in lodes which pass through the concession, and large additional profits may be derived from working these lodes. There are also found numerous alluvial deposits both of gold and tin, which the natives work with profit, and it is proposed to maintain them at the work on tribute on behalf of the company. The concession, which is for 55 years, has been secured by two or three merchants of Singapore, and the rights which it grants extend over an area of 200 square miles. The district is in direct water communication with any part of the world, by means of the Pahang River. Pahang has recently become a favourite field for British enterprise, but even among the undertakings associated with that interesting region this appears to be one of great promise.

THE MONEY MARKET.

City, Friday Evening.

The Mouey Market was firmer still to-day, discount advanced to $2\frac{5}{8}, \frac{3}{4}$ per cent., and money for short loans was in demand in the morning at 3 per cent., but was easier in the afternoon on a better supply. The discount houses have, it is said, decided to raise their terms for deposits to-morrow to 2 and $2\frac{1}{4}$ per cent. for money at call, and notice respectively. The tenders for the million of Indian Midland Railway Three-and-a-Quarter per Cent. Debentures for seven years, have resulted in a failure, only 100,000*l*. having been taken up.

At the Bank to-day there was an influx of 18,000*l*. in bar gold. Bar silver was unchanged at $42\frac{1}{2}$d. per oz., although the rupee was improved.

Political affairs this week have not been particularly startling or important. The lamented Crown Prince of Austria has been buried, and with him, let us hope, all reasons for his rash act. The "Paruell Commission" drags its weary length, but public interest has been revived this week by some very startling and, if true, damaging evidence. In France affairs still remain, and are likely to do so, in a very unsettled state, although Boulanger has not made any move at present. Business at the Stock Exchange has been moderate, and, considering all things, prices have been well-maintained. The Funds have not been so good, the purchases by the Government broker being counteracted by the sales by the public, who are re-investing the proceeds in other sound securities, such as Indian Government, Colonial Inscribed, Home Corporation, and English Railway Stock. The advance in these securities brought forward speculative realisations, so that the movements in the first-mentioned descriptions are more or less of a retrograde nature. Foreign Government Bonds have been supported by the Continental bourses, and show an almost general advance; the chief demand has been for Greek, Hungarian, Egyptian, and the Tribute and Defence Loans, which have risen 1 to $1\frac{1}{2}$. Portuguese Bonds were also in request, notwithstanding the Oporto troubles. Uruguay Bonds, however, were exceptionally weak, on reports of a panic on the Monte Video Bourse. In the Home Railway market the heavy lines were in request, an idea being very prevalent that the companies will shortly subdivide their stock. The traffic returns were also very good, and show an average increase of 3*l*. 4*s*. per train mile, as compared with last year. North-Western has risen $2\frac{1}{2}$; South-Western, $3\frac{1}{2}$; Caledonian, Lancashire and Yorkshire, Great Eastern, and Hull and Barnsley, 1 to $1\frac{1}{2}$, the latter on rumours of an amalgamation with some more prosperous neighbour, and Taff Vale fully 20 per cent. since the last "making up" price owing to this dividend announcement. American Railway Securities have fluctuated in a very uncertain manner, but on the week there is an almost general gain of $\frac{1}{2}$ to $1. Grand Trunk Stocks have weakened by the traffic returns showing an increase of only 7,200, while Mexican were firmer. In the Minor Markets the tendency has been dull, and Hotchkiss Shares fell away sharply on dividend rumours, while Guiuness Shares were very heavy on the aunouucement of a divideud at the rate of 12 per cent.

The Stock Markets to-day were affected by the approaching bi-monthly settlement, the arrangement of which commences on Tuesday, and prices in consequence have dwindled all round, the fall, however, has not been serious apart from Foreign Government Bonds and Home Railway Stocks. The Funds, and other high-class securities were dull. Foreign Government Bonds gave way, although the Continental bourses were reported as steady, the downward movement being attributable to the rise in the value of money, and consequent expectations of higher "carrying over" rates at the settlement. The fall ranges from $\frac{1}{4}$ to $\frac{1}{2}$, with an exceptional reduction of $1\frac{1}{4}$ in Uruguay Bonds, owing to a pressure of sales. Some of the South American Sterling Loans were rather firmer. Home Railways gave way from similar reasons, although somewhat counteracted by the excellent Board of Trade Returns. Hull and Barnsley at one time went to $36\frac{1}{4}$, but recovered to $37\frac{1}{4}$. North Western were exceptionally $\frac{3}{4}$ down, the rest being $\frac{1}{4}$ to $\frac{1}{2}$ per cent., excluding the Scotch lines, which were much stronger. American Railway Securities have been lifeless, and although the fall is not serious, the tone was emphatically dull. Reading issues, however, together with Northern Pacific, Ohio, and Mississippi issues, were firmer. Grand Trunk Stocks were dull and featureless, while Mexican Stocks were flat, and 1 to $1\frac{1}{2}$ lower, on some active selling. Bank and Miscellaneous shares were steady, but without important alterations. The Nitrate Group, however, again gave way one or two points. The City of Mexican Scrip has risen from $2\frac{1}{4}$ discount to $\frac{3}{4}$, $\frac{1}{4}$ discount.

REPORTS OF MEETINGS.

THE KOHINOOR AND DONALDSON CONSOLIDATED MINING CO., LIMITED.

MATTERS GO WELL UNDER MR. VIVIAN'S MANAGEMENT—ORE IN ALL THE ENDS, AND A GOOD PROSPECT FOR THE COMPANY AFTER ALL—HOW MR. RICKARD LEFT THE MINE.

THE ordinary general meeting of the shareholders was held at Winchester House, Old Broad Street, on Thursday, "for the purpose of receiving the report of the directors and the statement of accounts made up to the 31st day of December, 1887, and for transacting the general business of the company"—George Hopkins, Esq., C.E. (chairman of the company), presided.

Mr. W. H. ROWE (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

A RETROSPECT.

The CHAIRMAN, who was heartily received, said: I think, gentlemen, it was in May, 1884, that at the request of my friend, Mr. Soliague, and of his partner, Mr. Henry Walker, and by urgent representations from Mr. Elliott and the late Mr. Heiron, I consented to be one of a committee to inquire into the affairs of the company at that time with a view to seeing what could be done to put them into a better form. The affairs of the company then were in a most melancholy condition. As I have said at previous meetings, the word bankruptcy hardly expressed the state they were in. Not sufficient money to pay for postage stamps was in the till, and the debts on this side and in America were heavy, whilst litigation was threateued in all directions. That was the state of the company when that committee, of which Mr. Soliague was one, entered upon their duties. The outcome ot that committee was that the sum of 15,000*l.* was raised, the greater part of which was transmitted to the other side, and expended partly in payment of liabilities to a large degree for new machinery, because 50 stamps had been ordered for the mill, together with a new water-wheel, whilst a great many surface and other improvements had taken place. Great was our mortification and disappointment when we had spent all that money to have it reported to us that there were no reserves of paying ore in the mine.

MISREPRESENTATIONS.

Why, gentlemen, it had been represented to us over and over again that there was plenty of ore in the mine waiting only for this machinery to be completed in order to be crushed and turned into money. (Hear, hear.) After a good deal of delay and consideration, and believing in the value of the property, the directors took power, as you will remember, from the shareholders to raise capital in the way of first preference debentures, taking in the first instance power up to 8,000*l.* That money, or, at any rate, the bulk of it, was also sent over to the mine, aud like what preceded it was spent, so far as we are concerned or could see, with no very great result—the result being this, that after a short time of working, the mines and the mill had to be shut down, and a considerable amount of indebtedness was incurred mainly to the workmen at the mine. The manager (Mr. Alfred Rickard) came over in 1886, and if you remember met the priucipal shareholders with the directors at the company's offices, and at that time

THE SHAREHOLDERS EXPRESSED THEIR VIEWS SO FREELY

as to the management or mismanagement of the miue that soon after Mr. Rickard sent in his resignation, which was accepted. Mr. Rickard consented to hold office on half-pay merely to take care of the property until his successor was appointed. Meanwhile the directors obtained a report from a mining engineer (Mr. Fowler), which quite confirmed the previous reports they had had. About the end of 1886 the late Mr. Heiron made a suggestion to me that if Mr. Elliott and I, with our friends, would find money to develop the mine (and 5,000*l.* was spoken of as the sum) he would himself find money sufficient to clear the company from debt on the other side. We accepted that offer.

A GOOD FRIEND TAKEN AWAY.

Unhapplily, and I say it with deep regret, soon after that Mr. Heiron was removed from us. We had sent enough money to pay the principal part of the debts, and had given instructions for works to be re-commenced at the mine, but of course the unfortunate death of Mr. Heiron made us just short of so much money as he had promised, because I quite concur with Mr. Heiron's executors, that after his death a very different state of things was brought about. Mr. Heiron would have done what he promised had he lived, but his executors were in a different position. I coupled to that offer the condition that I would join provided we could find a really good manager, and one in whom we could have complete confidence. You know how difficult it is to do that, for you are absolutely at the mercy of your manager in regard to a property many thousands of miles distant. It was a long time before we succeeded in finding one whom we thought a suitable manager, and it so happened that Mr. Vivian, who is now sitting by my side, and who has been resident for a great number of years within a few miles of the mines, was in London on other business of his own, and it occurred to me whether I could persuade him to go out and take the management of the property for a time, even if he could not see his way to remain permanently there.

A NEW ORDER OF THINGS.

Mr. Vivian consented and left London on the 28th January of last year—arriving at the mines on the 10th February. I do not wish to say much about Mr. Alfred Rickard. I would be glad if I could sit down without saying anything, and I am quite sure Mr. Vivian, on his part, is not anxious to say anything either. But I should be doing injustice to you if I did not say this much, that seeing how well and considerately Mr. Rickard has always been treated by the directors, who in the face of complaints from the shareholders had stood up for him, and vindicated his conduct as long as they thought it possible —I say I do not think we deserved the treatment from Mr. Rickard's hands, which we seem to have received.

STRONG ALLEGATIONS.

Instead of taking care, as he promised to do, of the property everything was allowed to go to wreck and ruin. The mines themselves were in bad order. The machinery, the tramways and everything was in a neglected and ruinous condition. In fact, instead of taking carc of things they had not been taken care of. Everything that would fetch a dollar had been removed and sold, and even some of the things which were fixed to the machinery had also been removed and sold. Mr. Vivian is here—and I wish Mr. Rickard were here also—he will not go behind his word, or what he has written. I will read a portion of Mr. Vivian's letter—a letter addressed to the board of directors on the 4th April, 1888:—

"In order to thoroughly appreciate the present state of affairs, I must beg of you to picture to yourselves my position on my arrival here, in winter, to take possession of three abandoned mines situated in a 'howling wilderness,' with dilapidated buildings, machinery, tramways; no tools, drifts underground filled with debris, many of the tracks taken away, timbering neglected, and all the ore available stoped out; some stands of wire tramway down or bent; a considerable number (32) of buckets broken and distributed in the gulches, wheels and clips demolished, wire ropes on tramway and shaft neglected, and 'rusty as anchors;' and lastly, the general state of affairs, financial and otherwise, in disreputable condition."

I will, gentlemen, there leave that part of the question, and I will now turn to what Mr. Vivian has done during the past year. His first duties, as pointed out in the report, were to settle with the outstanding creditors—the total of whose debts at that time amounted to about 3,000*l.* Being supplied with the money, that was not a very laborious task, and I even think I may say it was a pleasant one.

WORK IN REAL EARNEST.

Then he commenced doing work, both in the Champion and Donaldson Mines. I am not going through all the details; I will allude only to the principal points. The Champion shaft which (to give every one his due) Mr. Vivian says is a splendid piece of work, was put in thorough order from the top to the bottom; furnished with a new steel-wire rope; the second track in the shaft, which extended from the surface down to the 400-ft. level, he put in order and repaired, and extended it to the 680-ft. level, putting in new rails and timbers, and using the old rope in the second road, which will now only be used for mineral.

EPITOME OF WORK DONE.

He cleared out, re-timbered, and re-railed the whole of the drifts below the 500 level, aud put them into good working condition. He put nearly 500 ft. of 10-in. pipe from the lower workings of the shaft towards the surface for the purpose of ventilation. The engine and boiler at the top of the shaft were thoroughly overhauled, and so also were the engine-house and buildings at that spot. The tramway leading from the top of the shaft down to the mill was also repaired, and put in order with new running wheels, buckets, and clips, and provided with a considerable length of new rope. This overhead wire tramway is about 1¼ miles in length, and consists of a double length of wire—together about 2½ miles long. The mill itself was also thoroughly overhauled and repaired. Four jigs and two sets of Cornish rolls (which had been put aside for what purpose I do not know) were set in order, with new belting, shafting and water tanks. Pumps and pipes were put in, and a complete set of new shoes for the 50 stamps was provided, along with five new bumping tables and other appliances. The mill was put in thorough order, and several additions made to it. A railway was made connecting the mill with the railway which leads to Denver, thereby reducing the cost of transport considerably. A new flume was made connecting our water-race with the water-race belonging to our neighbours, the Plutus Company, by which we avoided what might have been a very troublesome and expensive litigation. (Cheers.) By what we have done, that question of water rights is now set at rest for ever. In the Donaldson Mine some of the levels were cleaned out and re-railed, and some development work done there—the result being that 1,200 ft. of drifts have been run during the year, and the Champion shaft has been sunk 25 ft., so as to get more room below the 760-ft. level and more storage for the water which is allowed to accumulate in the bottom of the shaft, and is used for the engines and boilers at the top.

WONDERFUL CHANGE FOR THE BETTER.

The shaft is now 31 ft. below the 760-ft. level. At the present time we have eight ends going in the Champion Mine, and three in the Donaldson, the whole of them being in good paying ore. (Cheers.) Moreover at the bottom of the shaft you have the vein iu its full strength. (Cheers.) I do not understand how oue manager cannot find ore, and how another, as soon as he goes to work, finds ore in almost every direction at the point of his pick. (Cheers.) The difference between your position formerly and now, is that you have put all this machinery, and the mill into good order ready for work, and you have something like

10,000 TONS OF ORE AVAILABLE,

which can be got out at once. (Cheers.) You have also prospects in view sufficient to raise the hopes of all the shareholders, aud make us believe that after all these years of weary toil and disappoiutment we have at last arrived at the point where we ought to have been years ago, viz., a point at which these valuable properties will realise for you substantial profits. (Cheers.)

Mr. J. WALKER: What is the average value of the milling ore?

The CHAIRMAN: About $15 or $16. The smeltiug ore varies very much. Whilst I am speaking of development I will read to you the latest news from the mine received yesterday, and which is very satisfactory.

"Idaho Springs, January 21st, 1889.

"Everything is going on well. The second skipway is finished, the new rope in place, and working well. The mill is almost ready to run. Could be started up at a few hours' notice.

"To say that the mine looks well would be but a feeble expression of facts. The assays I sent you speak for themselves. I shipped a load of first-class ore to see how the grade kept up; it netted us $98 per ton. We have connected the 600 winze aud 680 level west; also the 760 raise and 630 east level. In closing I must say that the

Champion is opening up better than any mine I ever saw. Ore everywhere, and of good grade."

We are not working by night and by day. We shut down the mill, and discharged all the men engaged on stoping the ore, keeping all our force in developing the mine as much as possible during the winter, and as regards shutting down the mill—it will be satisfactory for you to know that it will not be necessary, as a rule, to do so in the winter, because in addition to the water we have, there is also steam power, by which, when the water-races are frozen over, and there is no water, we can still keep the mill running. We propose this :—We intend to start the mill as early as we can—probably in March.

PROPOSALS FOR THE FUTURE.

Mr. Vivian will leave directly after this meeting so as to catch the steamer on Saturday from Liverpool. He will start the mill as soon as he can, during the month of March. He thinks the weather will be sufficiently open by that time, and we shall be able to get the use of the water for the water-wheel.

PRESENT APPLIANCES.

The wire tramway from the top of the Champion Mine to the mill will only enable you to run down about 40 tons a day, and what I propose is this—that we should at once run down that quantity which is about 1,000 tons per month, and I think on that we shall make a profit each month of about $4 per ton, or from 700*l.* to 800*l.* In looking through all the different papers and reports I see that that is about the figure upon which we may rely, and Mr. Vivian concurs. We are of course handicapped by debentures and debenture interest, the latter being considerably in arrear.

A CHEERFUL FORECAST.

But I think that if you gentlemen will give us a little more of that forbearance and patience, which you have so generously extended to us for many years past, I can see my way to say that everybody who has ever put any money into this mine, will get it out again with interest. I know the debenture interest is very heavy, but I also know this, that directly we get to work we shall soon be reducing that and the capital of the debentures themselves; and always bear this in mind, that your share capital is very small for such a large property as we have. Three mines—I have not touched upon the Kohinoor, but I believe that is a good property as well. It was left by the other directors because they thought they had a much better property in the Champion. We have also the Donaldson. These three properties, with a capital of only 115,000*l.*, when once we can get rid of our debentures, will make your shares of value, and I think the time is not very far distant (we always in mining speak subject to some disappointment), but, so far as one can judge, I think the time is not far distant when these shares will be of considerable value.

THE HAND OF DEATH BUSY.

Death, I am sorry to say, has been busy amongst us. We have not only lost Mr. Heiron, but we have lost one of our solicitors, and, as you all have no doubt heard, within the last few weeks we have lost Mr. Sands, jun., one of the promoters of this company, and one of the early directors.

A TRIBUTE TO THE LATE MR. HEIRON.

I feel it my duty, after having sat for a long time on the board with Mr. Heiron, to bear testimony to the straightforward and honourable way in which he always dealt with this company. Some shareholders have complained at times, and spoken of hard bargains, but bear in mind, gentlemen, that there have been times in the history of this company when no other person would step forward and lend the company 7,000*l.*, even on any terms whatever, and, speaking for myself, whilst deeply regretting Mr. Heiron's death, I repeat this tribute to his memory, that in all his dealings with this company, so far as I became cognizant of them, they were of the most honourable and upright character. Perhaps I ought now to sit down, but I think I should not be doing justice to myself or my co-directors if I did not refer a little to what took place subsequently to

THE PRO FORMA MEETING

held on 27th December. I take upon myself the entire responsibility for that meeting. It was called under these circumstances: Mr. Vivian had written to us, that with our consent he proposed to come over here early in January, and I thought that it would be more satisfactory to you, gentlemen, to have this meeting held when Mr. Vivian was present than to have the ordinary meeting in the month of December when he was not present. (Hear, hear.) The only way in which that could be carried out, complying with the Act, was to call a meeting pro formâ, and in the notice which you all have it is stated that it is only pro formâ, and that it will be immediately adjourned. The object of that was to invite shareholders not to take the trouble to come to the meeting. However, I see by the minutes that there were three shareholders present, one of whom was our solicitor, Mr. Riley, Mr. Soliague, and Mr. Roux. I must say that I felt a little annoyance at

ANONYMOUS LETTERS

which appeared in the *Financial News* not written in the kindest possible spirit.

The Chairman here read the letters referred to, the first of which Mr. Soliague stated that he had written. The chairman also read and sarcastically commented upon another letter signed "Manchester Poor Confiding Shareholder," pointing out that seven shareholders in Manchester and district held together 350 shares, the cost of which was 51*l.* 12s. 9d.

THE CHAIRMAN FINANCES THE COMPANY.

The Chairman then proceeded as follows: What happened when I came back? I found Mr. Vivian in London waiting for me. He had telegrams in his pocket about the money that was wanted. The "poor confiding shareholder," willing to contribute money for litigation never contributed money to save the mine. (Hear, hear.) Mr. Vivian wanted 900*l.* for his month's expenses, and I found it. The insurance on our mill became due a few days afterwards, and another 125*l.* was wanted, and I found that. Therefore, I do not think the poor confiding shareholders have much fault to find with the board. (Cheers.) I feel I ought really to apologise for taking any notice of these letters but I must say they hurt me a little. Since May, 1884, I have been, doing my utmost, by personal exertions, by my own money, and by the money which I have induced friends to put into this undertaking to bring it into a profitable and satisfactory position, and if I thought, which I do not for a moment, that the shareholders at all sympathised with the letters, I would instantly

WASH MY HANDS OF THE WHOLE AFFAIR,

and ask the trustees for the debenture-holders to foreclose the property, and carry it on for the benefit of those who have invested their money in it. But, gentlemen, I know that is not your feeling. You have been extremely forbearing in times gone by. Bear with us a little longer, and I think before this time 12 months we can put before you a very different state of things. With these remarks I will formally move the reception and adoption of the report and accounts.

VIEWS OF A DIRECTOR WHO HAS SEEN THE MINE.

Mr. Purvis (director): I second it, and I think I am the only director who has ever visited the mines. I did so in the darkest days, and was most kindly received by Mr. Thomas Rickard, Jun., a young man of whom I formed high expectations. The mine was then at a standstill. The Champion was shut down, and the Donaldson was only going by a few tributers. I went through the various levels in the Donaldson, and saw ore being shipped to the smelting-house, and also saw a residuum of gold in the ore they were taking out. I satisfied myself that there was value in the mine. Mr. Sands made his father managing director, which was most unfortunate, for he was a man of magnificent ideas. He sent glowing reports which existed only in his own imagination.

IMPROVED MANAGEMENT.

Mr. Vivian has made a great change. Things that were in bad order are now in good order. Next to Mr. Vivian, who has been at the scene of operations, the credit is due for our improved position to our chairman, Mr. Hopkins. (Cheers.) He had very little stake in the mine when he was induced to become our chairman, but we had such confidence in his judgment and skill that we appealed to him to take the helm, and well we have been justified by the result.

MR. HOPKINS'S SERVICES.

I have a letter from Mr. Elliott, our colleague, in which he says :—"Mr. Hopkins has been the main cause of the success attending our company, and we cannot be sufficiently grateful to him for what he has done to save the debenture and shareholders from impending loss." The directors of this company have indeed been the means of keeping it alive. Mr. Heiron saved it from ruin. Mr. Elliott has 6,000*l.* at stake in the mine, and I have a very large stake, and have never sold a share. I think, with a little more patience, this will turn out to be a valuable property, and that we are on the eve of success. I have remained on the board to represent the Scotch shareholders, who constitute nearly half of the whole body. I left Scotland last night for no other purpose than to attend the meeting. (Cheers.)

VIEWS OF THE LATE MR. HEIRON'S SON.

Mr. Arthur Heiron: Before the report is put, I should like to make a few remarks, and, although younger than most of those present, considering the large stake I represent in this concern, perhaps I may be justified in speaking. You have referred, sir, in terms only too eloquently to the memory of my late father, and I can only say that I was deeply touched and affected by what you said. I know he was loyal to the true interests of this company, and did all that lay in an ordinary man's power. He lent money to the company to the extent of 7,000*l.*, and I think it is a fact that no interest was paid to him for three or four years, and if he had lived I feel sure that any promise he made would have been fulfilled. My father was connected with many mining properties, and he saved many. There are, however, limits and when a man has 8,000*l.* or 9,000*l.* in one mine, he feels chary about putting more into it. I stand in the position of a trustee for minors, and my powers are limited. I will use my utmost influence with my co-executors, that everything reasonable that can be asked shall be done to further the interests of the company.

SUNSHINE AT LAST.

As regards the prospects of the company, I feel quite elated. We have been under a cloud for many years, but surely at last the sun is beginning to shine. Under the management of Mr. Vivian, certainly our property has changed wonderfully. I have always believed in Mr. Alfred Rickard, and do so still, and I only wish he had been here to answer the remarks made about him.

JUSTICE TO MR. RICKARD.

A man cannot keep a large mine and mill going without money. Whether the money that was first sent out was spent judiciously is another question. That is a question that perhaps affected Mr. Sands. Mr. Rickard had to equip the mine with an expensive tramway and valuable mill, and the money went. Then how is it that as soon as Mr. Vivian comes he finds ore. Well, mines do suddenly develop ore. How was it that the Richmond for so many years sunk a shaft in indifferent ground, and discovered, within a few feet, a chamber of ore, of incalculable richness? Simply chance. Mr. Rickard said it would require 7,000*l.* or 8,000*l.* to complete the mines. His estimate has been verified. I believe the expenditure has been under that sum. I think as he is a thousand miles away, it is fair that both sides should be heard.

Mr. Urwick: How about the neglected machinery?

Mr. Heiron: He was remaining there to look after the interests of the company on half salary. Surely he could not afford to employ men to guard the works. He tells me he does not live on the spot. He cannot prevent people from injuring the machinery if he is not there. I follow the reports very carefully and I believe that the able management of Mr. Vivian, coupled with the judiciousness of our worthy chairman, to whom I equally contribute our success—these combined will, before long, make the Champion Mine rival the Montana.

Mr. Urwick: I was the mover of the resolution asking the directors to get rid of Mr. Rickard, but let bygones be bygones. I explained my reasons and the shareholders supported me. I hope never more to hear of Mr. Rickard as manager of this mine. I have greater faith by far in Mr. Vivian, but I want him to tell us if we have a true fissure vein. Are we in ore in the second level of the

Donaldson? It gives us a good amount of backs if we are in ore—something like 1,300 ft. in Donaldson and 800 ft. in Champion. Everything that Mr. Fowler predicted as to what the Champion would be and could be made, Mr. Vivian has fouud to be correct. I should be glad to know whether what I said at the last meeting is correct, because, if not, I should like to withdraw it, namely, whether the levels were driven to test other uines, or whether they have been driven for our own benefit. I ask because of certain information I received. Mr. Fowler also spoke favourably of the Kohinoor Mine.

VIEWS OF THE MANAGER.

Mr. VIVIAN: The conditions under which I went to the mine are pretty well known. I did not seek the position I hold. It is a position, however, that I value very much. When I went out, at the particular request of our worthy chairman, to look iuto the affairs of this company, to examine into the liabilities especially, and, if possible, to endeavour to start up the mines, I did start them un, of course under instructions. Mr. Fowler's opinions were perfectly correct, but the condition of this mine when I uudertook the management was quite different from what it was when he made that report. He claimed that there were large bodies of orc in sight. Those bodies were extracted, and when I commenced there was not a ton of ore that would bring a dollar.

A CHEERING STATEMENT.

I think in the space of about five or six months to come into such bodies of ore as we have found (I do not claim credit myself for their discovery)—it so happened that in developing the mines every point has proved successful, and we have now in sight at least 10,000 tons of ore. It is not only the tonnage of ore that we have, but the position of every level, one level coming inafter the other, and everyone in ore. (Cheers.) Then there was nothiug in the shaft; they were sinkiug the shaft on the hanging-wall of the lode. We had to strip down that shaft on the footwall, and when we strinped it to the bottom there was nothing in sight. We sunk on the footwall, and now at 31 ft. under the 761-ft. level wc have a large body of ore in the bottom of the shaft. (Cheers.) That operation has not been referred to by the chairman, but that is just the state of affairs. The intermediate level in the Donaldson is a new discovery. They werc driving on the wrong shoot or branch. We commenced to drive on that portion and took out somc valuable ore; and also in No. 2, coming under it again, and we have commenced No. 3, but, unhappily, we are not in a position to continue development. It is simply development that the mine wants to bring it to the front, the same as the Champion. At the same time I prefer the Champion to any mine in that country. The last account we received was from my son. No man stands higher in the country than he does; he has been employed by Mr. Mackay for years, at a salary of $10,000. He is a scientific mau, a cheuist, and one of the best of smelters. He came on a visit to Idaho Springs, and as I was comiug here, he offered to look after affairs while I was away. I mention that to show you that his remarks are worth somethiug, and he says that in all his life he

NEVER SAW ANY MINE EQUAL TO THE CHAMPION,

and to say that the Champion is rich is a mere feeble expression; it is wonderful, and they all acknowledge it in that part of the country, where before they condemned it. I claim no merit whatever, but at the same time we arc successful. We have done nothing at the Kohinoor. The mountain is a good one, and there have beeu good strikes. By and by it will be desirable to do a little—to put on half a dozen men. It is a miue of high-grade silver, $400 or $500 to the ton. The miues at present are in a most prosperous condition. I do not see how 10 points are likely at one time to fail; they are more likely to iucrease throughout in grade. (Cheers.)

QUESTIONS.

Mr. JOHN WALKER: When will you be able to get the company out of debt? (Laughter.).

Mr. VIVIAN: That is not part of my business, and I do not know what the debts amount to. We have no debts over there. (Cheers.)

Mr. SOLIAGUE: What steps do you intend to take to clear off the debentures?

The CHAIRMAN: As we stand at present we ought to make a profit of about 700*l*. or 800*l*. a month. What Mr. Vivian wants us to do is to put up another tramway by the side of the existing one. So that instead of 50 tons a day, we may send down to the mill 100 tons. But I have told hiu we must wait before we can do this. If we crush 1,000 tons a month, it only requires the ends of the drifts to be run 3 ft. a day to keep up the reserves of ore already in the mine. (Cheers.) We shall not draw upon our reserves at all if we do that amount of dead work.

Mr. URWICK: I hope it will go forth from this meeting that the shareholders are determined to support the directors in every way. You might get some of the debenture-holders hereafter to convert their debentures and interest into shares by a fresh issue. (Hear, hear.)

The CHAIRMAN said he had already discussed this question with Mr. Soliague, and it would be considered still further.

The report and aecounts were then unauimously adopted.

ROUTINE BUSINESS.

The CHAIRMAN proposed the re-election of Mr. Gibson, and said that none of the directors, from the time they took office in 1885, had received a penny for their services, but, on the contrary, Mr. Gibson like the rest of them had found money. All the money they could get they sent to the mine, and felt fully confident as to the result.

Mr. URWICK seconded the motion with pleasure, for he had known Mr. Gibson for some years.

Mr. JOHN WALKER supported the motion, which was carried.

Mr. GIBSON briefly returned thanks.

Mr. URWICK proposed the re-election of Mr. Cooper as auditor of the company.

Mr. HEIRON seconded the motion, which was carried.

THANKS.

Mr. URWICK proposed a cordial vote of thanks to the chairman and directors, and said there never was a more faithful board than the one this company possessed. (Hear, hear.)

Mr. SOLIAGUE, in seconding the motion, said: I have very great faith in the chairman and directors of this company I visited the property four years ago, and know that it is valuable. At that time there was ore in both the Donaldson and the Champion, but unfortunately we had no money. I am very glad the directors have found a manager who has put the property iu the position it is to-day. While I was in Denver, last October, I met several people, and the first thing they spoke of was the success of the Kohinoor aud Donaldson. I met one or two who told me they intended to buy as many Kohinoor and Donaldson shares at a price that they could get hold of. Whether they have doue so or not I do not know. You have a name in Colorado which you had not a few years ago.

The motion was carried unanimously.

GRATITUDE TO MR. VIVIAN.

The CHAIRMAN returned thanks on behalf of the board, and proposed a cordial vote of thauks to Mr. Viviau for the able manner in which he had conducted the operations at the mine. Mr. Viviau took hold of this company. aud very soon did so much for the shareholders as to restore confidence, and make them feel that it only wanted a certain amount of capital to put the property upon a solid basis. He wished to say that Mr. Elliott would have come here had it been possible to do so. He had been in bad health, but was now very much better. Mr. Elliott had been a true frieud to this company.

Mr. W. D. BARNETT seconded the motion, and said he had known Mr. Vivian for many years, and had been partly iustrnmental in bringing that gentleman and this company together.

The motiou was carried by acclamation, and the proceedings then terminated.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

BELMONT (WITWATERSRANDT) GOLD MINING CO., LIMITED.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—In reference to your notice of the property proposed to be purchased by this company, my directors are desirous that you should be in possession of the reason for their deeliuing to go to allotment, which will be best seen by the accompanying letter from Mr. W. F. Francis.

They wish me to add that they have no reason to believe that the property is other than has been represented; and they hope to be able shortly to prove its valne by an independeut and thoroughly reliable report.—I am, &c.,

N. CLAYDEN,
Secretary.

191 and 192, Gresham House, Old Broad Street,
Loudon, 8th February, 1889.

London, 7th February, 1889.

To the directors of the
Beluont (Witwatersrandt) Gold Mining Company, Limited.

GENTLEMEN,—Referring to the step you have thought fit to take in refercuce to the Belmont (Witwatersrandt) Gold Mining Company, Limitcd, I consider it due to you to express my extreme regret that any act of mine should have led to it, and the consequent loss to all concerned. I am therefore desirous of making all reparation in my power, aud when my explanation is given I trust not only you but the public will not look with undue severity upon a matter which is itself trifling, although it has unfortunately led to such a disaster. In consequence of heavy losses from Stock Exchange and other operations, lacking moral courage to face it ont, I left suddenly for South Africa, and determined to change my name from Frank Watson to Watson Felix Francis, which name is registered at the Government Office, and which name I inteud using for the future.

Therefore, being kuown only by that name in Sonth Africa, I did uot see any difficulty in the way of negotiating the sale of the property, for which your company was formed to purchase.

Under these circumstances it seems hard that a private matter, personal to myself ouly, should have been brought forward to damage the interest of others in a property of great valne.

Steps have already been taken to have other reports on the property, and I am desirous that you shonld send some one to inspect on your own behalf, being confident further investigation will only enhance the estimate of its value, and prove it second to none that have been offered on the Londou market.

Again expressing my regret,

I am, Gentlemen,
Your obedient servaut,
WATSON FELIX FRANCIS.

[We understand that the directors have, in the most honourable manner, returned the subscriptions of those who applied for shares.—ED., *M. W.*]

THE Earl of Dunraven and Robert Harvey, Esq., have joined the board of directors of the Nitrate Railways Company.

PAHANG TIMBER, MINE AND TRADING CORPORATION.—We understand that in the course of next week there will be introduced to the public a company by this title, which will have the control of 8,000 square miles, and, we are assured, practically the monopoly of the timber supply of the territory. A good deal of importance is attached to the timber trade it is proposed to carry on, and of this product there are, it is said, 140 specimens, including rosewood, ebony, mahogany and satinwood. Some of these specimens we have seen, and they are well fitted to excite admiration and also to provoke those orders from persons in the trade which we understand have already been given without stint to the company. The territory is also valuable for miuiug and agricultural purposes. We understaud that the capital of the company will be 300,000*l*.

SOUTH AFRICAN NOTES.

LATEST TELEGRAMS, &c.

Victoria Reef.—The wash-up for December was 244¼ ozs.

Wemmer Gold Company.—The dividend for January is 10 per cent.

Salisbury Gold.—The crushing for last month yielded 1,621 ozs. A dividend of 15 per cent. is declared.

Forbes Reef.—The company notify that share certificates are now ready in exchange for banker's receipts.

Aurum.—It is announced that the letters of allotment and regret in the Aurum Company, Limited, have been posted.

West Battery Reef.—The following cable is from the mines: "Result of 14 days' crushing, January, 201 ozs. gold."

Crown Reef.—The crushing for January showed a yield of 1,289 ozs. from 1,364 tons.

De Kaap.—The registered offices of the company will be 8, Drapers' Gardens, Throgmorton Avenue, E.C.

Gold Estates (Transvaal).—Cablegram :—"Manager reports Button's tunnel is in 120 ft.; the average width of the lode is 5 ft., and 5 ozs. of gold to the ton."

Edwin Bray.—It is announced that a batch of letters of allotment and regret in the Edwin Bray Gold Mining Company, Limited, have been posted.

Gordon Diamond.—The directors have decided to pay an interim dividend of 5 per cent., free of income-tax, for the period ended December 31st last, payable on February 11th next.

New Akankoo.—The directors have received advices of shipment of 148 ozs. gold, the produce of sundry crushings. The water-course being completed, regular work may now be expected.

Sheba.—The following telegram is from the general manager, dated Barberton 6th inst.:—"We have engaged transport for 500 tons, at 25s. per ton. Stock of rich ore 600 tons; estimated monthly; output 600 tons average mineral; battery started 4th February.

Geldenhuis.—At a meeting of the Geldenhuis Company, on December 31st last, it was agreed to increase the capital by 40,000*l.*, to purchase the Farm Elandsfontein for 26,500 shares, and have a reserve capital of 13,500 shares.

Durban-Roodepoort.—The company have to-day received the following telegram from the mines, dated 6th inst.:—"Since our last cablegram (28th ult.) we have crushed 295 tons of quartz, producing 646 ozs. of retorted gold; working nine days." This, with the crushings previously announced on 21st and 28th ult., makes a total of 835 tons crushed; result, 1,679 ozs.; 27 days working.

South African.—The following particulars of work relates to the week ending January 5th:—Blue ground hanled, 3,695 loads; blue ground washed, 2,567 loads; diamonds obtained, 763 carats; estimated value, 750; reef hauled, 380 loads. The directors have declared an interim dividend of 5 per cent. (or 1s. per share), payable 25th inst., at the Union Bank of Scotland, 62, Cornhill, E.C., to all members whose names are on the register at that date; and the transfer books of the company will be closed from the 18th to 23rd inst. inclusive.

Ferreira.—Report of the manager for the month ending 31st December, 1888. Herewith I beg to hand you my report for month of December:—Main shaft: Down 118 ft., making 18 ft. for the month of December. The shaft is laddered and timbered, and ready to receive the cages. The sinking this month has been slow, the ground getting much tighter, and the water has troubled us a deal. I am glad the Cornish pump is close at hand. The reef in this shaft shows several sandstone ribs, making it 5 ft. wide, and reducing the grade somewhat, but the dip remains the same, and is uniform throughout the ground. No. 2 shaft: Drives on the reef, both east and west, have been started at the 120-ft. level in this shaft, and run 43 ft. west and 39 ft. east, making 82 ft. driving on the reef for month's work. For the whole distance the reef is well defined, the walls being but a few degress from the vertical, the reef never being less than 4 ft. wide, and whenever the sandstone shows it widens to 4 ft. 6 ins. The ore on these drives continues of a very good grade. East winze: Carried to 90 ft. on the vein, which shows here the same size and dip as in east drive. West winze: 94 ft. deep. Within the last few days portions of hauling gear have began to arrive, and I trust to get it erected without delay, when development of a more extensive scale can be rapidly proceeded with. The staff has been increased this month by two fitters, the number of miners and natives being the same.—Alex. Iles, Manager.

CORTEZ MINES, LIMITED.

A GOOD REPORT AND A GOOD TELEGRAM.

The directors have received the following report from Mr. Welsh, the superintendent at the mines, under date of January 20th:—During the past week the work done on the mines has been as follows:—The Boss tunnel: Advanced 25 ft. Main tunnel: East drift advanced 9 ft.; ground continues unchanged. Caps Breast: Incline sunk 4 ft.; no work done on stope. Middle tunnel: Upraise west of turntable, raised 5 ft.; extracted 8 tons of ore, containing 50 ozs. silver per fm. Upper tunnel: Winze in west drift stoped 10 tons of ore, of an average value of $50.00 per ton. North-east upraise: Extracted 59 tons of ore, containing 70 ozs. per ton of silver. North-west upraise: Extracted 55 tons of ore, of an average value of $150.00 per ton. Ore hauled to mill, 80 tons. Ore treated at mill, 168 tons, containing an average of 79 ozs. silver per ton. Bullion shipped: 17 bars, containing 17,393 ozs. fine silver, and 11 ozs. gold.

IMPORTANT TELEGRAM.

The directors of this company have received the following telegram from Mr. Wenban, the managing director:—"Have made rich strike in north-east upraise; assays average 400 ozs. per ton.

The *Financial Critic* has published an excellent portrait of Col. North, the "Nitrate King."

THE LIVINGSTONE GOLD MINING CO., LIMITED.

RE-CONSTRUCTION PROPOSED—ESSENCE OF THE SCHEME.

6th February.—In accordance with the wish of the shareholders, unanimously expressed at the extraordinary general meeting held on 23rd November last, the committee then appointed have since been engaged, in conjunction with the directors, in investigating the position and prospects of the company. The directors and committee have been fortunate in obtaining the opinions of Mr. Stormont Finch-Hatton, Mr. Ross Robinson, and Mr. G. F. Wallace, all of whom have, at various times during the past year, made careful personal inspections of your property, Mr. G. F. Wallace having been through the mine as recently as 3rd November, 1888. Mr. Ross Robinson, who returned from Charters Towers last month, is thoroughly acquainted with the Livingstone Mine, and with the whole Charters Towers district, and his opinion is most valuable from the fact of his having had 25 years' practical experience of Queensland mining. It is very satisfactory to find that these gentlemen are unanimous in their opinion that your property is a valuable one, and that the sinking of the underlie shaft into deeper ground should be proceeded with. They are now in London, and purpose attending the general meeting. Although the results so far obtained from the workings to the east of the new shaft (where it was believed that a rich shoot of stone existed) have been disappointing, it must be remembered that in the past history of the mine, the richest results were obtained to the westward of the old shaft, a crushing of 14 tons from this spot having yielded at the rate of 37 ozs. to the ton, as certified by the Warden of Charters Towers returns. Here the shoot of gold appears to be crossing the old shaft diagonally from west to east, and consequently it is to be expected that it will be met with in the further sinking in the new shaft. This shaft is now down about 287 ft. (the deepest working in the mine), and it is most satisfactory to find, from the report dated 31st October, 1888, that better stone has again been met with in the sink; the crushing from the lower levels of this shaft and the adjacent workings, which was cleaned up on 22nd October last, having yielded 208 ozs. of gold from 240 tons of stone. With a view to the strictest economy, the resignation of the Queensland directors has been accepted, and the management of the property has been placed in the hands of Messrs. E. D. Miles and Co., who are practical miners, and who have charge of several of the principal mines in Charters Towers. Taking into consideration the past history and present condition of the mine, the directors and committee feel justified in strongly recommending the shareholders to continue the development of their property in deeper ground. In doing so they have given very careful consideration to the expert opinions which have been submitted to them by Mr. Ross Robinson, and the other gentlemen before mentioned, who have recently visited the property, and they believe that future results will justify the course which they now advise. As it will be necessary to provide funds for carrying out the further development of the mine, the directors, in conjunction with the committee recommend that company should be re-constructed according to the annexed form. This circular is signed by the directors and committee. The following is the essence of the scheme of re-construction:—A new company to be formed under the provisions of the Companies' Acts, 1862 to 1887, for the same or similar purposes to those described in the memorandum of association of the existing company (hereinafter referred to as the old company), with a nominal capital of 75,000*l.*, in shares of 1*l.* each. The new company shall, as further consideration for the sale and transfer of the property of the old company to the new company, allot to every member of the old company, or to his nominee or nominees, in respect of each fully paid share held by him, one share in the new company, with 17s. credited as paid thereon, and in respect of each share in the old company, with 19s. 10d. credited as paid thereon, one share in the new company, with 16s. 10d. credited as paid thereon; and there shall also be filed with the Registrar of Joint Stock Companies, before the issue of the same, a proper agreement, so that the same may be liable for the payment of 3s. per share and no more. The amounts payable in respect of the new shares shall be paid as follows, viz.: in the case of shares with 17s. credited as paid thereon, 6d. per share on allotment, and 6d. per share one month after allotment, and in the case of shares with 16s. 10d. credited as paid thereon, 8d. per share on allotment, and 6d. per share one month after allotment, and the balance shall be paid (if required) in calls of 6d. per share at intervals of not less than three months.—J. Durie Pattullo, Secretary.

NEW EMMA SILVER MINING CO., 1886, LIMITED.

January 19th.—I have to report work carried on at the mine for the week ending to-day as follows:—Level running easterly from No. 1 advanced 15 ft.; total, 126 ft. Not any material change to report. Rock continues soft, breaks well, and still carries a great deal of iron and manganese. The outlook for cutting ore continues very flattering. We have worked four men full time. Cross-cut from No. 1 toward hanging-wall advanced 9 ft.; total 15 ft. Rock is soft; seam of iron, manganese and soft limestone continues, and gives great hopes of cutting ore in this direction. Have worked two men full time. Level running north-westerly from No. 1 advanced 9 ft.; total, 127 ft. Continues in broken ground, and therefore much timbering is still required. Have worked four men full time. Level No. 3 easterly advanced 9 ft.; total, 282 ft. Rock very hard, but continues highly charged with oxide of iron. Have worked four men full time. Cross-cut from No. 3 running toward footwall advanced 7 ft; total, 48 ft. Not any change to report. Rock continues hard, and is about the same character as in level No. 3, from which it is being run. Have worked three men full time. Level running north-westerly from uprise from Attwood winze advanced 9 ft.; total, 57 ft. Ground coutinues soft; seam of iron with a little ore intermixed is fully 8 ins. wide, while the rock on either side is very favourable for ore, and gives great encouragment. Have worked two men full time. In addition to working the number of men as mentioned above, we have the same number of men working on fillings, as also carmen and timbermen, as mentioned in my report of 12th inst. The week has been very stormy, snowing almost continuously; fully 3 ft. snow fell during the week.—H. C. Wallace, Superintendent.

The following cablegram has been received from Salt Lake City:—"Face cross-cut level No. 1 shows seam galena inch thick; prospects are improving other points."—Cullins, Bennett.

MOUNTAIN RAILWAY FOR THE ARGENTINE REPUBLIC.

MR. F. B. BEHR was yesterday officially presented to the President of the Argentine Republic by the Minister of Great Britain. Mr. Behr, amongst various other companies, represents the Lartigue Railway Company and the Argentine Railway Syndicate, organised for carrying out the concession for constructing a single rail line (Lartigue system) from Chilecito to the mineral mountain of Famatina, for which the definitive surveys have just been made and submitted to Government. The cost of this mountain line being rather higher than originally contemplated, the concessionaires have petitioned Government for an increase of price, and the Government will support this demand at the next meeting of Congress. The cost of this line, about 50 kilometres long, will be about $2,500,000 gold, and it will go to about 14,000 ft. above the level of the sea; it will have about 130 bridges, and some long tunnels. Latigue's system being ærial and built upon trestles, it is bound to be a very important feature in the construction of mountainous railways, and the present line will open up the mineral wealth of the Province of Rioja, which is the mining centre of the Republic. The President and Ministers entertain the scheme very favourably, and Mr. Behr affirmed to them that with a guarantee for an increased capital, the line would be efficiently carried out and constructed. We have no doubt the negotiations, which are being continued, will have the desired result.—Extract from *La Prensa*, Buenos Ayres, December 20th, 1888.

THE MORGAN GOLD MINING CO., LIMITED.

ANOTHER DIVIDEND DECLARED.

February 2nd.—I am directed to forward you a copy of the general manager's report for the past four weeks. It will be seen that the result of the crushing cleaned up on Saturday, the 26th of January, was as follows :—450 tons yielded 319 ozs. 16 dwts. of gold of the approximate value of 1,079*l*.—being an average of 14 dwts. 5 grs. per ton of ore. At a meeting of the board held on the 31st ulto., it was decided, after allowing 1,000*l*. for depreciations, and carrying forward a sum of 1,300*l*., to pay an interim dividend at the rate of 5 per cent. per annum, free of income tax, as the result of the company's operations for the three months ending December 31st, 1888. Notice is therefore given that the transfer books will be closed from the 4th inst. to the 10th inst. inclusive, and dividend warrants will be posted on the 14th inst. to all shareholders appearing on the company's books on the date of closing the register.—C. PAKEMAN, Secretary.

No.2 DRILL.

THE INGERSOLL DUPLEX HAND-POWER

ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND LABOUR.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in three sizes, and can be worked by steam or air if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made. Send for full description, testimonials, &c., to

REPORTS OF MEETINGS.

GREAT SHE GOLD MINING CO., LIMITED.

SOME OF THE SHAREHOLDERS, BECOMING UNEASY, CALL AN INFORMAL MEETING TO WAKE UP THE BOARD—A DIRECTOR ATTENDS AND GIVES SUNDRY EXPLANATIONS—A COMMITTEE IS APPOINTED—IMPORTANT FACTS ELICITED ABOUT THE CONCERN.

A SPECIAL MEETING of this company was held under the circumstances set forth in the following notice of meeting :—

"As a shareholder in the Great She Gold Mining Company, Limited, I invite my brother shareholders to meet me in Winchester House on Wednesday, February 6th, at 5.15 p.m., to discuss the best mode of procedure to make our property marketable. It appears to be urgently necessary that something should be doue in our mutual interests. So little informatiou is offered us from direct sources that it must be to the interest of the shareholders to elicit from those in charge the position and prospects of the undertaking."

This notice was signed by Mr. F. Deering, a large shareholder, and it was this gentleman who took the chair—having at his right hand another large shareholder—Mr. Levy.

SHAREHOLDERS UNEASY.

The CHAIRMAN : Gentlemen, as I appear to be the chief instigator of this gathering, will you allow me, in the first place, to thank you all for your courtesy in so readily responding to the invitation I threw out in the advertisement in the papers. This is a purely informal meeting, and I must confess I did not expect to have to arrogate to myself the chairmanship over an assembly of this sort, but as you have responded to my invitation, the least I can do is to greet you more in the shape of a brother shareholder than as your official chairman. I was prompted to insert that advertisement from the dissatisfied feeling I had in my own mind with regard to the way in which our property was being manipulated or not manipulated—whichever way you please to take it, and I thought that as the 12 months had nearly elapsed, and the statutory meeting must necessarily be held, it would be desirable if we all met in a friendly way to ventilate any views we might have, and to speak outwardly any thoughts or feelings we might entertain inwardly. I think it is desirable that we should exchange views, and with that understanding I have invited you to meet me here. I was more strongly prompted to bring this meeting about at this present juncture for the reason that all South African properties have been going up in the market.

LIKE MERCURY IN THE THERMOMETER

—and why has not ours gone up—I thought to myself—what is it that is keeping it down? What is the weight that is lying upon it? Can we find out what it is, and can we remove it? I thought the best and simplest plan was—for we only want what is right and fair and just—to meet like this, and ascertain where our money has gone, what has been done with it, and what possible chances we have of the return of that money—and that being the case, each one of us is entitled to have that elicited, and I do not think it can be elicited in a better manner than by calling you together informally at a friendly meeting like this, which you have done me the honour of attending. (Cheers.) With regard to the details of the business, I must cry peccavi, because I am not well up in them, but we have one here,

OUR FRIEND MR. LEVY,

whose interest in it, to say the least, is very much greater than that of the majority of us, and he will probably throw out some points before you, which will be worthy of your consideration, and let me beg of you not to leave the room until you have uttered any words that you may have in your hearts, and if that is the case, I do not see why our property should not rise like the rest. It must be worth something or nothing. If it is worth something let us try and realise it, and if it is worth nothing let us know the worst. (Hear, hear.) With these few preliminary remarks, I hope someone will now give expression to his views. (Cheers.)

MR. LEVY REMINDS SHAREHOLDERS OF PLAIN FACTS, AND DRAWS A FEW INFERENCES.

Mr. LEVY (whom the chairman called upon), after apologising for having to come so prominently before the shareholders, said : I wish you to follow me, in case there should be any inaccuracy in the figures or facts I shall lay before you. I shall give you as succinctly as possible the history of the company from its introduction. Our only object is, as our chairman has told you, to improve our position. We do not wish to indulge in hostilities as to the past management. What we want to do is to improve it. I believe

EVERY MEMBER OF THE BOARD HAS ACTED CONSCIENTIOUSLY

as far as his capacity is concerned, but the result has been so unsatisfactory that we wish to ventilate the means by which our property may be improved. What has been done? What is going to be done? Now let us go to figures. At the last meeting the chairman informed you that 4,000*l.* was in hand ; a call has since been made, by which 4,000*l.* more will be acquired. The public subscribed 5,000*l.*, or 6,000*l.* of the first issue. 25,000*l.* was subscribed by the syndicate, therefore the syndicate floated the company, and as I was instrumental in the introduction of this company, and in the formation of the syndicate, those are reasons why I come prominently forward to-day. (Hear, hear.) The total collected was 30,000*l.* in all, of which

16S. 6D. PER SHARE HAS BEEN CALLED UP

—say 25,000*l.* 10,000*l.* was paid to the venders, leaving 15,000*l.* in the hands of the company to work the property. What has been done with this 15,000*l.*, or what are they doing with it? What has this 15,000*l.* up to the present time produced? Let me tell you ; if this 15,000*l.* or a large portion of it is still in hand, we have something to go on with, provided that work is being done, but if no work is being done, if no result is being attained, all we have to fall back upon is the 3s. 6d. per share balance, which will produce 5,000*l.* Now, if we let this run away we shall have to go into liquidatiou—there is no help for it.

TIME BY THE FORELOCK.

Before that occurs is the reason why this meeting has been called, so that we shall not have to part with every shilling out of the exchequer without having done something. (Cheers.) Let us go to the prospectus. About 30,000 shares were applied for altogether by the syndicate and the public. 50,000 shares were stated to be reserved for the Cape. If any of those 50,000 shares have been taken my figures are all wrong, because they have more money in hand. That is a point upon which we wish information.

FAITH IN THE PROPERTY.

The property, so far as it goes I believe, and always did believe, is a very good one. The map issued with the prospectus showed the great Sheba reef running to the Nil Desperandum, giving trials of the quartz on the points marked black. Since then an independent map has been issued, showing in gold the line of the reef. Therefore we naturally assume (taking into account the reports of the various mining engineers) that we have 2 miles of very valuable property, because you will find on all sides of us there are working mines. On the Sheba reef a small block of 19 claims I believe now has a market value of about 750,000*l.* All these things were pointed out in the prospectus, and naturally we had a right to expect, with the assays which were up to 16 ozs., the working of the mine would produce something. This is the prospectus, but independently issued was a French prospectus, where they mark in gold the lines of reefs belonging to the Sheba Company.

DELAGOA BAY RAILWAY.

Therefore, if we were at work we should expect that something was being done in our interest. It was also stated in the prospectus that it would materially assist the company, as the Delagoa Bay Railway was nearly finished, and, therefore, we had a right to look forward to the time when it would be, and also a connecting tramway which would assist us in working the ore. It was also stated in the prospectus that 800 tons of ore were already accumulated for crushing. Have those 800 tons been crushed? What has become of them? A battery was hired, that the Nil Desperandum was not using, to crush something, and we had notice of 86 ozs. of gold being produced—we do not know from what. Whether it came from those 800 tons or not we do not know. At the same time, in the prospectus the calculation of profit of 45,000*l.* was based upon the erection of a 100-stamp battery, showing 60 per cent. profit on the whole of the capital. Has that 100-stamp battery been erected?

CRUCIAL QUERIES.

Has a 10-stamp battery been erected? Have we a hammer going? If we have, we might stand some chance of getting gold. Another statement of the prospectus was, that it was contemplated to lease portions of this property to subsidiary properties, or to sell to them. Has any portion been sold? Has any portion been leased? I am comparing the prospectus to see if any of the promises have been carried out that induced the shareholders to subscribe their money. I will again call attention to this fact, that five-sixths of the capital is called up. We must not make matters run too long. Nothing has been done, and nothing has been received, and your property will go to nothing. I am not criticising the management ; I believe the greatest economy has been used, but sometimes there is an evil in too economical a management. We might hoard and hoard our money until it dwindles to nothing, without anything being done. We might stand by and let this economy go on until there is not a shilling in our exchequer, but we do not want to wait for that. I say no. (Cheers.) Let us bestir ourselves. Let our property be transferred, sold, wound up if you like, but do not let us stand by and see it die

A LINGERING DEATH.

(Cheers.) I believe in it still ; I always did believe in it. I do not think that a property introduced as this was, tested by such influential and good mining engineers, can be a swindle. I believe that we have

a property surrounded by other mines that are paying. These mines are rising and attaining the pinnacle of prosperity, while we are sinking into

THE SLOUGH OF DESPOND AND THE VALLEY OF INACTIVITY.

I have some propositions to make. "She" has a bad repute, and like her sex "she" cannot get on with a bad repute. (Laughter.) "She" is discarded—disregarded, but has never had the opportunity of asserting herself. Let us do something by which "she" can assert herself, and give her a chance. A mine, like Cæsar's wife, must not be suspected, or she is no good.

PROPOSALS.

Now, gentlemen, the propositions I have to make are these:—In the first place, let us delegate some of our shareholders to approach the directors in a friendly spirit to get at the outset a cash statement. (Cheers.) Secondly, let us remove the restrictions on the vendors' shares, so that we may have a free market. Thirdly, let us reduce if necessary the vendors' shares, so as to make the gross capital appear smaller. I think the vendors, the underwriters, and the others who hold vendors' shares would be satisfied to reduce their holding if they thought the prosperity of the company depended upon it. Therefore, gentlemen, the proposition I have to make is "That a small committee be delegated to meet the directors in a friendly spirit and confer with them on the best means to attain the ends, which I have set forth." I may tell you that I have, from all parts of Great Britain and Ireland, letters sympathising with this movement. I also wish to say once again, that it is not in opposition to, but only to assist the directorate. (Cheers.)

The Chairman: I invite any of you to express your views. The statement of Mr. Levy has probably given to you, as it certainly has given to me, a great deal more information than ever I possessed before. It must have suggested some thought or question in your minds, and please let us have the benefit of your views.

A Shareholder: Have we any directors here?

A DIRECTOR SPEAKS.

Mr. Cooper: I am the latest member of your board. I was not on the prospectus, and, therefore, have nothing whatever to do with the question as to whether its statements are correct or incorrect. During the short time I have been a director I have not found anything that would lead me to believe the statements were not honestly made, and as correct as could be reasonably expected. I have been on the board now for a little over three months, and I came on because a large number of friends (one especially), who is by far the largest holder of ordinary shares actually paid for, wished me to do so, and because he knew I had some personal knowledge of the country. Since then it has been my endeavour not only to see that the money is properly spent, but to know precisely how and in what manner it was being outlayed. I am certain that the directors throughout have done their best, and have the interest of the company at heart, because the majority of them are very largely interested, and also their friends. It would be absurd to suppose that they from any set purpose, or dereliction of duty, were allowing this property to go to the bad. (Hear, hear.) They have as large an interest in it as any of the gentlemen here. I have only 300*l*. in it, and, therefore, do not intend to say that that is a heavy stake, but I daresay it is as much as most of the gentlemen who are hearing me. Anything I say, I say simply as a shareholder, but at the same time, if I can throw any light upon the subject that you are met to discuss, I shall be glad to do so.

"LIGHT IN A DARK PLACE."

There are one or two points in Mr. Levy's speech that do appear to require considerable explanation. I will begin with the question of the Delagoa Railway. That has been completed, but I have never seen how it can materially improve the position of this company. I say, openly, you will always get your machinery and stores conveyed more cheaply by the Natal route than by the Delagoa Bay route, till the terminus is made into Barberton. That is about double the length and over a difficult country, and, personally, I do not believe it will ever be done unless Barberton increases to a very large extent. The most important point, which appears rather to have been linked with the Delagoa Railway, but which has really nothing to do with it, is that of

THE SHEBA TRAMWAY,

and that is the real reasons why this company has not, and cannot deal economically with its ore. The company's water rights are on Queen's River—a distance of two miles from the Standard Block, where the chief workings have been going on, and a little greater distance from the Sheba Mine. When you can imagine that the Sheba Company are not crushing for the simple reason that it does not pay (although in their case they have actually struck the rich lode that this company we hope is on the point of striking—although they have struck it, it does not pay them to carry the ore the long distance, and by the difficult road to their water rights, you may well imagine that it would only have been throwing away money if we had attempted at this stage to erect a battery on the Queen's river, and cart the materials from the workings in the present state of affairs. I can say from something more than hearsay, because I personally know the gentleman who is making the Sheba tramway (he is now in England, but will return in two months), that it is well on towards completion, and through the influence of this gentleman, who has had a large experience of railway work, a better route was found for that tramway than was originally intended, and it goes for a considerable part of its length through our property, whereas, originally, it skirted the hills at a distance that would have made cartage absolutely necesssary. By the new route it is accessible to any point of our property. I consider that

THE TRAMWAY ADDS LARGELY TO THE VALUE OF THIS PROPERTY,

because it enables each part to be dealt with either separately or as a whole. As to what has been said about the crushing—a certain amount of ore was crushed by a mill that was hired, but that was done before I came on the board. I was of opinion that it was not desirable to continue (even if we could have continued) crushing this ore with a hired mill, which was not one of the latest type and did not give the best results.

HOW THE MONEY HAS GONE.

The way in which the money has been spent has been in opening up the mine. Shafts have been sunk and galleries have been driven, the object being to hit the shoots of richer material, because it is manifest that 2,000*l*. or 3,000*l*. spent with the result of finding the quartz richly impregnated with gold is infinitely better than money spent simply haphazard, and taking out what can be got and crushing it at the mill, whether good or bad.

DE KAAP V. WITWATERSRAND.

Of course it is unsatisfactory to feel that the capital is going, and that we cannot say we have any actual returns, but unfortunately that is the position of all the other mines in the De Kaap district, but not in the Witwatersrand, because in the latter you have the ore on the surface, and it requires no finding. You see the reefs through which the gold is dessiminated, but you do not do that in the De Kaap Valley. We are obliged to sink these shafts and drive these galleries in order to find the rich shoots of gold. It is precisely the same as has been done in the case of the Sheba, and I may tell you that the reports we have had from our manager are most favourable. We are absolutely in his hands. We can only send him instructions, and expect those instructions to be carried out within certain limits. The instructions sent have been that there is to be no haphazard mining, but that having found a point where he has reason to believe that continued working will lead to the rich shoot of gold—he is told to confine his operations to that direction, and not work in too many places as though there was unlimited capital to go upon. I am perfectly certain that anything you can suggest to place this property in a better position will be received with the greatest satisfaction by the board, because they have only that object in view. (Cheers.)

DIRECTORS READY TO MEET SHAREHOLDERS.

The board will be most happy to follow any suggestions that may be made, provided they are reasonable, and that we all work in an amicable spirit. I think the greatest mistake will be quarrelling among ourselves, and I cannot see there is the slightest reason for it. (Hear, hear.) I am sure I would not stay on the board for a moment if I believed there was anyone who wished to take my place, or if the majority wished to put in anyone else. I say so distinctly, but if any question of examination of the figures arises I am sure the directors will be happy to supply any information. There could be no reason for doing otherwise. (Cheers.) The gentleman who is making the Sheba tramway has been over this property, and told me that he thoroughly believes in it.

ALL THINK WELL OF "SHE."

He says it is the general opinion that it is a good property, but the only point is as to the sufficiency of working capital, but that is a matter which I have nothing to do with. I have nothing to do with the allotment, or the statements on the prospectus, but I believe that if what we are doing results well within the next few months, we have a most valuable property—as valuable, in many respects, as the Sheba itself, and that I believe is the opinion of a good many people. I am ready to answer any question you may wish to put to me, and, in conclusion, would say that the directors simply regard themselves as your representatives, and wish to meet your reasonable views.

CROSS-EXAMINATION.

A Shareholder: When will the tramway be finished?

Mr. Cooper: It has to be finished in May. I believe the contract time is in March, but I am told it will be finished in May. The necessary information will be sent to us. It has not been construeted by the Sheba Company, but by a syndicate. A Sheba company merely uses it, as do all the other companies. There is no means of boycotting this company or any other.

A Shareholder: Is Mr. Kenrick still the manager, and, if so, what is he paid?

Mr. Cooper: He is still the manager, and we pay him 500*l*. a year. He had 800*l*. a year, and it has been reduced to 500*l*. If he does not accept the reduction he will not remain our manager.

A Shareholder: What notice will be required to terminate his services?

Mr. Cooper: His engagement terminates on April 3rd. We have sent out an accountant, and largely reduced the expenses in connection with the local secretary. The accountant will send home weekly statements giving the exact details of the expenditure. There is no question that the money has been honestly spent, but the great difficulty in dealing with these properties 6,000 miles away is that you cannot get detailed statements. That is what we are endeavouring now to do.

A Shareholder: Has there been any production of gold up to now?

Mr. Cooper: Only 90 ozs.! The ore was crushed simply for experimental purposes. We are trying to find the Sheba reef, and if we do so this will be a valuable property. Mr. Kenriek devoted the whole of his time to the property, and has scarcely ever been off it.

A Shareholder: When you get the ore to the river, what will you do with it?

Mr. Cooper: Crush it to be sure. (Laughter.)

The Shareholder: But you have no mill.

BUSINESS.

Mr. Simpson: You, Mr. Chairman, spoke very clearly and ably, and so also did Mr. Levy, and whatever we can do to forward your views (which are our own) we will do, but to-night it is hardly the time to go into a cross-examination of Mr. Cooper, and it is hardly fair. (Hear, hear.) He has kindly said on his his own behalf that he is ready to receive a committee of shareholders. As an old director, I am not in favour of committees as a rule, but if done in a friendly and informal way, I am quite ready to consent to one in this case. I propose that you submit that issue to the shareholders at once.

The Chairman: Mr. Cooper's cross-examination was self-inflicted. It was elicited by a question as to whether any of the directors were in the room, and Mr. Cooper kindly responded. I am very much obliged to him for coming here, and quite agree that the cross-examination should not be proceeded with. If any cross-examination be needed it will take place at the proper time. It is very good and kind of Mr. Cooper to have given us so much inforuation. I am being more and more enlightened as to our position, and feel still far more strongly that this meeting has been well called.

CAPE PEOPLE HOLD BACK.

Mr. Simpson: Has any of the capital which was reserved for the Cape been subscribed at the Cape?

Mr. COOPER: No; the vendors at the Cape have a large number of shares they can sell at a handsome profit for themselves below par. The mere question of registration does not affect them out there. You can sell where you please, and the only thing that you cannot do is to register in the names of the nominees—that is to say until the shares are at or above par, or a dividend is paid, otherwise vendors' shares are as good as other shares.

Mr. JOSEPH SOLOMON said he had searched through the documents at Somerset House, and was of opinion that every shareholder who held a fully paid share would be liable to pay 1*l.* per share. (No.)

Mr. COOPER: I should be very unhappy if I thought so. (Hear, hear.)

Mr. LEVY: I shall be very much obliged if Mr. Solomon can make the vendors liable to that extent. (Laughter.)

A RESOLUTION.

Major WEST: I find that the whole of the shares allotted to the syndicate were transferred to them by the vendors: consequently the vendors have given actual value for the shares. They have not been issued at a discount, and are not liable. It seems to me that the vendors, having received these shares, in payment for their property have an absolute right to dispose of them as they think proper, and if they choose to hand those shares to the syndicate who subscribed for them, they are perfectly free from any liability. The duties of this meeting are very much simplified after the candid way in which Mr. Cooper has met us. A committee has been suggested, and has been accepted in what I may call the most handsome manner by Mr. Cooper, and, therefore, the object of calling this meeting may be very easily carried out now by appointing a small committee, to confer with the directors upon the position and prospects of the company.

Mr. COLEMAN (chairman of the company), on being asked to speak, said Mr. Cooper has expressed the entire sense of the board, and any further information which may be wanting by this meeting I shall be happy to supply.

Mr. SPENCER HARRY seconded Major West's motion, which the CHAIRMAN put to the meeting, and it was carried unanimously.

THE COMMITTEE.

The chairman and Mr. Levy were earnestly requested to be members of the committee, and consented—a resolution being ultimately proposed that they should be members of such committee with power to add to their number.

THANKS.

Mr. LEVY: I have to propose a cordial vote of thanks to Mr. Deering for the very able manner in which he has expounded to you the purposes for which we have met.

The motion was carried by acclamation, as was also a similar compliment to Mr. Cooper.

The CHAIRMAN then briefly returned thanks, and the meeting closed.

THE NEWBERY-VAUTIN (PATENTS) GOLD EXTRACTION CO., LIMITED.

50 PER CENT. DIVIDENDS—REMARKABLE SUCCESS—OPERATIONS IN ALL PARTS OF THE WORLD—140 BOARD MEETINGS.

A MEETING of this company was held at the City Terminus Hotel on Thursday—Richard Birkin, Esq., chairman of the company, presiding.

Mr. H. S. BAKER (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN: Gentlemen, the directors of the company have very much pleasure in meeting you to-day, and I think I ought to make an apology that we have asked you to assemble in so large a room, seeing that we are comparatively a small body. But the fact was that the rooms of this hotel were all occupied, and the only chance we had of getting a room was to accept this one. At any rate it will give us ample space to do or say anything we wish. (Laughter.) I do not wish to detain you any longer than necessary, and considering that we had a meeting only a short time ago, and that this meeting is simply called in accordance with the requirements of the Companies Acts, we can necessarily not have very much more to tell you than we told you at the last meeting. You have had what I consider a very full report of the proceedings of the directors, and I think if I take that report seriatim, and make a few observations on the various paragraphs, it will probably lay before you as good an account as can be given of the present position of the company. The first item refers to the balance-sheet.

DEFENDING PATENTS.

Possibly some of you may have some questions to ask with regard to it, but, as a matter of information, I may say there are one or two items which I think I ought to say something about. There is the item of exceptional expenditure in defence of patents, 691*l.* We have necessarily been put to considerable expense in regard to these matters. There is another item, called Brazil Agency Plant; that is an item for the cost of machinery which this company has sent out to the St. John del Rey Mine, on an agreement with that company, that if the machinery works to the satisfaction of that company, they will recoup us for the outlay. We have, therefore, kept it as a separate item, so that when the time comes (as we think it will shortly) we may receive back that money.

DIVIDENDS.

You will see also that the dividend we pay, amounting to 7,312*l.* cash, leaves us with a balance in hand of 137*l.* It also leaves us, with cash in hand and at banker's, a total sum of 18,869*l.* Of course that is not a very large sum, but we think it ample for the purposes of the company. I do not think I need say any more in regard to the figures of the balance-sheet, but shall be very pleased, if by and by any shareholder wishes to know anything, to answer the questions he may put. I think I ought to say in regard to the patents, that the patents which it has been necessary to take out to protect the interests of the company have been very numerous, and naturally very costly. It has taken on the part of the directors a great deal of thought, care and trouble to arrange these various patents in the respective countries.

ISSUE OF FOREIGN PATENTS.

I am glad to say that of the 50 patents, for which we have applied 26, have been issued, and the remaining 24 are on the way to being granted. Gentlemen accustomed to deal with patents know that the delays are very considerable. Take Russia, for example. After application you have to wait six months before you can move another step by way of getting patents. All this has caused considerable delay in working the business of the company, but it is a delay which will ultimately result to the benefit of the shareholders. I daresay you would like to know what we are doing with regard to the various concessions which have been made by this company. One is to the South African Gold Extraction Company, for which that company paid us a considerable sum in cash, and from which this company is to receive a royalty of 100*l.* per barrel per annum so long as the patent rights exist. It was thought desirable, and it was part of the arrangement that we should send out Mr. Vautin to see that the plant was properly organised and the business properly started.

MR. VAUTIN IN AFRICA.

Mr. Vautin, in accordance with the request of the South African Company, went out a few weeks ago, and we believe he is in South Africa now, and we expect to hear most satisfactory results from him. The probability is that those results will be exceedingly satisfactory, if what we hear is correct. In regard to Australia, we have not made the progress we think we ought to have done, but that is very much to be accounted for by the fact that Mr. Newbery and Mr. Vautin have both been in London until lately.

MR. NEWBERY IN AUSTRALIA.

Mr. Newbery has returned to Australia, and is there now, and we have every reason to suppose that the business will be pushed by him. He is a gentleman of the first reputation and position, and has the whole thing at his fingers' ends, and we have good reason to suppose that he will do us excellent service there. At the same time this company has not been entirely idle with regard to Australia.

WHAT THE PROCESS IS DOING AT MOUNT MORGAN AND ELSEWHERE.

The processes are at work not only at Mount Morgan (of world-wide fame), where 1,500 tons of ore per week are being treated by this process, but we have works at a place called Norton, where we have a 100-ton plant; at Ravenswood the same; at Cloncurry a 250-ton plant; at Sandhurst a 250-ton plant, where ore may be sent, and is sent, from all parts of Australia to be treated; at the Long Tunnel Mine a 50-ton plant; in New South Wales the same; and at Ironclad the same. (Cheers.) Those works are already in progress and working in Australia, and, therefore, the company will receive a royalty from them. In regard to the concessions we made to the Colorado Company in the United States—our reports are of the most satisfactory character. You know that it takes a considerable time to get machinery first conveyed and then fixed in sites in foreign countries. As far as Colorado goes it has taken four or five months, and after that it was necessary to proceed very cautiously to select the proper methods and determine upon the proper system. All that is required is time and care. The staff in Colorado have proved most able.

THE PROCESS IN OTHER COUNTRIES.

They have done their work, and the company's work in a most satisfactory manner, and I am glad to say the results of their experiments, and the treatment of ores by the Newbery-Vautin process in Colorado is of so satisfactory a character that we are now in communication with a great number of the leading mine owners in various parts of America for the adoption of the process, and have every reason to suppose that before we meet you again we shall have most gratifying results to report from the United States, where the mines have the ores of the right character to be treated by us. As regards New Zealand, we have not had such definite information, owing to the distance, but we know that Dr. Seheidel is well up to his work, and the advices we receive from there are most encouraging. Since we met you we have completed arrangements with a gentleman for Austro-Hungary, which gives to this company one-half of the shares in that company. The amount of capital is 30,000*l.*, and the gentleman at the head of that business, Mr. Trivick, appears to be most capable, and to have had sufficient influence with the Austrian Government to induce them to give room for our machinery in the public works, where we have every reason to suppose the results will be satisfactory from the monetary point of view. I may tell you that although we should like to-day to have given you an additional dividend, the time since the last distribution has been so short that we can scarcely expect one, but the negotiations going on between the directors and most important people in various parts of the world leaves no doubt as to the satisfactory future in regard to dividends.

SPLENDID DIVIDENDS.

I think the directors may take credit for, and congratulate the shareholders upon the fact that even now, after only 12 months' operations, we have been able to divide (if you take the value of the shares distributed as well) something like between 50 and 60 per cent. (Cheers.) I hope the shareholders will take into account that this has been done in spite of the enormous work entailed upon the directors through the manipulation and working of these various patterns, and in spite of all the difficulties of establishing a business such as this, so that we think we are to be congratulated upon that successful result. (Cheers.) I do not think that I am very imaginative when I say that from all appearances we hope largely to exceed past results in the future. I shall be happy to answer any questions, and shall be pleased to give any information. In accordance with the articles of association four of the earliest directors retire, and submit their names to the meeting for re-election.

NEW PATENT.

Since we met last Mr. Newbery and Mr. Vautin have succeeded in developing an entirely new idea, not in connection with our present process, but in addition to it, and they have taken out patents for what we consider to be most valuable improvements. This is an entirely different process, and comes in as supplementary to, and can be worked in conjunction with, the former one to the greatest advan-

tage. Our opinion of it is such that this patent is worth even more than the original one, and very soon we hope to have it in practical use. We had to remove our works to Wharf Street for various local reasons. The new establishment is now in working order, and we find it of very great utility in settling questions as to the proper method of treating the ores. Any shareholder who would like to see the works will be shown them by the gentleman in charge. I now beg to move the adoption of the report. (Loud cheers.)

Mr. George Reid: I beg to second the motion.

A Shareholder: Is it proposed to spread the experimental expenditure over a series of years?

The Chairman: We thought we could afford to write this off completely, and we have done so, leaving a balance in hand.

The report was then unanimously adopted.

A Shareholder: Is the adaptation of the ore to the process, or the process to the ore?

IMPORTANT INFORMATION.

The Chairman: It would be a very difficult thing indeed to adapt the ore to the process. We should have to make ore on our own account. (Laughter.) In Colorado, as in other places, various ores exist, but some of them can be treated more cheaply by the smelting process. The telluride ores, of which there are millions of tons, give, according to present experience, very profitable results by our process. The smelters out there are not only exceedingly clever, but exceedingly wealthy, and they are not fond of having intruders competing with them. It has, therefore, been our aim rather to avoid competition, and endeavour to treat ores which they cannot treat to advantage.

Mr. Allen: Are the ores of the Indian Mines adapted for this process?

The Chairman: A great many of them are. The Indian mines sooner or later will have to come to us.

Mr. Allen: I beg to propose the re-election of the following directors—Mr. Richard Birkin, Mr. George Reid, Mr. James A. Hill, and Mr. John Paddon. I think we cannot do better than re-elect them.

Mr. Magnus seconded the motion, which was carried by acclamation.

The Chairman: On the part of the directors I beg to thank you very much for your kindness. I take it as a vote of confidence in us. I can assure you we have worked most arduously in your interests. The directors are all most deeply interested in the success of the company. I think I am not wrong when I say that

THE DIRECTORS HOLD 70,000 OF THE SHARES OF THIS COMPANY.

They have sold no shares, and they do not intend to—such is their confidence in it. As regards the work done—half of my time and half of their time is spent in looking after the interests of the shareholders. We have held about 140 meetings this year, not simply coming and going, but lasting from two to five hours at a time. Our hearts are in this work, for we hope and believe that sooner or later the company will become an even greater success than it has already been. (Cheers.) The next point is the remuneration of the secretary. Not only is the payment of the directors, but also of the secretary, left in your hands.

MR. BAKER COMPLIMENTED.

Our secretary we find to be a most able, excellent, and hardworking man, and trustworthy in every sense. His salary is 250*l*. a year. (Cheers.) We are in every way satisfied with him. We are not going to ask you to vote him an increase, but to put it in our power to do so. I move, "That the secretary's salary be at the rate of 250*l*. per annum, with power to the board to raise such salary as they in their judgment deem fit." (Cheers.)

Mr. C. C. Hopkinson seconded the motion, which was carried unanimously.

The Chairman proposed the re-election of the auditor, Mr. McKay, whom he described as "a gentleman of eminence in his profession."

A Shareholder seconded the motion, which was carried unanimously.

SERVICES OF THE DIRECTORS ACKNOWLEDGED.

Mr. Cook: We all know that an important part of the business of a general meeting is the remuneration of the directors, and in this case it is especially so. Such a board as we have we may well be proud of. (Cheers.) They are different from the directors of most other companies. The greater part of the work—almost the whole of it—devolves upon the directors. It is not like a manufacturing concern where they can delegate their duties to managers, but they have had to hold something like 140 meeting during the past year, lasting, as we have heard, from two to five hours each. I understand also that to the present time they have not taken a single penny from the funds of the company. They are all men of large business experience, and they bring a mature and bright judgment to bear upon an important company as this is. This company, in fact, depends almost entirely upon the good sense and management of the directors, and I beg to propose "That the remuneration of the directors be 1,500*l*., and that that sum be paid to them for their past services."

Mr. Bell: I second the motion. I know most of the directors are men of business, and are therefore capable of properly managing our affairs. This sum has to be divided amongst nine gentlemen.

The motion was carried unanimously.

The Chairman: This resolution is more one of principle than one of desire. This company is a sort of pet company, and we have worked hard at it for the love of it. At the same time, on the principle that the labourer is worthy of his hire, and because it gives you more hold on your directors, I think it a wise thing for the shareholders to have voted them this remuneration. (Hear, hear.) On the part of the directors we thank you very much, and we hope that the sum you have voted us to-day will be a small one in comparison with those you will receive. We have confidence that this company is going to turn out

ONE OF THE MOST REMUNERATIVE IN THE CITY OF LONDON.

At any rate we have paid 115 per cent. per annum if you keep your shares in the subsidiary companies until they get to par. We have worked the company not to effect a *coup de bourse*, but to make it a thoroughly sound and profitable business undertaking, and I think both you and we ought to be satisfied. The board increased the directorate by adding four names—those of Mr. Thomas Issac Birkin, D.L., Mr. Charles Grey Hill, and Mr. Sheriff Newton—all large shareholders in the company, and all men of business capacity. I ask you to confirm those appointments.

The motion was carried unanimously.

The Chairman: If anything important occurs the directors will inform the shareholders between this and the next meeting.

The proceedings of a very successful meeting were then brought to a close.

THE VANCOUVER COAL MINING AND LAND CO., LIMITED.

BONUS OF £1 ON ALL THE SHARES—CALL OF £1 ON THE £9 SHARES—RE-CONSTRUCTION—FAIR PROFITS—MESSRS. ROSENFELD'S OPTION.

An extraordinary general meeting of the company was held at No. 12, Old Jewry Chambers, on Tuesday, for the purpose of considering, and if thought fit, passing the resolutions following, that is to say:—

(1.) "That it is desirable to re-construct the company, and to transfer the undertaking thereof to the New Vancouver Coal Mining and Land Company, Limited, and that with a view thereto the company be wound up voluntarily, and that Mr. Joseph Ramsden should be and is hereby appointed liquidator for the purposes of such winding up."

(2.) "That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and the New Vancouver Coal Mining and Land Company, Limited, of the other part, be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to Section 161 of the Companies Act, 1862, to enter into an agreement with such new company in the terms of the said draft, and to carry the same into effect with such, if any, modifications as he may deem expedient."

J. Galsworthy, Esq., chairman of the company, presided.

Mr. J. Ramsden (secretary) read the notice calling the meeting.

The circular accompanying the notice stated:—The principal objects to be attained by the re-construction are — (1.) To overcome the difficulty created by the recent decision of the Court of Appeal in re Almada and Tirito Company, where it was held that the issue of shares at a discount was ultra vires, and to place the holders of such shares in this company in the position in which all parties intended that they should stand. (2.) To remove the existing difficulties in the way of a declaration of dividend, and (3.) To remove any doubt that may exist as to the company's power to sell its entire undertaking to Messrs. Rosenfeld, or otherwise. Sir Horace Davey and Mr. F. B. Palmer have advised the directors that re-construction is desirable, whether Messrs. Rosenfeld elect to purchase the company's property at Nanaimo or not, and the principal shareholders have expressed their cordial approval of the scheme. The re-construction will be effected as follows:—A new company will be formed to be called the New Vancouver Coal Mining and Land Company, Limited, with enlarged powers and appropriate regulations. The discount shares, other than a few which by estoppel have been confirmed, will be specially acquired by the new company on the terms of an agreement already entered into with them, by virtue of which the holders of each discount share will be entitled to 10 1*l*. fully paid shares in the new company; the assets and liabilities of the existing company will be made over to and undertaken by such new company; the members of the existing company will receive 10 1*l*. shares in the new company for each 10*l*. share fully paid in the present company, and 10 1*l*. shares, with 18s. per share credited as paid up thereon, for each 10*l*. share with 9*l*. paid up thereon in the present company; and the existing company will, in due course, be dissolved. This will not involve any disturbance of the business of the company, since the new, or re-constructed company will at once adopt the engagements of the existing company, and continue its business. The debenture-holders have been communicated with, and nearly the whole of them assent to the re-construction, and will exchange their present debentures for those of the new company.

UNANIMOUS APPROVAL.

The Chairman: I have to move that the resolutions which we have just heard read be passed. I do not think it will be necessary for me to say much to you upon the present occasion. Everybody knows what is the object of this meeting, and of this re-construction. At the same time I may tell you that nearly the whole of the debenture-holders have approved what we are doing. All the discount shareholders have approved, and a great body, generally, have sent in their proxies to the amount of 12,505 shares, and there has not been one dissentient; therefore, what we are doing I may say we are doing unanimously, as being the best thing to be done in the circumstances in which we are placed. The agreement which is referred to in the resolution is here on the table. It is the ordinary agreement, and the articles of association of the new company are also on the table. Those articles are more elaborate than the ones under which we have hitherto been carrying on this company, and the memorandum especially is of a more extensive character to enable us to do those things which we find necessary, and to carry out the agreement we have come to with the Messrs. Rosenfeld, and to enable us more completely to carry out the affairs of the company. The articles are framed with the similar object, and are the ordinary articles of a company of this character. You will see by the circular which went out that some of the shares have a liability of 2s. per share.

FINANCIAL ARRANGEMENT.

We think we see our way to extinguish that by this means:—We have made a call upon the shareholders for the 1*l*. still remaining unpaid in regard to the 9*l*. shares. We have also declared a bonus of a sufficient amount to meet that call, so that that call will be negatived, and the holders of 9*l*. shares will be in the position of having fully paid shares of the same character as the others. It means that the liability, which is contemplated of 2s. per share, will be extinguished by a bonus.

Prof. Lambert: The 9*l*. shares will become 10*l*. shares?

The Chairman: Yes, so that all will be alike. Those who have 10*l*. shares will get the bonus in cash. We have sent no notice out yet, but have thought it best to make this call to put all the share-

holders upon a common basis. Some of them have paid up already, and, therefore, that step was neecssary. We did not think it was desirable, in the face of the profits we made last half-year, that you should be asked to pay that call, and so "WE HAVE SCREWED OUR COURAGE TO THE STICKING PLACE," and proposed out of those profits to supply you with the means of paying the call.

Prof. LAMBERT: In other words, you give a bonus of 1*l.*, and you make a call of 1*l.* on the shares that are 9*l.* paid.

A SHAREHOLDER: It is taking the 1*l.* out of one poeket and putting it into the other.

The CHAIRMAN: Yes; it will make you all alike.

Mr. BULLIVANT: What was the objeet of making the new shares 1*l.* denomination instead of 10*l.*?

Mr. TENDRON (director): It was the taste of the day.

The CHAIRMAN: I have now said all I wished, and I move the adoption of the resolutions as read by the secretary.

Mr. JOSEPH FRY (director) seconded the motion, which was carried unanimously.

Mr. BULLIVANT: Are things going fairly well at the mine?

The CHAIRMAN: The price of coal has dropped, and we are not making so much profit as we were last half-year.

Mr. ROBERTS: But we are making a profit?

The CHAIRMAN: Yes, decidedly.

Mr. ROBERTS: We expected a dividend in the middle of the year.

The CHAIRMAN: I think we may be able to give you a dividend. We know we have made a profit, but we have not home the accounts.

A SHAREHOLDER: Will 1*l.* bonus be distributed amougst the 10*l.* shares?

A DIVIDEND FORESHADOWED.

Mr. TENDRON: Certainly. The call is made for the 30th April on the 9*l.* shares, and the bonus is to be paid the same day. Then we have a meeting in May, and I think the idea of the board is that we may be justified in considering that the company has so improved its financial position as to enable a dividend to be paid once more. This was a dividend-paying company for many years. The dividend must be a small one, and one that can be, with reasonable expectation, maiutained. I think it will be a dividend at the rate of 4 or 5 per cent., apart from the bonus, aud then people will begin to feel that which we know, that they have a substantial property. Our position is infinitely superior to what it was 12 months ago.

Prof. LAMBERT: We have been complaining of want of capital, aud this call will be so much more added to our working resources.

Mr. TENDRON: Certainly. Recent events improved our position altogether. Instead of struggling along heavily in debt we are independeut, and if any new work is required we have a fair amount of mouey towards it.

The CHAIRMAN: The resolutions will be submitted for confirmatiou on Thursday, the 28th inst., at three o'clock.

BETTER MARKET.

Mr. ROBERTS: How will the changed constitution affect the market?

Mr. TENDRON: It will be to the benefit of the jobbers and brokers, and will make the market livelier.

Prof. LAMBERT: Can the chairman tell us anything about the general work of the company.

BIG OUTPUT FOR JANUARY.

The CHAIRMAN: The output for the last month has been very large. For January it was 29,400 tons, and the shipments were 29,000 tons—a very large output. (Hear, hear.)

Mr. TENDRON: It is more than 1,000 tons a day.

The CHAIRMAN: It has been produced at a much less cost.

A SHAREHOLDER: What is the probability of the Messrs. Roseufeld closing the bargain?

THE MESSRS. ROSENFELD'S POSITION.

The CHAIRMAN: We have not yet discovered the coal, which Mr. Rosenfeld is hoping will be discovered before he buys. We are carrying on the boring in the northern district, and if we get down to the Wellington coal he will no doubt at once elect to purchase, or if we should find it in the seam at the bottom of the shaft in the east field, that would most likely induce him to buy also. He is only waiting to see some favourable development of the coal, and a favourable market also, and then we shall see that he will elect to purchase.

The SECRETARY: We do not expect to reach the coal in the north field until 30th June. The shaft was only commenced on the 2nd of January, and we anticipate it will be down by June 30th. Mr. Roseufeld left San Francisco, after being at home only a few days, and went to Nanaimo on the 16th January, since which time we have not had an opportunity of hearing from him.

Mr. ROBERTS: Was there not another field in which we hoped to find some good coal?

The CHAIRMAN: Yes; on Gabriola island. We have not reached the seam yet; we are going to the centre of the earth almost. (Laughter.)

Mr. TENDRON: I am afraid that coal found at a depth of 2,000 ft. will not be very profitable. The cost of hauling will be very great.

Mr. BULLIVANT: What is the greatest depth we are at?

Mr. TENDRON: 625 ft. at the No. 1 shaft, and then it goes shelving down very slowly.

SALE OF LAND.

Mr. ROBERTS: I suppose the town lots are increasing in value?

The SECRETARY: They are not increasing, but their value is beiug maintained. I suppose we have sold during the last half-year about 4,000*l.* worth, but the sales keep up very well indeed, but we cau only sell them to the men employed by the company. All the choice lots have been sold, but the others are valuable, though perhaps not so much so as those which have been disposed of.

Mr. TENDRON: It is clearly understood that we are not to force sales. This was the understanding with Mr. Louis Rosenfeld. We have sold double what we did the half-year before the unsold lots. When I was there they were valued at 50,000*l.*, but their value depends upon the prosperity of the company. The whole place lives upon our collieries. The neighbouring mines have their own properties, and have been very prosperous.

THANKS.

Mr. BULLIVANT: It only remains that we should propose a vote of thanks to the chairman and directors for their skilful management of our affairs.

Mr. FRY (director): We have certainly had a very uncomfortable time, and we have not reclined upon a bed of roses.

The CHAIRMAN also returned thanks, and the proceedings were brought to a close.

THE WOLVERAND KLERKSDORP.

ORE RESERVES—CRUSHINGS SHORTLY TO COMMENCE.

AN extraordinary general meetiug of the Notre Dame des Victoires (Transvaal) Gold Miniug Company, Limited, was held on Tuesday at the Offices of the company, 14, George Street, Mansion House, E.C.

Lord GIFFORD, V.C. (chairman of the company), presided, and after the notice convening the meeting had been read by the SECRETARY, he addressed the shareholders as follows:—

OBJECT OF THE MEETING.

Gentlemen, the sole object of this meeting to-day is to approve or otherwise the words of the special resolution which has been sent to you with your letters of allotment. It will be apparent that had the directors or the promoters of this company desired to have settled those articles of association of the company themselves, and have put them on the file before the company was brought out, it could have been done without any difficulty, or without troubling you to come here to-day and offer us any suggestions or advice which may occur to you as shareholders in this company; but we consider that to have done so would hardly have been fair to a numerous aud influential body of shareholders, such as we fully expected would have become interested in this company. I am glad to see that this expectatiou has been fully realised, and that I have before me a body of shareholders worthy in every way of our consideration. We submit the articles to you as prepared by our solicitors, and beg to iuvite your criticisms frankly and openly, and to assure you that whatever may be the opinion of the majority, we shall gladly aud willingly bow to it. Perhaps this proceeding is novel in the history of the formation of public companies, but we have looked upon it as being a far more straightforward and open manner to consult the bonâ fide shareholders upon the statutes or articles of association, which should govern the operations of the company, rather than have them approved by seven nominal subscribers who can have very little interest in the future of the company.

NEEDLESS EXPLANATION.

The company was registered on April 28th, 1888, under Table A, in order to take advantage of the old scale of fees prior to the introduction of the new scale of fees introduced by the Chancellor of the Exchequer with reference to limited liability companies. The solicitor will explaiu to you, if you wish it, that Table A is most difficult for a company of any size to work under, and that it is usual for new regulations in substitution for Table A to be adopted. When everything was in order, and it was determined to issue the company's shares, the provisional directors approved a formal set of articles of association which would meet all the requirements of the company, and which they were informed were in the shape approved by the Stock Exchange for the purposes of quotation. These were passed by the then shareholders of the company iu the usual manner, and were open to inspection to any of the applicants for shares. They are now again brought forward for confirmation by you in the usual manner incident to special resolutions.

MACHINERY ORDERED.

Before calling upon the solicitor to read the resolutiou to the meetiug, I should like to take the opportunity of informing the shareholders that the necessary machinery for commencing active operations has been ordered, aud will very shortly be shipped. The directors are arranging with their consultiug engineer (Mr. Edward Jones) as to the engagement of a gentleman specially recommended by him as an experienced manager, and they expect to despatch him at once. I may mention also that a favourable offer has been made in the nature of an option to purchase one of the blocks of land, which have been acquired by the company. This offer is still under the consideration of the directors; but they are not in any hurry to part with any portion of their property before they have had a report from their manager on the whole property. A day or two ago I had an interview with a well-known engineer, who has just returned from South Africa, where he had been visiting the Rand and Klerksdorp districts. It is his opinion that the Klerksdorp will quite equal, if not surpass, the Rand. I learn that this view is also being taken by many men who are well acquainted with South Africa. I will now call upon Mr. Francis to read the resolution to be submitted to you.

The resolution was then read to the meeting by the SOLICITOR (Mr. Francis). Some of the shareholders then criticised the proposed articles of association, and a few amendments were resolved upon, which will be submitted to the shareholders at later meetings for a formal adoption.

PROSPECTS.

A SHAREHOLDER (Mr. Hargrove) afterwards asked the chairman whether some informatiou could not be given to the meeting as to the prospects of the company, in reply to which his lordship called upon

Mr. EDWARD JONES, C.E. (the company's consulting engineer) who said that he had no hesitation in stating that their property was one of the best, and second to none in the Transvaal. It had been generally remarked that all the good things were floated out there; but in this case he was certain that the company would prove, after the property was developed, that was not so, aud that all good things were not kept in the Transvaal, but that a great many good things were brought home to be floated, and that the company's property would turn out a great success, was one of great value, aud would pay handsome dividends on the capital. Mr. Jones also explained that the machinery would be capable of crushing about 60 tons per day, and would be shipped about the end of February. The machinery would be erected in complete working order in six months from this date, and at the end of 12 months he was certain that the shareholders would have a good dividend. He also pointed out the advantages of the property being so near the Kimberley terminus of the railway

and also that coal was within a very short distance of the property, which was most advantageously situated in every respect.

The proceedings then terminated with a vote of confidence in the chairman and directors, which was proposed by Mr. Hargrove, and seconded by Mr. French, the former stating that he had been induced to take shares from the confidence he felt in the names of the directors appearing in the prospectus.

The Chairman thanked the meeting on behalf of his colleagues and himself, and assured the shareholders that no effort on the part of the board would be spared to make the undertaking a success.

JAVALI CO., LIMITED.

RE-ARRANGEMENT OF CAPITAL—NEWS FROM THE MINE GOOD.

An extraordinary general meeting of the shareholders of this company was held at its Offices in Cannon Street Buildings, 139, Cannon Street, London, E.C., on Wednesday, for the purpose of submitting the following resolution for approval or otherwise :—

"That the capital of the company be increased by the creation of 136,391 shares of 2s. each, to be issued in such numbers, and at such times, and at such premium as to the directors may seem fit."

Vice-Admiral Sir L. G. Heath, K.C.B., presided.

Mr. E. Schubert (secretary) read the notice convening the meeting.

SETTLEMENT WITH DEBENTURE-HOLDERS.

The Chairman, in moving the resolution, said that the law business was now, he believed, satisfactorily concluded, and in the course of the week the debenture-holders, almost all of whom had agreed to the terms that had been proposed, would be settled with. The capital of the company, so soon as this resolution had been passed and registered, would be 18,000*l.*, but it was believed that it would not be necessary to call up more than 12,000*l.* The news from the mine continued to be good, and with so very small a capital it could hardly be considered rash to

EXPECT SATISFACTORY DIVIDENDS

in the future.

Mr. C. Green (director) seconded the motion, which was agreed to without discussion, and the meeting separated with a vote of thanks to the chairman.

THE TOLGULLOW UNITED MINES CO., LIMITED.

A CONFIRMATORY MEETING.

A meeting of this company was held on Monday, 4th February, at 6, Queen Street Place, for the purpose of confirming a resolution passed at a meeting on 18th January, "That the company be wound-up voluntarily."—Mr. Robert Heuty presided.

The Secretary read the notice convening the meeting.

The Chairman said that, by the notice which had just been read, they were all made aware of the object for which they had been called together. Therefore, he would simply say that as the resolution was passed at their last meeting, they had now assembled to confirm that resolution. He, therefore, put it to the meeting "That this company be wound-up voluntarily."

Mr. Dowson seconded the motion, which was carried unanimously.

The Chairman then moved "That Mr. John Garland, the secretary of the company, and Mr. Wm. Michell be, and they are hereby appointed liquidators of the company.

This motion was also seconded and carried unanimously.

The Chairman said he was sorry they had met for the last time under not very favourable circumstances. They must all take chances when they dig in the earth.

Mr. Schofield asked if there was any objection to their taking the machinery and disposing of it at once.

The Secretary said they had just received a letter from the agent of Lord Falmouth, in which he said that he (Lord Falmouth) had no wish to exercise his option of taking the machinery.

Mr. Taylor said their machinery was very good, and ought to sell well.

A vote of thanks to the chairman brought the proceedings to a close.

PRADENA GOLD MINING CO., LIMITED.

PROSPECTS GOOD—MANAGER THANKED.

The first general meeting was held at the company's offices on 5th inst., in compliance with the requirements of the Companies Act. The proceedings were purely formal. The following report from the assistant manager, M. Le Normaud, was read, dated 30th January :—The weather having been rather severe during the last few weeks has prevented the works being prosecuted with the usual promptness, a certain number of the men having been occupied in keeping every level perfectly drained. Part of the water, where there is infiltration, is conducted to Sn. Abel shaft; distant from the main shaft 565 ft. south, whence it is raised by the pump on the 42-ft. level. A reservoir, near Sta. Elena shaft, between the two others, can also receive the water in case of emergency, but so far the lower level (262 ft.) has been kept perfectly drained. We have requested our captain to give us an estimate of the ore on the dump, and the ore in view on several points in the mines, and by the assays made on the principal parcels and on the different parts of the lodes to give us also the approximate value of such ore. We must point out that the ore raised only comes from the driving the levels and sinking the shafts, as no stoping has as yet been done. The resumé of his estimate is as follows : 86 tons, classified, with an average of 84 ozs. of silver per ton ; about 1,000 tons of low-grade ore containing at least 4 ozs. of silver per ton. In view on the two highly mineralised veins cut at the 114, 143, and 196-ft. levels ; 250 tons between these levels, with an average of no less than 64 ozs. of silver per ton. The ore thus reckoned contains above 1,700 lbs. of silver in all. As to the low-grade ore which is found in large quantity, it is intended to have it concentrated, and we have in that respect a very interesting report which the managing director of the celebrated Hiendelaencina Mine, in the same district, has kindly sent us, as both ores are very similar. The necessary machinery is simple and not costly, and the very poor ore with 2 ozs. 2 dwts. only of silver is concentrated up to 52 ozs. per ton. This is very much like the experiment made with our ore at Kalk, in Germany ; 85 grammes or 3 ozs. concentrated up to 1,280 grs., or 45 ozs. We are glad to say—as it is a most important matter—that our Capt. Don Casto y Largo (who has his diploma from the school of Almaden) is a first-rate man, punctual and most trustworthy. His reports, accounts, &c., are drawn up with great care and regularity and he understands his work thoroughly well.

SATISFIED WITH THE REPORT.

The Chairman said he had listened to the brief report with much pleasure, especially to the testimony as regards the qualifications of the captain of the mine, as that was a most important matter, and he thought the company very fortunate in having such an able and trustworthy manager at the mines as Don Casto had proved himself. The thanks of the company were also very specially due to the agent in Madrid, Senor H. de Cevallos, whose exertions in the interests of the company had been untiring ; as well as to their notary, Senor Francisco Tobar y Vilon, and last, but by no means least, to their assistant manager, Mons. J. Le Normand, and he begged to propose that the thanks of the meeting be given to these gentlemen for their services.

This was unanimously agreed to, and after the customary vote of thanks to the chairman the meeting terminated.

"THE JUMPERS" GOLD MINING CO., LIMITED.

REPORT FOR DECEMBER.

Your directors have pleasure in submitting to you herewith summary of operations, and result for same, for the month of December : quartz won, 1,610 tons ; quartz milled, 1,490 tons ; yielding gold, 1,452 ozs. 8 dwts. ; taken at 3*l.* 10s. per oz., 5,083*l.* 8s. ; cost of winning same, mining and milling, also legal, office, and all other expenses of every nature, together with 364*l.* 14s. for quartz won prosecuting permanent works, and 150*l.* being 2s. 6d. per ton for every ton of quartz stoped, credited permanent works redemption account, 2,402*l.* 17s. 4d. ; profit on month's operations, 2,680*l.* 10s. 8d. ; expended upon construction of buildings, permanent works, and machinery during the month, 2,304*l.* 10s. 2d. ; driven on main reef, 242½ ft. ; driven on north reef, 343 ft. ; total, 585½ ft. ; east main shaft, sunk and timbered during month (making same 132 ft. deep), 33. Mine : North reef, upon which we have done considerable driving, is opening out very favourably both as regards quality of ore and width of reef. The erection of the 16 h.-p. hauling engine at east main shaft is completed, and the engine is at work. It is a credit to the manufacturers, Messrs. Marshall, Sons and Co. The erection of head gear is well in hand, and we expect to get same completed during January, also the cages fitted and at work, and, if possible, the engine, head-gear and shaft roofed in. 16 h.-p. boiler and steam pump fixed and at work at western main shaft. The two steam pumps referred to above are very efficient, and will easily keep the mine clear from many times the quantity of water we have to cope with, at our present and next level. Battery : The defective engine still prevents our milling the full quantity our stamps warrant us to expect to mill, and greatly hinders our returns. Water supply still keeps good, though almost a drought has prevailed. General : The 70 stamps, 100-h.-p. compound engine, and four boilers are either on the water or landed at Port Elizabeth. All material for the new battery engine house is en route from Natal. Building containing dining-rooms for the men and cooking galley, &c., completed. European workmen can now obtain proper food from the contractor running same. A sick and accident fund has been started, so that when any workmen are laid up, from either cause, he will have proper medical care and attention from the funds of the same.—R. R. Hollins, Managing Director.

THE GOLDFIELDS OF URUGUAY, LIMITED.

PROGRESS OF THE WORKS—FINAL CALL.

18th January.—The directors have made the final call of 2s. 6d. per share, and Mr. Hubert Akers is instructed to state that not only is all the machinery for the 40-stamp mill at the mine, but good progress has been made in its erection, and it is expected that it will be completed and at work in March. The directors have considered that it would be of advantage if one of the directors would visit the mine, and Mr. Hausen has, at the urgent request of his co-directors, undertaken this duty. He will probably return in April, and it is intended to hold the annual meeting immediately afterwards. A concession has been granted by the Government of Uruguay for a railway from Paso de los Toros (the present terminus of the Central Uruguay Railway) to Rivera, passing within a short distance of the mines. A company (The Central Uruguay Northern Extension Railway) was formed here in November, to construct this line, and we understand that work will shortly be commenced. This railway will give greatly improved access to the mines, and be an advantage to the company in many respects.

Messrs. Baring Brothers and Co. publish the numbers of the outstanding bonds of the Buenos Ayres Six per Cent. Loan of 1873, which will be paid on 1st April next.

Holloway's Ointment and Pills are beyond all doubt the most valuable and most convenient medicines that travellers can take across the seas to distant climes, for change of climate and the new conditions and surroundings of life to which they will be exposed will assuredly give rise to great disturbances of the system and to such especial morbid states of the blood and constitution generally as will render the use of these effectual remedies highly necessary, for they will find in them a ready and safe means of relief in most of the diseases which afflict the human race, and with them at hand they may be said to have a physician always at their call.

PROSPECTUS.

THIS Company is formed to acquire the mining rights over two extensive areas in the State of Pahang, granted by two concessions from his Highness the Sultan of Pahang, as under:—

1. Dated the 29th day of the month Shaban, 1,304 (April, 1887), and granting the right to search for, extract, and sell all gold, silver, tin, and other minerals or metals over 25 square miles (16,000 acres) in the district of Telemong, subject to payment of a royalty of 10 per cent. of the minerals found and raised.

2. Dated the 1st day of the month Rejab, 1,304 (March, 1887), and granting the same rights over a similar area in the district of Tres, subject to the same royalty. Thus making a total of 32,000 acres.

The concessions give full power to use, free of charge, all the roads, watercourses, and other means of communication, and all workings now in existence, and where necessary to construct others; also the use of water-power, timber for fuel and mining purposes, and every other natural advantage conducive to the working of the mines. All machinery and other material for the use of the mines, food and other necessaries (except opium and spirits) for use of the miners are exempt from import duties for the full period of 55 years over which the concessions extend.

The concessionare, Mr. Seah Song Seah, a wealthy Chinese merchant resident in Singapore, is thoroughly familiar with the Pahang country, and states that he has specially selected these two areas as offering well-founded prospects for the operations intended to be carried on by this Company.

The States of the Malay Peninsula have long been known to be extremely rich in various metals, especially stream tin (Straits tin forms the standard of the metal market), and the only obstacle to their thorough exploration and development arose from the disturbed state of the country, owing to the internecine disputes between the chiefs of the different small States. This state of affairs has now been remedied by the establishment of a British Protectorate, which has put an end to the constant petty wars, and under the control of British residents the prosperity of the various States has rapidly increased.

Pahang, which has been the latest to enter the Protectorate, by treaty dated 8th October, 1887, has been long celebrated for the quantity and quality of its tin deposits, and its reputation as the possessor of great mineral wealth in gold, silver, lead, copper and other metals. On the sheet accompanying the prospectus will be found extracts from books of reference, newspaper articles, reports and speeches by persons well qualified to pronounce authoritatively upon the resources of the country.

The following extracts from the report dated 28th February, 1888, of Mr. W. E. Nash, mining engineer, who has had many years' experience of mining in the Malay Peninsula, Borneo, and other places, and was sent up to examine the Telemong Concession, will serve to show the great value of that property:—

"The Sungie or River Telemong is a tributary of the Semantau River, which is itself a tributary of the Pahang River, the great highway of the State, and is a distance of 100 miles or thereabouts from the sea in a south-easterly direction (plan is attached to prospectus) and is easily reached by water-way; a steam-launch can get up the river five-sixths of the whole way, and the rest is navigable by the native craft of 2 or 3 tons. I found the concession to be one of the richest in tin ore that has been brought under my experience. I went inland from the River Kerrow for a mile, and sunk a shaft at 'A' as indicated on plan, and found the tin-bearing stratum at 15 ft. below the surface, and the thickness of same to be 3 ft. I got from this ½ cwt. of tin ore, the shaft at the bottom being only 3 ft. 6 ins. square, which shows that the tin-bearing stratum is very rich.

"I found the tin ore to be of very good quality, and appearing to my judgment, without the necessary apparatus for assay, to contain 60 per cent. of pure tin.

"I then sank another shaft at B, a distance of ¾ mile from A, and found the tin-bearing stratum at a depth of nearly 15 ft., the thickness of which I found to be 3 ft. The sample I took from this appeared to be of the same richness as that from A.

"I then proceeded and opened a shaft at C, and found the tin-bearing stratum at 12 ft. below the surface, and the thickness of same 2 ft. 6 ins.

"Another shaft sunk at D proved the same as C, very rich, and the results were almost identical with A and B.

"The water-power, which you instructed me to notice, I found to be particularly suitable for working machinery; it is abundant at all times of the year, and its use must lessen the cost of working.

"I found the property well wooded, offering every advantage both for building and fuel for smelting the tin ore.

"Following your instructions I made every inquiry concerning labour, and I found that it was easily procured on the spot and at Singapore, or the mining districts of Selangor and neighbouring States, at an average of $7 (£1 2s.) per month per man.

"With reference to the land having been formerly worked, I found that it had been worked, but only by natives in a very primitive manner, and pays them to do so handsomely."

With regard to the Tres concession, native opinion sets a high value upon the mineral wealth of that district both in tin and gold, and some ore of the latter brought from the district is stated to have yielded very high assays. It is intended to have this portion of the property thoroughly explored without delay.

There are already several British Companies working in the State of Pahang with most favourable results; in fact, the expectations raised have been surpassed by the results obtained.

The system of mining which is found most favourable is the employment of Chinese miners on tribute; these may be obtained in any number, and work at very moderate rates. The usual method of payment is at a given rate on the weight of tin delivered for smelting, and in this way the ton of smelted tin, including royalty, would cost about £60, which, at the present price of tin, would leave a profit of about £38 per ton.

It is intended as soon as possible to return at least 1,000 tons of tin per annum from the Telemong concession; on this basis there would remain available for dividend an amount of about £35,000. On a similar basis in working the Tres concession the annual return should be doubled.

The above scale of working would only serve to develop a small portion of the tin-bearing territory of the Company, nor does the estimate include the profits derivable from the working of gold, silver, or other minerals, nor from any of the following sources of revenue.

1. The sale or sub-leasing of the mining rights over portions of the Company's area.

2. The purchase of ore or smelted tin from sub-concessionaires and re-sale of same.

3. The profits on the sale of stores, provisions, &c., to the miners and sub-lessees.

4. The sale or leasing of stamping and other machinery to sub-lessees, or tributers.

The purchase price for the two concessions has been fixed at £75,000, payable as to £33,300 in fully paid-up shares, £5,000 in cash, and the balance in cash or shares, at the option of the directors. This leaves an ample margin for working capital for the proper development and working of the properties.

The only contract entered into by the Company is one dated the 4th day of February, 1889, and made between Towkay Seah Song Seah, of the first part, and the Company, of the second part.

The vendor, who is the promoter of the Company, has fixed the purchase-money, and will provide all the preliminary expenses of the promotion and bringing out of the Company, and the issue of its capital, and he has reserved to himself the right to enter into, and has entered into, arrangements with third parties for this purpose, which do not affect the Company, and to which it is not a party. As these arrangements may technically be contracts within the meaning of section 38 of the Companies' Acts, 1867, applicants for shares shall be deemed to have had notice thereof, and to have waived any fuller compliance with such section with reference thereto.

The above contract, together with the memorandum and articles of association, concessions, original report, &c., may be seen at the offices of the Company.

Application will be made in due course to the Committee of the Stock Exchange to grant a special settlement and an official quotation for the shares of the Company.

Applications should be made on the form accompanying the prospectus, and forwarded, with a deposit of 2s. 6d. per share, to the bankers or secretary of the Company.

Prospectuses and forms of application may be obtained from the bankers, solicitors, and secretary of the Company.

London, February 4th, 1889.

London: Printed for the Proprietors by Straker Brothers & Co., and Published at the Offices, 234, 5, & 6, Gresham House, Old Broad St., E.C., Saturday, Feb. 9, 1889

Since printing the Prospectus, the leading firm of Rock Salt customers in Manchester have expressed their willingness to take 1,000 tons per month from this Company.

The LIST of APPLICATIONS will CLOSE on or before MONDAY, the 11th, for both Town and Country.

MR. THOMAS WARD, J.P., the well-known Salt Expert and Manager of the Salt Union, Limited, in his pamphlet, "On the Manufacture of Salt in Cheshire," states :—"I have come to the conclusion that the Northwich beds occupy at least three square miles, and contain in the aggregate 900,000,000 (nine hundred million) tons—the upper bed 380,000,000 ; the lower 520,000,000."

The London *Echo* of November 15th last says :—"The Salt Union is already making itself felt. The price list for November shows an increase of nearly 50 per cent."

THE NORTHWICH SALT COMPANY, LIMITED.

NORTHWICH, CHESHIRE (SALT UNION DISTRICT).

Incorporated under the Companies Acts, 1862 to 1886, whereby the liability of Shareholders is limited to the amount of their Shares.

Share Capital, £100,000 in 20,000 Shares of £5 each,

The Shares are payable as follows :—10s. per Share on Application, £2 per Share on allotment, £1 5s. one month after allotment, £1 5s. two months after Allotment, or Shareholders may pay in full on Allotment, the Shares ranking for dividend according to the amount paid up. The Company also offer for immediate subscription £20,000 in EIGHT PER CENT. FIRST MORTGAGE DEBENTURE BONDS of £50 each. These Bonds will be secured on the entire property of the Company, and the interest will be payable half-yearly, on the 1st January and 1st July. The First Mortgage Debenture Bonds are payable, £10 on Application, £20 on Allotment, and the Balance One Month after Allotment.

ABRIDGED PROSPECTUS.

SITUATION OF PROPERTY.

THIS Company has been formed to purchase 27 acres of freehold land, with the salt deposits underlying, at Lostock Gralam, on the north bank of Wade Brook, near Northwich, Cheshire, the head-quarters of the salt production, and to erect thereon works for raising and manufacturing salt and other chemical products.

RAILWAY AND CANAL FACILITIES.

The property is situated in the midst of the salt district (vide map with prospectus), and about 300 yds. from salt land recently purchased by the Union ; it is adjacent to the Cheshire Lines Railway, to which a siding will be constructed(the Company's land joining that of the railway company), and is within 100 yds. of the Trent and Mersey Canal, which is connected with the property by two good private roads. The necessary land for a wharf has also been secured on very favourable terms, and with such exceptional facilities for transport cheap rates can be obtained, which will be of enormous advantage to the Company.

WORKS NOW BEING ERECTED.

The nccessary works (in order to produce 1,000 tous per week) are now in course of erection, and a contract for sinking the shaft has been made with Mr. Ebenezer Timmins, of Bridgwater Fouudry, Runcorn, the well-known contractor for artesian wells and borings. The construction of the shaft and other works is being pushed forward with all possible despatch.

LARGE DEPOSITS OF SALT.

The salt, according to careful estimates, is about 150 ft. from the surface on this property, and about 130 ft. in thickness, and is practically inexhaustible. This represents (calculating the net profit at a minimum of 6s. per ton) a revenue of £20,000 per annum.

REPORT OF PROF. DE RANCE.

The property has been reported upon by the eminent geologist, Prof. Charles E. de Rance, Assoc. Inst. C.E., F.R.G.S., F.G.S., Secretary of the Royal Geological Society, who gave evidence before a Select Committee of the House of Commons as to "Cheshire Salt Compensation," and he states :—"The property in question is only a few huudred yards from the working face of the Witton Rock Salt Mine, carried in the lower bed, and there is every reason to believe that both rock salt beds are continuous in that direction : that brine occurs under the property, may be considered proved, as the buildings of the adjacent farm upon it are affected by subsidence, and the ground on the south side of the brook has given way in the manner too well-known to landowners of the Cheshire salt district."

DIRECT COMMUNICATION WITH MARKETS.

Almost the entire inland output of salt finds its way to the numerous chemical works at Widnes, Runcorn and St. Helens, the chief works of the world ; and this Company's property, being within a few miles, with direct railway and water communication, they will be enabled to send salt to that market at a very low rate of carriage. The Company will also be in a position to command a large proportion of the foreign and coasting trade, being in direct communication with the important ports of Runcorn and Liverpool.

IMPORTANCE OF SALT TRADE.

The salt trade, with the exception of coal and iron, is the most important industry in the kingdom, and the Cheshire salt district at present produces four-fifths of the total supply. To show how the salt trade is increasing, it may be mentioned that during the month of October last the United States of America took 23,225 tons, as against 15,837 for the same month of the previous year.

AMOUNT OF EXPORTS.

The quantity of salt shipped in the Mersey during the years 1878 to 1887 amounted to upwards of 10,000,000 tons.

PRICES LIKELY TO INCREASE.

Since the formation of the Salt Union, the price of salt has considerably increased, and there is no reason to doubt that it will be sustained. Several of the salt proprietors who sold to the Union had previously entered into contracts for forward delivery, and so soon as these have run out prices should undoubtedly have a further large advance.

PROFITS AT PRESENT PRICE OF SALT.

The cost of producing salt at Northwich, including carriage to Runcorn, Liverpool, or Widnes, will not exceed 5s. 6d. per ton, and this Company, having acquired the freehold, will not have to pay any royalty whatsoever. Salt is now about 18s. per ton, so that this shows a profit of 12s. 6d. per ton, and on a weekly output of 1,000 tons a profit of £625 per week would be made, or £32,500 per annum.

PROFITS IF THE PRICE OF SALT FALLS 33 PER CENT.

But supposing salt fell 33 per cent. in value, then, on a production of 1,000 tons a week, the following profits would be made :—

1,000 tons at 6s. 6d. per ton equals £325 per week..... .... or per annum	£16,900
Less interest on debentures.....	1,600
Leaving a balance of	£15,300

ESTIMATED DIVIDENDS.

Thus, with the prices of salt at 12s. per ton, and with an output of 1,000 tons per week (which quantity could easily be doubled by the erection of additional pans, for which there is ample space), the profits would show over 15 per cent. on the shares.

PRICE TO BE PAID FOR PROPERTY.

The price to be paid to the vendor for the freehold of the twenty-seven acres has been fixed at £84,000, of which two-thirds will be payable in cash and one-third in fully paid-up shares. This will leave a working capital of £36,000, which is considered ample for all the purposes of the Company. The map, with prospectus, will show the exceptional position of the property (it being almost the only land in the district which has not been acquired by the Salt Union). Since the Union was floated, salt works in close proximity to this property have been sold at upwards of £10,000 an acre, or more than three times the price paid by this Company. It will, therefore, be seen that the Company will acquire the present property on most advantageous terms, more especially when the facilities for transport are taken into consideration.

Applications for shares or debentures may be made on the form accompanying the prospectus, or by letter to the secretary, stating the number required, but in either case the application must be accompanied by a deposit of 10s. per share, or £10 per bond.

Messrs. SMITH, PAYNE AND SMITHS, Lombard Street, E.C., and Messrs. HERRIES, FARQUHAR AND CO., St. James's Street, S.W. are authorised to receive Subscriptions at Par, for the Balance (less 10,000 Ordinary Shares reserved) of the undermentioned Capital, a considerable portion of which has been privately taken up.

The Subscription List will Close on Wednesday, the 13th of February, for Town, and on the Following Day for Country applications.

The objects of the Association have received the cordial support and approval of UPWARDS OF 2,000 NOBLEMEN AND GENTLEMEN residing in the Metropolis, a large number of whom have subscribed towards the Capital. The connection thus established forms the nucleus of a very large business, and practically ensures the Commercial success of the undertaking.

THE METROPOLITAN COAL CONSUMERS ASSOCIATION, LIMITED.

Incorporated under the Companies Acts, 1862 to 1886, whereby the liability of the Shareholders is limited to the amount of their Shares.

CAPITAL - £250,000,

DIVIDED INTO

20,000 Six per cent. Preference Shares of £10 each, and 50,000 Ordinary Shares of £1 each

The Preference Shares are entitled to Cumulative Preferential Dividends at the rate of Six per cent. per annum, and are Payable :—10s. per Share on Application ; £2 on Allotment ; and the Balance in Calls as required ; but no Call will exceed £2 10s. per Share, nor be made at intervals of less than Two Months.

Subscribers for Preference Shares are entitled to an Allotment of Ordinary Shares, at Par, if duly applied for, in the proportion of Two Ordinary Shares for each Preference Share allotted. The Applications for Ordinary Shares, already received, being greatly in excess of this proportion, it has been determined to reserve, for future issue, at least 10,000 of these Shares, which will be offered at a Premium of not less than 5s. per Share. Ordinary Shares are payable, 2s. per Share on Application, 3s. on Allotment, and the balance in Calls of not exceeding 5s. per Share, which may be made at intervals of not less than Two Months. Shareholders can pay up in full on Allotment. Interest at the rate of Five per cent. per annum will be allowed on such prepayment.

(*Continued on next page.*)

THE METROPOLITAN COAL CONSUMERS ASSOCIATION, LIMITED.

Continued from previous page.

PROSPECTUS.

THE great necessity for a combined and strenuous effort to safeguard the interests of the population of London in respect of the supply of coal for domestic use in the Metropolis has long been admitted. In face of the recent rise, and the probability of further heavy advances in the price of coals, and having regard, moreover, to the growing tendency towards the creation of monopolies, which is calculated to lead to a monopoly in the coal industry of the United Kingdom, it is evident that a combination which will permanently protect the interests of coal consumers is more than ever urgently needed.

That this question can, by the adoption of suitable measures, be brought to a satisfactory issue is evident, it being purely a matter of organisation backed up by the employment of adequate capital, and the magnitude of the interests involved renders the subject one of very great importance.

The Metropolitan Coal Consumers Association, Limited, has therefore been formed to bring the producer and consumer into more direct business relationship, so that a large proportion of the profits now made by merchants or middlemen may be diverted to the consumer, and at the same time to render it impossible for any ring or organised monopoly to control the coal supply of London to the serious disadvantage of the community.

Official returns show that the quantity of coal brought into the metropolis, by rail, during the year 1888, approximates to 7,500,000 tons, and that nearly 5,000,000 tons of seaborne coal entered the port of London during the same period. The supply of only 400,000 tons of coal per annum (an extremely moderate percentage of the domestic consumption alone) will, at the small profit of 1s. 6d. per ton, produce a gross profit of £30,000, which, after providing for the expense of administration and for all possible contingencies, would, it is estimated, leave a balance of at least £17,500, or sufficient to pay the full dividend of six per cent. on the preference capital, and upwards of 10 per cent. on the ordinary capital of the Association. In submitting this calculation it should be observed that a far less capital than £250,000 would be required in dealing with so moderate a turnover as 400,000 tons, and it may, therefore, be reasonably assumed that the profits of the Association will be considerably in excess of those stated.

The business of the Association will be conducted strictly upon a cash basis; hence, no losses can possible accrue through bad debts, which, being so frequently incurred by ordinary coal merchants, necessitate in some measure the high prices so justly complained of by consumers generally.

In ordering their supplies of coal, householders incur the risk of paying exorbitant prices with the alternative of being deliberately cheated if they deal with firms other than those whose reputation and standing enable them to demand the highest rate of charges. In every respect the consumer stands at a disadvantage, possessing as he does neither technical knowledge regarding the intrinsic value of the article he is purchasing, nor the means to conveniently ascertain, at the right moment, whether the quantity delivered is accurate or the quality correct.

Notwithstanding the remarkable success which has in numerous branches of trade attended the operations of the leading co-operative societies, the question of supplying coals upon the co-operative system has never been adequately dealt with, seeing that such societies invariably execute their orders through middlemen, thus giving but a nominal advantage to customers. This fact is distinctly shown by a comparison of the prices quoted by the Army and Navy Co-operative Society with the highest advertised prices of the leading coal merchants, the latter being only 1s. per ton above the stores' quotations.

The prices which will rule on the system to be adopted by the Association will be regulated as follows:—The Association will purchase for cash at the pit's mouth the finest qualities of coals at the lowest possible prices. To such net cost will be added the actual charges for railway freight, truck hire, loading, cartage, &c., and a fixed profit of 1s. 6d. per ton. With the command of large capital the Association should undoubtedly be able to make contracts upon specially advantageous terms for the entire output of several collieries, and the immense advantages which consumers will thus derive should, within a very short period, enable the Association to transact a business infinitely in excess of the moderate turnover above estimated.

With such prospects, it is anticipated that the shares of the Association will prove a high-class investment, and rank with those of the soundest and most profitable trading companies in London, among which may be mentioned the following:—

NAME OF COMPANY.	Nominal Capital.	Paid up per share.	Present Market Value.	Last Dividend Paid.
	£	£ s. d.	£ s. d.	
Aerated Bread Company, Limited	250,000	1 0 0	5 0 0	20 per cent.
Army and Navy Co-operative Society, Limited	*300,000	*5 0 0	15 0 0	14 ,,
Army and Navy Auxiliary Co-operative Society, Limited ...	80,000	1 0 0	4 10 0	20 ,,
Belgravia Dairy Company, Limited	100,000	1 0 0	1 7 6	8 ,,
New Civil Service Co-operation, Limited	100,000	0 10 0	0 17 6	10 ,,
Welford and Sons, Limited ...	100,000	1 0 0	2 17 6	19 ,,

* Including Bonus Fund.

The preliminary expenses of registration and forming the Association will be restricted to the actual cost incurred. No contracts have been entered into, and no promotion money or shares will be paid, except with the authority of the shareholders, who, at the first annual general meeting, will be asked to decide whether any, and if so, what amount of remuneration shall be voted to the founders of the Association.

The memorandum and articles of association can be seen at the offices of the solicitors.

It is intended to apply to the London Stock Exchange for a settlement and an official quotation.

Should no allotment be made the amount paid on deposit will be returned in full. In the event of the number of shares allotted to any applicant being less than the number applied for, the surplus of the deposit will be credited towards the amount payable on the shares which may be allotted to such applicant.

Prospectuses and forms of application may be obtained from the bankers, solicitors, and auditors, or from the secretary at the offices, Palace Chambers, 9, Bridge Street, Westminster, Albert Buildings, 53, Queen Victoria Street, E.C.

BARTHOLOMEW HOUSE, BARTHOLOMEW LANE, E.C.

PROSPECTUS.

This Company is formed for the purpose of purchasing and taking over 32 old-established bakers' businesses, carried on for many years past in main thoroughfares of various densely-populated parts of London, and also an extensive and valuable freehold flour mill, with a capacity considerably in excess of that required for supplying the whole of the shops, thus forming a "tied" trade, in the same manner as licensed houses are tied to a brewery.

The business of bakers, even as at present conducted, is very profitable, as will be seen by the accountants' certificate herein, but on the large scale upon which the business of this Company will be conducted, important economies will result; besides which, the Company, having its own flour mill, will retain the profits now made by millers on the flour used by the shops, and the result cannot fail to be highly satisfactory to the Company.

The mill acquired by the Company, which has both steam and water power, is situated at the market town of Ashford, in the County of Kent, the finest wheat-growing county in England, and the wheat is delivered at the mills free of cost for carriage. It has a frontage to the watercourse of the River Stour, and is within half a mile of stations on the South Eastern and London, Chatham and Dover Railways. The mills are equipped with a 30 h.-p. engine, by Horn, 10 ft. waterwheel, and the usual plant and machinery, and there are also stores, stabling, manager's residence, foreman's house, &c., &c., &c.

The bakers' shops have been carefully selected, and have leases averaging 16 years, many of which can be still further renewed, and as the trade is entirely a cash one, all risk of bad debts is eliminated. The books and accounts of these shops have been examined by Messrs. Herbert Watkins and Co., chartered accountants (who are well acquainted with the trade), and they report that the average consumption of flour was 606 sacks per week, and the net profit, after paying all usual expenses of the shops, was upwards of £8,800 per annum. The have also examined the books of the flour mill, and find that this weekly output of 606 sacks, delivered to the Company's own shops at present prices, represents a further net profit of £2,216 per annum. The total profits, therefore, from these two sources amount to over £11,000 per annum, which is over 15 per cent. on the entire capital of the Company.

In addition to this, as the mills have a capacity considerably beyond the present requirements of the shops, the Company will be in a position to dispose of the surplus, either in the market, or by supplying additional shops to be hereafter acquired by the Company, which should still further increase the profits.

The Company intend at once to erect an extensive steam bakery, sufficient to supply all its shops, and from the estimates which have been prepared on the basis of the Company's consumption of 600 sacks per week, a saving of £4,000 per annum in making the bread may be expected. The directors are negotiating for a suitable site at Westminster, and a provisional contract has been entered into for the construction and equipment of the bakery on the Mounié system, which has been found so successful, a license having been granted to the Company for this purpose.

It will be seen, therefore, that the profits from these various sources should result in dividends of from 20 to 30 per cent. on the capital of the company.

As showing the remunerative character of bread Companies, reference is made to the following :—

The Aerated Bread Company's £1 shares are now quoted on the London Stock Exchange at £5 to £5 5s. per share—or 400 per cent. premium—the last dividend paid by the Company being 25 per cent. per annum.

The Bristol Bread Company pay dividends of 35 per cent. per annum.

Boland's (Limited) (Capital £280,000), a Bread Company started in Dublin in May last, declared an interim dividend in November last of 10 per cent.

The *Financial News*, of Wednesday, 9th January, 1889, in a leading article on "Joint Stock Bakeries" says :—

Joint-Stock Bakeries.

Every year has its boom. What will be the boom of 1889? There is one form of industry, which is likely to have a boom of more or less importance, and that industry is bread-making. Some time ago the *Financial News* took occasion to point out that the manufacture of bread is not less profitable than the manufacture of beer and other commodities too numerous to mention.

The Aerated Bread Company, after passing through broken seas, has undoubtedly sailed into smooth and pleasant waters. A shareholder who is not satisfied with a dividend of 25 per cent.—exclusive of the share bonus allocated by this company in October last (of 5s. per £1 share)—must, indeed, be difficult to please. It is obvious that what has been done in London may very well be done in the large towns in all parts of the country.

Nor is it in the least degree surprising; for bread, like water, no household can do without. The demand is universal. It is true that the supply is forthcoming, but it is not the best that can be reasonably expected for the price paid. Large bakeries in populous towns invariably return excellent profits to their proprietors. It is when the trade requires upwards of 50 sacks of flour that the advantage of machinery is at once experienced. From that level a bread company may enlarge its business step by step with first-class results to its shareholders. The use of modern machinery and the most improved patent ovens will give such an undertaking an immense advantage over competing bakers.

At present, notwithstanding our boasted advance in sanitation and the operation of the Factory Acts, but too much of the staff of life is manufactured under injurious conditions, of which the consumer knows little or nothing. Only in a well appointed modern factory can immunity be secured from the objectionable influences of smoke and dirt. A company with a relatively moderate capital, and well-officered, which can guarantee such immunity, and supply a superior and uniform loaf at the ordinary price of household bread, must sooner or later attain conspicuous success.

(Continued on next page.)

THE LONDON AND COUNTY BREAD COMPANY, LIMITED.

Continued from previous page.

The mills will be managed by Mr. Cantrell, who has acted in that capacity for a considerable period, and who is well-known on the markets. Mr. Vollmer, chairman of the Western Association of Master Bakers, and a thoroughly practical man, will manage the bakery, and personally visit every shop twice a week.

The price fixed by the vendor for the freehold flour mills, including all machinery and plant, with the fixtures, fittings, goodwill, and riparian rights, leases of the 32 shops, together with all vans, horses, carts, &c., belonging to the same, has been fixed at £55,000, of which two-thirds will be payable in cash, and one-third in shares or cash, at the option of the directors.

The following are the contracts which have been entered into:—(1.) Contract dated 8th February, 1889, between F. T. Cantrell of the one part, and C. Brown of the other part. (2.) Contract dated 8th February, 1889, between W. Evans of the one part, and the said C. Brown of the other part. (3.) Contract dated 9th February, 1889, between C. Brown of the one part, and F. Sangwin, as trustee for the Company, of the other part. (4.) Contract dated 9th February, 1889, between F. T. Cantrell of the one part, and F. Sangwin of the other part. (5.) Contract dated 9th February, 1889, between G. Vollmer of the one part, and F. Sangwin of the other part.

The vendor, Mr. Brown, is the promoter of the Company, and will pay all expenses in connection with the formation and raising the capital of the Company, including printing, advertising, legal charges, &c., up to the first allotment of shares. In relation to these the vendor has entered into certain arrangements which may constitute contracts within the meaning of the 38th section of the Companies Act, 1867, and applicants for shares will be required to waive the insertion of the dates and names of the parties to any such contracts, as required by such section.

In the event of no allotment being made, the deposit will be returned in full, without deduction. Should a less number of shares be allotted than that applied for, the balance will be applied in reduction of the amount due on allotment.

The above-mentioned contracts, together with the articles of association, and the accountants' certificate and schedule of the businesses to be acquired can be inspected at the offices of the Company.

Prospectuses and forms of application can be obtained of the bankers and brokers, or of the secretary, at the offices of the Company.

The following is the certificate of the accountants before referred to:—

Moira Chambers,
Ironmonger Lane,
Cheapside, E.C.
28th January, 1889.

Gentlemen,—We have examined the books and accounts of the businesses proposed to be taken over by the London and County Bread Company, Limited, comprising in all 32 shops, as per schedule attached hereto, and we find therefrom that the present aggregate consumption of flour at the shops amounts to 606 sacks per week, and that this is bringing in a net profit at the rate of £8,880 per annum.

As we understand, you have also acquired a freehold flour mill at Ashford, to the above profit should, therefore, be added the wholesale profit which would accrue on the business done by the mill in supplying the shops with flour. On an output of 606 sacks alone per week, which trade would be ensured by the demand of your shops, this would be a further sum of over £2,216 per annum, or a total of £11,096 per annum.

We are, Gentlemen,
Yours faithfully,
(Signed) HERBERT WATKINS and Co.,
Chartered Accountants.

To the Directors of the
London and County Bread Company, Limited.

CAPE COLONY, THE TRANSVAAL AND BECHUANALAND.

PROSPECTUS.

THIS Company has been formed for the purpose of purchasing lands and acquiring options for the purchase of lands in South Africa, more especially in the vicinity of the proposed extension northward from Kimberley of the railway from Cape Town.

The Colonial Government have completed the survey for the portion of the railway lying within the Cape Colony, extending from Kimberley to the Vaal River (a few miles from the frontier); and the portion extending through British Bechuanaland to Mafeking has been surveyed for the Exploring Company, Limited, by their engineers, Sir Douglas Fox, C.E., and Sir Charles Metcalfe, Bart, C.E., acting in conjunction with Messrs. Lucas and Aird, the well-known contractors. Sir Charles Metcalfe, in a speech delivered at Vryburg, the capital of British Bechuanaland, on the 3rd November, 1888, declared that he "passed through grain lands which had yielded this year a most bountiful harvest, and the cattle he saw everywhere bore testimony to the excellence of the pasturage, and instead of being, as was supposed, a barren wilderness, the country might be much more fitly described as a land flowing with milk and honey." "Why, then," he continued "are there such misconceptions as to this fertile country? Because these natural products cannot be forwarded as yet to a market; because there is no channel by which that milk and honey can flow. The railway will provide that channel, and large centres will be supplied by the produce of fertile Bechuanaland. When the resources of this country have been developed, we may look forward with confidence to a rich and prosperous future."

The survey has determined the route that the contemplated extension will take. The project is supported by the following extract from a despatch from Sir Sidney Shippard, the Administrator of British Bechuanaland, to Sir Hercules Robinson, dated Vryburg, 3rd September, 1887.

"Public attention here has recently been directed to a proposal for the extension of the railway from Kimberley to Mafeking, which is within 18 miles of the Goldfields of Malmani. It is urged with considerable force that a Bechuanaland Railway must form part of the great trunk line, which, in the long run, will most benefit the Cape Colony by securing for her the trade of the interior. It is further contended that in all probability the development of the gold reefs, both in British Bechuanaland and the Protectorate, will necessitate the construction of a line of railway to a point very far north of Mafeking."

In view of this, and taking into account the remarks of Sir Charles Metcalfe, mentioned above, the Exploring Company instructed its agent to acquire lands, or options for the purchase of lands, in the districts contiguous to the route of the contemplated railway, either in Cape Colony, the Transvaal, or Bechuanaland, and he telegraphs that he has done so. Up to the present these amount, approximately, to 30,000 acres. It is considered by the board that these will constitute a sufficient basis to commence business operations, the intention being to continue the purchase of lands from time to time.

The Exploring Company, desiring to confine its attention more particularly to the construction of the railway has caused this Company to be incorporated, and agrees to transfer to it all the options for the purchase of lands which it has acquired, except those which are, or may be, required for the purposes of the railway. The price to be paid for these options will be the sums paid, or payable, by the Exploring Company, together with £3,000 in cash, and £20,000 to be satisfied by the issue of fully paid-up ordinary shares, and the 100 Founders' Shares entitled to the benefits specified in the memorandum of association. No other profit accrues to the Exploring Company, which bears all the expenses of the formation and bringing out of this Company, and the issue of its capital. In connection with this, and its guarantee of subscriptions of part of the capital of this Company, the Exploring Company has entered into contracts with third parties, and it has also provided special remuneration for its directors. These contracts have been made with various parties at different dates; they are too numerous to be set out in this prospectus, but applicants for shares can inspect them at the offices of the Exploring Company, and this notice shall be deemed to be a compliance with the provisions of the Companies Act, 1867.

The only contract entered into by the Company is dated the 14th day of February, 1889, and made between the Exploring Company, Limited, of the one part, and the Southern Land Company, Limited, of the other part. This, with a copy of the memorandum and articles of association, and the telegrams which the Exploring Company has received from its agent, advising the options obtained, can be inspected at the offices of the Company.

It is intended to apply to the Stock Exchange for a settlement and quotation.

Applications for shares should be made on the form accompanying the prospectus and forwarded to the bankers of the Company, together with the amount payable on application. If no allotment be made the deposit will be returned in full, and where the number of shares allotted is less than that applied for, the surplus will be credited to the payment due on allotment.

Share warrants to bearer will be issued at the request of holders as soon as the full amount of the shares has been called up.

Prospectuses and forms of application may be obtained from the bankers, brokers, solicitors, auditors, and at the Company's offices.

London, February 14th, 1889.

The SUBSCRIPTION LISTS will be CLOSED on or before MONDAY, the 18th, for London, and Tuesday, the 19th, for the Country.

The district in which the Mines are located is one of the richest Silver-producing territories in the world.

Extract from report of Mr. G. Thureau, F.G.S., Government Geologist, and Inspector of Mines for Tasmania :—(d) "Having now thoroughly examined this Company's property, I have no hesitation in stating same to be one of the most valuable Mines in that district, and which, undoubtedly, will produce permanent and very satisfactory profits to the Shareholders."

PROSPECTUS.

This Company is formed for the purpose of acquiring and developing the Broken Hill Consolidated Blocks Company's Blocks 16, 22, 23, 34, and 50 (shown in red on the map accompanying the prospectus), comprising an area of about 150 acres, situate in the Barrier Ranges, New South Wales, and for working the silver and lead ores found therein. The property is held under leases from the Crown, which have about 15 years to run, and are renewable pursuant to the Mining Act of 1874.

The district in which the mines are located is one of the richest silver-producing territories in the world. It is on the same line of lode as the celebrated Broken Hill Proprietary Company's property, which it is believed has eclipsed in its marvellous productiveness even the famous mines of the Western States of America.

According to the Broken Hill Proprietary Company's half-yearly report, dated 30th June, 1888, in the two years from July, 1886, to June, 1888, and with the dividends subsequently declared, the Broken Hill Proprietary Company have paid in dividends and bonuses the enormous sum of £2,920,000, or over £182 per share of £20 (£19 paid), and these extraordinary returns are, according to this report of the directors, likely soon to be increased. The value of the mine at the latest price of the shares in Melbourne is £4,640,000. During the six months ending May, 1888, they have treated 41,340 tons of ore, producing 6,773 tons of lead, and 1,633,737 ozs. of silver, or an average of 17.3 per cent. of lead, and 43 ozs. of silver per net ton of ore. See full table herewith :—

TABLE showing amount of Dividends and Bonuses paid by the Broken Hill Proprietary Company since July, 1886. This Mine was only opened up in 1885.

Number of Dividend.	Date of Payment.	Amount per £20 Share.	Rate per cent. per annum on £20 Shares (£19 paid up.)	Total Amount Paid.

,, ,, ,, Block 10				912,000
Grand total				£2,920,000

The £20 shares (£19 paid) are now quoted at £291.

The mail of November 30th, 1888, gives the returns from the Proprietary Company as follows :—Week's run, eight furnaces, ore treated, 2,506 tons, producing 434 tons bullion containing 98,572 ozs. of silver, the average week's return being about 96,000 ozs.

In an article in the "Mining Journal," dated March 12th, 1887, Mr. Jno. Provis, M.E., specially accredited to the Broken Hill Proprietary Company by Messrs. Johnson, Matthey and Co., of London, writes :—"The Broken Hill vein is a large fissure vein, extending from the Broken Hill South Company's claim to Piesses Nob, a distance of 9 miles (see map of leases). Lead is one of the most abundant constituents of the vein, while silver is generally distributed roughout it.

Mr. Z. Lane, mining engineer, and at present manager of Block 14 Company, who has had great practical experience of the property, states in his report that, "The main lode of the Consolidated is undoubtedly the extension of that being worked in the Broken Hill. After leaving the Broken Hill, the lode passes through the Junction, North, Imperial, Cosgrove's and Round Hill Mines, and from the latter right through the entire length of the Consolidated Blocks, the course of the lode being north-east."

On referring to the reports and plans at the Company's offices, it will be seen that nine shafts have been sunk to depths varying from 54 to 111 ft., and Mr. Lane states positively that in these shafts "Ore has been found, thus leaving no doubt as to the existence of the main lode throughout the entire length of the blocks held by the Company." He also says, "That although the ore veins met with have been comparatively small,* the lode formation is of immense size, fully 40 ft. in width, thus giving every opportunity for the occurrence of ore in proportionately large deposits. That the mine is a valuable one is beyond dispute, and it evidently only requires that the lodes be followed down to greater depths in order to yield ore profitable in quantity and quality."

* (Note.—One vein is 3 ft. broad).

The mine has also been reported on by Mr. G. Thureau, F.G.S., Government Geologist and Inspector of Mines for Tasmania. This gentleman is a specialist in silver mining of the highest reputation and experience, and is intimately acquainted with the silver mines of Nevada, U.S.A., and other parts of the world. He was employed to make an exhaustive examination of the Consolidated Broken Hill property, and he states :—

(a). "That there cannot be any doubt that the lode and its galeniferous offshoot coming in from the south-west belong to the system of argentiferous deposits so successfully worked by the former (Proprietary) Company."

(b). "With regard to the ground held by the Broken Hill Consolidated Company, I have arrived at a conclusion without specially recapitulating the extent of the workings, depth of shafts, &c., that the blocks 16, 23, 50, 34, and 22, contain two most valuable lodes, as proved by the exploratory workings, and, to judge from the numerous assays taken from the bulk of ores raised and now at the surface. Another feature should not be omitted to be mentioned, viz., that the outcrop ferro-manganese, of the Broken Hill Proprietary are clearly traceable up to, and right through, the company's ground, thus establishing a direct connection. In the Proprietary's mines the ores occur chiefly as carbonates of lead, and chlorides of silver, whereas, more northerly, the ores comprise a larger percentage of sulphides, which is by no means a less valuable feature, as galena is much required as flux in the reduction processes necessary for producing marketable bullion."

(c.) "There is thus an unbroken line of rich argentiferous country traversing this Company's blocks, to which a branch lode carrying coarsish galena may be added, which joins the main lode in block 22, and to all appearance a very heavy galena deposit will be found at that point of junction."

(d.) "Having now thoroughly examined this Company's property, I have no hesitation in stating same to be one of the most valuable mines in that district, and which undoubtedly will produce permanent and very satisfactory profits to the shareholders."

The directors call particular attention to the above paragraph (c), inasmuch as it is well-known that, in all great metal-producing centres, wherever two rich lodes form a junction, the result almost surpasses belief.

From the main shaft ore has been raised from a depth of only 80 ft., which assays 28 ozs. 10 dwts. of silver, and 64.5 per cent. of lead to the ton (see assay certificate of Messrs. Johnson, Matthey and Co., at the Company's offices, while the unparalleled riches of the Broken Hill Proprietary Company were found at a greater depth than 150 ft.

The Company's mines are admirably situated with respect to facility of transport. The township of Broken Hill is connected by tramway with the South Australian Railways terminus at Cockburn, and ore can be conveyed by rail for shipment from Adelaide, Port Augusta, or any South Australian port.

There will be no necessity to erect expensive machinery for treating the ore, as the Barrier Ranges Concentrating Company and other companies undertake that work upon reasonable terms, and with the very best appliances which local knowledge and practical experience can suggest, thus utilising to its utmost the silver-yielding capacity of the ore.

The London financiers are beginning to appreciate the enormous field for investment offered by this rich territory. The *Financial News*, in a leader of 18th October last, remarked :—

"The development of the Barrier Ranges Silver field proceeds apace. . . . . Since the day when a few shepherds happened upon silver ore, the Broken Hill district has been revolutionised out of recognition. Elaborate mining plants have been set up, townships have been established, and railway connection has been made with the sea. Fortunes have already been made out of this silver field, and if no more fortunes are made it will simply be because the profits of mining these masses of rich silver ore are now divided over a wider circle of investors."

The price to be paid for the purchase of the property is fixed by the vendor at £275,000, payable in cash or shares, at the option of the directors, but the vendor stipulates that he and his friends shall have a fair allotment for all applications they may make, and agrees that he and they will apply for all shares not subscribed for by the public up to the full amount of the purchase-money.

A contract for the purchase of the property has been entered into, dated the 8th day of February, 1889, between Lindsay Crompton Lawford of the one part, and William M'Lean Borradaile, as the trustee of the Company, of the other part.

All costs and charges incidental to the formation of the Company up to allotment will be borne by the vendors. In relation to these expenses, and for securing the subscription of a portion of the Company's capital, certain arrangements with various persons have been entered into. There are also various contracts incident to the formation of the Company. Applicants for shares will be required to waive the specification in the prospectus of the particulars relating thereto required by section 38 of the Companies' Act, 1867.

Applications for shares should be made on the forms accompanying the prospectus, and sent with the deposit direct to the Company's bankers. In cases where no allotment is made the deposit will be returned in full, and where the number of shares allotted is less than the number applied for, the surplus will be credited in reduction of the further amount payable upon allotment.

Copies of the memorandum and articles of association, the above-mentioned contract for sale and purchase, the reports of Mr. Z. Lane and Mr. G. Thureau, F.G.S., and the assay certificate of Messrs. Johnson, Matthey and Co. can be inspected at the offices of the Company.

Prospectuses and forms of application can be obtained from the bankers, solicitors, or at the offices of the Company.

PROSPECTUS.

THIS Company is formed to acquire, further develop, and vigorously work an extensive area auriferous grouud situated in the famous Witwatersrandt Gold Mining District, South Africa.

The property is known as No. 441, Modderfontein Farm, and lies about 9 miles north-east of the town of Johaunesburg. It com-prises about 2,810 acres, and contaius numerous gold-beariug reefs, which have been thoroughly prospected, and proved to be of great extent and exceptional value.

The property has been reported upon by Mr. Francis Fowler, M. Inst. C.E., the well-known mining engineer, from whose report the following extracts are taken :—

"LOCALITY.—The farm lies about nine miles north north-east from the town of Johannesburg, and near to the well-known 'Knights,' 'Jumpers,' 'Simmer and Jack,' and other uoted gold-producing pro-perties in this district.

"AREA.—The farm contains about 2,800 acres of auriferous land.

"PHYSICAL FEATURES.—The farm is situated upon two slopes of a rolling veldt intersected by a valley formed by a stream flowing into the Yokesky River, into which several smaller streams fall from other parts of the property, and this is reported to produce a copious and perennial supply of water, which only needs proper control, by means of dams judiciously placed, to provide a never-failing supply of water for milling and other purposes. At the same time plenty of coal can be procured from the immediate neighbourhood, thus fulfilling all requirements for the ecouomical working of the pro-perty.

"GEOLOGICAL FORMATION.—This presents the most favourable attributes for the existence of gold, as proved by experience through-out the rich gold-producing countries of the world, the strata which underlie the farm consisting of thin bedded shales tilted up by masses of intrusive diorite, which have altered their character into deposits of a flaky, micaceous matter, owing to the heat of this plutonic eruption. Throughout this formation we find the strike of the quartz reefs following the lines of the fissure, containing silica, gold, iron, &c.

"ALLUVIAL GOLD.—In the main creek a deposit of sand, gravel, and wash-dirt is met with, which has already yielded a good supply of gold, in the form of small nuggets. The fall of this creek is very convenient for alluvial working, and the ground easily worked. This branch of gold-mining will doubtless yield valuable returns. On the other water-courses flowing through the farm good alluvial ground ought likewise to be met with.

"REEFS.—This property is intersected with numerous auriferous quartz reefs, with a general line of strike from N.E. to S.W., and various leaders running thereto. These reefs have been opened to some extent, as may be seen by the following summary of work done and results of tests applied :

WORK DONE ON PROPERTY.

Reef.	Width. ft.	in.	No. of Openings on Reef.	Length of Reef Opened.	Yield per Ton of Quartz.
1	2	6	6	900 Cape Roods.	2 ozs. 2 dwts.
2	2	6	4	200 „	2 ozs.
3	3	0	1	— „	8 dwts.
4	3	6	5	300 „	1 oz. 10 dwts.
5	Thick		2	300 „	18 dwts.
6	2	0	4	— „	18 dwts.
7	Thick		1	— „	4 ozs.
8	Thick		1	— „	10 dwts.

"On the eastern portion of the farm the Buck reef forms a high ridge, under and through which the gold-bearing reefs pass, and here exceptionally rich deposits should be expected.

"Besides these main reefs, several quartz leaders bearing gold exist in different portions of the property, one of which, about 6 ins. thick, has been proved rich in gold, and there is little doubt that the others may prove equally good.

"Besides the above-mentioned openings, shafts have been sunk, but not to great depth—one only reaching 28 ft.—all giving promise of good results. Beyond these shafts most of the main reefs have been opened along the course, proving their continuity.

"I would recommend the erection of 40 heads of stamps upon the main creek below the dam or dams, as ample supplies of quartz can be produced to keep such a mill constantly at work, and with further development there is every probability that this output may be largely increased."

There is an ample supply of water for mining purposes, and a dam can be constructed at a small cost, which will ensure a never-failing supply. There is a plentiful supply of small bush for immediate use as fuel, and recent discoveries have demonstrated the existence of extensive coal deposits in the district, which will be available for feeding the steam machinery.

The property offers opportunities for both alluvial and quartz mining, and possesses every facility for economical working.

The following list of current prices (February 6th, 1889) will serve to show the present value of the £1 shares in the mines of the Wit-watersrandt district :—

African Exquer.	...	3¼	3½	Langlaagte	... ...	4½ 4¾
Aurora...	... ...	3⅞	4⅛	May	... ...	10½ 11½
Bantjes ...	... ...	3⅝	3⅞	Pioneer ...	... ...	13 14
City and Surburban	...	12¼	12¾	Robinson	... ...	65 67
Crown Reef	... ...	10⅛	10½	Royal	... ...	5½ 6
Durban-Roodept.	...	8¾	9	Salisbury	... ...	35 37
Ferreira...	... ...	25	26	Simmer and Jack	...	10¾ 11¼

Heriot	... ...	7¾	8¼	Vogelstruis	... ...	3⅞ 4⅛
Jubilee ...	... ...	9	9½	Wemmer	... ...	15¼ 15¾
Jumpers...	... ...	18¼	18¾	Wolhuter	... ...	4⅞ 5⅛
Knight ...	... ...	3¼	3½			

It is proposed, in accordance with the engineer's recommendation, to erect a battery of 40 stamps, thus ensuring large returns from work-ing the same, and, after making ample deductions for London expenses, a net annual return of about 50 per cent. upon the total capital of the Company may fairly be anticipated. The result of the assays made at numerous points upon the reefs show a higher pro-bable yield than 1¼ oz. to the ton, but that figure has been taken in the above estimate in order to afford a safe basis for calculation.

The vendor has fixed the price to be paid for the property at 120,000*l.*, payable in cash or shares at the option of the directors. This will leave an ample margin for working capital for the proper develop-ment and working of the property.

The only contract entered into by the company is one dated the 8th of February, 1889, and made between Gustav Franc of the first part and the Company of the second part.

The vendor, who is the promoter of the Company, has fixed the purchase-money, and will provide all the preliminary expenses of the promotion and bringing out of the Company, and the issue of its capital, and he has reserved to himself the right to enter into, and has entered into, arrangements with third parties for this purpose, which do not affect the Company, and to which it is not a party. As these arrangements may technically be contracts within the meaning of Section 38 of the Companies Acts, 1867, applicants for shares shall be deemed to have had notice thereof, and to have waived any fuller compliance with such section with reference thereto.

The above contract, together with the memorandum and articles of association, original report, &c., may be seen at the offices of the solicitors of the Company.

Applications should be made on the form accompanying the pros-pectus, and forwarded with a deposit of 2s. per share to the bankers or secretary of the Company.

Prospectuses and forms of application may be obtained from the bankers, brokers, solicitors, and secretary of the Company.

London, February 8th, 1889.

The List will Open on Monday, February 18th, and Close on or before Wednesday, February 20th, for Town, and Thursday morning, February 21st, for Country applications.

These Mines will be worked with one of the largest water supplies ever employed on any Hydraulic Mine, and the estimated profits show over 100 per cent. per annum on the capital of the Company.

The Mines purchased by this Company are a continuation of the Mines now being so profitably worked by the COLOMBIAN HYDRAULIC MINING COMPANY, LIMITED, and the ORITA GOLD MINES, LIMITED.

THE GRAVEL GOLD MINES OF COLOMBIA,

LIMITED.

Incorporated under the Companies' Acts, 1862 to 1888.

CAPITAL £100,000, IN 100,000 SHARES OF £1 EACH.

PAYABLE—2s. 6d. on Application; 2s. 6d. on Allotment; and the Balance in instalments of 5s. per Share, at intervals of Two, Four, and Six Months respectively, from date of Allotment. Half the above Capital of £100,000 will be available as Working Capital.

Directors.

*J. T. P. PECHEY, Esq., Chairman of the Colombian Hydraulic Mining Company, Limited.
The Hon. F. C. DRUMMOND, Director of the Frontino and Bolivia Gold Mining Company. Limited.
T. S. G. KIRKPATRICK, Esq., Chairman of the Orita Gold Mines, Limited.
FRANCIS RETALLACK, Esq., Chairman of the Vogelstruis Gold Mining Company, Limited.
*C. O. ROGERS, Esq., Director of the Colombian Hydraulic Mining Company, Limited.
* Being Directors of one of the Vendor Companies, will join the Board after Allotment.

Bankers.

Messrs. BARCLAY, BEVAN, TRITTON, RANSOM, BOUVERIE & CO., 54, Lombard Street, E.C., and 1, Pall Mall East, S.W.

Broker.

P. MEADOWS TAYLOR, Esq., 29, Threadneedle Street, E.C., and Stock Exchange.

Solicitors.

Messrs. WALTER WEBB and CO., 23, Queen Victoria Street, E.C.

Secretary.

SYDNEY A. COBBETT, Esq.

Offices.

10, BLOMFIELD STREET, LONDON, E.C.

The statements in this Prospectus are, for the most part, based upon the accompanying detailed Reports made by Mr. A. E. Oakes, the Superintendent of the Colombian Hydraulic Mining Company, and Mr. W. S. Welton, the Engineer, upon whose Report the Mines of the Colombian Hydraulic Company and also those of the Orità Company were purchased.

PROSPECTUS.

This Company is formed for the purpose of purchasing and working, by the hydraulic process, certain freehold auriferous gravel deposits, situated in the State of Tolima, Republic of Colombia, in the immediate neighbourhood of those which are being so successfully worked by the Colombian Hydraulic and Oritá Companies.

These properties are known as the :—

Rica,
Hoyo Negro or La Guardia,
Reforma, and
Maravilla,

the whole containing over 10,000 acres, and being 20 miles from the Port of Honda on the River Magdalena, whence there is constant steam communication with Europe.

The Rica, Hoyo Negro, and Reforma properties adjoin each other, and contain one continuous deposit of auriferous gravel of an average height of 120 ft. above bedrock, of over 8 miles in length, and of a varying width of several hundred yards. This gravel has been thoroughly tested by the hydraulic system, and proved to yield gold in highly remunerative quantities. The Maravilla property also contains an extensive run of gravel, which at all the points prospected shows the presence of a considerable amount of gold. There is every facility for working the mines by the hydraulic system, abundance of water, a splendid outlet for the tailings, and an ample supply of timber.

There are two distinct sources of water supply, viz. :—

The Guali River, containing at all seasons over ... ... 10,000 ins. of water, and

The San José and Agua de Dios streams, containing over ... ... 1,600 ins. of water.

It is proposed to commence operations with 3,000 ins. of water drawn from the River Guali, and 1,600 ins. of water drawn from San José and Agua de Dios streams. The 3,000 ins. of water will be brought on to the Rica, Hoyo Negro, and Reforma Mines, and, according to the estimate of Mr. Welton, this amount of water should produce the following results per month :—

As 300 ins. of water produced $11 per hour—	
3,000 ins. of water washing for 500 hours (an average month's run would produce ...	$55,000
Less estimated cost	5,000
Profit per month	$50,000
Or	£10,000

Over 100 per cent. per annum upon the capital of the Company.

The remaining 1,600 ins. of water will be brought on to the Maravilla Mine, and should produce proportionately large profits.

The advantages of working by the hydraulic system are well known. No expensive machinery is required, nor is there the need for a large force of skilled labour; the initial cost of bringing in a sufficient supply of water being the only heavy outlay.

The published statements of the cost and returns of the Colombian Hydraulic and Oritá Gold Mines show the exceptionally low cost of working by the hydraulic process, 70 per cent. of the gross returns being nett profit. Both these companies are paying dividends at the rate of 20 per cent. per annum, and the £1 share of the Colombian Hydraulic Company is quoted at £1 17s. 6d., and that of the Oritá £2 5s. These Companies are working with little over 1,000 inches of water, and both have yet to reach the main bank of gravel, the returns having been obtained in a great part from washing through tailings left by the ancient workers.

The profits of hydraulic mining are mainly based upon the quantity of water used in the operations. By the foregoing, it will be seen that the above-mentioned companies are making large profits with little over 1,000 ins. of water, whereas this company (The Gravel Gold Mines of Colombia) will commence its operations with 4,600 ins. of water, with a practically unlimited area of auriferous gravel to operate upon, and with ability to increase the water supply to almost any desired extent.

An important feature connected with this undertaking is that the gravel has been thoroughly prospected by the practical working of the hydraulic system, and the estimates of profits are not based upon samples and prospects taken, but upon work done and results obtained.

The sketch map shows the relative position of the properties, and the sources from which the water supply is to be obtained. All the necessary surveys have been completed, and work already commenced on the ditches.

The price agreed to be paid for the properties to be acquired by the Company is £50,000. Of this £10,000 is to be paid in cash to the Colombian Hydraulic Mining Company for the Rica property, the memorandum of association of that company not permitting it to hold shares in any other undertaking, and the balance for the other properties is to be paid in cash or shares at the option of the directors. An ample sum will remain as working capital and for future development.

A contract has been entered into dated the 30th day of January, 1889, and made between the Colombian Hydraulic Mining Company, Limited, of the first part, Alfred Ernest Oakes, whose above-mentioned report accompanies this prospectus, of the second part, William Delisle Powles of the third part, the Reforma Gold Mine, Limited, of the fourth part, Edward Arthur O'Brien of the fifth part, and this Company of the sixth part. Also a contract by letter from E. A. O'Brien to P. M. Taylor, dated 30th January, 1889, and accepted the same date.

The memorandum and articles of association of the Company, together with a copy of the above-mentioned contracts, and the originals of the reports of Messrs. Oakes and Welton, can be inspected at the offices of the solicitors.

Applications for shares must be made to the bankers of the Company upon the form accompanying the prospectus. Where a less number of shares is allotted than applied for, the balance of the deposit money will be applied towards the amount due on allotment. Where no allotment is made the deposit will be returned in full.

A Stock Exchange settlement and quotation will be applied for in due course.

Prospectuses and forms of application for shares may be obtained from the bankers, the broker, and at the offices of the company.

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

ACTIVE BUSINESS—HYDRAULIC MINES TO THE FORE—AFRICANS IN DEMAND BUT PRICES UNEVEN—INDIAN SHARES FIRM—CHEAP SHARES MOVING UPWARDS—AUSTRALIANS UNSTEADY—HOME SHARES ON THE DOWN GRADE.

Last week will long be remembered on the mining market. Early mornings and late evenings were the rule. Some of the dealers are, to-night, worn out with want of that repose which "something attempted" has won, and "something done" has merited. Some of them have been out of bed two nights running, and where the masters have fared so ill their assistants could scarcely expect to fare better. Business instead of coming in a genial flow has arrived with a rush, and particularly last week, which experienced one of the heaviest accounts that have been known in mining for years past.

Hydraulic mines have been to the fore, and particularly the share of a new concern, called "Colon," of which we publish some particulars this week. The shares, commencing at nominal prices, rushed up to 10s. and 11s., and are generally thought to be worth buying for a further rise. Telegrams poured in to purchase from all parts of the country, and sellers, though at first shy, being tempted by the splendid profits they saw before them, began to appear. Many thousands of shares changed hands, and Mr. Thomas Thompson, the sponsor for the new venture, was warmly congratulated upon having scored another success. Tetuans have been rather weaker, but there has been a rising market in Organos. We announce the advent of three new hydraulic companies, the merits of which are discussed in another part of this issue.

African Shares have also been in demand, but the feature of the week in regard to them has been that the shares high in price have fallen, and the shares low in price have risen—a paradoxical statement, but one which a reference to the figures will fully bear out.

The Indian Market has been extremely firm, though prices scarcely close at the best. We have all along pinned our faith to these ventures, and every day's experience justifies our confidence. The balance of Mysore West Shares not taken by the proprietors have been offered at 8d. prem. Without a doubt every one of them will be taken.

Cheap Foreign Shares have been in good demand. We advise our readers to watch the progress of Monte Del Oro Mine. It is rapidly turning the corner, and becoming a most valuable property. Empires have fallen with the temporary cessation of work. A reconstruction scheme will put the company on a proper financial basis. A circular setting forth the present position appears in this issue. The news from New Emma continues to be very good.

Copper shares have been without feature. The price of that metal is well maintained. Rumours to the contrary notwithstanding, it would be premature to accept the report that arrangements for the formation of the Copper Company, Limited, in England have fallen through. Some details remain to be settled, and until everything is on a business footing the contract for taking over any part of the French syndicate's stock of metal or other liabilities must be delayed.

The Australian market has been unsteady, but there has been rather more business in the shares. We continue to hear good accounts of Mount Morgan Extended, and fancy it will one of these days make its mark.

Home shares appear to attract no attention. They have decidedly fallen upon evil times. West Kitty, for instance, is about half the price it was a year ago, and fell upon the declaration of the dividend this week. It seems likely that the shares will go still lower along with those of the whole of the "Walbrook group." On the other hand, the accounts from East Blue Hills, Prince Royal and West Carzise, whose meetings were held this week, are wholly good, and the shares bid fair to rise. There has been a considerable amount of business in Dolcoath, but quotations close weaker—not owing to any diminution of the value of this grand mine, but to unsteadiness of the Tin market.

Africans.

Another busy week in most of the shares in this market, and in consequence quotations have changed every few minutes. There has been, as we have already predicted, a general rise in most of the lower-priced stocks, while those at a higher price have given way. Most of the shares have risen since Tuesday last: for instance, Bantjes made up $3\frac{1}{2}$, and close $4\frac{1}{8}$, $\frac{3}{8}$; Crœsus at $2\frac{1}{4}$ are now $4\frac{1}{2}$, $\frac{3}{4}$; Modderfontien at $1\frac{1}{2}$, and are now $1\frac{13}{16}$, $1\frac{15}{16}$, and have been done at 41s. A rise has taken place in Edwin Bray of $\frac{3}{8}$; Shebas, $\frac{1}{16}$; Bantjes, $\frac{5}{8}$; Bixley, $\frac{1}{16}$; Blackreef, $\frac{1}{4}$; Bothas, $\frac{3}{16}$; Central Lanlgaagtes, $\frac{1}{4}$; City and Suburban, 2*l.*; Crœsus, $2\frac{1}{4}$; Dornkop, $\frac{3}{16}$; Evelyn, $\frac{1}{2}$; Geldenhuis, $\frac{1}{8}$; Goldfields of South Africa, $\frac{1}{4}$; Heriot, $\frac{1}{8}$; Jubilee, 20s.; Kleinfontein, $\frac{1}{8}$; Langlaagte, $\frac{1}{8}$; ditto Block B, $\frac{1}{8}$; Luipaards Vlei, $\frac{1}{8}$; Main Reef, $\frac{5}{8}$; ditto United Roodepoort, $\frac{1}{4}$; Modderfontein, $\frac{3}{4}$; Morkel, $\frac{3}{8}$; Moss Rose, $\frac{1}{2}$; Nabob, $\frac{3}{4}$; New Grahamstown, $\frac{3}{16}$; Oosthuizen, $\frac{1}{4}$; Randfontein, $\frac{7}{16}$; Royals, $\frac{1}{4}$; Spes Bona, $\frac{3}{4}$; Stanhope, $\frac{1}{4}$; Star, $1\frac{1}{8}$; United Langlaagte, $\frac{1}{2}$; Van Ryn, $\frac{1}{2}$; Vogelstruis, $\frac{5}{8}$; Wemmers, $\frac{1}{2}$. The following have fallen :—Piggs Peak, $\frac{1}{16}$; Horo Exploration, $\frac{1}{8}$; Moodies (fully paid), $\frac{1}{8}$; Bankets, $\frac{3}{16}$; Crown Reef, $\frac{1}{4}$; De Villiers (Robinson), 20s.; Durban Roodepoort, $\frac{7}{8}$; Golden Kopje, $\frac{1}{8}$; Jumpers, $\frac{1}{4}$; Mays, $\frac{1}{2}$, and Salisbury, 20s.

The closing prices are as follows :—

Diamonds.

There has been more business done in Diamond shares this week than for the past month, and prices have in almost every instance improved. The making up prices of the principal shares on Tuesday last are given on the left hand, while this evening's quotations are on the right.

4⅜	Anglo-African, 10*l.* shares	4½	—	4⅝
4¼	Bultfontein, 5*l.* shares	4⅜	—	4½
24/	Bultfontein Consolidated. 1*l.* shares	22/6	—	23/6

London and South African Exploration	16⅝	—	16⅞ x rights xd
Read's Drift Land Co.	2½	—	2¾

Indians.

This has been a busy week in Indian shares, and prices have been very firm, although they do not close at their best. For instance, the leading mine (Mysore) closed last Friday evening 5⅛, ⅜, but have since changed hands at 5⅜ and leave off this evening, 5¼, 5½. Goldfields have again gone steadily up. On February 2nd they closed 1 7/16, 1 9/16; on the 9th inst. they were 1½, ⅝; but this week they have been as high as 38s. buyers, and leave off 1¾, 1⅞.

Australians.

A rise is shown in Cumberland of 1s.; Day Dawn, 1s. 6d., and Gympie Great Eastern, 2s. The only other changes are a fall of 6d. in Day Dawn, p.c. and Livingstone. Market rather quiet for this class.

Foreign Shares.

There have been large transactions in low-priced shares this week, the chief of which have been Alturas, Colon, Callao Bis, Colombian Hydraulic, Empire, Don Pedro, Kohinoor and Donaldson, Moruya, New Emma, New Organos, Tetuan, Victory, New Eberhardt, and Yuruari. There has been more real business done this week in the above properties than for a long time past, thousands of shares having changed hands. The following show a rise: Callao Bis, 6d.; Dickens Custer, 1s.; Kohinoor, 9d.; New Organos, 2s. 6d.; Palmarejo, 6d.; and Victory, 2s., whilst a fall is shown in Don Pedro, 1/16; Empire, 1/16; Montana, 1/16; New California, 6d.; Tetuans, 3s. 6d.; and Viso, 1s.

Copper.

There has not been very much doing in Copper shares during the week, the chief dealings being in Capes, Copiapo, and Rio Tintos. Prices generally have given way: Cape Coppers have fallen ¼; Masons, 5/16; Panulcillo, 1/16; Quebrada, ⅛; Rio Tinto, ¾; and Tharsis, ⅛.

The following list shows the principal changes in the mines which have taken place:—

	Last Week.			This Week.	
Dolcoath	103	104		102	103

LATEST FROM THE MINES.

Indian Mines.

Indian Gold.—The directors have appointed Mr. Herbert Phillips to succeed the late Capt. Coward in the management of the company's mines. A cablegram dated Devalah, 14th instant, has been received from Mr. Phillips announcing that he has now taken over the charge of the works.

Mysore.—The directors have sold the gold produced in the month of December, which realised 5,718*l.* 15s. 5d.

Nundydroog.—The company have sold, through Messrs. Johnson, Matthey, and Co., the gold obtained in the month of December, which realised 2,567*l.* 4s. 7d.

Colonial Mines.

Midas.—Cable:—"Result of two days' washing at No. 2 shaft, 58 ozs. (238*l.*); ground opening splendidly; large returns shortly."

Mount Leyshon.—Telegram received on the 12th instant:—"203 tons; 88 ozs. gold." The secretary adds, this represents about half time, crushing for 12 days with 10 heads, and water still short.

Mount Perry Copper and Reid's Creek.—A cablegram from

the resident manager advises shipment of 50 tons of matte per Merkara, value 2,750*l*., and that in future shipments will take place monthly.

PHŒBE GOLD.—Cablegram received from the manager at Charters Towers, viz. :—"1,128 tons, 1,316 ozs., value 4,385*l*. Will resume crushing in a fortnight."

FOREIGN MINES.

BUENA VENTURA.—The meeting of this company, called for Thursday last, was adjourned sine die, the shareholders failing to put in an appearance in sufficient numbers to form a quorum. The working for the past year shows a loss of 656*l*., which is attributed chiefly to a falling off in the productiveness of the lodes.

DON PEDRO.—Telegram, dated Marianua, 12th February :—"Clearing 50-fm. cross-cut."

GARFIELD.—The following cablegram from Mr. Hooper, the superintendent at the mines, shows the results for the month of January :—"Production, $9,600 ; revenue expenses, $9,000 ; capital and development expenditure, $2,000 ; tons crushed, 365. We have been putting low-grade ore through the mill."

NEW CALIFORNIA.—The directors have received the following advice by cable from the manager, Mr. Alfred Rickard, under date of 15th inst. ;—"January gross returns 1,750*l*. ; mining costs, 1,200*l*. ; profit, 550*l*. ; development account, 420*l*.

NEW SONORA.—The first batch of allotment letters of this company have this day been posted.

ORITA.—Mr. Sidney A. Cobbett (secretary) has received the following cablegram of the returns for the month of December, 1888 :—"We have cleaned up after a run of 770 hours. The gross returns are 1,200*l*. The profit on this run should be about 900*l*."

OURO PRETO.—The directors have received a telegram dated 11th February, giving last month's return of gold as follows :—2,126 tons of quartz produced 7,638 oits. of gold " (928 ozs.)

PINOS ALTOS BULLION.—The out-turn for the week ending 10th inst. was $12,000.

RIO TINTO.—The company notify that at the eighteenth half-yearly drawing of their 5 per cent. bonds, to be held on the 1st proximo, bonds amountiug to 23,180*l*. will be drawn to be paid off at par on the 1st April.

SANTA BARBARA.—A cable message from Rio de Janeiro, dated 11th February, advises the amount of produce obtained for the month of Jauuary as being 4.046 oits. of gold. The value of this produce would amount, at 8s. 6d. per oit.. to 1,719*l*. 11s. sterling.

UNITED MEXICAN.—The directors have received the following telegram :—"Gross returns San Cayetano property week ending 9th February, $8,400 ; net returns San Cayetano property week ending 2nd February, $930 ; gross returns El Cubo property week ending 9th February, $1,180 ; loss El Cubo property week ending 2nd February, $3,650."

HOME MINES.

EAST BLUE HILLS.—The balance-sheet showed that from the 23rd October to 4th February the liabilities over assets were 72*l*.

MINERA.—The directors have declared a dividend of 3s. per share, payable on and after February 14th, for the half-year endiug December 31st, 1888.

POLBERRO.—A call of 1s. per share was made. The statement of accounts showed—balance from last meeting, 215*l*. ; call made October 23rd, 1888, 500*l*. ; total receipts, 730*l*. The labour costs were 436*l*. ; merchants and other bills, 186*l*. : balance at the banker's, 87*l*.

PRINCE ROYAL.—The accounts from October 20th to February 11th showed the liabilities over assets to be 312*l*. A call of 6d. per share was agreed to.

TREVAUNANCE.—The accounts showed that the call of 1s. 6d. made October 23rd, 1888, had realised 600*l*. ; copper sold October, 1888, 94*l*. ; total receipts, 697*l*. The labour costs had amounted to 408*l*. ; merchants' bills. 130*l*. ; and there was a balauce of cash at the bankers of 104*l*. A call of 1s. 3d. per share was made.

WEST KITTY.—The shares have been flat, prices dropping down to 6½, 6¾ ex div. Three years ago this mine was selling at double its present value. Some sinister reports are in circulation, but we (West Briton) understand there is uo probability of any falling off in the returns—at any rate, for the present. A divideud of 10s. per share was declared this week. A shareholder remarked as to Mr. Reynolds, that it did take him a little aback when he sold some of his shares in West Kitty.

LONDON METAL MARKET.

4.35.—Closing official report.—Copper : Chili bars, cash, 77½, 8 ; three months, nom. ; best selected, 78, 9 ; strong sheets, 80 ; English tough, 78, ½. Tin : Fine foreign, cash, 94⅝, 5⅛ ; three months, 95⅛, ⅝ ; Australian, 95⅛, ⅝ ; English ingots, 98, ½.

FOR LATEST PRICES
AND ALL PARTICULARS OF FOREIGN AND HOME MINES
SEE PAGES 228 AND 229.

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Increases : Provincial, 461*l*. ; North Metropolitan, 96*l*. ; Belfast, 155*l*. ; Sheffield, 61*l*. ; Glasgow, 89*l*. ; South London, 140*l*. ; Gothenburg, 20*l*. ; Bristol, 47*l*.—Decreases:—London Street, 132*l*. ; London, 290*l*. ; Southampton, 23*l*. ; London Southern, 32*l*. ; Hull, 17*l*., Calcutta, 64*l*. ; Continental Metropolitan, 165*l*. ; Calais, 10*l*. ; and Bordeaux, 61*l*.

RAILWAYS.

For the week ended February 9th the Mexican Railway traffic receipts were 17,300*l*., against 15,600*l*. last year, showing au increase of 1,700*l*.

For the week ended February 9th the Grand Trunk Railway of Canada return exhibits an increase of 5,138*l*., and the Chicago and Grand Trunk, 1,045*l*. ; but the Detroit, Grand Haven, and Milwaukee shows a decreasc of 348*l*., making a net increase of 5,835*l*., and of 30,564*l*. for six weeks to date. The cablegram adds : "Weather very unfavourable."

The Great Eastern Railway traffic return for the past week exhibits an increase of 2,345*l*., the Lancashire and Yorkshire an increase of 1,888*l*., and the Metropolitan District an increase of 172*l*.

DIVIDENDS DECLARED AND ANNOUNCED FOR WEEK ENDING FEBRUARY 16TH.

	Carried forward.	
Australian Agricultural Co.	—	50s. per share.
Anglo-Foreign Banking Co.	6,516*l*.	7s. per share.
Atlantic First Leased Lines Rental Trust	5,897*l*.	4 per cent.
Aberdeen Heritable Securities and Investment Co.	37*l*.	4½ per cent.
Aberdeen Heritable Securities and Investment Co.	Bonus	2½ per cent.
Brunner, Mond & Co.	17,917*l*.	25 per cent.
Brighton and Hove Co-operative Supply Association	—	5 per cent.
Colne Valley Water Co.	357*l*.	2½ per cent.
Carl Rosa Opera Co.	650*l*.	4 per cent.
Dublin, Wicklow & Wexford Railway	7,935*l*.	2 per cent.
General Steam Navigation Co. ...	—	6s. per share.
Hong Kong and Shanghai Bank ...	—	1*l*. 10s. per share.
Leipzig Tramway Co.	—	6 per cent.
London, Paris and American Bank	4,730*l*.	6 per cent.

THE COLON GOLD MINES.

GRATIFYING REPORT FROM THE PROPERTY.

MR. B. ANDERSON, of California, in his report on this property, says : The mines, from all appearance, have a general north and south direction, and can easily be traced for a considerable distance along the ridge which separates the Frias Quebrada from the Casbonera. The mines consist of alluvial deposits, apparently of great richness. situated on the ridge at a considerable height above the neighbouring ravines. Judging from the nature of the mines, and taking as a guide the two prospect pits opened, it is more than probable that the lead or channel is continuous and extensive, and if it proves to be so, and furnishes anything like returns proportional to those obtained from the prospect pits or cuts, the veins, when properly opened, must prove extremely productive. The character and general appearance of the bed-rock are almost identical with that of the seam diggings, of Georgetown, California, one of the richest placers in that State. This rock consists of decomposed slate, veined with quartz, very favourable for coarse gold, and, from the trials made, there is every reason to suppose that it will prove very rich in heavy gold. The outlets for these mines are excellent on both sides of the ridge, and the ground can be bottomed far below the level of the bed-rock, if required, and this without necessitating any deep cuts of levels. Nothing better than the existing outlets could be desired. In the prospect pits opened on the side of the ridge, the depth of gravel is considerable. and, on advancing further into the hill, increases rapidly. Further to the north the ground will appareutly give very high banks. The ground now opened on is hardly sufficient to determine what is the width of the channel, but even should the lead or chaunel prove of only very moderate width. its extreme richness would make the mines very valuable. From the results obtained from the two points opened we can form some idea of the nature and value of the ground, and its adaptability for hydraulic operations on a large scale. It appears from these two small prospects 105.80 ozs. coarse gold were obtained, value $1,937.7⅝
Cost of producing same by hand work, using 4 ins. to 6 ins. of water 586.4

Leaving net $1,351.3⅛

a result which is certainly most extraordinary, considering the slow and primitive method followed by the native miners. With the amount of water we are using at Malabar the same work could be effected in half a day or less. With 200 or 300 ins. of water it would be done in about two days, and with the very limited supply of 100 ins., say, from four to five days' wash. This lesser quantity of water would, if applied, give most satisfactory results, as the ground is so rich and easy to run off. I consider the Colon Mines as offering the strongest inducements for active and energetic working. Even with the present small stream of 4 ins. to 5 ins. of water, it is quite possible to get out gold enough to cover the cost of opening property, and this fact of itself is the strongest argument that can be offered in favour of a more vigorous and economical prosecution of the enterprise.

FOREIGN MINING INTELLIGENCE.

ANGLO-MEXICAN.—The superintendent, in his report for week euding 5th January. says :—Ultimo winze below 572-ft. level : There is in the bottom nearly 2½ ft. of good ore, with a decided tendency to widen out. The ore lies a little over 4 ft. from the hanging-wall ; this distance appears to be increasing as we go down. This I regard as a favourable sign. East drift, 572-ft. level : The ore-streak seems to be somewhat narrower than at last report, but as we are leaving ore on the hanging I cannot give you the exact width, but I have directed that the full width should be taken so that we may be able to report with accuracy what is in sight. Hidalgo winze, Santa Margarita level : We are sinking on a body of ore in the west drift ; width 2½ ft., all of which is of good grade. We are extracting ore from the 572-ft. level stopes, which I consider are looking very much better than when I last wrote you. East of No. 2 winze, width of ore 2½ to 3 ft., and on the other side we have two streaks exposed ; the width varies from 2 to 3 ft. each. This stope is producing a large amount of valuable ore, and. as far as I am able to judge from present appearances, I think will continue to do so for some time to come.

ASIA MINOR (19th Jan.)—Seventy-six men driving ; aggregate value of ends per fm., 4 tons 10 cwt. 180 men stoping ; aggregate value of stopes per fm., 11 tons 3 cwt. 16 men rising, 14 men cross-cutting, 172 trammers, labourers, &c. The lode in the top of Union level is producing 1 ton of rich silver-lead ore, with a prospect of improvement. The lode in the bottom Union level is 6 ft. wide, and worth fully 1½ tons per fm. The lode in Petri air shaft is improving again, and there are some nice stones of silver-lead in the main adit end. The mine is in capital working order, and underground operations are proceeding vigorously.

BALAGHAT-MYSORE. — Report for fortnight ending 22nd January.—North engine shaft : We are pushing forward as fast as possible, with two rock-drills, the cutting of the necessary ground for plat, &c. at the 410-ft. level, and fairly satisfactory progress is being made. At the 330-ft. level we have completed the cutting of the ground for turn out, also risen against and communicated with the winze in the bottom of the 270-ft. level, and commenced stoping in the back of this level north and south of the No. 2 winze ; the quartz on that stope is about 14 ins. wide and assays respectively 11 dwts. 18 grs. and 2 dwts. 14 grs. of gold per ton. We have also commenced another stope in the back of the 330 level further south ; here the quartz is about 1 ft. wide and assays 2 ozs. 13 dwts. 13 grs. of gold per ton. These three stopes are being worked with three machines. We have not yet resumed the driving of the 330 level, but hope to do so as soon as the work at the 410-ft. level is sufficiently advanced as to allow of our withdrawing one of the rock-drills. The 270-ft. level north has been advanced 4 ft. 2 ins., or 638 ft. 1 in. from the shaft ; the end is poor. As intimated in my last, I have now suspended this drive, but instead of putting the men to drive on the other part of the lode I have for the present put them to stope in the back of the 270 ; here the quartz is about 1 ft. wide, and worth about 2 ozs. of gold per ton. The No. 2 winze in the bottom of this level has been sunk 4 ft., or 28 ft. 3 ins. below the level ; the quartz is improving a little in size and quality. The No. 2 cross-cut east has been extended 5 ft., or 56 ft. 10 ins. from the level. As desired, I have commenced another cross-cut (about 490 ft. from shaft) west of this level to further test the ground in this direction ; it is advanced about 7 ft. 6 ins. from the level. The stopes in the back of the 270-ft. level north yield quartz of about 10 ins. wide, and assays 1 oz. 6 dwts. 3 grs. gold per ton. The 165-ft. level north has been driven 2 ft. 6 ins., or 450 ft. from the shaft. We have cut through the branch referred to in my last report ; the quartz is nearly 18 ins. wide, and assays 3 dwts. 17 grs. of gold per ton. At first it appeared to be crossing the drive, but is now apparently making a more northerly direction. and is. I think, a part of our lode. Air shaft : The desired communication between the 95-ft. level and the 165 at the north engine shaft is being pushed forward. We are now spilling through old workings. and driving south from the bottom of the winze towards the stopes in the back of the 165-ft. level. and hope shortly to communicate. Surface : The necessary repairs (as detailed in my last) at the mill have been completed. and the mill again set to work in a most satisfactory state, and although the quality of the quartz crushed up to date has not been so good as anticipated, I hope it will soon again right itself, as we have, undoubtedly, good sections of stoping ground laid open especially at the 330-ft. level.—Capt. Pryor.

BARANCANNES (7th Feb.)—Monthly report :—Dressing operations : In consequence of the winding of ore being suspended, dressing operations were stopped in the middle of the month. We have now about 40 ton of ore in the bin, which will be shipped to England in a few days. The machinery, &c., is in usual working order.—D. Bray.

BATTERY REEF.—The manager of this company reports as follows on January 3rd :—No. 1 shaft : The back reef has been cut in the low level, it has not improved, but is coming nearer the Battery reef in the north drive 60 ft. from shaft ; bothreefs are in sight. The reef in the drive towards No. 2 looks very well, and the last assay is over 5 ozs. per ton from a sample right across the reef, taken by Mr. Rudd. No. 2 shaft is now down 200 ft., and the drive expected to connect to No. 1 in six weeks' time. No. 4 shaft : The reef has faulted at 50 ft. in depth, and is now being cross-cut for. The battery is erected, and the foundation ready for the engine.

BONNIE DUNDEE.—Mine manager's report for fortnight ending 8th December :—No. 1 south west level : The crushing of the first portion of this stone only yielded about 12 dwts., since then we have crushed 88 tons for 91 ozs., and there is a decided improvement in every part of the stopes. The gold from the last cleaning up was exceptionally coarse, portions of the gold being almost nuggets. Underhe shaft : On the whole this portion of the mine is showing a decided improvement. No. 3 shaft : The contractors have sunk a further distauce of 23 ft., making a total from the surface of 647." We have raised about 88 tons for a week. All the machinery, &c., in good working order.

BRATSBERG (4th Feb.)—Mining report No. 58.—Hoffnung Mine : No. 2 adit level is worth 1 ton per fm. The winze in the bottom of No. 2 is carrying a very fine lode, producing fully 2 tons per fm. No. 3 adit level is still worth 1½ tons per fm., and we are in hopes this value will continue for some time. The rise in the back of No. 3 is yielding saving stuff, and from appearances we have no doubt that a good lode will be cut here soon. The mid level at Ball's shaft remains pretty much of the same value as when last reported. No. 4 level is worth fully ½ ton per fm. ; the lode appears to be undergoing a change, and when we consider the run of ore ground we had in the section above we ought to be getting a permanent improvement here forthwith. At present and for some time past the best part of the lode in this level has been in the bottom. At No. 5 level west the lode is looking very well indeed, but it does not improve much in value, being still worth only ½ ton per fm. No. 5 level east is without change. The mid-level at Murchison's is yielding ¾ ton per fm. At the rise in the shallow workings the lode looks promising, but it is not yielding much ore ; 86 miners are employed here. Johanne's mine : No change to notice neither in the cross-cut nor winze, nor in the number of miners employed. Næsmark mine : Barker's shaft has been sunk about 1½ metres during the past week, and although there are some favourable indications presenting themselves, there is not much change in the value of the lode for ore. Four miners and four assistants engaged here. Surface work and remarks : The result of the special arrangement referred to in last report, as regards getting up the machinery from Skein, was satisfactory, and all found there is now on the mine or at Bandakslie, but we as yet cannot tell whether this includes the lot, as the cases yet remaining at Bandakslid have yet to be unpacked. As regards the general prospects of the mine, I see no reason to alter the opinion expressed in report No. 54, dated January 9th. True, the lode at Næsmark has not recently been so productive as hitherto, but we presume that we have got between two of the ore-bearing veins, where as before at this mine the lode makes poor, and, doubtless, if we do not meet with a new vein, shall immediately strike the old ones in driving on the course of the lode, which we presume we shall commence to do in March month. The output from the Hoffnung Mine, as duly reported, has been satisfactory during the latter month. The present stock of 123 tons or thereabouts, available for shipment at Skien we hope will soon be forwarded to Swansea. This, together with the estimated stock of 100 tons in the mine, and 179 tons accumulated and awaiting treatment by the machinery when the new erections are finished, makes a total of 402 tons 20 per cent. ore on the mine and at Skien.—J. D. Holman.

CALAVERAS CONSOLIDATED.—The directors have issued a circular to their shareholders, in which they state that the first cross-cut driven from the shaft at the north end of the Santa Cruz claim, at a depth of 100 ft. from the surface, showed the lode to have a width of 20 ft., and an ore value of 27. per ton.

— The following are extracts from the latest letter from their manager, dated 18th January :—On the 1st of January tunnel was in 533 ft. In the tunnel I am still driving cross-cut ahead ; have 35 ft. of ore mixed with slate and quartz that will average from $4 per ton in free gold, and 2 per cent. sulphurets ; value $50 per ton. Vein is very soft, and easily mined, little or no blasting required.

CONSOLIDATED ESMERALDA.—The superintendent, under date January 29th, reports : I am pleased to be able to report a much improved outlook on the lower level Durand. The south drift east branch has been extended 24 ft. ; total from the shaft, 129 ft. The last 20 ft. of this drift was driven through broken ground, showing no indications of vein. Knowing it to be in a fault we continued on the supposed course of the ledge, and were rewarded by striking it in the extreme north end of the break. The fault, so far as can be ascertained at present, has thrown the ledge to the west about 35 ft., and pulled it apart endwise about 23 ft. At a point 120 ft. south from the shaft we cut into the ledge on top of the drift. Are now turning the course of the drift towards the ledge, so as to cut through it as quickly as possible. It is now into the quartz about 2 ft., the quality of which is low grade, but I expect to find it much better on the hanging wall. As soon as the drift is fairly into the ledge I shall start one upraise and drive through to the level above, where I fully expect to find good ore the entire distance. The south drift on 325 level is out 297 ft. Progress, 18 ft. The ledge varies from 3 to 5 ft. in width, continues on its regular course and dip and looks very promising. Both pumps in good order and working well.

— A cablegram received February 5th states that "There is a big ledge, and the upraise has been started ;" and a cablegram received Wednesday last, 13th inst., gives the satisfactory information that ore has been reached 2 ft. in thickness, estimated to yield over 2 ozs. standard gold per ton.

CUMBERLAND.—Mining operations for month of November :—No. 1 shaft, No. 2 level south : There is still a little good ore coming to hand from the stope over this level. Although the extent of it has so much diminished that there is only room for two hands in each shift to work on it, the stope is now up a little higher than No. 1 level. This is the only work being carried on from No. 1 shaft at present. No. 2 shaft, No. 4 level : The lode in the stopes north of shaft so far has not improved as I expected it would have done ; in the hanging-wall part of the winze that was sunk from No. 3 level we have ore a few inches thick of good quality, then we have 2 ft. of stone on the footwall of stope of inferior quality, which is sure to improve as we rise higher. In the south end of this stope towards the shaft the lode is of better quality at present than it is towards the north. The drive going south has been extended 15 ft. for month, making total length from shaft 100 ft. ; we have still a good body of ore in this drive over 3 ft. in thickness, but only of medium quality as yet. We have now stopes opened over this drive for a length of 85 ft., and the lode the whole length will average about 2 ft. in thickness and of very fair quality, which I also expect to improve as we rise higher. No. 2 shaft : I had the water and accumulated débris taken out of the shaft during the month, and called tenders for sinking shaft by contract a further depth of 50 ft. : the lowest tender received was at the rate of 6l. 17s. 6d. per foot. The contractors started work on Monday, the 3rd inst., at a point 24 ft. below No. 4 level ; there is a body of stone over a foot in thickness right across the shaft, but the quality at present is poor. Surface : The carpenter is at present engaged putting a roof over new landing brace at No. 2 shaft ; when same is finished the tool-sharpening shop will be shifted from No. 1 shaft on to the brace at No. 2 shaft, which will be much more convenient, as the bulk of the tools are now used in the working of No. 2. New battery : The work at new battery site is proceeding fairly well, but I do not think it will be quite finished by the end of the year ; the water dam is still empty, but I am in hopes that we will have sufficient rain to give us water enough to start with as soon as the battery is ready. Old battery : This has been taken down and removed from old site during the month ; some of the machinery was below the level of Newby-wash, so that it was

necessary to have it removed in case we should have a flood. P.S.—In regard to sinking a new vertical shaft, I do not think it would be advisable to take any steps in that direction just yet, as by waiting, say another 12 months (which will be ample time enough to start new shaft) we will be better able to fix on the proper position for such shaft, and the company will be in a better position financially than at present.—W. Straughan.

DEVALA-MOYAR (21st Jan.)—The pyrites winze is being sunk below the deep tunnel night and day. The lode is now fully 2 ft., and the greatest portion of it solid pyrites. We have cut the lode from the deep tunnel 100 ft. west of the winze, and it is 16 ft. wide. The most productive part appears to be on the hanging-wall, and we shall open the lode on this portion east and west with all despatch.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending 22nd December.—Main underlie: The contractors have sunk a further depth of 9 ft., making total depth below plat 64½ ft.; ground is hard granite, intermixed with diorite.

— (22nd Dec.)—New mill on Burdekin River.—Since my report of 8th inst., the work here has been steadily progressing, and, as you are aware, on the evening of the 18th inst. we received here the first train load of quartz, consisting of seven trucks, and I am pleased to have to report that both the engine and trucks passed over our shoots most satisfactorily, not a perceptible move in any part of the structure was perceived. We again on the 21st received nine trucks, which passed over the shoots in the same satisfactory manner, and I am confident in saying that that portion of the work is quite up to anything that will be required of it. To-day I got the steam up in our five boilers, and found everything perfectly correct, and a splendid draught in all the furnaces. The steam joints were all tight, and the valves in perfect working order. I am highly pleased with the draught in our furnaces. Steam was got up in a very short time, the fuel used being the rubbish about the place. I have erected the engine and dynamo for electric light, and am now engaged in laying the wires, and trust to have the whole machine shortly in working order. —Thomas, engineer.

DAY DAWN P.C.—Report of mining manager for the fortnight ending 22nd December:—Main underlie shaft: This has been sunk a further distance of 7 ft., making its total depth below No. 10 level 116 ft.; the face at present contains 7 ft. of crushing stuff. No. 10 level has been driven 11 ft. in the fortnight, making its total distance from the underlie shaft 163 ft. The present end of this has 5 ft. 6 ins. of good stone, apparently making bigger. The three stopes between this level and the next above it each have about 3 ft. of good stone. No. 9 level has been driven a further distance of 8 ft., making its present length 257 ft. The end of this level has 6 ft. of good stone, and the stopes above it average 3 ft. of good stone. No. 3 winze between this level and the one above it has been sunk 17 ft., making its present depth 83 ft.; it has at its present depth 6 ft. of really grand mundic stone. No. 8 level has been driven 10 ft., and its present length is 514 ft.; in the face there is 3 ft. of crushing stuff. We expect to break through into No. 9 level in the next fortnight with No. 5 winze from No. 7 level, which has been sunk 7 ft. in the past fortnight, the bottom of which carries about 1 ft. of good stone. In the stopes which are being worked above No. 8 level there averages about 4 ft. of crushing stuff. No. 7 level has been driven further 6 ft., making its distance 594 ft. The face carries 3 ft. of crushing stuff. The two stopes which are being worked above this level average 5 ft. of crushing stuff. No. 6 level has been driven 14 ft., making its distance 571 ft., and at present has no stone in its face, and the one stope being worked above this level contains only poor stone. The number of trucks hauled from the shaft, and each level is as follows, viz:—Shaft, 120; No. 5 level, 66; No. 6 and 7 level, 484; No. 8 level, 624; No. 9 level, 492; No. 10 level, 436; total, 2,222. Trucks to Excelsior mill 160, equal 960 tons; drays to Defiance mill 42, equal 126 tons; total, 1,086 tons. No. 2 underlie shaft has been sunk 4 ft., making its depth 175 ft. There is no change to report. The new engine and the old locomotive boiler have been started and tested, and are working satisfactorily with 55 lbs. pressure. Three sets of timber have been put in the underlie.

EAST AREVALO (MEXICAN) (21st Jan.)—During the past two weeks we have driven the No. 2 level 11 ft., and have cut into the vein 6 ft. We find that the metal is going down in the bottom of the level, this is as it should be; and I commenced to sink a winze, which will, as well as prove the value of the lode, ventilate this and the No. 3 level. The vein in the winze is looking very well, and producing some good metal, worth from 10 to 20 marks per montone (the mark is 8 ozs., and the montone 3,000 lbs.) The No. 3 level has been driven during the same period 19½ ft., although we are constantly meeting with stones of ore, we are not far enough east to get into the metal we have at No. 2; but at the present rate of driving (10 ft. per week) we shall soon reach the desired point, and connect with the No. 2 level, when no doubt a large quantity of ore ground will be laid open for stoping. The No. 4 level during the past two weeks has been extended 26 ft. 9 ins. I am forcing this level so as to get further east out of the influence of the water from the adjoining mines, when I shall cut through the lode to ascertain the extent of its richness. The shaft is at present idle because of the influx of water from the Arevalo preventing me from sinking. However, it will not continue long, as the Arevalo Company's adit tunnel is nearing their old works. This tunnel will not only drain the Arevalo Company's mine, but ours also. You will see, from the above report, that I am rapidly opening the mine, and that our prospects are exceedingly good, and I expect in a short time to make a further discovery of metal.—Capt. Prideaux.

ETHERIDGE UNITED.—The mining manager reports for the week ending 15th December:—I cannot, owing to the few men at work, say that much progress has been made since writing last week. The men now at work will, with one or two exceptions, be compelled to give up at the end of the week, in consequence of the shortness of provisions. The gold warden has issued a Gazette order granting from to-day a month's exemption from work for all mines and claims on the whole of the Etheridge goldfield.

GARFIELD (26th Jan.)—The mill has been working full time. On the 30th inst. a shipment of four bars of bullion will be made, weighing 512 lbs. (avoir.), of the estimated nett value of $4,616.45 silver, at 92d.—Hooper.

GOLDFIELDS OF MYSORE.—Fortnightly report of Mr. John Samborne, acting superintendent, dated 22nd January. Sinking bridge shaft, an advance of 3 ft. 9 ins. has been made; total depth, 169 ft. 9 ins. The bottom is in country. The north level at 105 ft. has been advanced 3 ft., making a total distance from the shaft of 59 ft. 9 ins. There are a few stringers of a low grade in the end. The west cross-cut from the south level at 105 ft. has been driven 2 ft. 9 ins.; total length, 4 ft. 9 ins. The end is in country. A winze has been sunk 5 ft. 6 ins. in the bottom of the north level 105 ft., about 10 ft. north of the shaft, and where we met some good ore when driving the level; there is a branch of quartz about 12 ins. wide in the bottom of the winze of low grade. The winze has now been stopped, and the man put to drive a cross-cut east from the end of the south level 105 ft. We propose to cross-cut west from the shaft at 165 ft., and shall commence in the early part of next week. Driving north of middle shaft at 175 ft., an advance of 5 ft. has been made; distance from shaft, 55 ft.; the lode is 4 ft. wide, and worth, by assay, 1 oz. per ton. The south level at 175 ft. has been driven 4 ft. 3 ins.; distance from the shaft, 51 ft. 9 ins. The lode in the end is pinched to about 6 ins., and of low quality. The north level at 108 ft. has been advanced 3 ft., making a total distance from shaft of 126½ ft. The level has been turned to the west to follow the lode, and at present about 18 ins. of lode is in the end, and worth, by assay, 2 dwts. The south level at 108-ft. has been advanced 18 ft., making a total distance of 280 ft. from the shaft. The end is in old workings. The winze below the north level at 108 ft. has been sunk 4 ft.; total depth, 55¼ ft. We have now intersected in the bottom of the winze the same horse of country we have in the shaft. This has split up the lode into two parts, and we are going down on the hanging part of the lode, which is about 2 ft. in width, and worth, by assay, 6½ dwts. Champion lode: Coromandel shaft has been sunk 4 ft. 3 ins.; total depth, 166½ ft. The bottom is in country with a few stringers of quartz. Driving south from the west cross-cut at 150 ft., an advance of 15 ft. has been made; total distance, 49 ft. A west cross-cut from the end of the south level at 100 ft. has been driven 6 ft.; a few small stringers of low-grade quartz have been met with. New Prospect shaft has been sunk 7 ft. 3 ins.; total depth, 186½ ft.; bottom in country; we propose to drive north at 200 ft. to unbottom the old workings. Good speed has been made in the new shaft south of middle shaft, and fair speed in the new shaft south of bridge shaft, the bottoms of both of which are in country.

GYMPIE GREAT EASTERN (27th Dec.)—During the past fortnight the drive going north at the 634-ft. level has been extended 8 ft.; total, 14 ft.; there are 2 ft. of crushing stuff with a little gold showing, and that going south has been extended 8 ft.; total, 34 ft. The reef going south is at present a little smaller, but I believe it will soon make large again. I have some of the stull timber in, and stoping will now be carried on over those levels. The winze at the 580-ft. level in eastern cross-cut to cut I South Great Eastern reef has been sunk 11 ft.; total, 51 ft. It is getting more favourable for working, and better country is coming in. The stopes above the 500-ft. level are all showing fair gold, and those above the 400-ft. level on the old Eastern reef are all showing a little gold. There is also a large body of crushing stuff in the old 364-ft. level going south showing fair gold. Work in the mine was stopped on the 24th inst., and the battery is also stopped since that date. We are now making the necessary repairs, and shall have all ready for starting on the 2nd January, 1889. For the five weeks ending December 24th there were 680 tons of quartz raised and crushed for a yield of 1,359 ozs. 12 dwts. 12 grs. of smelted gold. Everything will be in good working order when we start again. There are 77 men employed; 70 on the mine, and seven at the battery.—J. James.

MONTE DEL ORO.—Fortnightly report, 2nd February:—Taylor's engine shaft: Since last reported on the 186-ft. level north of the cross-cut has been communicated with shaft No. 6. At and near the shaft the ground was very badly crushed, and, just after knocking through, a run occurred, filling the level for several feet. This had to be spilled through, but the work has been completed, and both level and shaft are securely timbered. The miners are now engaged in cleaning out the old workings to the north of No. 6 shaft, where we find quartz which was left standing by the ancients, varying in places from 10 ins. to 18 ins. in width. The east or footwall part consists of decomposed granite, containing numerous small veins of quartz from which free gold is obtained by panning. The 186-ft. level south of cross-cut was extended 13 ft. during the past fortnight; its total length now being 147½ ft. The lode is composed of almost solid quartz, is well defined and regular, and averages in width from 2½ to 3 ft. The cross-cut to the west of the shaft has, since the last report, been driven on the course of the east and west lode, which now carries little quartz. To-day I stopped driving in this direction, and have put the men to blast down the north side in order to keep the cross-cut in its proper bearing. Shaft No. 5: This shaft has been cleaned out to its bottom, a depth of 130 ft. At a depth of 120 ft. a cross cut to the north west of the shaft was cleaned out, and proved to be about 6 ft. long. At this point old workings were discovered, which are now being cleaned out, but so far all the ground appears to have been taken away. Winze No. 1: With the sinking of this winze very good progress indeed is being made. The amount sunk for the fortnight is 18 ft., which makes its total depth from the bottom of the 76-ft. level 149 ft.; the lode is composed of quartz and a nice flookan, and is about 15 ins. wide.—J. Roberts.

NEW EBERHARDT.—The mine manager reports under date 19th January as follows: Mine: The south cross-cut from surface drivings has been advanced for the week 4 ft.; total length, 38 ft. The material passed through for the week has been low-grade quartz. South drift: These drivings continue about the same as mentioned in my letter of last week, the seam of ore being small and irregular, although the grade of the ore is somewhat better than last week. Amount of ore taken out and put on the ore dump 5 tons; assay value of same, 8s6 per ton. West drift from north shaft No. 1 has been advanced for the week 6 ft.; total length, 45 ft. The face of this drift remains in the hard lime and white spar with some quartz, but the best prospect for ore is near the shaft, and if the face of the drift does not change during the coming week, I shall move the men back near the shaft, and try to find some seam or stringer of ore that will lead us to something in the shape of an ore body. North shaft, No. 2: Drift westerly from the bottom of this shaft has been advanced for the week 7 ft.; total length 20 ft.; the face of this drift is still in the hard black lime mentioned in my last. North shaft, No. 3, has been extended down for the week 6 ft.; total depth, 52 ft. I have this week started a drift southerly, which will be towards the company's office. East cross-cut from bottom Gore incline has been advanced for the week 9 ft.; total length,

165 ft. The face of this cross-cut is all lime. It is my intention to push this drift along as far as the side line of our neighbour and see if any ore exists in our ground east of the quartzite footwall, or dyke.

NINE REEFS (22nd Jan.)—Mining operations: Malleson lode, main shaft, 310-ft. level north, driven by one miner and six coolies, has advanced 1 ft. 6 ins., the total distance from shaft being 77 ft.; vein is 6 ft.; assay, 1 dwt. 23 grs. gold per ton. Morrison's shaft has been sunk 2 ft. 7 ins. under the 185-ft. level by one miner and eight coolies, the total depth of the shaft under the 185-ft. level now being 15 ft.; the width of the vein carried is 6 ft.; the assay 3 dwts. 22 grs. gold per ton. 185-ft. level north of Morrison's shaft has not been worked, the men having been employed in the stopes to fill the places of men absent. 310-ft. level north of Baynard's shaft, driven by one miner and six coolies, has advanced 2 ft. 3 ins., a total distance from shaft of 32 ft. 3 ins. The vein is 4 ft. wide; assay, 1 dwt. 22 grs. gold per ton. 310-ft. level south of Baynard's shaft, driven by one miner and six coolies, has advanced 2 ft., the total distance now being 34 ft.; vein 5 ft. wide; assay, 1 dwt. 7 grs. of gold per ton. Stoping: No. 1 stope in the back of the 185-ft. level north of main shaft, worked by one miner and eight coolies; vein 6 ft. wide; assay, 5 dwts. 5 grs. gold per ton. No. 2 stope in back of the 185-ft. level north of main shaft, worked by eight coolies; vein 6 ft. wide; assay, 1 dwt. 7 grs. gold per ton. No. 3 stope in the bottom of the 185-ft. level south of Baynard's shaft, worked by one miner and 12 coolies; vein 4 ft. wide; assay, 1 oz. 3 dwts. 17 grs. gold per ton. No. 4 stope in bottom of 185-ft. level south of main shaft, worked by 18 coolies; vein 4 ft. 6 ins.; assay, 1 dwt. 23 grs. gold per ton. No. 5 stope in bottom of 185-ft. level north of main shaft, worked by one miner and 18 coolies; vein 6 ft. wide; assay, 2 dwts. 14 grs. gold per ton. No. 6 stope in back of 310-ft. level north of main shaft, worked by six coolies; vein 5 ft. wide; assay, 1 oz. 19 dwts. 4 grs. gold per ton. Champion lode: Vyvyan shaft — 145-ft. level south, driven by seven coolies, has advanced 9 ft. 2 ins., a total distance from shaft of 289 ft. 2 ins.; the width of vein 1 ft. 8 ins.; assay, 1 dwt. 23 grs. gold per ton. South stope in back of the 145-ft. level south of Vyvyan shaft by six coolies; vein, 1 ft. 8 ins. wide; assay, 1 oz. 12 dwts. 16 grs. gold per ton. North stope in back of the 145-ft. level north of Vyvyan shaft, by eight coolies; vein, 1 ft. 4 ins. wide; assay, 1 oz. 19 dwts. 4 grs. gold per ton. A cross-cut east at the 95-ft. level south of Vyvyan shaft, driving to intersect a parallel vein, has been advanced by two coolies a distance of 4 ft.; total distance, 7 ft. A telegram reporting this intersection was received 28th January.—Capt. Bennetts.

NO. 2 QUEEN (15th Dec.)—Fortnightly report.—No. 1 shaft: Since my last report Messrs. Shepherd and party (tributers) have continued stoping over and under No. 1 level south. The reef varies from 6 ins. to 2 ft. in thickness; estimated quantity of stone raised, 33 tons. No. 2 level south: The underhand stope is still proceeded with; the reef varies from 6 ins. to 15 ins.; the stone is of fair quality. No. 3 level north: Stoping was commenced along the side of the underlie shaft; the stone is rather bunchy, and similar to that raised from the No. 2 level south. We have had the water baled from the bottom of the underlie shaft during the past fortnight, to enable us to commence stoping under hand from the No. 5 level south; estimated quantity of stone raised, 60 tons. No. 5 level north: A. Jevons and party (tributers) are driving this level north; the reef is irregular in thickness; about 19 tons have been raised by them, making a total of 132 tons from the mine for the fortnight. No. 2 shaft: Philp and Co. have sunk a further depth of 28 ft., making a total from surface of 467 ft. Their contract will be finished by the end of the year. Mill: We have been crushing steadily with 20 heads—10 engaged on our own stone, and 10 on the No. 1 tributers'.—A. G. Charleton.

NUNDYDROOG (22nd Jan.)—Mining operations: There is no change in the rock in the bottom of Webb's shaft, in the bottom of Taylor's shaft, nor in the end in the 300 north of Taylor's shaft, the rock in each place being barren, and in Taylor's shaft very hard. The other places are looking just as they did a week ago. In the 370 north of Webb's shaft the lode is 2 ft. wide, giving a trace of gold only. The stopes in the 300 south of Webb's shaft are looking very well; in each, the quartz is 3 ft. wide, assaying 2 ozs. 15 dwts. 6 grs. and 1 oz. 12 dwts. 6 grs. respectively. The intermediate level and the middle level south of Webb's shaft contain quartz 2 ft. and 1 ft. 8 ins. wide, assaying 1 oz. 2 dwts. 4 grs. and 4 ozs. 1 dwt. 6 grs. respectively. The stope below the 230 south of Webb's shaft and the rise in the back of the 230 north of Webb's shaft contain lodes of quartz 2 ft. and 1 ft. 8 ins. wide, assaying 18 dwts. 18 grs. and 2 ozs. 18 dwts. 12 grs. respectively; and the stope below the 166 contains a small lode of quartz, assaying 1 oz. 3 dwts. 6 grs. per ton. We have commenced the erection of two Wheeler's pans and one settler for the treatment of tailings. This will be hastened on as fast as possible, as we think a small profit will result. Weekly samples from the mill:—Rough quartz, 2 ozs. 5 dwts.; smalls, 1 oz. 3 dwts. 6 grs.—B. D. Plummer.

GYMPIE GOLDEN CROWN.—Report for fortnight ending December 20th.—I have to report that the cross-cut being carried in east at the 1,200-ft. level is now advanced a total distance of 19 ft. The frame has been put in at this level, and the well-hole has been timbered and skidded to the bottom, so that we can now haul with the tanks and cages from the bottom. At the 930-ft. level cross-cutting west for the March reef has been resumed, and is carried in a total distance of 27 ft.; the formation at this level is hard grey conglomerate, but in cross-cutting west this will soon be got through, and slate country will be met with. During the fortnight the boilers and flues have been well cleaned; the new boiler has been connected, also new feed and blow-off pipes have been laid to all the boilers. The repairs to shoots have been completed, and the weigh-bridge is now being erected.—T. Ramage.

OOREGUM (22nd Jan.)—Fortnightly report.—Main shaft: The 230-ft. level driving south from cross-cut west, 15 ft. 1 in. have been done, or 148 ft. 7 ins. from cross-cut; the lode is 2 ft. 6 ins. wide, and gives an assay of 1 oz. 12 dwts. 16 grs. of gold per ton of quartz. The 270-ft. level driving north from cross-cut west, 9 ft. 5 ins. have been driven, or 130 ft. 4 ins. from cross-cut; the lode is 1 ft. 8 ins. wide, and gives an assay of 5 dwts. 10 grs. of gold per ton of quartz. Low's shaft: The pumping engine here being under repair, we were not able to measure the work done in the 270-ft. levels. The 200-ft. level driving north from shaft, 4 ft. 7 ins. have been done, or 267 ft. 11 ins. from shaft; there is no change in the rock here, which is still in the band of barren rock. The winze sinking in bottom of the 200-ft. level north of shaft, 3 ft. 9 ins. have been sunk, or 33 ft. 6 ins. below the level; the vein of quartz here continues small; no assay was made from it. The 200-ft. level driving south on course of lode south of shaft, 6 ft. 3 ins. have been driven, or 122 ft. 7 ins. from cross-cut west; the lode is 1 ft. 9 ins. wide, and gives an assay of 15 dwts. 16 grs. of gold per ton of quartz. The winze sinking in bottom of the 200-ft. level at the end of cross-cut west south of shaft, 5 ft. 6 ins. have been sunk, or 66 ft. below the level; the lode is 1 ft. wide, and gives an assay of 6 ozs. 9 dwts. 16 grs. of gold per ton of quartz; communication with the 270-ft. level below this winze will soon be effected. All the stopes here are the same, and continue to yield quartz for the stamps. Probyn's shaft has been sunk 2 ft. 3 ins., and is 13 ft. below the 300-ft. level; the lode is 4 ft. wide, and looks well, and gives an assay of 2 ozs. 4 dwts. 15 grs. of gold per ton of quartz. The 300-ft. level driving south from shaft, 4 ft. have been driven, or 5 ft. 6 ins. from shaft; the lode is 4 ft. wide, and gives an assay of 2 ozs. 5 dwts. 17 grs. of gold per ton of quartz. The 300-ft. level driving north from shaft, 4 ft. have been done, or 5 ft. 6 ins. from shaft; the lode is 4 ft. wide, and gives an assay of 3 ozs. 19 dwts. 11 grs. of gold per ton of quartz. The winze sinking in the bottom of the 230-ft. level north of shaft, 5 ft. 6 ins. have been sunk, or 33 ft. 3 ins. below the level; the lode is 1 ft. 6 ins. wide, and gives an assay of 8 dwts. 17 grs. of gold per ton of quartz. The 230-ft. level driving south of shaft 4 ft. 9 ins. have been driven, or 85 ft. 7 ins. from shaft; the lode carried is 4 ft. 6 ins. wide, with no hanging wall, there being more lode standing to the west; an assay from it gives 2 ozs. 16 dwts. 14 grs. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level south of shaft, 7 ft. have been sunk, or 9 ft. below this level; the part of lode carried 6 ft. wide gives an assay of 19 dwts. 15 grs. of gold per ton of quartz. The 166-ft. level driving south from shaft, 5 ft. 4 ins. have been driven, or 188 ft. 1 in. from shaft; the lode is 3 ft. wide, and gives an assay of 1 oz. 12 dwts. 16 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 166-ft. level south of shaft, 1 ft. 6 ins. have been sunk, or 14 ft. 6 ins. below the level; the lode is 5 ft. wide, and gives an assay 1 oz. 11 dwts. 14 grs. of gold per ton of quartz. North battery shaft: The driving of the 130-ft. level south from old workings, 3 ft. 3 ins. have been done; the lode is 3 ft. wide, and gives an assay of 3 dwts. 6 grs. of gold per ton of quartz; this level will soon improve we think as we drive on it. Stamps: These continue to work well; a fair amount of amalgam is being taken off the plates daily. All the machinery continues to work well.—W. Martin.

THE LONDON AND COUNTY BREAD CO., LIMITED.

According to the prospectus of this company the baker's business is one of a profitable nature. At any rate, the consumption of this indispensable article is enormous, and must increase with the population. This company is formed for the purpose of purchasing 32 old established bakers' businesses, and also a valuable freehold flour mill. Messrs. Herbert Watkins and Co., who have examined the books of the different businesses to be acquired by the company report that the aggregate consumption of flour of these 32 shops, amounts to 606 sacks per week, bringing a net profit at the rate of 8,800*l.* per annum. They further estimate the profit which will accrue from the mill at 2,216*l.* per annum, making a total of 11,096*l.* The price to be paid for the property, including vans, horses, &c., has been fixed at 55,000*l.*, two-thirds of which will be payable in cash, and one-third in cash or shares at the option of the directors. The company proposes to erect an extensive steam bakery which, it is stated, will increase the profits considerably. The capital of the company is 70,000*l.* in 14,000 shares of 5*l.* each.

EXCELSIOR GOLD MINING CO., LIMITED.

Another company, hailing from the Witwatersrandt district, has been formed under the above title. The property which this company is formed to acquire is known as No. 441, Modderfontein Farm, situate about 9 miles from Johannesburg. It comprises about 2,810 acres, and is said to contain numerous gold-bearing reefs, which have been thoroughly prospected, and proved to be of great extent and value. The property has been reported upon by Mr. Francis Fowler, M.Inst.C.E., who speaks favourably of it. The price to be paid for the property is 120,000*l.*, payable in cash or shares, at the option of the directors. The property is intersected with numerous auriferous quartz reefs which have to some extent been opened, and have yielded from 8 dwts. to 4 ozs. to the ton. Mr. Fowler in his report recommends the erection of 40 heads of stamps upon the main creek below the dam or dams. There is au ample supply of water, and plenty of fuel. The capital of the company is 150,000*l.*, in 150,000 shares of 1*l.* each, of which 50,000 will be allotted as fully paid up to the vendors, and the balance is offered for subscription. The prospectus merits the careful attention of investors.

Drakewalls Mine.—After heroic exertions on the part of their comrades, the entombed miners were rescued safe and sound early on Sunday morning. Mr. Henry Rodda, the agent, on February 14th, wrote: In consequence of the unfortunate accident last week, and the men having been engaged in the work of rescuing the two entombed men, there is no change to notice in any of the points underground. We are getting on with the taking out of foundation for another calciner; and the masons are getting on with the building of the new chambers and flues as fast as possible.

We have received the following publications from the Institution of Civil Engineers:—"Abstract of Papers in Foreign Transactions and Periodicals;" "The Failure of the Kali Nadi Aqueduct on the Lower Ganges Canal:" "Williams on the Witham New Outfall Channel and Improvement Works;" "Smith on Hurst's Triangular Prismatic Formula for Earthwork;" "Hunter on the Manufacture of Oil-Gas on the Pintsch System;" "Gribble, Topham, and Vickery on Surveying;" "Arnold on the Strength of Bessemer-Steel Tires;" "Beaumont on Friction-Brake Dynamometers." "California State Mining Bureau, Eighth Annual Report of the State Mineralogist, for the year ending October 1, 1888. Sacramento: State Office, J. D. Young, Supt. State Printing."

REPORT OF MEETING.

THE CHARTERS TOWERS SOUTH GOLD MINING CO.

DRASTIC PROCEEDINGS IN THE COLONY.

A MEETING of the shareholders of the above company was held at Winchester House, yesterday, for the purpose of considering a resolution for the liquidation of the company, and to appoint a liquidator—Mr. W. A. Stirling presided, and called upon the secretary (Mr. L. J. Woodman) to read the notice convening the meeting.

The CHAIRMAN then explained how, under circumstances over which the directors had no power, the property of the company at Charters Towers had been seized, and a portion of it sold, it was alleged by those who had seized it, for the purpose of liquidating certain liabilities which the company had contracted through their manager out there. He would ask Mr. Woodman, their secretary, to read the two circulars that had recently been issued to the shareholders by the directors, and which would pretty accurately describe the position of the company at the present time, and the circumstances which had brought them into that position.

The circulars having been read,

STRANGE DOINGS.

The CHAIRMAN proceeded to say that the directors regretted that no substantial response was received to their circular to the shareholders on the 5th ult, and they entered into negotiation with other parties to obtain the requisite funds; but in the meantime they received a telegram from Mr. Thomas Buckland, their manager, on the 14th ult., announcing that the machinery was to be sold the next day, and finding that the time was then too short to do anything else, they telegraphed to Mr. Buckland protesting against the company's interests being so sacrificed, and on the 16th ult., the day after the sale, the following telegram was received from Mr. Buckland:—"Everything has been sold by public auction. Have bought for cash, 1,850*l*., privately. If you do remit within one week 2,035*l*., everything will be transferred to Charters Towers South again. If you do not remit, must sell promptly to avoid further loss." Meanwhile, information had been received through one of the local banks that the estimated value of the machinery would be, at a forced sale, 3,000*l*., and the board had also received the report of Mr. Paull, confirming their opinion that the property was worth further exploration. This, however, could only be carried out by the reconstruction of the company. The board, therefore, telegraphed to Mr. Buckland, and to their solicitor, Mr. Maitland, urging that time must be given for this purpose, and proposed a payment of 500*l*. on account of the machinery if three months' time were given for re-construction. On the 30th ult., however, the directors received an answer: "I have sold South machinery. Negotiations are concluded." The company had been led into its present unfortunate position entirely by Mr. Buckland's inconsiderate expenditure, to his over-sanguine, if not misleading, reports, and his obtaining an overdraft for a large amount without informing the board, and his generally allowing the company to be placed in want of money without due intimation to the directors. Had Mr. Buckland acted in the best interests of the company, he would have had the sale postponed, pending the creation of new capital with which to meet the demands of their creditors. (Hear, hear.)

BOARD'S VIEW OF THE MANAGER.

The directors considered that Mr. Buckland had rendered himself liable for damages for acting as he had done. The chairman went on to describe other extraordinary conduct on the part of Mr. Buckland, who had been asked time after time by the directors to send them monthly estimates of his monetary requirements in order that they could send remittances to him, and he had also been instructed time after time to contract no debts without the knowledge of the board. Their plant was most excellent, and the report of Mr. Paull showed that the mine was a most promising one. But now the directors could only advise the shareholders to wind up the company voluntarily, and then it would be a matter for consideration whether it would or would not be better to re-construct. For his own part, if the latter was acted upon, he and his fellow-directors would be willing to still subscribe with that end. (Hear, hear.) He concluded by moving that the company be wound up by voluntary liquidation.

Mr. E. PARR seconded.

DISCUSSION.

Mr. W. E. SPURLING said that so far as he could judge of the position of the affair Mr. Buckland had been playing ducks and drakes with the company, and that proceedings ought to be taken against him for his conduct.

Mr. CAZENOVE expressed surprise that Mr. Buckland had been entrusted with such power by the directors.

The CHAIRMAN said that if the new capital had been raised the company would certainly have appointed a new manager.

Mr. CAZENOVE remarked that if he had known the property must have been sold, he and and four or five others would have been glad to buy it at a proper price. He had plenty of faith in the mine. (Hear, hear).

The CHAIRMAN explained that they could not discharge Buckland and have appointed another manager at the time the company were in such an awkward position. Then, again, they could not start a new life without fresh capital, but sufficient could have been raised to tide things over if Mr. Buckland had acted with good faith towards them. It would have been difficult to discharge our manager, and appoint another, 16,000 miles away, at the short notice intimated by the last speaker.

Several SHAREHOLDERS said they had no blame to attach to the directors. The present condition of things seemed to have been brought about by conduct of their manager, who seemed wilfully to have got the company into difficulties instead of discharging his duties in the best interests of the company. It appeared as if he had all along been working for himself whilst professing to act for the company. Some very strong language was also used towards Mr. Maitland, the solicitor of the company in the colony, who neglected to keep the directors posted up with the conduct of the manager, or neglected to delay the sale of the company's property.

The London SOLICITOR to the company said he had good reason to complain of the way in which Maitland and Buckland had treated them, but he was not prepared to characterise their conduct as a swindle.

A VOICE: You are very cautious. Solicitors generally are.

The SOLICITOR having explained the condition the shareholders would be in under a voluntary liquidation,

The motion was put to the meeting, and carried.

Mr. HERSEE then proposed, and Mr. SPURLING seconded, that Mr. John Francis Clarke, of 41, Coleman Street, be appointed liquidator.

The motion was carried.

It was decided that a committee of shareholders should be appointed at the confirmatory meeting to confer with the liquidator.

A cordial vote of thanks to the chairman closed the proceedings.

SOUTH AFRICAN NOTES.

THE news to hand from these rich goldfields continues to be encouraging. The main reef is not only being proved to a considerable depth, but in all cases it has widened, and the banket gives a far better yield. The Salisbury Company, one of the most fully and best managed companies, has, it is stated, sufficient banket exposed to last a 100-stamp mill for two years, and each successive crushing proves the great value of this company.

"The market" (says Mr. D. Swift, of Hatton Garden), "although fluctuating with slight advances and similar reactions, is not quite so active as in the earlier part of January; at the same time the confidence in the properties is not only retained by the most experienced diggers and engineers, but all fresh arrivals from this and other countries are fairly astonished at the vastness of the gold-bearing deposits and marvellous returns already made by many of the companies."

LATEST TELEGRAMS, NEWS, &C.

PERCY.—The result of the crushing for December was 375 ozs.

KIMBERLEY IMPERIAL.—Crushing is still proceeding at the Lily battery.

JOHANNESBURG PIONEER.—The yield for December was 1,352 ozs. exclusive of the mortar boxes.

MEYER AND CHARLTON.—An ingot of 971 ozs. of gold was deposited in the bank on the first.

NOOITGEDACHT.—It is stated that this company has disposed of one-half of its mynpacht for 80,000*l*.

MOUNT MORGAN (MOODIE'S).—We understand this property is in the hands of a powerful Kimberley Syndicate.

CORNUCOPIA.—The plates of the above company are looking well, and a good wash up is expected for the month.

BIRD'S SWAZILAND.—The letters of allotment and regret in Bird's Swaziland Concession, Limited, have been posted.

THARSIS.—Extensive works are being carried out in the mine under the superintendence of Mr. T. D. Williams, M.E. and C.E.

LIVINGSTONE.—This company's battery has started work again after a long period of idleness. A crushing of 1,000 tons is to be put through to test its value thoroughly.

CITY OF GRAHAMSTOWN.—The 25 tons crushed have yielded at the rate of 5 ozs. 2 dwts. per ton—or a total yield of 127 ozs. 9 dwts. Crushing will be resumed very shortly.

WITWATERSRANDT.—Robert Whyte and Co. advise the receipt, per Trojan ss. from Cape Town, of 847 ozs. native gold for account of the Witwatersrandt Company (Knight's.)

EVELYN COMPANY.—A dividend of 10 per cent. has been declared. It has been resolved to issue 10,000 additional shares to enable the company to increase the stamps from 15 to 30.

STEYN ESTATE.—The Bank of Africa has just received from the company their first returns of retorted gold. It is 213 ozs. in weight, and is the result of 133 tons put through the mill.

CONSORT (BARBERTON).—The directors notify yield of 300 ozs. for 25 days crushing in December. Dividend of 10 per cent. has been declared payable on 13th inst. Transfer books close on the 23rd.

CHIMES.—The local secretaries, J. S. Glennie and Co., inform us that the crushing for the month of December was 444 ozs. 6 dwts. from 440 tons of ore taken from the south reef, which is from 4 to 6 ft. wide.

LANGLAAGTE ESTATE COMPANY.—The battery of 60 stamps is now completed, the mine is fully developed, and great crushing results may be looked for which cannot fail to fully establish the high reputation of the Rand properties.

MOODIE'S.—A cablegram from the secretary in Pietermaritzburg gives the result of the crushing for the month of January: "Claims rented or leased, 639; claims which are producing returns, 9; 90 tons crushed by claimholders yielded 625 ozs."

TRANSVAAL GOLD EXPLORATION AND LAND.—Cablegram this morning: "The battery was at work 18 full days and crushed 500 tons, yielding 220 ozs. The yield of gold from treatment of tailings in the pans was 65 ozs.; total for January, 285 ozs."

WEMMER COMPANY.—The secretary, Mr. W. J. Else, states, for the information of the shareholders, that the rich lead of gold found in the Salisbury Company's claims has been struck at two points in the Wemmer Company's claims, and from the richness of the ore it is estimated to yield at least 10 ozs. to 12 ozs. per ton.

This Company, still only working with a 10-stamp battery, increases its enormous yield every month, and although the returns for January are not yet published, it is believed that the result will be even greater than that of December; at the same time too much must not be expected, for there is, of course, a limit to the crushing power of so small a battery.

MOSS ROSE EXTENSION.—A meeting of shareholders in the above took place at Mr. Hollard's office on Thursday last, when it was decided to confirm the action of the directors in taking over the water right and 26 claims from the Anniversary Syndicate, and to increase the capital to 125,000*l*. to be divided as follows:—Moss Rose Extension, 29,000 shares; Anniversary Syndicate, 60,000; working capital, 21,000; promotion, 15,000; total, 125,000.

The December output from South African mines, as published by the Chamber of Mines on January 10th, was as follows:—The amount of gold lodged in the various banks as the result of the December crushings is 25,148 ozs. The total of the returns for the 12 months ending December 31st, 1888, is as follows:—January, 11,229 ozs.; February, 12,161 ozs.; March, 14,706 ozs.; April, 15,853 ozs.; May, 19,002 ozs.; June, 16,318 ozs.; July, 19,963 ozs.; August, 19,877 ozs.; September, 20,219 ozs.; October, 27,773 ozs.; November, 27,333 ozs.; December, 26,148 ozs.; total, 230,657 ozs.

Komatie.—This district, which has many advantages over Barberton, is steadily proving the value of the many reefs opened out, and the facility of easy and cheap transport will be of great importance in the successful working of the properties. "My Queen" is believed to be one of the best on these fields, and has been favourably reported upon by Mr. Furlonge, M.A.I.M.E., whose opinion is valued. The first crushing gave over 2 ozs. 12 dwts. per ton of quartz, but it will not be offered to the public in this country until a sufficient number of tons (from 100 to 500) have been crushed, that the real value of the reef proved which runs through 38 out of 44 claims may be known.

Barrett Gold.—The battery has been at work again for about 10 days, but owing to the very dry season only 20 stamps can be worked. There is a fair supply of ore for the mill, and it is probable that it can be kept supplied for some time. Prospecting is being proceeded with at several points on the property. Owing to want of water the alluvial workings have come almost to a standstill; the little work, however, which can be done proves the ground to be as good as ever, and some nice little nuggets were found last week. All dams and water-races are now completed, and when the rainy season sets in the alluvial workings will be carried on on a more extended scale, and a steady output is confidently looked for. An important alteration of the tram-line and sluice boxes in Rautenbach Creek is nearly completed, and will enable the work there to be carried on more economically. Native labour is plentiful.

Salisbury.—This company has exceeded the previous record. The return for December is satisfactory. The company has obtained a larger ingot than any previous month, and as the mine is now developed from end to end, there is no difficulty in keeping 20 stamps fully supplied. The following is the report of the meeting held in Maritzburg as given by the *Witness*:—A meeting of the Salisbury Gold Company was held in the Town Office on Thursday afternoon, when there were present—Mr. J. Nicholson (in the chair), Mr. A. Eicke (secretary), and some 25 others. In opening the proceedings the chairman said the meeting was called for the purpose of increasing the capital of the company, and proceeded to detail the work of the company since its formation. The increased capital, he said, was wanted for the purchase of an additional 30 stamps, which, when in working order, would secure the position of the company as among the best of the Rand Goldfields. The manager at the mine (Mr. Jordan), under date 21st December, gave a very glowing picture of the prospects of the company. He said the workings for milling ore, up to the present, had been directed upon the south reef from the first level, viz., 66 ft. When first opened out its average thickness did not exceed 18 ins., but subsequent working had disclosed the reef of an average thickness of 3 ft. Therefore, the first estimate made of ore volume, viz., 4,500 tons, in this reef was very considerably under-estimated, subsequent workings having proved that it still contained after 15 months' working and the extraction of 3,500 tons, a volume exceeding 5,000 tons. The same increased volume and depth applied to all the other reefs of the group. The total volume of all reef matter so far as disclosed at first level he estimated to exceed 80,000 tons, or equal to two years' supply for a 100-stamp mill. There was a decided improvement in the grade of all the reefs at the lower levels. The work of sinking to the second level was now being vigourously pushed downwards. With the present average returns with 70 stamps it would be possible to mill about 2,650 ozs., or say 6,600 ozs. of gold per mensem. The actual cost per oz. he estimated at 12s. 10d. With increased output stamping power, this cost would be considerably reduced; but say 2,650 tons at 12s. 10d. placed the total cost of mining and milling at 1,700*l*., against the value of 6,600 ozs. of gold at 70s., or equal to a sum of 23,050*l*. giving a mouthly profit of no less than 21,350*l*., or equal to a monthly divideud of over 80 per cent. The profits earned by the mill were equal to 1 per cent. per stamp head per month, so that if a 20-stamp mill could pay 20 per cent., from what cause should not the 70-stamps pay 70 per cent. per mensem? He could conscientiously predict that the 80 per cent. per mensem on a capital of 25,000*l*. would be frequently paid. He had already informed the secretary by wire of the weight of gold already deposited, viz., 1,194½ ozs. He hoped to retort again on Saturday morning, the 29th inst., another ingot of about 600 ozs., and again on the 1st the wash up for the month, giving from 300 to 400 ozs., making a return for December of over 2,000 ozs. This would permit them declaring a dividend of 30 per cent., thus proving to the world that with 20 stamps the Salisbury had paid a dividend of 75 per cent. in three months, or equal to 1¼ per cent. per stamp head per month. Mr. E. M. Greene brought forward the proposal of the directors, viz., that the capital of the company be increased to 25,000*l*. by the creation of 3,000 new shares of 1*l*. each, 2,250 to be put up to public tender and 750 to be held in reserve. An amendment was put forward by Mr. Mason, providing for the creation of 2,000 new shares, but on it being pointed out that the money asked for by the directors was urgently required, it was withdrawn, and Mr. Greene's motion, on being put to the meeting, was declared carried, Mr. Egner being the only dissentient. A further resolution was adopted, on the proposition of Mr. Haythorn, providing that the proceeds of the new shares should be applied to the capital of the company. This was all the business.

Bratsberg Copper Company.—We understand that, subject to confirmation of the shareholders at a general meeting called for 27th inst., a subsidiary company has been formed, and the necessary capital promised for the erection of smelting and refining works at the mines, which will enable the Bratsberg Copper Company to distribute in dividends the profits now being earned, and secures a permanent dividend for the future, even though copper should again fall to 40*l*. The Bratsberg shares, which had fallen to 4s. to 5s., rose on Thursday to 5s. to 6s., in anticipation of the directors' circular announcing the proposed erection of the smelting works.

The Brighton Railway traffic return for the past week shows a decrease of 410*l*., and the South-Eastern a increase of 750*l*.

NEW EMMA SILVER MINING CO., LIMITED.

THE NEWS FROM THE MINE CONTINUES TO BE VERY GOOD.

January 26th.—Below please find statement of work carried on at the mine for the week ending to-day. The level east from No. 1 advanced 16 ft.; total, 142 ft.; improving. Indications for cutting ore are very favourable; rock is soft, and very much stratified, and continues to carry a great deal of oxidised iron. Have worked four men full time. Cross-cut from No. 1, towards hanging-wall, advanced 10 ft.: total, 25 ft. Rock is the same character as in level No. 1, from which it is being run; seam of iron and manganese, and soft limestone, is now about 15 ins. wide. Rock on each side is strongly mineralised, and still gives great encouragement for our finding ore in this direction. Have worked two men full time. (The cablegram received yesterday refers to this cross-cut.) The level north-west from No. 1 advanced 15 ft.; total, 142 ft. This level continues in cased ground, where we are getting some fillings and low-grade ore. We still have to timber the ground very closely. Have worked four men full time. Level No. 3 south-east advanced 10 ft.; total, 292 ft. Rock is very hard, but still carries oxide of iron; seam we are following is very narrow, but am in hopes it will open out before many more feet are run. Have worked four men full time. Cross-cut from No. 3 towards footwall advanced 9 ft.: total, 57 ft. Rock is the same character as in No. 3 level, very hard, and showing but little iron. Unless an improvement in the next few feet I shall discontinue this cross-cut and put the men to work in more favourable ground. Have worked four men full time. The level north-west from upraise from Attwood winze advanced 12 ft.; total, 69 ft. Improving as we advance; seam of iron and decomposed limestone has widened to about 18 ins., shows ore occasionally in small nodules. Rock on either side of seam is strongly saturated with iron stains. Have worked two men full time.—H. C. Wallace, Superintendent.

The following cablegram has been received from Salt Lake City:—"3 ins. ore in cross-cut from level No. 1.—Cullins."

THE YURUARI CO., LIMITED.

Mr. J. R. Robins, assistant secretary, writes (15th February) as follows:—"I am directed to state, in reply to numerous inquiries, that the price at which the directors are offering the balance of unissued capital, viz., 1s. premium, or 3s. 6d. per share when fully paid, is described in the circular as a nominal price, for the simple reason that 5s. per share was paid by old shareholders to the New Chile Company, and 6d. to this company, with a further liability of 2s. per share. This company now own all the property possessed by the Chile Company, since which time plant has been purchased, and money necessary for opening up the mines has been expended, to the value of over 50,000*l*. The directors decided upon this issue so as to complete the agreement entered into with the New Chile Company, connected with the acquisition of the property, to carry out the works suggested by the superintendent, as named in the circular, and to leave the earnings of this company, after payment of working expenses, available for dividend purposes. Representations have constantly been made to the directors by shareholders to the effect that the large amount of treasury shares at their disposal acted as a serious drag upon the market, and prevented the shares being quoted at a price more commensurate with their value. I am desired to add that owing to the large number of applications already received, the directors do not see their way, as requested, to extend the time of issue to shareholders beyond Monday next."

THE EMPIRE MINING CO., LIMITED.

IMPORTANT COMMUNICATION TO THE SHAREHOLDERS.

The secretary announces the following cablegram received from the manager at the mine: "During January the mill worked 25 days, and the total weight of ore crushed was 3,000 tons. The yield was as follows: Bullion, $8,500; concentrates —; total, $8,500. The working expenses for the month were $10,500." The board have issued a circular to the debenture-holders and shareholders. It will be remembered that at the period when an issue of 25,000*l*. debentures was arranged, with the view of providing for the then existing liabilities, there was a general feeling amongst the shareholders that the capital account should not be further increased, but that development work should be continued, and any profit arising from milling operations be used in aid of capital. Mr. Wallace, the manager who succeeded Mr. Sizer, was compelled to carry on work under very disadvantageous circumstances. Notwithstanding these grave difficulties he hoped to retrieve the position as the development work on the Whipperwill location struck ore of a high grade. This unfortunately proved to be of limited extent. The result of continuing unproductive work has been that in any scheme of re-construction, funds must be provided for meeting all outstanding liabilities, which the directors are informed amount to about 2,000*l*. in excess of the value of stores. Mr. Wallace, the manager, has resigned, and the local director has taken charge of the mine, pending the carrying out of plans necessary under existing circumstances. It is not, of course, possible for the directors to foreshadow in this circular the scheme of re-construction which will be submitted to the shareholders, as it requires very careful consideration.

Subscriptions with a Vengeance.—We are informed that the directors of the Pahang-Kabang, Limited, after careful and prolonged consideration of the very numerous applications, amounting to over three-quarters of a million, decided to distribute all the shares at their disposal as equitably as they could. Their object has been to give as many investors as it was in their power to supply at least some interest in the future of an undertaking in which they are themselves large holders. Upwards of 2,000 applicants have received allotments, and 800 letters of regret were unavoidably issued by the directors. The shares will in the first place be registered, but holders may at their option and expense have them transformed into share warrants "to bearer," a plan adapted mainly for the benefit of the continental shareholders, but which is also open to those English shareholders who may desire to avail themselves of it. These share warrants will be issued in series of 5, 10, and 20 each.

The list of applications for shares in the Consolidated Mining Co., Limited, will close on Monday next for town, and Tuesday for the country.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE upward course of the Money Market has, as expected, continued, the revenue payments being supplemented by an efflux of bullion, half a million having been taken for abroad within the *Gazette* week. The quotation for bills has advanced to $2\frac{7}{8}$ per cent., and under the extra influence of the Stock Exchange settlement money has advanced to 3 to $3\frac{1}{2}$ per cent. for short loans. Loans for the new account from the 14th to the 28th inst. were charged $3\frac{1}{2}$, 4 per cent., with a good demand, and rates of continuation were heavy, particularly in the Railway Market. As a consequence of the firmer Money Market, bills on 'Change here have been offering at rates more and more in our favour, and at Paris and Berlin the rate on London have also advanced, the former sharply responding to 25,34½. The New York Exchange, after a relapse, is also firmer again. The Lincoln Corporation Three per Cent. Loan was allotted at 1s. 6d. over the minimum of 95 per cent. Messrs. Baring and Rothschild are offering an issue of Four per Cent. Mortgage Debentures of the Manchester Ship Canal Company, and Mr. S. C. Lister, of Manningham Mills, Bradford, is about to transfer his interests to a joint-stock company. On the 1st of April the Buenos Ayres Government will redeem its Six per Cent. Loan of 1873 at par, which is a new departure for a South American State, and marks the progress of credit. The Bank return shows a reflex of notes and coin from circulation, but the liabilities under deposits have increased, so that the proportion of reserve is $2\frac{3}{8}$ per cent. less at $44\frac{7}{8}$ per cent. The private securities are now 2¼ millions greater than last year, and are only 1½ millions less than the private deposits.

The Money Market has been calmer to-day, owing to yesterday's borrowings from the Bank, and the release of several home railway dividends by Glyn's and others. Short money has been comparatively plentiful at $2\frac{1}{2}$, 3 per cent., and three months' bank bills have been discounted at $2\frac{3}{4}$, 60 days' paper being negotiated at $2\frac{7}{8}$. The Bank to-day bought 18,000*l.* in bar gold. Bar silver was unaltered; Rupee Paper a shade easier, and the India Council specially allotted 25,000*l.* in transfers on Calcutta and Madras at 1s. $4\frac{5}{8}$d.

Business at the Stock Exchange has been interrupted by the arrangement of a very stiff account, which, however, was satisfactorily concluded. The rates for carrying "over" speculative bargains until the next settlement were slightly harder than on the previous occasion, ranging from $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. on Foreign Government Bonds, and from $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. on American Railway Securities. The tone, however, has been good, apart from one or two slight relapses. The defeat of the French Ministry was not known until late on Thursday, and after business hours, so that any effect this may have upon the market will be shown in to-day's business. Rumours were current at one time that Russia was making active preparations on the Afghan frontier, that Prince Bismarck was ill, and that Boulanger would issue a manifesto; these, however, proved to be more or less exaggerated, and prices, that had previously given way, rapidly recovered. There was also, some talk of the Emperor of Germany visiting these islands during the ensuing summer, and if this turns out to be true he may rest assured of a very hearty welcome. The Funds were fairly good, but the purchases by the Government broker have again been counteracted by the sales of the public. Foreign Government Bonds show slight adverse balances on the week, the only movements of importance being a decline in Turkish Tribute and Defence Loans. Home Railways have been good, and speculators have been busy in view of investors coming forward later on. The prices noted below do not by any means disclose the full rise on the week as many stocks were (on Thursday) quoted ex the dividend. The majority of the heavy lines have risen 1 to 2, and the rest ½ to 1. The Southern Deferred Stocks were purchased in view of the increased traffics arising from the Paris Exhibition, but of these too much may be made, as we have already remarked. Taff Vale Stock was conspicuously strong, and during the account rose 30 per cent., but since the last "making up" prices has given way a trifle. The district dividend was better than last year, for then the preference holders got nothing, now they get 7s. 6d. per share. United State Railroads have been erratic, and on balance there is a fractional loss, excluding the various Pacific issues, which have risen. Grand Trunk of Canada Stocks were depressed, as the traffic returns exhibited an increase of only 5,800*l.* Mexican were also heavy, but on the week the final prices show but trifling alterations. In the minor departments Allsopp's issues were good, on the declaration of a dividend, at the rate of 5 per cent., and the Ordinary Stock has risen 7, and the Preference issue 3 per cent.; there was a very serious fall in Submarine Cable Shares on the refusal of the French Government to join in the purchase of the undertaking, the price being nominally 100 to 130. Stock Exchange Shares have risen to 120, 122 in expectation of an advance on the 5 per cent. dividend.

The resignation of the French Ministry had but little effect upon the stock markets to-day, which have closed good, but without special feature. The Funds at one time receded to a fractional extent, but re-acted before the close, and, together with Indian Government and Colonial Inscribed Stocks, left off comparatively unchanged. Foreign Government Bonds responded to the higher values eabled from the Continental Bourses and Egyptian, Greek, Russian, and Turkish record the greatest advances. Other International issues reflected the upward movement, but to a smaller extent. A fair amount of business was transacted in English Railway Stocks, but the best values were not maintained, as the advance encouraged speculative selling. The heavy lines closing at a reduction, but the Southern and Scotch lines with a small advance. American Railway Securities have been neglected, but fairly steady in tone, and beyond a rise and fall of 1 in Illinois and Mexican Income Bonds respectively, the changes in only a few cases exceed ¼$. Grand Trunk Stocks gave way, on adverse rumours coupled with speculative realisations, and Mexican Railway Stocks have also shown a drooping tendency. A better tendency has characterised the Miscellaneous market, and Guinness, Hotchkiss and Hudson's Bay issues advanced. The Nitrate Group was also firmer and the new company introduced to-day has been quoted at 2 prem. Submarine Cable shares have recovered yesterday's serious fall, and are now quoted at 130 to 150. Gaiety Theatre shares were also freely dealt in, and rose from 10s. to 16s.

Annexed are the final quotations to-day:—Consols Account, 99, $99\frac{1}{8}$; Egyptian Preference, 103, $103\frac{1}{4}$; Egyptian Unified, $86\frac{5}{16}$, $86\frac{7}{16}$; French Four-and-a-Half per Cents., $103\frac{1}{4}$, $103\frac{3}{4}$; Hungarian, $84\frac{3}{16}$, $84\frac{5}{16}$; Italian, $94\frac{11}{16}$, $94\frac{13}{16}$; Mexican, Scrip, 93, $93\frac{1}{2}$; Peru Five per Cents., $14\frac{3}{16}$, $14\frac{5}{16}$; Peru Six per Cents., $16\frac{1}{8}$, $16\frac{1}{4}$; Russian, 1873, $102\frac{3}{16}$, $102\frac{5}{16}$; Portuguese, $65\frac{7}{16}$, $65\frac{9}{16}$; Spanish, 75, $75\frac{1}{8}$; Turkish, 1871, $87\frac{3}{4}$, $88\frac{1}{4}$; Turkish Defence, $98\frac{1}{2}$, 99; Caledonian, $119\frac{1}{8}$, $119\frac{3}{8}$; Great Eastern, $70\frac{3}{4}$, 71; Great Western, $157\frac{1}{4}$, $157\frac{1}{2}$; Brighton "A," $136\frac{1}{8}$, $136\frac{3}{8}$; North-Western, $179\frac{7}{8}$, $180\frac{1}{8}$; Metropolitan, $75\frac{1}{4}$, 76 xd.; Metropolitan District, $34\frac{1}{2}$, 35; Midland, $141\frac{5}{8}$, $141\frac{7}{8}$; North British, $57\frac{3}{8}$, $57\frac{5}{8}$; North-Eastern, $164\frac{1}{2}$, $164\frac{3}{4}$ xd.; South-Eastern "A," $109\frac{1}{8}$, $109\frac{3}{8}$xd.; Hull and Barnsley, $38\frac{3}{4}$, 39; Grand Trunk, $11\frac{3}{16}$, $11\frac{5}{16}$; Ditto First Preference, $70\frac{7}{8}$, $71\frac{1}{8}$; Ditto Second, $50\frac{3}{4}$, 51; Ditto Third, $27\frac{3}{8}$, $27\frac{5}{8}$; Canadian Pacific, $53\frac{5}{8}$ $53\frac{7}{8}$; Denver, 17, $17\frac{1}{4}$; Erie, $29\frac{3}{4}$, $29\frac{7}{8}$; Milwaukee, $65\frac{5}{8}$, $65\frac{3}{4}$; Lake Shore, $107\frac{1}{8}$, $107\frac{3}{8}$; Louisville, 61, $61\frac{7}{8}$; Atlantic First, $34\frac{7}{8}$, $35\frac{1}{8}$; Ontario, $18\frac{3}{8}$, $18\frac{1}{2}$; Ohio, 24, $24\frac{1}{4}$; Norfolk and Western, $53\frac{1}{4}$, $53\frac{1}{2}$; Reading, 24, 25; Reading Bonds, $86\frac{1}{2}$, 87 xd.; Union Pacific, $67\frac{1}{4}$, $67\frac{1}{2}$; Wabash Preference, $27\frac{1}{4}$, 28; Ottoman Bank, $11\frac{7}{16}$, $11\frac{9}{16}$; Anglo-Telegraph, 49 49½xd.; United Telephone, $14\frac{5}{8}$, $14\frac{7}{8}$; Hudson's Bay, $19\frac{3}{8}$,$19\frac{5}{8}$; Suez Canal, $87\frac{3}{4}$, $88\frac{1}{4}$; Guinness, $31\frac{1}{8}$, $31\frac{3}{8}$; Allsopps $8\frac{5}{8}$, $8\frac{7}{8}$; Bryant and May, 13, $13\frac{1}{4}$; Nitrate Rails, $27\frac{1}{2}$, $27\frac{3}{4}$; Bell's Asbestos, $16\frac{7}{8}$, $17\frac{1}{8}$ xd.

NEW "ORGANOS" GOLD MINE.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—As a shareholder in the above mine I am very pleased to find that a lode assaying 6½ ozs. to the ton has been discovered, and that the shares, which have been so long neglected, are coming into prominence again.

Mr. Thos. Thompson, who has been so successful in his recommendation of the Colombian mines, notably Tetuan at 2s. 3d., now 14s., Colombian Hydraulic and Orita at 5s. each, now 38s. and 50s. respectively, says in his last circular respecting "Organos:"—"The writer will have something to say of this mine shortly. A little bird whispers that something will come off ere long." Organos is in the immediate neighbourhood of the three mines I have named above, and is managed by Mr. J. G. Green, who also has the management of "Tetuan." I would warn shareholders not to throw their shares away at present prices, but to increase their holding now the shares may be procured at 3s., as I believe there will be a big rise shortly, more especially so if Mr. Thompson takes the property in hand, as he promises to do in his last circular.—I am, &c.,

ONE IN THE KNOW.

12th February, 1889.

THE COLON GOLD MINES.

SIR,—I notice by the daily and other papers that a great rise has taken place within the last few days in the shares of the Colon Gold Mines, and that a very favourable report upon that property has been published from Mr. B. Anderson. This is very gratifying to me, as, although I have had no monetary interest in it, I have known and watched the Colon Mine for ten years past, and it has always been to me a source of surprise that it has not so far been worked under the hydraulic system, and generally with a greater amount of energy than has been the case.

I observe that Mr. Anderson mentions two small prospects yielded underhand washing 105 ozs. coarse gold at a cost of $586, the profit being $1,351, or, say, £270. I understand the directors intend bringing in course of time 1,000 miner's inches of water on to the mine, and as this quantity of water is, I believe, what Mr. Anderson had in his mind when he wrote that "the same work (viz., 270*l.* profit) could be effected in half a day," it follows that the Colon under its present energetic management is likely to become one of the best paying companies yet placed before the public. I may add that the prospects mentioned by Mr. Anderson are by no means isolated ones, the mine having always made a very handsome profit considering the slow and laborious system of pan washing.

I have somewhere in my possession particulars of the gold taken out for a comparatively long period, and if I can in the course of the next few days place my hands upon them, I will, with your permission, send them to you for publication,—I am, &c.,

COLOMBIA.

VISO TIN, LIMITED.

MANAGER'S REPORT FOR JANUARY.

9th February.—During the past month we have been in full and active work throughout the mines, and as anticipated in my last report we have sent to the dressing floor twice the quantity of tin-stuff treated in any previous month, having broken and sent down during the week now ended nearly 1,000 tons. It is encouraging to note also from the samples taken daily that the quality of the stuff has been steadily improving, the average sample this week being a good deal better than that taken at the beginning of the month, or say four weeks ago. At present our most important point of operation is in Mi Amor, referred to in my last report, where we have an open excavation on the back of the lode about 20 ft. wide, containing tin throughout, and it being of a soft nature and in the side of the hill, it is being worked very cheaply. Our ore-dressing arrangements are not yet as complete as I desire them to be. We find the tin coming from these surface workings to be very light, which will necessitate a further extension of our slime dressing machinery, to which we are giving prompt attention. We are now shipping two parcels of tin ore, and have a large quantity of tinstuff in the process of cleaning, which shall be pushed on as fast as possible in order to get other parcels ready for shipment.—R. R. NANCARROW, Manager.

"NOTES ON INVESTMENTS"

The OLDEST and SAFEST GUIDE to INVESTORS and SPECULATORS

Published Fortnightly. Free on Application.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes, and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

Rossa Grande.—We advise you to support the directors.

C. M.—He has rejoined the board.

W. M. H.—Hold Nos. 3, 4 and 6; sell Nos. 1, 2 and 5. Quite respectable.

J. W. H.—We gave five columns of the meeting. It was a full report.

C. W. T.—Nos. 2 and 3 good to hold for dividends; Nos. 1, 4 and 5 should be held merely for the market rise.

W. B.—Fee not enclosed. It takes much time and trouble to get the information.

W. H.—We do not limit the queries of annual subscribers.

Roach (Hull).—See to-day's issue for all the particulars you ask on Colon. The shares are likely to have a speedy rise.

Scott (Edinburgh).—Regret your letter miscarried.

S. C. S. (Yorks.)—You had better send the specimen to Johnson, Matthey and Co., Hatton Garden, or F. Claudet, 6 and 7, Coleman Street. You can send in any weight, say 7 to 14 lbs.

Duff.—No price for Australasian Electric Shares. Cannot answer without fee. You are not an annual subscriber.

L. G. (Perth).—You must write secretaries of Mason and Barry, Copiapo, and Tharsis Companies for particulars. Mysores and Ooregums should be held for higher prices, but take up your stock, or buy for forward delivery.

J. W. S.—Yes; buy Colons for speedy rise. See price list.

Shore (Dublin).—Take your profit on Ophir, and be thankful. Buy Organos.

Bells.—1. Yes, certainly. 2. Do not know the firm—beware!

Miner.—We do not advise the purchase of Ophir.

E. N. (Hants.)—You should refuse to sign the so-called transfer, which, according to your statement, was not in proper order.

G. S. (Glasgow).—Send us particulars, and we will do as you request.

A. P.—Will write to you further on Monday.

J. L. S.—Certainly hold your shares. The present price affords a good chance of averaging at a low rate.

Caution.—The person you name is a bucket shopkeeper, and trades under any and every name but his own. He has already tried several. Pay your cheque to chief office, Threadneedle Street, and then he must deliver stock. Certainly you may tell him we gave you this advice.

We are obliged to postpone many reports of progress from the mines.

The Mining World.

LONDON: SATURDAY, 16th February, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

HYDRAULIC MINES OF COLOMBIA.

One of the most distinct features in connection with recent mining history, is the attention which has been given lately to the auriferous gravel deposits of the Republic of Colombia. This is mainly due, no doubt, to the manner in which the opinion of geological experts who had studied these deposits on the spot, has been verified by the results obtained by several of the companies working in the Republic; and notably by the Colombian Hydraulic and Orita Companies. In these, the hopeful anticipations formed years ago by those who knew the properties best have been amply realised, and judging from all the information that is coming to hand in regard to them, the future is likely to witness a very considerable expansion of the already great prosperity of both. In neither have the explorations gone much beyond the preparatory stage, and yet in both returns are being made which, while providing for the extended development of the properties, enables the directors in each case to give their shareholders 20 per cent. on the par value of their shares. To some of the Colombian Hydraulic shareholders the actual yield upon their investments is enormously greater, for three or four years ago the shares were to be picked up, and were indeed picked up, to the writer's knowledge, at 4s. and 5s. each. At the end of the present month a dividend of 1s. per share will be paid by this company, which will raise the dividend payments to 8s. per share; so that those who bought in at the prices mentioned above will have had their capital returned nearly twice over in, say, three years, and if they are not satisfied with that, they can sell out at about 36s. a share. There is little disposition, however, among the shareholders to dispose of their holdings just as the development of the rich bed of gravel which has been proved to exist is being practically commenced. The Orita Company is three years younger than the Colombian Hydraulic, but it was only about six months later in entering the dividend list, namely, in February last. In both cases, as we have mentioned, the present rate of dividend is 20 per cent., but those who are best in a position to form an accurate judgment of the prospects confidently anticipate an increase in the rate in the current year. The Tetuan Company has not yet commenced to make returns, but it is expected that it will be doing so in the course of the next month or two.

The history of the Colombian Hydraulic and Orita Companies furnishes abundant evidence of two facts: one that the country is rich in auriferous deposits, the other that those deposits can be easily and inexpensively treated. In regard to the first of these facts we may mention that the Republic of Colombia, or New Grenada as it used to be called, is situated in the north-west portion of South America. It includes the Isthmus of Panama, the scene of M. de Lesseps canal scheme, which has so far proved so disastrous, and it has a coast line on both the Atlantic and Pacific oceans. So much for its geographical position. What more concerns our readers, however, is its geological features, and in reference to them we may say that the value of the country as a producer of the precious metal, to say nothing of other minerals, has been known by practical results for more than two centuries past, and there is ample historic proof that some of the mines of Colombia have been productive of gold to an extraordinary amount. The mines of Cana have a world-wide repute, and there are, over large tracts of the country, evidences of ancient workings of such enormous extent that the marvel is how such developments were effected with the primitive appliances that were then in use. It is clear that these workings were not undertaken for amusement, but for practical purposes. Here and there, indeed, support pillars have been discovered containing quartz, yielding when treated a very high percentage of gold. In short, there are indisputable evidences that the country is traversed by gold-bearing reefs of no ordinary character, and as actual mining is carried on to a greater extent we have no doubt that vast riches will be opened up, that will put into the shade some of the other gold-mining districts which now command so much attention.

A report for 1887, lately issued by the British Foreign Office, contains the following facts:—"The total amount of the precious metals which has been produced in Colombia since its conquest in the 16th century may be estimated at $653,000,000 or 130,600,000*l.* ($5 being equal to 1*l.* sterling.) In almost every part of the country, and at different altitudes, alluvial gold is to be found, but more especially in the valleys following the direction of rivers. The gold and silver veins are situated on mountains generally in healthy localities, under a moderate and sometimes cold temperature, where there would be no

difficulty in obtaining supplies of provisions. It may here be observed that Colombia has no seasons, a perpetual spring (or summer) exists everywhere, varied only by its dry and rainy periods. Foreigners can acquire mines on the same conditions as natives."

It is in the extraction of the precious metal from the beds of gravel, which exist over a large part of Colombia, and especially in the province of Tolima, that efforts are at present mainly directed and it is to hydraulicing—as the process for extracting the gold from the gravel is called—that the success of the mines referred to above is due. The process is very inexpensive as compared with the expense of deep mining. The requisite machinery costs very little, and the amount of skilled labour required in washing the gravel is quite unimportant; so that, on an average, fully 75 per cent. of the gross produce is net profit. There is little wonder, therefore, that the hydraulicing process is much favoured. We believe, indeed, that as the methods of extraction are improved by the advance of science, even a larger proportion of net profit will be made. In any case, if the present rate of profit is not exceeded, those who are interested in hydraulic mining will have no need to complain. It may be of interest to describe the process briefly, and we can hardly do this better than by quoting the following from a recent circular by Mr. Thos. Thompson, who has paid a good deal of attention to the subject:—"A stream of water, if thrown from a nozzle of a 1-in. aperture under a vertical head or pressure of 150 ft., will strike an object at a distance of 100 ft. with an impact equal to 8½-horse power. A 5-in. nozzle, under 150 ft. pressure, throws 623 miner's inches with an impact equal to 127-horse power. An 8-in. nozzle, under like conditions, throws 1,600 miner's inches, striking a bank 100 ft. distance with an impact of 554-horse power. If it be assumed that the washing of three cubic yards per day forms the duty of a miner's inch of water, under a head of 150 ft., this being the usual calculation, it will be seen that the stream thrown from an 8-in. nozzle will wash 4,800 cubic yards of gravel in a day of 24 hours. Now, allowing the gravel to contain 10 cents in gold per cubic yard, the product of a single day's work should be $480. The Orita mine produces gold to the value of about 8 cents. per ton, and as the washing is conducted with 1,480 miner's inches of water, it follows that, at the above computation of three cubic yards per miner's inch of water, the amount of gravel dealt with per day must be about 4,440 cubic yards, or for a month, say, of 25 days, about 111,000. This is known to be as nearly as possible correct." We need not pursue the matter further, for we have shown that the attention which is now being paid to Colombian mining is based upon accomplished facts, and not upon sanguine prospects or market manipulations. We look for a steady advance in the returns in the near future, and for a corresponding advance in the prices of the shares of the companies which have been established on a sound basis, and are managed with honesty and ability.

A VIGOROUS ATTEMPT TO REVIVE A GRAND OLD MINE.

THERE was a day in which the Gongo Soco mine of Brazil was as much talked about on the London market as the richest of those which command public attention at the present time. Gongo Soco, in fact, has a history that old Brazilians delight to tell. It was generally admitted to be the best gold mine in the world. Something of its past history may be gathered from the letter of Mr. Wm. Treloar, which we publish in connection with the meeting of the Rossa Grande Company held yesterday. In fact it is to the latter company it has belonged for some considerable time, and Mr. John Schofield, who is nothing if not energetic, is determined that although in latter years it fell upon evil times it will now with better machinic appliances, and with a proper infusion of working capital, have the trial that it deserves. For the last 15 years the old directors, like so many Rip Van Winkles, have been asleep, and, as Mr. Schofield reminded the meeting, some of them now know the sleep that knows no awakening. The directors in fact have been gathered to their fathers, and, with no disrespect to the departed, we are bound to say that the company would have suffered no loss if their demise had taken place at an earlier period of its career. They simply did nothing. They were men of the old school to whom modern ideas came as intrusions, and who had not mastered even the rudiments of the glorious principle of reconstruction. Mr. Schofield has been living for many years, but he has also been learning, and in spite of the factious opposition of a Mr. Boydell, who it was stated bought his shares at 3d. each and who was offered 1s. for them in the meeting, he has determined, as we have before said, that Rossa Grande and Gongo Soco, but particularly the latter, should have infused into it a little fresh capital, and if the shareholders do not support him, he has friends like Mr. Alfred Thomas, Mr. Dawson and a large circle on the Stock Exchange who will most assuredly do so. We are quite of Mr. Schofield's opinion, that if he can get sufficient money to work the mine (of course it must be a question of some time) the position of this property will equal that to-day held in the public estimation by Don Pedro and our share lists, not to speak of the reports we publish from time to time, pretty strongly indicate what the position is. The shareholders will be wise if they support the directors in no niggardly spirit.

AN ENTERPRISE OF PROMISE—THE GRAVEL GOLD MINES OF COLOMBIA.

THE auspices under which the Gravel Gold Mines of Colombia, Limited, are introduced to the public are highly favourable, and are sure to bespeak a handsome subscription for the shares. Mr. J. T. P. Pechey, chairman of the well-known and successful Colombian Hydraulic Mining Company, and Mr. C. O. Rogers, one of its directors, were sponsors for this description of enterprise at a time when few persons believed in its merits, although many of the Californian Mines had long been conspicuous illustrations of its success. Mr. Pechey and Mr. Rogers were like voices crying in the wilderness, but their report was not believed until suddenly the truth of what they had been saying for years burst upon the astonished public in the brilliant success which attended the Colombian Hydraulic Mining Company's affairs—in the dividends it declared, and in the enormous premiums to which the shares rose. Looking at this prospectus from an all-round point of view, we are strongly of the opinion of the directors that a similar success awaits the Gravel Gold Mine Company, which the public have now the opportunity of joining. It does not detract in the least from this prospectus, in our estimation, that its paragraphs are mainly based upon the reports of Mr. A. E. Oakes and Mr. W. S. Welton. These are gentlemen, upon whose statements in respect to hydraulic mining we should perhaps be more disposed to rely than those of any other living authorities with whom we are acquainted. It is under the direction of Mr. Oakes that the success of the Colombian Hydraulic Company has been secured, and it was upon the report of Mr. Welton that the property of that company and also of the highly successful Orita Company, were purchased. The Gravel Gold Mines are in the immediate neighbourhood of these concerns, and comprise four distinct properties, covering about 10,000 acres, and only 20 miles from the Port of Honda, on the River Magdalena, whence there is constant steam communication with Europe. Three of the properties immediately adjoin each other, and are shown upon the excellent map which accompanies the prospectus. The gravel has been thoroughly tested upon the hydraulic system, and Mr. Oakes and Mr. Welton unite in saying that "it has been proved to yield gold in highly remunerative quantities." The Maravilla is some distance off, and its gravel shows the existence of gold. In hydraulic mining everything depends upon an ample water supply, and our first care, on taking up this prospectus, was to see how the company was likely to fare in this respect. We were gratified to learn that there were two distinct sources of water supply, from a river and two streams, the former at all seasons containing over 10,000 ins. of water and the latter 1,600 ins. Working as it is proposed to do, with 3,000 ins. of water drawn from the River Guali, and 1,600 ins. from the two streams, the estimate of Mr. Welton, based upon large past experience, shows a profit of over 100 per cent. upon the capital of the company. Hydraulic mining is different from quartz mining in this respect—that the elaborate machinery, the deep shaft sinking and level driving, which consume the time, the patience, and the money of the shareholders, is quite unnecessary. To quote the expressive language of Mr. Pechey, at a meeting of the Colombian Hydraulic Company when it was in its dark days, "You have only to turn on your water, secure your gold, and bank your profits." In fact the cost of hydraulic mining, as compared with that of quartz mining is infinitely lower. In the case of the Colombian and Orita Companies the net profits are 70 per cent., and both of these companies are paying dividends at the rate of 20 per cent. per annum, although only working with a little over 1,000 ins. of water. The difference between these successful companies and the Gravel Gold Mines, Limited, is that 1,000 ins. is brought to bear in each of the two former cases, whilst this company will commence work with 4,600 ins., and, as the prospectus remarks, "a practically unlimited area of auriferous gravel to operate upon." The price agreed to be paid for the property must occur to the reader as moderate. It is 50,000*l*., 10,000*l*. being in cash, and the remainder in cash and shares at the option of the directors. The capital is 100,000*l*., in 100,000 shares of 1*l*. each. The prospects of the company we hold to be exceptionally good.

THE SOUTH AFRICAN GOLDFIELDS.—No. 1.

BY A CAPE COLONIST.

IT would be difficult to find in the whole civilised world a more interesting, difficult, and complicated problem for the statesman and the commercial man than that which is presented by South Africa at the present moment. Whether we take the oldest settlement—the Cape Colony, or the Transvaal, or Natal, or the Free State, or Zululand, the whole question is fenced round with perplexities and embarrassments. A residence of some 25 years in this country, and an intimate acquaintance with all classes of its polyglot population, has led me to contribute my mite towards an exposition of the present position of affairs in this part of the world.

Perhaps I should best consult the interests of my readers if I first directed attention to the second in order of these five States—the Transvaal. Roughly estimated, this Republic—for its correct title is that of the South African Republic—is about the size of France. This territory has of recent years sprung into importance, owing to the discovery of gold over an enormous area of country. For

more than 20 years the Transvaal has been known to possess gold amongst its many mineral products, but its development was carried on in a very perfunctory manner until about three years ago, when the discovery of the wonderful Sheba reef was first made known to the world. This discovery attracted a considerable number of people to what is called the De Kaap district, and the result was the foundation of a township, now known as Barberton. I shall presently particularly allude to this district more in detail, but I will content myself just now by stating that it is placed on the north-eastern corner of the Transvaal, and immediately contiguous to the Portuguese territory, of which Delagoa Bay is the natural outlet. In a great measure, however, the De Kaap district, as an auriferous region, has since been eclipsed by the district of Witwatersrandt, which is more in the centre of the State, and which has attained considerable notoriety owing to the rapid rise and progress of the principal town, which is known as Johannesburg, a town which had no existence two years ago, but which now contains a population of 15,000 souls. It is not my intention to encumber this paper with any statistics. Suffice it is to say, that up to the time of the discovery of gold in the Transvaal the white population consisted of about 75,000, the majority being of a class known in this country as Boers, i.e., farmers, the remainder being English and German traders, and a native population of 300,000. Since the discovery of gold, however, it is computed that close upon 100,000 white people have poured into the country, and are engaged in developing its unrivalled mineral resources. I may also add that there are some 200 gold mining companies at work in the De Kaap and Witwatersrandt districts, that the present rate of output is 20,000 ozs. of gold per month, and that output is increasing month by month as additional stamps are erected. I should further explain that, although these goldfields are attracting considerable attention in the commercial world, they are not what is called in Australia "poor man's diggings," owing to the non-discovery of alluvial deposit in any large quantity. Before concluding this portion of my subject, I may point out that the discovery of gold in the Transvaal is by no means confined to the De Kaap and Witwatersrandt districts. Indeed, prospecting has been carried on so vigourously that it has now been ascertained that valuable reefs exist in the south, in the neighbourhood of the towns of Potchefstroom and Klerksdorp, on the banks of the Vaal River, and again in the north-western corner of the Republic and bordering on Bechuanaland, a territory over which the British Government has lately thrown its mantle of protection.

Having briefly disposed of what may be literally termed the golden prospects of this really unknown territory, I may proceed to remark that its mineral resources are by no means confined to the precious metal—gold. Already, in various portions of the State, good serviceable coal has been found in quantities, which hold out the prospect that the coalfields of this part of South Africa are almost illimitable, and will play an important part in its future, whilst I am afraid I should be accused of Munchausenism if I attempted to convey to my readers the ocular demonstration I have had of its vast and wholly unexplored silver mines. When I use the term "wholly unexplored," I should explain that several attempts have been made to develop this industry, but so great has been the rush to the goldfields, that practically silver has been neglected. For many years past galena has come down from that territory to the more civilised communities in Natal and this colony in small quantities. These specimens have been from time to time handled and analysed by so-called experts. That one and all have declared that they contain large proportions of silver is without doubt, and it is also an acknowledged fact that the deposits are said to exist in several places in the Transvaal wide apart, and that they extend over a considerable area. I am not in a position to state that all attempts to do so by local capitalists have failed for good and sufficient reasons—want of capital and want of sufficient knowledge. Nor is there any reason to doubt that in various parts of this productive country—capable of supporting three or four millions of white people—there are large deposits of quicksilver, platinum, and other minerals.

It will doubtless at once occur to the ordinary reader to ask—If this territory is of such vast wealth, how is it that it is not more largely populated? To answer this very natural question in detail, and to elaborate on the one hundred and one questions thereby involved, would occupy far more space than I am sure you could place at my disposal. The subject is full of interest to the statesman, the philanthropist, and the capitalist. I will be as concise as I possibly can. When, after the unfortunate Majuba incident in 1881, the British Government handed the Transvaal over again to the Boers, the South African Republic, under the presidency of the now renowned Paul Kruger, remained in an impoverished condition up to the end of 1885. It is always most difficult for a South African colonist to convey to English readers the condition of these peculiar people—locally known as Boers. A Boer, properly speaking, is a South African Dutch farmer; but it would be a gross libel to call scores of intelligent, well educated South African Dutch farmers—Boers. Generally Boers in this colony are half educated Dutch farmers; in the Transvaal the majority of them—perhaps I should not be very far from wrong if I said the whole of them—are wholly illiterate, and being completely isolated from the civilised world, their knowledge of even the most elementary principles of religious, commercial, or social life is of the meanest order. If I made a comparison, I should say that any number of agricultural labourers to be found in Essex or Suffolk 50 years ago were far and away above the intellectual capacity of the Transvaal Boer of to-day. Taking all things into consideration, it may be conceded that these men are wholly unable to cope with, and incapable of rising to the wants, necessities and requirements of the country, and administering its affairs with any degree of credit. The machinery they employed at the outset was of a most primitive order, and they believe it can be adapted to the new order of things. It is true that in the first instance they had the sagacity to import from outside judges who administered their laws with tolerable impartiality, but that is found to be insufficient now that an alien and intelligent population is pouring into the land. They are a law abiding people, and basing their laws on the model of those of the Cape Colony they could not well go wrong, and these sufficed for themselves and the few British and German traders who remained in the State during its struggle for independence in 1880, and gave them no trouble. They also continued the semblance of representative institutions in their Volksraad, a primitive Parliament, and the probability is that under their excessively conservative regime, which set its face against the importation of men to till the soil of one of the most fertile regions on the face of the globe—the Boers themselves being averse to engaging of the tillage of land for anything more than their own immediate requirements—the territory would have been shut out from the civilised world for the next three or four generations had it not been for the discovery of gold.

(*To be continued.*)

THE EDWIN BRAY GOLD MINING CO., LIMITED.

Since our first notice of this company the prospectus has been issued to the public, and the shares have been duly allotted. The favourable opinion we formed regarding the property has been fully endorsed by the public, as shown by their very large application for the shares. We believe we are right in stating that the capital available for allotment was subscribed 50 times over, and those who sent in their applications for hundreds and thousands were fortunate in getting fives and tens. This unusual appreciation by the public is the more remarkable considering that the De Kaap goldfields are comparatively in the shade, for Witwatersrandt is the favourite of the hour. We take it as a healthy sign that the public are discriminating in their applications for new enterprises, and not merely rushing after shares that are at a big premium in the market. A careful perusal of the prospectus and reports will, we think, sustain our favourable opinion of this company, and fully account for the demand for the shares. The six claims acquired originally formed part of the Sheba property, and lie between and connect the celebrated Sheba and Oriental Mines. The Sheba main reef, which has produced such great wealth (averaging 3 ozs. of gold to the ton) passes right through the Edwin Bray. In the five months from April to August, 1888, the Sheba yielded 8,410 ozs. of gold, equal to 32,820*l.*, or at the rate of about 80,000*l.* a year, and this with only a 20-stamp mill. Comparing the number of claims in the Sheba and Edwin Bray, the latter should yield about 27,000*l.* per annum; but the fact is, if the Edwin Bray is worked to its full capacity, there is no reason why its output should not equal that of the Sheba. To estimate fully the meaning of such a result the relative capitals of the two companies must be taken into account; that of the Sheba being 600,000*l.*, while that of the Edwin Bray is only 65,000*l.*, so that it is quite within the range of possibility that the latter may make an exceptionally large return to its shareholders. We understand that reports are just to hand that there are at present no fewer than 300,000 tons of ore in sight. The Government has granted permission to construct a wire tramway, so that the company will be able to transport its quartz from the mine to the battery site on the river, at an estimated cost of less than 2*s.* a ton. On the formation of the South African Edwin Bray Company, the shares were for a long time at from 12*l.* to 15*l.* a share, and the shares of the English Edwin Bray Company, in market opinion, will not be long before they reach an equivalent price. The closing quotation to-night is given at 2—¼ premium.

LAS BRUJAS (COLOMBIA) HYDRAULIC GOLD MINES, LIMITED.

A COMPANY OF MERIT.

Not by any means too soon is the remarkable success of the hydraulic gold mines of the Republic of Colombia commanding the attention of investors. In a leading article on the general question in our present issue we set forth the advantages of this system of mining as compared with deep sinking on quartz veins. In conjunction with the present notice that article should be read. There are several features in connection with Las Brujas mines which will strike the reader before even he turns to the second page of the prospectus. In the first place the ownership of this property is acquired free from all royalties—a most important point. Another point is the influential character of the gentlemen who have consented to join the board, at the head of whom we observe the well-known and much respected name of Mr. G. J. Von Dadelszen, the metal-broker of East India Avenue. The solicitors are Messrs. Snell, Son and Greenip, whose names would not

appear upon a prospectus with the bonâ-fides of which they were not satisfied. These properties are in the neighbourhood of the Orita and Colombian Hydraulic Mines, and the concession has been granted by the Colombian Government to an English resident engaged in commercial pursuits, who agrees to transfer the properties direct to the company. 1,500 acres are embraced in the grant, and 400 acres are stated, on the authority of engineers of repute, to contain an average depth of 20 yds. of gold-bearing gravel immediately available for hydraulic operations. We have been pleased to learn that the grant throughout is a free washing gravel, so that there will be no hindrances caused by the presence of pipeclay and boulders, which in other properties have in past times proved the great impediment to the development of mines in this territory. Surface washings have shown a return of over 1 dwt. per cubic yd. (4s.), which, on the 400 acres to which we have referred, would amount to several millions sterling, and the prospectus is at pains to show that Las Brujas Mines, when brought into comparison with other mines, not merely in Colombia, but also in California, are well able to hold their own. A similar comparison in regard to expenditure also puts Las Brujas in a favourable position. If we had any fault to find with the prospectus at all it would be in the comparisons that are made between the mines of this company and those of other concerns in the vicinity, but the results as they work out are certainly very striking. The water supply is drawn from a river about 5 miles distant, and can it is said be brought on to the property at a moderate outlay; but a creek hard by will serve present necessities until better arrangements can be made. Wisely proceeding to take the lowest yield of Las Brujas gravel (9d. per cubic yd.), one monitor, it is estimated, will earn a profit of over 35,000*l.* a year, or 50 per cent. upon the company's capital. The climate is healthy, and labour cheap, abundant and good. The mining laws of Colombia are wiser than those of most other places; for the Government will grant no concession until experts appointed by themselves have satisfied them that gold exists in workable quantities. Las Brujas was no exception to this wholesome rule. It is a feature in this prospectus, and one which well shows the confidence of the vendor, that he will receive no cash until a sufficient sum has been set aside for working capital—the company merely undertaking to pay 500*l.* to cover the expenses of the assignment of the property. The purchase consideration is 45,000*l.*, wholly in shares, with the exception just named, or partly in cash and partly in shares, at the option of the company, The capital is 65,000*l.*, and the calls are made payable by easy instalments. On the whole, we are disposed to think that an application for some of the shares is desirable.

MINING IN NORTH CAROLINA.

HAMBLEY FREEHOLD GOLD MINE, LIMITED.

THIS is not a company that can be introduced to the public in the sense of asking for subscriptions of its shares at par, for the simple reason that the entire issue has been subscribed, and that letters of allotment and regret have already been posted. If the public buy shares at the present time it is clear they will have to do so at a premium, and according to all the evidence, they will act wisely even in so purchasing. The object of the company is to carry on gold-mining at a spot adjacent to the well-known Sam Christian Hydraulic Mine—in fact upon an extension of the same rich seam. Upon the Sam Christian Mine the reports we have published from time to time will have prepared the reader for the statement that large quantities of gold are now being found. Important discoveries have been made by the gentleman from whom the present venture takes its baptismal name, and whose opinion is that the various veins he has found will, in depth, form one of a large, compact, and rich character. The reports of Mr. Hambley show that the property is not only rich in gold-bearing veins of great value, but that it affords exceptional facilities for working by the hydraulic process. It is this process—as we are at pains to show in our present issue—that is just now exciting so much attention. Further consideration will determine whether this system of working will be adopted, but meanwhile we are glad to know that the water-power (the all-essential element) is at hand, and can be easily and cheaply adapted to the requirements of the property. The vendors are to receive 2,500*l.* in cash—the only cash payment made—and the remainder up to 50,000*l.* in fully-paid shares. The vendors pay all expenses connected with the formation and registration of the company, and the directors anticipate that a working capital of 20,000*l.* will suffice. These gentlemen are highly influential and, what is more to the point, they are thoroughly acquainted with the particular business they have in hand. Three of them are directors of the Sam Christian Gold Hydraulic, Limited, and Mr. Henry Davey is a director of the Stanly Frechold Gold Mines, Limited. Messrs. Kerly, Son and Verden are the solicitors, and the consulting engineer is Mr. E. B. C. Hambley, whose success has been so conspicuous in this mining centre. The total capital of the company is 72,500*l.* in shares of 1*l.* each, and the public issue, which, as we have said, has been fully taken up, was 22,500*l.* We shall watch the progress of this company with great interest.

HOPE FOR LIVINGSTONE SHAREHOLDERS.

WE are disposed to congratulate the shareholders of the Livingstone Gold Mining Company first of all upon the harmony which prevails on all sides, and next upon the prospects that seem to be opening before them of now developing their property with considerable chances of success. On the first point we are somewhat tempted to enter, considering the line we have taken in the past, but forbear. In regard to the second, the keystone of the policy of the board, as set forth by Mr Chemery, who presided, lies in the words "rigid economy," but by this we do not understand him to mean that anything will be sacrificed to efficiency. This gentleman first appeared on the Livingstone scene as a discontented shareholder, possibly thinking that as regards the mine the sponge might as well be thrown up. But now he considers its prospects as good as when the shares stood at par. This opinion was probably produced by the telegram read at the meeting, which spoke of a vein big and well-defined, of the quality of ore improving, of the vigorous sinking of the shaft, and of reduced expenditure. The chief feature of the meeting was the speech of Mr. Robinson, an Australian mining expert of repute, who said it would be suicidal to wind up. He thought dividends would, in all probability, result from going on. The view expressed by Mr. Arthur Heiron is that which all who wish to see a return of their money will endorse—viz., that of supporting the re-construction scheme. which appears to have been conceived in the truest interests of the shareholders.

THE TALTAL NITRATE BEDS.

WE hope the hitherto successful nitrate business is not going to degenerate into a tussle between the respective merits of the Tarapaca and Taltal districts. We believe that each has its sphere to fill in the commercial world, and that the respective companies can do far better by concentrating their energies upon their own business than by diverting them for the purpose of criticising the position of their neighbours. For this reason we regretted the observations made by Col. North, whose interest is wholly opposed to the Taltal district, on the eve of his departure for the district, of which he is the titular king. As a parting shot it was ineffective. We have all along expressed a high opinion of the merits of the Tarapaca district, and have in equally emphatic language spoken approvingly of those of Taltal. As to the duration of the Taltal beds, there seems to be but one opinion. The supply appears to be exhaustless, if we may judge from the statements of the respectable authorities, who have testified to their duration both before and after the issue of the prospectus. For example, Mr. Wm. Baker, who sailed from Liverpool last November with instructions thoroughly to inspect the company's grounds, and to take charge of the property has, after a sojourn on the spot sufficiently prolonged to enable him to form an opinion, telegraphed, "I have seen Pampas (nitrate grounds): in every way satisfactory." We believe the attempts made to depreciate the Taltal properties in order to appreciate those of Tarapaca will wholly fail. Col. North has not figured so well in this matter as he did at his famous Metropole ball. The necessity of his attack upon Taltal is not apparent, for, as we have before hinted, the respective properties may be allowed to pursue the even tenour of their way, without the meddlesome interference of injudicious friends or implacable foes. After all, as M. Thiers would say, "the future is to the wisest," and from all we have heard of Taltal, its future appears to be pretty well assured.

UNION GOLD CO.

THE shareholders of this company have resolved to wind up voluntarily, and the property has been sold to a new company styling itself "The Cordova Union Gold Company, Limited," whose statutory meeting, held yesterday, we report in another column. All the difficulties with the vendors have now been settled; and the new company acquires two additional mines, one of which, at least, gives very promising indications of value. It also acquires 160 acres of very fine timber land, which will greatly facilitate the cheap working of the mines. After studying the reports which have just been received from the mine manager, and from Mr. Cowland, who is acting temporarily as engineer (which reports we would advise our readers to carefully peruse), we think we are justified in predicting better things for the new company, and we shall be somewhat surprised if the long-suffering shareholders who have joined the new company do not at an early date see their shares quoted at a substantial figure in the market, consequent upon the receipt of regular and payable returns from the property. Of the 389 shareholders in the old Union Gold Company, representing 153,603 share, 213 have joined the Cordova Company, representing in the aggregate 107,436 shares. and we join unhesitatingly with Mr. Arthur Heiron, from whose father, the late Mr. George Heiron, the company in the past received valuable support, in recommending those shareholders who are still holding aloof, to cast in their lot with the majority. If they do not do so, they may live to regret it; for we understand that there are several influential gentlemen, well known in mining circles, who will be only too glad to come in and take the balance of the shares not applied for.

THE NEW NITRATE COMPANY—TAMARUGAL NITRATE CO., LIMITED.

The growth and prosperity of the nitrate industries was unquestionably the chief feature of the commercial year of 1888. A few years ago, guano was the great fertiliser used in the production of crops, but it has steadily gone out of favour, and to a large extent out of existence—in the first case, because agriculturalists prefer it, and in the second place because the deposits have largely been exhausted. The great merits of nitrate of soda (particularly when applied to those lands which have been more or less exhausted by a continuous succession of crops), have been realised by agriculturalists in all parts of the civilised world. The consumption in Europe alone, mainly for agriculture, was 650,000 tons which represented a cash purchase of about six-and-a-half millions sterling. To aid this, American consumption did not do much, but now in the United States as elsewhere the advantages of nitrate of soda as a fertiliser are widely known and as widely acknowledged, and hence it is to be expected that the consumption in this direction will be very great. It is a remarkable fact that stocks of nitrate do not accumulate, and that where nitrate of soda has once been used, other forms of manure are rarely or ever reverted to. To assume, therefore, that the price of 11*l.* per ton will be maintained is not going too far into the region of prophecy; but even should it go lower, well-managed companies having properly selected properties with good facilities for working them, will pay enormous dividends upon the capital employed, whilst on the other hand it must not be forgotten that even reduced prices, should these come about, will be counterbalanced by that cheapened production which experience in working must bring. On January 26th we drew the attention of our readers to the following salient facts in connection with the nitrate industry:—"The pioneer company, the Liverpool, between March, 1885, and November last, paid 126*l.* in dividends upon each 100*l.* subscribed: the Colorado Company, from May, 1886, to November last, returned 38 per cent. to the shareholders; the Primitiva Company, which commenced work in April last, paid 10 per cent. in September, and has just announced an interim payment at the same rate, due on Monday next; while the London Nitrate Company paid 20 per cent. out of the profits of its first year's working; and the San Pablo Company will, on February 21st, pay another quarterly dividend at the rate of 20 per cent. per annum. The Nitrate Railways Company, too, in the past year paid 15 per cent. in cash, and 15 per cent. in scrip, and the shares, which in the old form once stood at 10*l.* for the 100*l.* stock, now stand at about 27*l.*, or 270*l.* on the old basis."

These are remarkable facts, and it is not to be surprised at that they have fascinated the imagination of investors and led them to look for financial salvation in the direction of the new industry.

A company fulfilling the best conditions laid down in the foregoing remarks, appears to be that of the Tarmarugal Nitrate Company, Limited, the prospectus of which we have this week the pleasure of introducing to our readers. It has elements about it which entitle it to be considered with earnest care. In the first place the properties (2,300 acres in extent) are in the province of Tarapacá, in the Republic of Chili, and embrace the nitrate grounds of La Patria and La Palma. The great advantage is possessed of a railway close to the properties by which the produce is conveyed to the port. The output in 1888 from these two properties was 1,828,000 quintals (a quintal is 101 English pounds), and the average cost is under 5*s.* per quintal, delivered alongside the steamer at the port of shipment. Sales in the present year have been effected to the extent of 1,000,000 quintals at the price of 6*s.* 6*d.* per quintal, the bulk of which is deliverable in the first six months of the year. Those who know the exigencies of the trade will be of opinion that this basis of calculation is extremely low as applied to the whole of the year, and also that the estimate of the directors of a profit of about 1*s.* 6*d.* per quintal is very moderate. The company will carry on the general business of manufacturers and exporters of nitrate of soda and iodine, and it anticipates a profit of 135,000*l.* per annum on the former and 20,000*l.* on the latter, or 22 per cent. upon the 650,000*l.* which, in 130,000 shares of 5*l.* each constitutes the capital of the company. The profits of the concern will accrue to the company from the commencement of this year, and will include all the appurtenances and stocks, except such of the latter as were manufactured on the 1st of January, 1889, The caliche coal, stores, and provisions will be taken over at a valuation, and the stock of iodine will be purchased on the basis of 3*d.* per oz. placed in Europe or the United States. The price to be paid for the properties is 590,000*l.*, which, when paid, will then leave 60,000*l.* as working capital. The directors, without exception, are gentlemen who understand the business they have undertaken to manage, and who are on the boards of those concerns, the shares of which have risen to—and what is a great deal more to the point—remain at the enormous premiums which have commanded the astonishment of the commercial and industrial world. The brokers are the well-known firm of Messrs. Panmure Gordon, Hill and Co., and Messrs. Garle and Harris (4, Tokenhouse Buildings, E.C.), whilst the solicitors are the firm of Messrs. Bircham and Co., of Old Broad Street. The lists will opened to-day (Saturday), and close on Monday. It may be useful to add that the prices of nitrate shares at the close of January ranged from 160 to 600 per cent. premium. The properties, we are informed, belonged to Messrs. Anthony Gibbs and Sons, and we understand they have arranged to be agents in Chili for the Company. The sales of Nitrate and purchase of goods for the Company will be entirely in their hands which aught in itself to be a guarantee to those who may take shares.

TRANSVAAL LANDS CO., LIMITED.

The meeting of this company must have impressed the shareholders who attended it, and those who may read our full report of the proceedings, with the vast extent, and, according to all evidence, the great value of the estate. In regard to its extent, it embraces 87 farms, having an area of about 600,000 acres, and in regard to the value, Mr. Percy Boult, who knows the property well, states: "We have on every farm found first-class indications of gold-bearing quartz." We are quite disposed, with this gentleman, to believe that less than the truth has been told about the Transvaal, but in the midst of the tales of fabulous wealth acquired by individuals and companies in a very limited space of time, it is necessary that none of us should lose our heads, and that we should try and look facts fairly and squarely in the face. Neither the directors of the Transvaal Lands Company, on the one side, nor Mr. Percy Boult on the other, are to be reproached with not having done so. The language of the chairman representing the board, and of Mr. Percy Boult, as indicating the views of one who knows the property, was couched in moderate terms. The policy of the company, as indicated by the chairman and Mr. Boult is based upon a well-considered plan, and one which we expect to see carried out with success.

THE SOUTHERN LAND CO., LIMITED.

This company has been formed for the purpose of purchasing lands and acquiring options for the purchase of lands in South Africa, particularly in the vicinity of the proposed extension northward from Kimberley of the railway from Cape Town. The land has been surveyed partly by the Colonial Government for the portions of the railway extending from Kimberley to the Vaal River, and partly by Sir Douglas Fox, C.E., and Sir Charles Metcalfe, Bart., C.E., on behalf of the Exploring Company, Limited. Sir Charles Metcalfe, in a speech he delivered at Vryburg on the 3rd November last, spoke very highly of the excellence of the pasturage and fertility of the country, and described it as "a land flowing with milk and honey." The railway which will be constructed will provide the means of forwarding the products of the country to the market. The Exploring Company, desiring to confine its attention more particularly to the construction of the railway, has caused this company to be incorporated, and agrees to transfer to it all the options for the purchase of lands which it has acquired, except those which are or may be acquired for the purposes of the railway. The capital of the company is 100,100*l.*, in 100,100 shares of 1*l.* each, 80,000 of which are now offered for subscription.

CONSOLIDATED BROKEN HILL SILVER MINING CO., LIMITED.

The property which this company has been formed to acquire and develop comprises about 150 acres, situate in the Barrier Ranges, New South Wales—a district which ranks as one of the richest silver-producing territories in the world. It is said to be on the same line of lode as the celebrated Broken Hill Proprietary Company's property, and when it is borne in mind that this company has paid in dividends and bonuses no less a sum than 2,920,000*l.*, or over 182*l.* per share of 20*l.* (19*l.* paid), we have little doubt that the prospectus, which we print elsewhere, will receive careful attention on the part of the investing public. Mr. Z. Lane, mining engineer, who has had great practical experience of the property, reports that "the main lode of the Consolidated is undoubtedly the extension of that being worked in the Broken Hill. After leaving the Broken Hill, the lode passes through the Junction, North, Imperial, Cosgrove's, and Round Hill Mines, and from the latter right through the entire length of the Consolidated Blocks, the course of the lode being north-east." The property has also been reported upon by Mr. G. Thureau, F.G.S., Government Geologist and Inspector of Mines for Tasmania, who says "I have no hesitation in stating this to be one of the most valuable mines in its district, and which undoubtedly will produce permanent and very satisfactory profits to the shareholders." The capital of the company is 350,000*l.*, in as many shares of 1*l.* each, and the purchase-money has been fixed by the vendor at 275,000*l.*, payable in cash or shares, at the option of the directors, but the vendor stipulates that he and his friends shall have a fair allotment for all applications they may make, and agrees that he and they will apply for all shares not subscribed for by the public up to the full amount of the purchase-money.

The company to which we referred last week, under the title of the Pahang Timber, Mine and Trading Corporation, is making rapid progress, and will in the course of the next few days, we understand, be in a state in which it can be introduced to the public.

Aurum Company, Limited, of Witwatersrandt.—Mr. Alfred Bull, one of the directors, having to go to the Transvaal on his firm's business, sails on Friday next, and has arranged, immediately on his arrival at Cape Town, to visit the company's property to make the necessary arrangements with Mr. David Lewes, of Johannesburgh, the consulting engineer, for the thorough and rapid development of the mine.

REPORTS OF MEETINGS.

CORDOVA UNION GOLD CO., LIMITED.

A LARGE NUMBER OF THE SHAREHOLDERS IN THE OLD UNION GOLD COMPANY JOIN THE NEW COMPANY—AN ADDITIONAL PROPERTY SECURED—PROSPECTS GOOD.

THE statutory meeting of this company was held at the City Terminus Hotel yesterday, under the presidency of R. S. Laing, Esq.

The notice convening the meeting having been read,

107,436 SHARES TAKEN.

The CHAIRMAN said: Gentlemen, as you are aware, this is only a statutory meeting, which we are compelled to hold at this time, simply to report to you what we have done up to the present, and there is no formal business to be transacted to-day. I may, however, tell you that out of 389 shareholders, representing 153,603 shares in the old company, 213, representing 107,436 shares, have joined this company, and other large shareholders have expressed their intention of coming into this company, but they have not done so at present.

SETTLEMENT OF ALL QUESTIONS WITH THE VENDORS.

All questions with the vendors had been settled, and the properties had been taken over; the deeds, however, have not arrived in this country yet. We have written and telegraphed for them to be sent over as soon as possible, but up to the present time we have not received them although copies of them have come to hand. We have information from the solicitors on the other side that they are all in perfect order. After the last meeting,—that was the meeting, of course, of the Union Co.—Mr. Cowland the engineer whom we sent out to inspect the property, came over to this country and reported to us upon it. Those of you who were shareholders of the Union Company at that time will recollect that I, as chairman, told you that it was inexpedient to say very much just then because we were negotiating with the properties and for the settlement of the claims over there, and it would very likely interfere with our settlement if we discussed the matter openly. Now, however, that is all over.

AN ADJOINING PROPERTY SECURED.

We have secured an adjoining property, which appears to possess a very substantial value. I will presently read you the reports that we have received, and I think you will agree with me that we have got hold of something good at last. There was considerable difficulty in carrying on the negotiations on the other side, and Mr. Cowland, finding that he had longer time to spare than he expected, expressed himself ready to go out again for us, and we gladly availed ourselves of his services, not only to start the work there, but to negotiate with the vendors on our behalf. We therefore gave him a power of attorney, and he went out, and it is mainly due to his efforts that we have got matters completed so satisfactorily as we have. Mr. Cowland is still there, conducting preliminary operations. I will now read you what our manager, Mr. Richard says, in his report, dated 26th January, and received last night:—

MINES PRESENT CONDITION, AND PLANS FOR FUTURE DEVELOPMENTS.

Gentlemen, in accordance with the request for a report contained in your cablegram of the 18th inst., I would hereby lay before you a description of the present state of work at the mine and the plans for future development.

MOVING MACHINERY.

Immediately on the final settlement with Rathgeb, and the purchase of the additional property, the work of moving machinery upon the Cordova Mine was commenced. This machinery had been purchased at a neighbouring mining camp (Glencoe) after a careful search in the vicinity for a plant of suitable price and proper size. We were fortunate in having unusually fine weather, which much facilitated the removal, which in wet weather would have been a lengthy and expensive business, owing to the hilly character of the intervening country. As it was, we found it necessary to transfer the heaviest piece on a bullock team of five yoke, of which I send you a blue print photograph that may be of interest.

DESCRIPTION OF THE PLANT.

This machinery, which is now being erected on the centre shaft, forms a complete and powerful hoist capable of working the mine to a depth of 1,000 ft. We are placing it in position as rapidly as possible, and if nothing hinder, and the weather does not prevent the erection of the gallows frame, we hope to recommence sinking on or about the 16th February. The plant consists of an engine of 40-h.p., 12 ins. by 18 ins., link motion; the boiler is 50-h.p. of $\frac{5}{8}$ plate, 40 ins. by 14 ins. There is a double reel so that we shall be enabled to work two compartments simultaneously.

STATE OF THE WORK AT PRESENT.

The work of erection to-day stands as follows:—The engine is in place, the frame resting on masonry, the first foot of which is dressed soapstone, and the remaining 2½ ft. ordinary stonework. The flywheel is ready to be placed on its bearings, waiting only the babitting of the boxes. The spool or reel rests on its frame, waiting the placing of the Plummer blocks. This frame is constructed of 12 ins. by 12 ins. timbers, placed on sills 12 ins. by 14 ins. A concrete floor to be laid down immediately round the engine and reel will help to render the foundations firm and good. The setting of the boiler will be completed next week. The walls are 20 ins. thick of soapstone of very good quality, obtained near the mine, and quarried by ourselves. The poppet heads or gallows frame will be 40 ft. high, built up from timber cut on the land recently purchased.

THE TIMBER LAND.

This 160 acres of timber land was inspected by Mr. Cowland and myself. It is 2 miles from El Dorado, or about 15 miles altogether from the mine. It is conveniently situated for hauling, being close to a good road, and we found that there are on it a large number of very fine trees—mostly the varieties known here as yellow pine and sugar pine. There are many trees from which can be cut timbers 14 ins. to 16 ins. square, and 50 ft. to 60 ft. long. This track will be of good service in furnishing us with the material for gallows frames, as well as the heavier timber for underground use.

PRESENT EXTENT OF UNDERGROUND DEVELOPMENT.

The placing of the machinery has prevented the pushing forward of underground development; there is, therefore, nothing new to report, and I can but briefly describe the exteut and character of the work already done on this lode (the Cordova). The first exploratory work was done last October, and up to the end of December there had been 187 ft. of sinking completed. Three shafts were sunk, the two outside ones being 720 and 615 ft. respectively from that named the centre shaft.

SOUTH OR COWLAND SHAFT.

Of the former the southern was sunk and timbered 45 ft. when the water coming in proved too much for the windlass. The vein had been gradually changing with depth, having a width of 8 ft., and we expect, with further sinking, to get into as good ore as that cut by the centre shaft.

THE CENTRE SHAFT.

In this shaft the water prevented our going deeper than 62 ft., of which 45 are timbered. Good ore was found first at about 50 ft., and the bottom yielding on assay, as reported in November, an average of 815 fm. for the entire width of lode laid open by the shaft (about 8 ft.)

CHANGE IN THE VEIN.

There was a very marked change noticeable in the appearance both of the quartz and the accompanying slate, as soon as the first 50 ft. had been sunk. The croppings show large pieces of massive white quartz of most unpromising appearance, with neither pyrites or its decomposition products visible. The casing near surface consists of a slate whose bedding gives all the evidences of disturbed ground. As the surface was left the quartz became less massive, showing pyrites and galena, and yielding well in fine gold. The casing became a graphitic blue-black slate or schist, accompanied by 6 ins. of gonge, which much helped to increase the speed of sinking. It may be remarked that this black slate, and with it sheets of black clay, along the walls is characteristic of the best producing mines of Amador County, which immediately adjoins Calaveras on the north, and is as a mining district far more developed.

THE NORTH OR ORCHARD SHAFT.

The northern or Orchard shaft is the deepest, having been sunk 80 ft. This went down on the hanging of the vein, and at 55 ft. a cross-cut was put out to discover the extent of the ore. The lode was found to be 15 ft. across, consisting of quartz and slate, having a ribbon structure, thin streams of slate alternating with the quartz. The casing is similar to that of the centre shaft, a block graphitic slate, and several tests made showed gold on washing. It would seem that we have cut into the apex of an ore shoot, the character of which further development will prove. All the shafts appear to be in the same course of quartz, and the lode is evidently large and strong.

FUTURE OPERATIONS.

As soon as practicable sinking will be resumed on the centre shaft to be pushed forward with all possible speed, and when a suitable smaller hoist has been erected upon the southern or Cowland shaft this also will be sunk. The centre will be the main working and hoisting shaft, and it is therefore the largest, viz., 6 by 15, or three compartments, two of which, each 4½ by 4 in the clear, will serve for hoisting, while the third for ladder road and pump. The other two shafts are 5 by 10, or 4 by 8½ in the clear, to be divided into ladder-way and hoisting compartment. The early stage of work altogether prevents a complete report, but my letters must have made it clear that I consider we have excellent prospects of opening up a good mine. Should the discoveries made lead to the opening up of any large extent of ore ground, it is satisfactory to note that we shall not, as at the union previously, be hampered for want of room, and in this connection I would mention that the mining rights on a further 40-acre block on the south, obtained by Mr. Cowland from Rathgeb, is a valuable and useful acquisition to the company. The map herewith enclosed will show the extent and position of the property, as well as the additional block mentioned above, together with three other blocks on which a two years' option has been obtained.

The CHAIRMAN (continuing): We have got the 160 acres of timber land which is mentioned in the report; and although it is 15 miles away, the roads are good, and it can easily be got at.

WHAT MR. COWLAND SAYS.

We have a letter from Mr. Cowland, dated 26th January, in which he says:—"I have not yet settled up with Rathgeb for the option of purchase of the 160 acres south of Rathgeb claim"—we are rather in a fog about that; for he has never explained what the option is—"as I want," he continues "to get the option of 80 acres more upon which there seems to be a good vein. The more I go over this new property the more interesting it becomes; the lode can be traced right through the property, including the option ground If the shoot of stone exposed in the centre shaft only holds up for any distance, you will have a good mine. The look of the stone, both in the Cowland and Orchard shafts, is most favourable for the continuance of the shoot in the Centre shaft." Speaking of the hoisting plant in the Centre shaft, he says: "It is most complete of its kind, capable of sinking to a depth of 1,000 ft. You could not put this up new for less than $6,000 or $7,000." He also says he is looking out for a second-hand mill, and has two under offer. Fearing that we would not receive these reports in time for the meeting to-day, we sent the following cable, dated 12th February: "Report not arrived; cable Thursday aspect workings, and assay value for Friday's meeting."

LATEST BY CABLE.

This is the reply:—

"Centre shaft: Hoisting work practically finished; commenced bailing water to-day; engine working beautifully; will take almost one week to clean up shaft before startiug sinking; very good vein bottom this shaft, shows good gold by panning, consider it worth $10, must have mill to test ore as we proceed. Orchard shaft: Engine boiler and tank fixed; framing our shaft well in hand; reef in this shaft also looks very well; indications distinctly favourable for shoot continuing from centre shaft to Orchard. Cowland shaft: Timber work well in hand; machinery likewise; reef here looks very promising; boiler and engine for mill on the ground; foundation for boiler finished; the completion this mill most urgent; cannot decide system of development without it; two months required to get result after money for same received."—COWLAND.

That is to say, he wants us to send him out money to put up a 10-stamp mill on the spot, and then he calculates that in two months after that he will be able to give us good returns.

Mr. GRAY: Does he not propose to make use of the present mill?

The CHAIRMAN: The present mill is very large. It is made in three compartments, but unless used as a whole it gets choked up.

We are at present communicating with Mr. Cowland as to whether he will remain a few months longer. If we can get his services for another month or two they will be a great value to the Company.

BRIGHT PROSPECTS IN STORE FOR THE COMPANY.

Mr. Arthur Heiron: I think, sir, that after the valuable information which you have imparted to us, we should go away feeling that there are brighter prospects in store for us. A lot of it was new to me, although a large shareholder—in fact, it must have been new to the board until last night when the reports came to hand. The advantages of the negotiations just concluded must be patent to all. We have acquired, apparently, two mines, one of which certainly gives indications of value as reported by Mr. Cowland, and in addition to that we have 160 acres of timber land. Unfortunately that is rather a long way from the mine, but notwithstanding that, if you can cut timber there of the size our manager reports it will become an element of value by-and-bye.

IMPORTANT TO SHAREHOLDERS WHO HAVE NOT JOINED THE NEW COMPANY.

As regards the shareholders who have come in—the chairman has said that 107,000 applications have been received (I think there are only about 150,000), and promises have been received, which will bring this number up to 115,000. I have little doubt, when these facts go forth to the other shareholders, that they will also join. I may say that I know several parties are inclined to take the shares that are not disposed of, but it will be for the shareholders themselves to decide whether they will come into the new concern and take their chance of any profit that is likely to arise. (Cheers.)

THE BOARD CONGRATULATED.

Mr. Urwick wished it to be made clear that the title deeds of the property were in the company's own possession. However dear the property might have been at first, the shareholders might now consider, from the reports received, that it was a valuable property, and it had been purchased for something like 40,000*l*., or 45,000*l*. He congratulated the board for the energy they had displayed, and the success they had achieved in their negotiations with parties on the other side, and he could only hope that their efforts would be rewarded by being in a position to develop the mines at once, and pay a dividend to the shareholders at no distant date. (Cheers.)

Mr. George Davies (solicitor) said that the title deeds were completed, and that the copies were on the way to this country. The original deeds were put upon the register out there. At present all the purchase-money had not been paid—part being payable in instalments extending over several years, which instalments would be met as the calls became due. They would, however, have the complete evidence of title before the next meeting.

A vote of thanks to the chairman and directors terminated the proceedings.

UNION GOLD CO., LIMITED.

THE COMPANY TO BE WOUND UP VOLUNTARILY AND SOLD TO THE CORDOVA UNION GOLD COMPANY, LIMITED — SHAREHOLDERS' INTEREST TO JOIN THE NEW COMPANY.

An extraordinary general meeting of the Union Gold Company Limited, was held at the City Terminus Hotel, Cannon Street, London E.C., yesterday, for the purpose of submitting an arrangement for the approval of the shareholders rendering effective the transfer of the property and business of the company to the Cordova Union Gold Company, Limited, under, or in pursuance of section 161 of the Companies Act, 1862—Mr. Laing presided.

The notice calling the meeting having been read,

PROSPECTS OF THE NEW COMPANY.

The Chairman said: Gentlemen, you all understand what we are met here for to-day. I may as well tell you, as a matter of courtesy, that we have just held a meeting of the Cordova Union Company, and a cable received by that company was read, which I will read to you, as showing how promising the property looks. I wish you, however, to bear in mind that this does not refer to the Union Gold Company that was, but the property lately acquired by the Cordova Company through the re-construction.

"Centre shaft: Hoisting work practically finished; commenced bailing water to-day; engine working beautifully; will take almost one week to clean up shaft before starting sinking; very good vein bottom this shaft, shows good gold by panning, consider it worth $10, must have mill to test ore as we proceed. Orchard shaft: Engine boiler and tank fixed; framing our shaft well in hand; reef in this shaft also looks very well; indications distinctly favourable for shoot continuing from centre shaft to Orchard. Cowland shaft: Timber work well in hand; machinery likewise; reef here looks very promising; boiler and engine for mill on the ground; foundation for boiler finished; the completion this mill most urgent; cannot decide system of development without it; two months required to get result after money for same received."—Cowland.

So you see we are in hopes, in two months or so after getting that mill, of having payable results. I only mention this to show any shareholders who have not come into the Cordova Company that I think they are making a mistake. I will now simply move the first resolution: "That the company be wound up voluntarily under the provisions of the Companies' Acts, 1862 and 1867, and that George Benson Monkhouse of 28, St. Swithin's Lane, London, E.C., chartered accountant, be, and he is hereby appointed liquidator for the purpose of such winding up."

A FRIENDLY THOUGHT FOR THE OLD SHAREHOLDERS.

Mr. Urwick seconded the motion, and said: I see no other course open to the company as they have no funds. I think that the directors, or rather the solicitor, has done wisely in postponing the period of going into liquidation to the present moment. I regret that those shareholders have not come into the new company who could have done so; but I hope that a little grace will be given them, and that they may still have the opportunity of doing what I think will enable them to recoup themselves for what they may have lost. I never like to see old shareholders shut out; therefore I plead that a little grace may be given them. (Hear, hear.)

Mr. Blumenthal asked in what position the shareholders would stand who did not consent to join the new company.

Mr. Grant protested against the motion. He wished to know why the company was not liquidated before the property was sold to another company. He contended that it was entirely illegal.

A SENSIBLE VIEW.

Mr. Arthur Heiron: As one of the largest shareholders in the room, I may perhaps be allowed to make a few observations, and I am sure that every gentleman present, be he a large or a small shareholder, must have the same interest at heart, namely, the welfare of the company and his own pocket. (Hear, hear.) That is the motive that actuates me, and on that principle I am going to support the resolution, for this reason: We have had, by the way (perhaps an unusual way) in which the arrangements for the new company was first carried out, a great advantage. Men holding a stake in the company to the tune of 107,000 shares are quite content to act in accordance with that arrangement, which has been approved by counsel, and I, for one, have paid my money in advance. The result is that all litigation with the vendor has ceased, and two additional mines have been acquired, one of which has been tested pretty fully; 160 acres of timber land have been purchased, and although its value may not perhaps be great at present, still it is an asset of the company. And these dissenting shareholders get the benefit of our pluck, because they now perceive for themselves—by the news which came to hand last night, and which is confirmed by cable to-day—what they are putting their money into. If they are of opinion that it is not good enough for them to risk any more money in it, I can assure them of this, that there are

OFFERS FROM INFLUENTIAL MEN IN THE CITY

who know the merits of mining properties, for the whole of such shares as are left in abeyance. Therefore, there is no fear as to the ultimate success of the company; but I think when the report of to-day's proceedings goes forth to the world we shall get the balance of the shares taken up. (Cheers.)

RECONSTRUCTION ON A SOUND BASIS.

Mr. Davies (solicior), in reply to Mr. Grant, said that the board, under his advice, proceeded to reconstruct the company on a sound basis under the provision of memorandum of association of the old company and supported by the legal decisions of the courts in this country. It would have been a most suicidal policy to have attempted to reconstruct the company by a move towards liquidation. Immediately they had gone into liquidation the whole of the property would have been forfeited to the unpaid vendor, and reconstruction would have been impossible. There was no desire to shut any shareholder out of the new company who liked to join; but if he did not come in within the time provided he would be simply

LIKE A LOOSE PLANK AT SEA,

he would have nowhere to go. (Laughter).

The motion was carried, 12 voting in its favour and four against.

The Chairman remarked that the board had proxies representing 83,000 votes at their back.

The Chairman moved the next resolution as follows:—"That the draft agreement submitted to this meeting and expressed to be made between the company of the first part, and George Benson Monkhouse, of 28, St. Swithin's Lane, London, E.C., chartered accountant, as liquidator to this company, of the second part, and the Cordova Union Gold Company, Limited, of the third part, be and the same is hereby approved, and the liquidator be and he is hereby authorised to enter into an agreement in the terms of the said draft, and to carry the same into effect."

The Solicitor read the draft agreement referred to.

Mr. Ware seconded the motion, which was carried.

Mr. Heiron proposed a vote of thanks to the chairman and directors, who, he said, had had a lot of hard work in dealing with these matters, and he was sure they were doing their level best. (Cheers.)

Mr. Grant seconded the motion, which was carried, and the meeting closed.

THE ROSSA GRANDE GOLD MINING CO., LIMITED.

UNDER VIGOROUS MANAGEMENT THE COMPANY HAS A GOOD CHANCE OF RAISING ITS HEAD—TWO VALUABLE PROPERTIES, AND ONE OF THEM ONCE ADMITTED TO BE THE RICHEST GOLD MINE IN THE WORLD—SHAREHOLDERS DO NOT SEE WHY SUCH PROPERTIES SHOULD BE LOST.

An extraordinary general meeting of the company was held at the Great Eastern Hotel, Bishopsgate Street, yesterday, for the purpose of considering, and, if thought fit, confirming the resolutions following, which were previously passed, namely:—

(1.) "That a re-construction of the company is desirable, and that the company be therefore wound up voluntarily, and that Mr. John Edward Dawson, of Devonshire Chambers, Bishopsgate Street Without, London, agent, be and he is hereby appointed liquidator for the purpose of such winding up, and that the remuneration of the said liquidator for his services be fixed at the sum of 50*l*." (2.) "That the said liquidator be and he is hereby authorised to consent to the registration of a new company, to be named 'The Gongo Soco and Rossa Grande Land and Gold Co., Limited,' with the memorandum and articles of association which have already been prepared with the privity and approval of the directors of this company." (3.) "That the said liquidator be, and he his hereby authorised, pursuant to section 161 of the Companies Act, 1862, to enter into an agreement with such new company when incorporated in the terms of a draft agreement submitted to this meeting, and expressed to be made between the above-named Company and the said liquidator of the one part, and the Gongo Soco and Rossa Grande Land and Gold Co. Limited, of the other part, and to carry the same into effect with such, if any, modifications as they think expedient, and that the said draft agreement be and the same is hereby approved."

John Schofield, Esq., chairman of the Company, presided.

Mr. John E. Dawson (secretary) read the notice calling the meeting.

The minutes of the last meeting were also read by Mr. Dawson.

Mr. Boydell (who has been a conspicuous figure at these meetings previously) raised technical objections on trivial points, which excited the impatience of the shareholders, and led the chairman, after useless discussion, finally to proceed with the remarks he intended to offer.

WHAT THE DIRECTORS HAVE DONE AND PROPOSE TO DO.

Mr. Schofield (chairman): Gentlemen, we have now to consider the resolutions which were passed at the last meeting, and confirm

them. I do not know that it would have been necessary for me to have said much at this time, had it not been for the fact that we had no representatives of the Press present at the last meeting. Now I am desirous that a statement of the position and prospects of the company should be put fully before the shareholders, and, therefore, I will rather extend my remarks upon the present occasion. I will begin at the Gongo Soco Mine, merely reminding you that we hold two properties, the one being the mine I have just mentioned, and the other Rossa Grande. I have received a letter from Capt. William Treloar, who was manager of the mine up to the end of 1858 or 1859, when the mine was sold by the Imperial Brazilian Mining Company, who then owned it, to a gentleman in Brazil. Work was continued for some time, but the mine was ultimately shut up. It was sold again to the Rossa Grande Company, and they carried on some operations which resulted in an expenditure of about 10,000*l.* or 12,000*l.* The object in view was not obtained, in a great measure because the funds fell short. I think Mr. Dawson will bear me out that that was so.

Mr. DAWSON: Yes; they expected to find gold at the end of a particular level, and did not do so, and they had no money to go further.

The CHAIRMAN: Mr. Treloar was the manager of the mine up to its change of ownership in 1859, and I will read to you the letter I have from him, dated the 2nd day of November, 1888:—

VIEWS OF THE FORMER MANAGER.

"Gongo Soco yielded more gold for a number of years than any other mine in Brazil, and I believe there are still great riches in the mine. But the mine would be a heavy expense to re-open; but this could be most effectually accomplished by bringing up a long deep adit, at a considerable depth below the old workings. The company's operations for the last year or so, previous to stopping them, were confined to a systematic examination of the lode at the 20-fm. level near Duval's shaft, where the rich shoot of ore worked upwards to this point disappeared. A long level was driven to this spot, and a promising vein was struck in virgin ground, south of all other works, when an order came from the board to wind up affairs, notwithstanding I offered to give my services free for 12 months if I did not find the rich shoot of gold. The 32-fms. level driven on the Cumba vein passed through a rich shoot of gold unknown to anyone at the time, but it was subsequently worked, and produced 10 or 12 lbs. weight of gold daily. This shoot is intact below the 32-fm. level. The water supply is ample for all mining purposes. There is some large and useful timber for mining, and also plenty for fuel and firewood on the property. The length of a deep adit I am unable to give—it would be long and expensive—but when completed what a splendid property it would open up."

That is the opinion of Capt. Treloar, who was almost the last man to conduct work to any great extent in the mines, and his opinion is to the effect that they ought to be tried again. (Hear, hear.) We have a very large area of property, including the Gongo Soco section, and no doubt there are several valuable lodes in it. At all events, if we had the capital even, it would not be desirable to do more than attack this old mine, which is only some 35 fms. deep. If we can only get the money to work that mine, I believe that our prospects would be

AS GOOD AS THOSE OF DON PEDRO,

except that in the latter case the operations are further advanced, and we should be two years before we could bring ours to the same state. Don Pedro shares are selling at about 30s., and ours are at—well, about 1s. The Rossa Grande Mine was worked for a considerable period, and was ultimately abandoned because there was an inadequate supply of water-power. At that time they could have had this water-power if the company had been in a position to purchase the adjoining portion of the estate now belonging to the Ouro Preto mines, for 1,500*l.* or 2,000*l.*, but at the present time, I suppose, if we wished to buy it we should have to give a considerably enhanced price for it.

POLICY TO BE FOLLOWED.

At the same time we do not intend to work the Rossa Grande mine but the Gongo Soco, which is likely to come to the front more rapidly and to prove a very much richer mine. I know as a director of the Imperial Brazilian mines, in 1858, that at one time this Gougo Soco mine was not merely the richest mine in Brazil, but

THE RICHEST MINE IN THE WORLD.

Therefore I do not see why, if we could get the money to work it again, we should not meet with a certain amount of success, even basing our hopes on the most moderate anticipations. I have now to propose "That the resolutions passed at the extraordinary general meeting of the company on the 28th of January, 1889, be, and the same are hereby confirmed."

A PRACTICAL MINER AND MAN OF BUSINESS SPEAKS.

Mr. ALFRED THOMAS: I rise, gentlemen, for the purpose of seconding this resolution, and in doing so would say that I think we, as shareholders, are indebted to Mr. Schofield for the trouble he has taken in communicating with people in the neighbourhood of the mine—(hear, hear)—and with those who evidently know a great deal about it; and he has given us all the information he has gained in the most complete manner. I cannot help thinking that the plan adopted by the Board of Directors is the most desirable of any that can be suggested under the circumstances. We believe, from what our friend the chairman told us, that we have a valuable property in the two mines of which he has given us an account. His statement appears to me as a miner, as proving there is something of a tangible nature in these properties, and the question is how to make them valuable. We have all sunk our money in this venture—some of us having paid a high price and some a low price for our shares. Our interests are concentrated in this concern and it

IS NO DOUBT OUR DUTY TO SUPPORT THE DIRECTORS

in the plan suggested, because it is put in such a form that it will not cost us much money, and we will be able to nurse our property and retain it during the construction of a railway, which I believe is proceeding, and during other important events which may come about by and by. At any rate by paying this small amount of money we shall preserve this property for ourselves instead of allowing it to go into other hands.

A SHAREHOLDER WITH A GRIEVANCE.

I am sorry to see a gentleman continually getting up at these meetings and trying to throw cold water upon everything that directors do. I do not know this gentlemen, but I cannot help thinking he is making a great mistake. He may be a large or small shareholder, but I cannot help thinking that he must have some ulterior motive in doing what he does, because nothing can be more plain, honest, or straightforward than the action of the directors, or the way in which things are put before the shareholders. At the same time I think, if a shareholder gets up and takes all sorts of objections on technical points and calls in question legal matters which have already been decided by legal minds, it is wrong. We have no money to spend on law, but all our funds should be devoted to the working of the property, for that is in the truest interests of the shareholders. What the honourable proprietor's motive may be perhaps he will explain, and in the meantime I will conclude by seconding the resolution proposed by the chairman.

WAS MR. BOYDELL REASONABLE?

Mr. BOYDELL: In reply to your remarks, I shall oppose this reconstruction scheme, because it bears on its face failure, and it is simply a cloak for other purposes. (No.) If the 6d. a share in which you propose to mulct the shareholders—and I use that work advisedly—were paid up on every one of the 100,000 shares, it would not give you as much cash as you had 15 years, and what have you done for the shareholders these 15 years? (Laughter.)

The CHAIRMAN: What can we do?—we have not been directors for 15 months. You cannot blame us for

THE SINS OF THE FATHERS.

(Laughter.)

Mr. BOYDELL: You propose to write off 90 per cent. of the capital, reconstruct this company, and ignore what has become of the valuable plant and machinery for which many thousand pounds were paid. Then you ask the shareholders to come forward and pay another 6d. per share when there is not the possibility of getting anything back. (Oh.) I believe there is a legal flaw by which you can never form a new company. It would be better to have the property sold by independent parties and a return made. I believe, from the advices I have had, that there would be some return in that case, whereas if you paid up your 6d. there would be no return.

MR. BOYDELL WITHOUT SUPPORT OR COUNTENANCE FROM THE SHAREHOLDERS.

The CHAIRMAN: That is your opinion, but I very much mistake the rest of the meeting if it is theirs. (Cheers). I trust there is no one in this room who will countenance or support you. (Cheers). You may be right or wrong—I cannot, not having the confidence you possess, look as far in the future; but I think I understand the business in hand a good deal more than you do. If the shareholders will give us the money I think we shall be able to show them a return, and after all the amount we ask for is not ruinous. If any shareholder (no matter how many shares he holds) will take a shilling per share for his shares, and will put himself in communication with Mr. Dawson, the secretary, I have no doubt I shall be able to find a buyer without any difficulty. You practically say that the money is going to be thrown away, but how can that be when the very object of raising it is to preserve the property for the purpose of taking advantage of its increasing value. That object is distinctly set forth in the Memorandum of Association which lies before me. (Cheers.) I fail to see how we are going to throw your money away when the objects we have in view are limited to the purposes set forth in that Memorandum. We cannot work the mines without your consent, and to commence mining operations with the small amount we are going to raise would be absurd. We never contemplated any such thing. We simply wished to save the property and prevent it from being dilapidated, the buildings from being destroyed, and the machinery from being carried away piecemeal. You say we ought to have done this before, but how could we when we had nothing to do with the management of the concern? (Laughter.) We only took it up at the last because nobody else would. It was in a state of collapse, and who are you going to blame for that? You had better sue the old directors, and, let me tell you before you begin, that most of them are dead.

Mr. BOYDELL: That would be your duty.

THE CHAIRMAN: Not at all. Our business is not to engage in lawsuits, but to do what we can for the benefit of shareholders. (Cheers.) I agree with every word that has fallen from Mr. Alfred Thomas with respect to your remarks, which I think are very injudicious, and are likely to benefit no one, not even yourself. (Hear, hear.) If your view is to depress the shares you will fail, for they are as near zero as they possibly can be; but, on the other hand, if you want to obstruct us in going on doing what we can for the benefit of the shareholders, and if you have no faith in us, your most practical mode of getting rid of your doubts, difficulties and fears, would be to sell your shares.

A THREEPENNY SHAREHOLDER.

As you only gave threepence for them (so I am told), and you have been offered in this meeting 1s. a share, you would make a substantial profit by selling them. (Laughter.) We know where the incentive to this opposition comes from. You talk about the sale of this property being put into the hands of "independent parties." We know who they are, and we do not intend to place ourselves in their hands. (Cheers.)

Mr. CLUFF: Like Mr. Alfred Thomas, I have been surprised at the line of conduct pursued by Mr. Boydell, and have been at a loss to conceive what he is driving at, but I think he has told us to-day. His object is, if possible, to prevent the directors from carrying out the scheme they have in view, and to force this affair into the market. I think shareholders will agree with the board, and will support them in not parting with a very valuable and extensive property, which some day may prove most remunerative, if not for mining, still for agricultural purposes. (Cheers.) The one object of this gentleman in coming here seems to be to destroy the propositions of the directors, but if the shareholders keep together and support the board they will reap any value their estate may have in the future. (Cheers.)

The motion was carried—all the shareholders present voting for it with the exception of Mr. Boydell.

The CHAIRMAN: I hope we shall be able to put before you a scheme which will be very much to your advantage. I am in communication with parties now who assure me that they will go into the enterprise and take every share that the shareholders will refuse to accept in the new company and give a fair price for them. In that case I think we shall be able to go on with the concern in a business-like way.

THANKS TO ONE WHO HAS DONE MUCH FOR THE COMPANY.

Mr. C. HINGSTON: I beg to propose a vote of thanks to the chairman for the manner in which he has conducted the meeting. Whether in the field of politics, or of commerce, there are sure to be some dis-

sentients. I very much regret the tone which Mr. Boydell has adopted at these meetings. He called upon me, and showed me a scheme of his own, and I told him that I would support him if I found reason to do so at the meeting in a bold and open manner; but after having had the advantage of hearing the explanations of the directors, I support their scheme in opposition to that of Mr. Boydell. (Cheers.)

Mr. Marston seconded the motion, which was carried.

Mr. Alfred Thomas: We have been accurately advised, I believe, by Mr. Holmes, our solicitor, and I know that the courts of law have no sympathy whatever with wreckers.

The motion was carried unanimously.

The Chairman: I beg to return you my most sincere thanks for this compliment, which I do not appropriate to myself, but share with the whole of my colleagues. I hope that we shall continue to give you as much satisfaetion in the future as we appear to have done in the past.

The mecting then closed.

MINING IN CORNWALL.

(FROM OUR CORRESPONDENT.)

During the past week, in consequence of the drop in the price of tin, the mine share market has been rather dull, and shares have been generally lower. The fall was quite unexpected, and came even with a surprise to those who ought to know how things are going. No special reasons can be assigned for it, although rumour has it that shipments from the east will be very heavy this month. The tumble was most unfortunate, for at the beginning of the week there was every prospect of increasing activity and higher prices, but, alas, with the fall things again became quiet. However, on Wednesday night a fresh stir was again apparent in the share market, and wheu it was known that tin had rallied about 20s. a ton the price of shares became firmer and hopes again raiscd for active business. One of the ends in Carn Brea is reported to have fallen off in value, and although the shares in this mine have been largely dealt in, they fell from 14 to 12¾, closing about 13. The fall in Cook's Kitchen shares of about 10s., is owing to the drop in tin, and not to any failure in the mine, for the bottom of the mine continues to steadily improve, and au important discovery is expected very shortly in the 294 west. From the report of Capt. Josiah Thomas, Dolcoath Mine still looks well, and the disposition shown by some shareholders to scll, is due to the threatened increase of imports from the Straits, and not to any deterioration of any points in the mine. Wheal Bassets have continued strong, and have advanced to 8s. A rich part of the lode appears to have been missed in the driving of the 170-fm. level, and this is said to be the reason for the advance in the price of shares. West Seton has been very little injured by the explosion of the boilers which happened on Friday in last week. Shares fell slightly to 5½, but have since recovered to 5¾. The bottom of the mine is reported to have improved. Mr. Pincing (the Government inspeetor) is very properly making a thorough investigation into the cause of the explosion, and his report is anxiously awaited for by many. The outlook, with regard to mining generally, here, now that the price of tin has slightly goue up, is encouraging. The accounts of Cornish mines at the present moment are in a very satisfactory condition.

MINING MACHINERY

Of Latest Approved Designs as developed in American Practice.

The ultimate success of the African Goldfields must depend on large economical Mills, crushing the maximum quantity of ore with the minimum outlay for fuel and labour.

As an illustration of what can be done with superior machinery reference is made to the Montana Company's Mill. This consists of three rock-breakers, 60 stamps and 24 Frue Vanner concentrators. It crushes daily 120 tons of hard quartz, burning six cords wood (3 tons coal) per 24 hours, and employs 15 men in the 24 hours. The engine has been run four months at a stretch without once stopping.

The following extract from the "Engineering and Mining Journal" shows the difference between Fraser and Chalmers' Mills, and those of less experienced firms :—

"STAMPS AND STAMPS.—The El Callao Company has two mills of 60 stamps each; the new one supplied by Fraser and Chalmers representing the best modern designs and workmanship. Both mills are run under one management, and the old mill has been much improved on its original condition.

"Old Mill crushed 31,770 tons in 48½ weeks, cost 24.60 fcs. per ton.

"New Mill crushed 29,000 ,, 25 ,, ,, 8.60 fcs. per ton.

"New Mill will probably crush 60,000 tons in 51 weeks. The rock is a very hard quartz."

The cost of freight and erection is nearly as high for a poor mill as a good mill. The difference in first cost between ordinary mills and the best mills can be made up in the extra saving on a month's run. The large masses of low-grade ore in Africa cannot be worked to a profit with expensive fuel and labour except by improved mills. The days of small mills and rich rock are numbered, as proved by experience in all other goldfields.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, FEBRUARY 16, 1889. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

THE TRANSVAAL LANDS CO., LIMITED.

AN EXTENSIVE AND VALUABLE PROPERTY—VALUABLE FOR MINERALS AND FOR AGRICULTURE—VIEWS OF MR. PERCY S. BOULT.

THE first ordinary general meeting of the company was held at the City Terminus Hotel, on Tuesday, to transact the ordinary business of the company. Notice was hereby also given that immediately after the ordinary general meeting an extraordinary meeting of the company would be held, when the subjoined special resolution will be proposed.

RESOLUTION.

"That the articles of association of the company be amended as follows, viz. :—By the addition of a further clause between clauses 8 and 9, to be numbered 8A. Clause 8A.—The company may at any time by special resolution sub-divide the shares in the capital of the company, or any of them, in such manner as may seem expedient. Clause 23.—By inserting the words 'in the usual common form,' after the word 'deed.' Clause 24.—By omitting the word 'or' in the sixth line, and also the last phrase in the clause, from the words 'in their absolute discretion,' down to the end of the clause. Clause 49.—By inserting the words 'not fully-paid' after the word 'shares' in the first line of the clause."

W. J. Thompson, Esq., chairman of the company, presided.

Mr. A. W. HERON MAXWELL (secretary) read the notice calling the meeting.

MANAGER ABOUT TO LEAVE FOR THE PROPERTY.

The CHAIRMAN: Gentlemen, we have convened you some two months before the time at which we would have been obliged otherwise to hold our statutory meeting, in consequence of some verbal alterations which the Stock Exchange requires in our articles of association. As regards the company I, of course, have nothing to tell you beyond what that you yourselves know. We have every reason so far to believe that we have founded a company which is likely to be one of great success, and in which you will all have satisfaction in being shareholders. I had hoped that Mr. Percy Boult would have been present to say farewell, and in fact I expect him every moment. (Mr. Boult shortly afterwards entered the room.) He will leave us next week. All his arrangements have been made, so that he may begin prospecting the lands, especially upon which he has reports that gold and other metals are to be found, and we hope in the course of six months we may be able to give you information which will be satisfactory to every one of you.

ARTICLES TO BE ALTERED.

The alterations which we want to bring before you—or rather the principal one, is after clause 8 in the articles of association, which will give the directors power hereafter to sub-divide the shares. It has been represented to us that possibly the foundors' shares may become of very large value, and that it would be satisfactory to the shareholders if there existed a power of sub-dividing the whole of the shares in the future, and, therefore, we propose to you a resolution, namely, the addition of clause A: "The company may at any time by special resolution sub-divide the shares in the capital of the company, or any of them, in such manner as may seem expedient." Our idea is that the shares so divided shall not carry a vote that would upset the voting power, but that no one has a vote who does not hold a full founders' share as at present existing, or a full ordinary share: but the shares if sub-divided for the convenience of shareholders would not increase the voting power. I think you will quite approve of that. The next resolution (clause 23) is purely verbal: "Each transfer of a share shall be by deed, and shall be accompanied with such evidence as the directors may require to prove the title of the transferor." The Stock Exchange propose that we should insert the words, "in the usual common form" after the word "deed." It is a mere verbal alteration. Clause 24 reads, "which are not fully paid-up, or to any person to whom they object." They omit the word "or" in the 6th line, and also the last phrase in the clause, from the words "in their absolute discretion," down to the end of the clause. Then in clause 29, by inserting the words "not fully paid" after the word "shares" in the first line of the clause. It reads now "the shares which for the time being shall be registered, the shares not fully paid up to be included." Those are the only alterations, and I beg to propose that that resolution be adopted by the present meeting.

A SHAREHOLDER seconded the motion, which was carried unanimously.

The CHAIRMAN: Our friend Mr. Boult has now arrived. He leaves us next week, and I will ask him to speak for himself. I hope he will not give you too glowing a report so as to raise your expectations too high, but tell yon that we have really the prospect before us of something that it will be an honour and a pleasure to belong to.

PROPERTY DESCRIBED.

Mr. PERCY BOULT: I had no idea till this minute that the chairman was going to call upon me to address you, and I beg you will excuse me, because I am speaking under a certain amount of difficulty. I have a terribly bad cold, which is my punishment for remaining here a fortnight later than I intended. I will now proceed to tell you something about the property in which you are shareholders. As you are aware, there are 87 farms in all, having an area of something like

600,000 ACRES.

These farms have been very carefully selected in years past by the original owner, not only from his own information, but from information which was given him at that time, and some years afterwards, by his great friend, Carl Mauch, a very celebrated geologist, and the discoverer of the Lydenburg and Tati districts. They were so selected that not only were they purchased by the former proprietor with the view to their agricultural and 'grazing' value, but also with the possibility of their auriferous or other mineral value being largely increased in the future. I may tell you that it has been absolutely impossible for the Chevalier to in any way prospect or develop such an enormous tract of country as is now the possession of the Transvaal Lands Company. It would be a work of very great time and of enormous personal supervision, not to speak of a considerable amount of expense, but what he was able to do he did, and I am happy to inform you that wherever he (and I may say myself) sent parties to prospect these farms (and these parties were conducted by, and worked under, the supervision of one of the bestand most reliable men in the Transvaal—Mr. Edward Button)—wherever we have looked—and that is something like over six farms, or more—we have on every farm found

FIRST-CLASS INDICATIONS OF GOLD-BEARING QUARTZ,

and not only that, but it is within my knowledge that upon these farms (I am only speaking of this small portion of the property) there are also good indications, and not only indications, but several deposits of galena or silver-lead ore, besides also argentiferous copper. With the permission of the directors, I may tell you that it is my intention on arriving there as far as possible to ascertain for myself, and prove for myself, the authenticity and the truthfulness (which I may mention I do not doubt) of the reports which have been furnished upon those farms by Mr. Edward Button. After that I then shall attack the farms as conveniently as may be, and as speedily as may be, in the Waterberg, and other districts.

LESS THAN THE TRUTH ABOUT THE TRANSVAAL.

Of course you have all heard how enormously rich the Transvaal is, and what an immense future is opening up for it, but I doubt that even what you have heard from principally indirect sources i anything like an approach to the truth of the immense wealth of thasconntry. The Waterberg district is known to but a very few people, comparatively speaking in the Transvaal. I, myself, have been there, not through all portions of it, but some portions of it, and although I am not a mining expert, and do not place such credit to myself, but at the same time I have seen quite sufficient in that district to be able to believe that the property belonging to the company is of enormous worth, and I know that in a short time it will be developed. Quite apart from that, you are all aware that the influx of prospectors, of diggers, of capitalists from all countries into the Transvaal is increasing to an enormous extent, and that if this company were to remain quiescent, which it is certainly not its intention to do, and attempted to do no work whatever on the property, the value of that property would be enhanced considerably, simply by the discoveries which are being made daily or weekly in the neighbourhood of some of these properties, and by the increase which is being given to the value of the properties lying all around the lands of the company.

POLICY OF THE COMPANY.

That intention is, as speedily and as carefully as possible (because, in prospecting, the greatest possible care must be taken, for very large sums of money can be spent in that way for little or no purpose) to surely and carefully develop the properties, and as far as possible not by the aid of its own capital, but by the aid of the capital of people who will only be too glad on certain terms to develop the resources of the land, and by so doing improve the position of the company in every possible way. (Cheers.) I regret that I have been unable to leave before now for the seat of operations. But it has been impossible. There have been so many things that

have required to be finished, that the directors have allowed me to stay. I have, therefore, been delayed a fortnight longer than what I anticipated, but on the 22nd of this month I hope, and in fact I am certain, to be sailing for the Transvaal, and I have little doubt in my own mind that before the next meeting, which will be held here, you may almost have the certainty of hearing of good reports and good results from some of your properties. I must inform you that it is not only your interests I have at heart, but the interests of my father-in-law, the Chevalier, and my own, which are very large, and whilst I shall endeavour to do my utmost with the support—the cordial support of the directors—to prove the property, it will not only be your interests, but those of the Chevalier and myself, which I shall also be forwarding. I thank you for your patient hearing and attention. You must pardon my inability in speaking better, but what with the cold and other things it has been rather difficult. I think I may say, with some degree of assurance, that your next gathering will be a pleasant one, and that you will have good news from the property ; and I do not think that any of you will be dissatisfied for one moment in having taken shares in the Transvaal Lands Company, which I believe to be one of the most genuine properties which has ever been brought here from the Transvaal. (Cheers.)

MR. BOULT THANKED.

The Chairman : Gentlemen, I think I shall carry you with me in thanking Mr. Boult for the account he has given of our probable future. He has told us that he has not only the interest of the company at heart, but that which is generally deemed by men the strongest impulse—his own interest and the interest of his father-in-law and family. I am quite sure that from the little I have known of Mr. Boult, and from what I have heard of my son, who is resident in Pretoria, that Mr. Boult is one who will study the interests committed to his charge as well as those which are personal to himself. His anticipations, we trust, will be most fully realised, and I think I may say from you that we wish him health and strength, so that he may be able to send us those accounts which he has led us to expect, and that all will tend to the future benefit of this company. Mr. Boult, we wish you every prosperity. (Cheers.)

Mr. Boult : I thank you most sincerely.

A Shareholder : On the fourth paragraph of the second page it says :—"The area of the farms extends to upwards of 800 square miles, and there is every reason to believe from the reports, which can be seen at the office of the company, that the properties are rich in auriferous wealth. Gold-bearing reefs (conglomerate and quartz) have already been discovered on several of the farms." On the last paragraph it says :—"The directors content themselves with pointing out that the total cost to the company of the 87 farms is under 5s. 9d. per acre, whereas they are informed that the value of land in the neighbourhood of several of the farms has risen very largely in excess of this." Has anything occurred to strengthen that opinion, and when will the share certificates be issued ?

The Chairman : The share certificates will be issued to-morrow. Mr. Boult can perhaps answer the other matter.

Mr. Boult : The paragraph has reference to what I have already mentioned. It is upon one or other of these five or six farms I have mentioned to you, which I did not think of at the time—a conglomerate and also quartz reefs have been discovered, and also not only the usual quartz reefs, but the solid blue quartz reefs, and we have every reason to believe (at least I have) that they should be, when opened out, of very considerable value. The assay which is mentioned was an assay taken from this particular conglomerate reef, but I do not attach the least importance to assays. Still, not only was it assayed, but I myself assayed it afterwards roughly, and was perfectly satisfied. The stone was taken from the top of the conglomerate reef, and I made it give in the pan something like 10 to 12 dwts., which is the usual average of the same sort of conglomerate reef found in the Witwatersrand. Wherever we have looked at present we have proved the existence of gold-bearing reefs, but I need not tell you that the mere fact of that presence is not sufficient until they have been tested practically and thoroughly, and it is my intention to prove them, not merely by assay, but by a practical and proper crushing at the mill of some tons, and I shall have a small three-stamp prospecting mill with me for that purpose. I have been in the vicinity of the particular farms, and may tell you that some of them close by have been let for infinitely more than 5s. 9d., but it is of no use to attach too much importance to that. There is no doubt we could pick out of our property acres which would be worth infinitely more than 5s. 9d.

The Chairman : In the prospectus you see we tell you that there are reports on the property, which can be seen in the offices of the company's solicitors, and if any shareholder would like to do so he can consult his own convenience in the matter. We started on what we believed to be a first-class undertaking, and I hope in the course of 12 months this will be proved to your satisfaction. (Cheers.)

A Shareholder : Is there much land under cultivation ?

VALUE OF THE LAND FOR AGRICULTURE.

Mr. Boult : In some parts it is considerable, by the Kaffirs and the Kaffir chiefs, and on our properties and in our vicinity, and although we did not think it necessary to put it in the prospectus, yet, from one Kaffir chief alone, my father-in-law had the offer of 3,000*l.* in cash for simply the agricultural rights of one farm of under 6,000 acres. From that one man alone (and the offer still obtains) I should imagine there was the offer of 3,000*l.*, or 10s. per acre, for the purchase of the agricultural rights of one farm only. Also, we did not think fit to draw special attention in the prospectus, or to make too much of, the fact which I shall now mention—we have on many farms a large number of Kaffirs, so that whenever we want Kaffir labour we shall be able to get it cheaply, which is a great feature in the interests of the Transvaal Lands Company. (Hear, hear.)

A Shareholder : I beg to propose a hearty vote of thanks to the chairman.

The Chairman : Pray delay your thanks until we are able to bring something substantial before you. (Laughter.)

The motion was nevertheless carried unanimously, and the proceedings closed.

THE LIVINGSTONE GOLD MINING CO., LIMITED.

HARMONY ON BOTH SIDES OF THE TABLE—MAJOR COTTON RETURNS—"RIGID ECONOMY"—AN EXPERT PREDICTS DIVIDENDS FOR THE SHAREHOLDERS.

A special meeting of this company was held on Thursday, at Winchester House, to consider the re-construction scheme of the directors and the committee of confereucc.

Mr. J. D. Pattullo (secretary) read the notice calling the meetiug.

The Hon. Harold Finch-Hatton (director) apologised to the meeting for the unavoidable absence of his brother, owiug to bad health, and to sickness in his family.

At a later stage Mr. J. Durie Pattullo (secretary) read a letter from the Earl of Winchilsea, which is as follows :—

Grasse, A.K, France,
11th February, 1889.

To the chairman of the extraordinary general meeting of the Livingstone Gold Mining Company, Limited, to be held 14th inst.

My dear Sir,—I beg you will express to the shareholders present at the general meeting on the 14th my deep regret that I am prevented by severe illuess, which confines me to my bed, from being present myself on an occasion of so much importance to the future welfare of the compauy that I had arranged to return to Eugland purposely for it.

The same reason, however, which prevents my return prevents my writing at any length, and all business is in fact forbidden me. But the uniform kindness which the shareholders have always extended to myself personally makes me feel my enforced absence at this critical point the more keenly.

I force myself, therefore, to write these few liues to say how strongly I should have felt it my duty to advocate the policy of a re-construction, and how much I hope it will commend itself to the shareholders, and am convinced they should by all means adopt it.

Both the company and the board have derived great advantage from the labours of the powerful committee appointed by the shareholders, and the full examination they have been able to make into the position and prospects of the company from a point of view outside that of the official management.

The presence, too, in England of three gentlemen who have recently, and independently of each other, visited the company's property, (this giving double weight to their opinion) goes far to meet the desire expressed very naturally, at the last general meeting, for an independent report furnished from local data by an eye-witness.

Aud iuasmuch as these three gentlemen, the board and the committee are, as I understand, unanimous in the opinion that our property is a valuable one, and affords a prospect of paying us well if we speud a comparatively small sum on deepening our shaft. I think the shareholders can come to only one conclusiou, viz., that advice so given ought certainly to be acted upon.

The outlay necessary to equip the mine with first-rate machinery has already been incurred ; the expenses of management have been reduced to a minimum ; the capital of the company is not a large one, and a very small change for the better in the quality of our stone (a change foreshadowed in fact by our latest reports) would enable good dividends to be paid.

I need not point out that under any scheme of re-construction all shares, including vendors, must contribute equally, or suffer forfeiture, nor that if we abandon the property it is more than likely that (supposing these gentlemen's opinion of its value is correct, we may be playing into the hands of persons, if such there be, at Charters Towers, who would be very glad to have a valuable mine, fully equipped with machinery, knocked down to them at the nominal price always realised at a forced sale, rather than consulting our own interests.

Under all the circumstances, speaking both as chairman of the company and as an individual shareholder, I earnestly trust the joint advice of the committee, the experts, and the board will be unanimously adopted, aud that with the uew compauy a new and prosperous era may dawn upon our enterprise.

I am, my Dear Sir,
Yours truly,

Winchilsea and Nottingham.

Mr. Chemery, in the regrettable absence of the noble earl, was asked to preside.

WHAT HAS HAPPENED SINCE THE LAST MEETING.

The Chairman : Geutlemen, I extremely regret Lord Winchilsea's absence, and I am sure it is a great regret in which you will all coucur. I feel a difficulty in following so able a speaker as the noble earl, but with your kind forbearance I will endeavour to place the state of the mine before you in as brief and concise a manner as possible. I think it will interest the shareholders if I run back to the last time we met here, and tell you briefly what has transpired since then. You are aware on that occasion they had not very good news to tell you of the propnerty. You are also aware that a committee was appointed to confer with the board as to what was the best thing to be done under the circumstances, and furthermore to see if a competent person could be found in order to proceed to Charters Towers in the interest of the Livingstone mine and any other Queensland properties having their boards of direction in London. Their labours in this direction were futile, as these boards did not feel disposed to join in the combination in order to defray the expenses. Therefore that scheme was abandoned.

TRUTH ABOUT THE MINE.

The first thing that occupied the conference, if I may so call it, was to arrive at the truth about the mine, and they were greatly aided in this by having as one of the members of the committee Mr. Thomas Mills—a very practical man, and from whom we had the most practical suggestions. They were furthermore very fortunate, inasmuch as Mr. Ross Robinson and Mr. Wallace, jun., were then on their way home from Charters Towers, and at a very early stage in their proceedings the committee had the benefit of their advice and assistance. I would, on the part of the directors, thank the geutlemen of the committee for the way in which they have worked with the board, the time they have spent, and the very valuable counsel aud assistance

they have rendered. I am very pleased to see my friend Mr. Ross Robinson here to-day, and I trust he will be kind enough to give us an account of the mine as it appeared when he last saw it. Mr. Ross Robinson has had from 25 to 30 years of experience in mining, and I, personally, would prefer Mr. Robinson's opinion upon mining in Queensland to any authority that could be obtained in London, because you will have from him the practical suggestions of a gentleman who is fully acquainted with mining in Queensland.

RIGID ECONOMY.

It was felt by the committee, or the conference, that the primary matter of urgency (if you will allow me to call it so) was the strictest curtailment, or the most rigid economy, and we were fortunate enough in imbuing the Queensland directors with this view, and they were good enough to retire. (Laughter and cheers.) We have appointed Messrs. Miles and Co., of Charters Towers, as our managers there, at a salary of 200*l*. per annum, and I may mention that we have heard on all sides the best accounts as to their ability, as to their being honest, practical, and energetic men, with a vast experience in mining, and we feel perfectly safe in their hands. In view of these economies we proceeded to reduce the area of the property from 25 to 18 acres, thereby reducing the number of men employed to only nine, and we have furthermore given Messrs. Miles instructions to get down the main shaft as quickly as possible. If you will look at the diagram furnished you, you will perceive the No. 2 underlie shaft has been sunk in order to cut the pay-shoot in the lower levels, which we have already had in the upper levels—the No. 1 underlie shaft—and we have every hope that we shall cut this lode. With reference to

THE PROSPECTS OF THE MINE,

I join this board, gentlemen, as a discontented shareholder, and therefore anything that I am doing in your interests I am also doing in my own, for all interests are identical. (Cheers.) I am a holder of some thousands of shares, and can assure you that I consider the Livingstone Mine to-day, or its prospects, as good as when the shares stood in the market at over par. (Cheers.) I have been a miner myself, and a miner in Queensland, and the first requisite for such a man is to have patience. When I tell you, gentlemen, that the Day Dawn P.C. was abandoned when considerably more development work had been done upon it than we have done in the Livingstone, and that this mine has since paid some hundreds and thousands of pounds in dividends, I think my hope in the Livingstone is justified, and the more so because—and I would particularly move your attention to this—the strata of the Livingstone Mine is identical with that of the Day Dawn. I am very pleased to say, for my brother directors and myself, that this view is being borne out.

LATEST BY CABLE.

When we elected to call this meeting we cabled out to the Messrs. Miles, advising them of the date, and desiring them to cable to us the latest news with reference to the mine, and we have received the following cable :—

"Have sunk 13 ft. since last cable; total present depth, 336 ft. At the bottom of the shaft the width of the vein is 30 ins. The vein is compact and well-defined; quality of ore improved: expenses for the month, 140*l*."

(Cheers.) You will kindly note that what I said about economy is borne out in this cablegram, and I am glad to see from your expression of applause that your view with regard to the cable is the same as that of the board. (Hear, hear.)

MAJOR COTTON'S RETURN.

I am very pleased to see that Major Cotton is at the table again. (Cheers.) In deference to the wish of many of the shareholders, in which I myself join, Major Cotton has accepted a seat at the board. (Cheers.) In conclusion, I can only say this, that if you accept this scheme of re-construction (which I may tell you has had the most careful consideration of the committee you yourselves have named, and which our solicitor will read to you), it will be the most earnest endeavour of the board to do all they can to overcome what we consider have been the first difficulties in starting the mine, and that by rigid economy (for that is the thing we are going into before everything else) we shall not be very long before we make the Livingstone a paying mine. (Cheers.) I think the meeting will be very glad to hear a few words from Mr. Ross Robinson. (Cheers.)

VIEWS OF AN OLD AUSTRALIAN MINER.

Mr. Ross Robinson, who was heartily received, said: Mr. Chairman and gentlemen, I shall have great pleasure in telling you what I know about the Livingstone Mine. I may say that I have been connected with it from its discovery 13 or 14 years ago, down to within a few months ago, when I made a close personal inspection of the property for my own information and that of friends. I have to say that in my opinion the mine is undoubtedly a permanent one. (Cheers.) The reef is well-defined between two clean walls; in fact it is a true lode. The quartz is usually highly impregnated with mineral, and of a quality that usually carries with it gold. You have also very excellent crushing machinery upon the ground, and the mining plant generally is of a good description. The mine itself is but little developed, and in my opinion it is well worth spending more money upon in order to develop it to a great extent.

THE MINE FORMERLY RICH.

Some years ago when the mine was in its infancy it did turn out, to my own personal knowledge, gold excellent in quality, and large as regards quantity, and was highly remunerative. Since then you appear to have got into a poorer description of quartz, and I can fully endorse what has fallen from the chairman, that the celebrated Day Dawn P.C. was abandoned at a time when it was much further developed than the Livingstone is at present, and yet many thousands of pounds profit have been divided since the mine was taken up by strangers. I do not like to say too much, but I know no reason why the Livingstone should not occupy a similar position in the time to come. At all events, for myself, and for my friend Mr. Mills whom I represent, I am more than willing and anxious that the company should be re-constructed on the basis indicated by the directors. As to winding up the concern, I consider such a course would be suicidal. I have already said you have very excellent crushing machinery and plant generally, but it is situated about 18 miles from the goldfield—from Charters Towers—and in case of winding up that machinery would have to be carted to Charters Towers, and even then it would not bring anything like a proper price.

ON THE WATCH.

The chances are that in Charters Towers you would get nothing like a proper price for it. I am certain the people there would be pleased if you would abandon the mine. In fact, I, for one, would like to know if such be your intention. (Laughter.) There is always a certain amount of doubt in developing a mine, but it is impossible to foresee the result, but I am of opinion that you have a very good chance of getting dividends before long, especially if the programme indicated by the chairman is carried out, namely, to prospect in an economical and efficient manner for the lost shute of gold which you are proposing to do now by sinking the underlie shaft. I am certain the work will be done as cheaply and as efficiently as possible under the direction of Messrs. Miles and Company, than whom no men stand higher in the district for probity and intelligence. If it is agreed upon that the company should be re-constructed before very long, the shareholders will be very glad that they have done so, because I believe this will yet be a dividend-paying mine. (Cheers.)

A Shareholder: We have suffered from the want of water; is there any prospect that this can be supplied from any permanent source?

Mr. Ross Robinson: I have told you that you have excellent crushing plant on the ground, and the only difficulty has been with reference to the water. Mr. Mills obtained a permanent supply, although he was in a much more difficult position than you are, and the question is merely one of expense, and one of not very great expense. I do not think the making of dams in that particular locality would be expensive. In my statements I have taken that into consideration.

A HEARTY SUPPORTER OF RE-CONSTRUCTION.

Mr. Arthur Heiron: While I think we must all regret the absence of the Earl of Winchilsea, I do not think we have suffered in the shape of a lucid statement from the chairman. It does Mr. Chemery very great credit — the way in which he has represented the state of affairs. I am, personally, more acquainted with mines in America, but think that after the testimony borne by the board, the committee and the local experts, shareholders may confidently take up this scheme of re-construction, and I, for one, will certainly support it. (Cheers.) It is a great feature that harmony once more prevails in our midst. I am glad that Major Cotton—(cheers)—my co-director in a mine in Colorado, has joined the board, and perhaps that acquisition of strength will be the means of early producing those favourable results that we all desire. I think it will be a great pity to abandon the mine when so much good development work has been done. The Day Dawn Company is suffering at present from poorness of ground just as we are, but that is no reason why they should give up, and I think that they and we have both better days in store for us. (Cheers.)

The Solicitor here read the agreement, the substance of which we printed last week.

The Chairman: I have now the pleasure of moving the following resolutions :—

1. "That it is desirable to re-construct the company, and that with a view thereto the company be wound up voluntarily, and that Mr. James Durie Pattullo be and he is hereby appointed liquidator for the purpose of such winding up."

2. "That the said liquidator be and he is hereby authorised to consent to the registration of a new company, to be named 'the New Livingstone Gold Mining Company, Limited,' with a memorandum and articles of association which have already been prepared with the privity and approval of the directors of this company."

3. "That the draft agreement submitted to this meeting, and made between this company and its liquidator of the one part, and the New Livingstone Gold Mining Company, Limited, of the other part, be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to section 161 of the Companies Act, 1862, to enter into an agreement with such new company (when incorporated), in the terms of the said draft, with such (if any) modifications as the said liquidator may approve, and to carry the same into effect."

4. "That the remuneration of the liquidator be and is hereby fixed at 50 guineas."

Major Cotton: Gentlemen, I have much pleasure in seconding these resolutions.

A Shareholder: I notice a clause which gives the secretary power to treat with shareholders for shares over 10,000 in number.

The Solicitor: It is 10,000 shares altogether. In case so many shareholders do not join the re-construction scheme it gives him power to rescind the agreement because it cannot be carried out.

The Chairman then put seriatim resolutions Nos. 1, 2, 3, 4, which were carried amidst cheers.

THANKS.

The Chairman: I should like to say one word of thanks to Mr. Robinson for his attendance here, and for the lucid explanation he has given with regard to the mine. I think it is of the greatest importance to have the opinion of a practical, as distinguished from a theoretical miner.

Sir Charles Craufurd: I beg to propose a vote of thanks to the chairman for his able and courteous conduct in the chair, and at the same time express a regret, in which all of the shareholders will join, that the Earl of Winchilsea is unable to be present, and at the sad cause of his absence. We hope that at the next meeting he will be amongst us again.

The resolution was seconded, and carried unanimously.

The Chairman: On the part of the board and myself I beg to return you my most sincere thanks, and I can only say that as long as we have your confidence we shall do our best, and our motto will be "rigid economy." (Hear, hear.)

The proceedings then closed.

PRINCE ROYAL MINE.

ENCOURAGEMENT TO PROCEED—SELF-DENIAL OF THE MANAGEMENT.

A meeting of this company took place on Tuesday, at the Offices in

Gracechurch Buildiugs, Gracechurch Street—Walter Pike, Esq., presided.

The notice calling the meeting was read by the SECRETARY, Mr. C. B. Parry.

ACCOUNTS.

The statement of accounts from October 23rd to February 11th showed that the labour costs were 208*l*. 17s. 4d., and the merchants' bills, 61*l*. 16s. 8d., and the interest and discount, 4*l*. 8s. 8d.; total, 275*l*. 2s. 8d. The tin sold, 10 cwt. 2 qrs. 4 lbs., realised 28*l*. 19s. 5d., leaving a deficiency of 246*l*. 3s. 3d. The liabilities over assets were 312*l*. 19s. 4d. The arrears of call were 286*l*. 18s. 6d., and the amount due on forfeited shares was 73*l*. 3s. 3d.

A special report was read which had been prepared by Capt. Bishop, as follows :—

The mine being filled with water, caused by the adit being choked and the continued heavy rains, it became necessary to first clear the adit before pumping could be resumed. The men are making good speed in clearing the adit, and I should think, in about three or four weeks from this date, the engine could be again started ; and as it may be hoped by that time the weather may be more settled, it will not take long to drain the mine to the bottom. I think the mine had better be forked out with the machinery now in position, after which you can decide what to do.—C. F. Bishop.

The CHAIRMAN : I explained what took place in regard to Capt. Bennett and his resignation of the management at the East Blue Hills meeting. The committee then asked Capt. Bishop to inspect the mine, but he has been unable to do so in consequence of

THE ACCIDENT TO THE ADIT.

The heavy rains caused the mines to be flooded. It is a negative report because Capt. Bishop has not seen the mine. He says that in about three weeks they will be able to resume the forking of the mine, and I think that will take a very short time to accomplish.

Mr. HODGKINSON : I believe there is no great amount of water in the mine. Capt. Bishop wishes to see what is really at the bottom and the end of the lode, and I think his advice the best that can be given under the circumstances.

A SHAREHOLDER : What value did Capt. Beunett put on the lode in his last report?

The CHAIRMAN : At the last meeting for a short distance it was worth about 18*l*. to 20*l*. per fm., and there it remains as it was left. They drove a little distance ; they were cuttiug plat, and the level was theu driven 8 or 10 fms. when the accident occurred. At the bottom of the shaft, when we left off sinking, the lode was worth 20*l*., but if I remember rightly it did not extend very far east or west. It was the best piece of tin ground that had been seen in any part of the mine. The

LODE WAS CONSIDERED WELL WORTH FURTHER DEVELOPMENT

in depth. The shaft was suuk in one part of the mine 20 fms., and 10 fms. deeper I imagine the Pink lode could be struck. As soon as the water is out Capt. Bishop will tell us plainly his view.

Mr. HODGKINSON : We are spending very little. There is no agent's salary now, but we have four men employed in clearing the adit.

AS TO THE ACCOUNTS.

In reply to questions by Capt. Nance, the CHAIRMAN produced the cost-sheets, and stated that the later charges were incurred before the water got iuto the mine. The 8th December pay was for work done previously, and every detail of the expenditure was on the table.

Mr. WAGSTAFF : I think you have given a very good explanation.

SELF-DENIAL OF THE MANAGEMENT.

The CHAIRMAN : I have stopped my salary for the last two months.

Mr. PARRY : I am willing to reduce the London charges.

The report was then unanimously adopted, and on the motion of the CHAIRMAN a call of 6d. per share was agreed to.

The proceedings closed with a vote of thanks to Mr. Pike for presiding.

WEST CARZISE MINE.

THE AGENT SAYS THE MINE HAS GREATLY IMPROVED, AND THE SHAREHOLDERS, AFTER HEARING HIS VIEWS, AGREE WITH HIM.

A GENERAL MEETING of the shareholders was held at the Office of the company, Graeechurch Buildiugs, Gracechurch Street, on Wednesday, to examine and audit the accounts, to make a call, aud to transact the ordinary business of the company—J. Brittain, Esq., presided.

Mr. C. B. PARRY (secretary) read the notice calling the meeting.

The report of the agent was read as follows :—

AGENTS' REPORT.

9th February.—Mitchell's eugine shaft is now being sunk below the 30-fm. level, and is within 10 ft. of the 40-fm. level. The lode did not underlie as fast as we expected, and it has only been in the shaft the last 6 ft. sinking, and is 2½ ft. wide, with a leader on the north side or footwall about 18 ins. wide, containing tin ; and, from its kindly appearance, it will no doubt improve as depth is attained. The 30-fm. level is driven east of Michell's engine shaft 28-fms. 4 ft. 8 ins. The lode has been for several fms. in a disordered state, although containing tin, but not enough to value. Behind this end, 10 fms. 3 ft. east of the shaft, we met with the Janie lode, aud opened on it 2 fms. 2 ft. 3 ins., which produced a little tin. The 30-fm. level is driven west of Mitchell's engine shaft 23 fms. 2 ft. 6 ins. In the last 15 fms. driving we have intersected several cross-braneches but not the floocan course), which are letting out water freely. The end to-day is letting out more water than I ever saw it before, which clearly shows that there is a larger lode or junction of lodes near at hand. The 30-fm. level cross-cut is driven south of Michell's engine shaft 36 fms. 4 ft., and intersected the Old Carzise lode, which is 2½ ft. wide, composed principally of quartz with red and white prian, muudic, &c., with tin disseminated throughout ; a strong and masterly-looking lode for the depth, and no doubt, when fully developed, will yield a large quantity of mineral. By extending this level west 10 fms. we shall get under the old tinner's workings, where they sunk a shaft 11 fms. 2 ft. below the surface, and the lode is all taken away for several fathoms east and west of the shaft. At this depth we found an old tinner's windlass, brace, &c., and, judging from their operations and mode of working, they must have had a quantity of tiu. In the 20-fm. level 19 ft. east of the engine shaft is the Janie lode, on which we have driven east 5 fms. 6 ins., and have had some good tinstuff from this point, but the lode is rather small. In the deep adit west of western shaft nothing has beeu done for some months, owing to the heavy rains which prevented our operations. I would strongly recommend the sinking of the engine-shaft with a full pare of men, also drive the 30 west on the engine lode, and the 30 east and west on the Old Carzise main lode ; and as soon as a comunication is made to the old meu's shaft above referred to, no doubt it will lay open a large piece of good tiu ground. Thcse operations will take about four months to accomplish, and will, I firmly believe, be attended with great success.—J. CURTIS.

The statement of accounts for the period ending January 26th, 1889, showed that the labour costs had been 595*l*. 5s. 4d., the merchants' bills 144*l*. 6s. 1d., the interest and discount 14*l*. 8s. 1d., and the total expenditure 753*l*. 19s. 6d. The tin sold had realised 94*l*., and the accounts showed a deficiency of 659*l*. 19s. 6d. The debit balance at present was 632*l*. 9s. 3d.

PROSPECTS BETTER.

The CHAIRMAN : You have heard the report aud the statement o accouuts, and I do not know that I can add anything to what has been stated in them or to the report of the agent. I think I had better leave Capt. Curtis to give you any addition to his report that he may desire. Our prospects seem to be a little more encouraging than they were four months ago, inasmuch as the captain reports to us to-day that he has received news since he left the mine that they have cut into the old Carzise lode iu the engine shaft from the 30-fm. cross-cut, and it has a kindly and promising appearance. He has hope that in the future this will increase our returns and put the mine in a paying condition. He will presently answer all questions that may be put to him, and give, as he has always been most ready to do, all the information that may be required in an intelligent and satisfactory manner. As to the accounts—we all expected that we should have a balance on the wrong side, because at the last meeting we did not make a sufficient contribution to meet our expenditure. I think we fell into a mistake at the last meeting not to have made more than a call of 6d., although the burden was made as light as possible in the interests of the shareholders. It would have been much better if we had made a call of 1s., because to-day we are left with a liability of 632*l*., whereas, if we had had a call of 1s. we should now have been minus 300*l*. of the deficiency we at present show. We must make a call sufficient on the present occasion to wipe off this liability, and if we do so it will be a great advantage to us in a variety of ways. (Hear, hear.) A call of 1s. will only leave us a small liability, and with the prospects that Capt. Curtis will hold out of an increase in the returns of tin—that if brought about will help materially towards paying our way. I will now move "That the report and accounts be passed, and that a copy, together with the proceedings of this meeting, be forwarded to each adventurer."

Mr. HODGKINSON seconded the motion, which was carried.

VIEWS OF SHAREHOLDERS.

Mr. WAGSTAFF : The chairman truly said the call of 6d. was a mistake, but I must remind the meeting that it was made at the suggestion of the captain who held forth good promises to us. I think we must all feel a little disappointed that they have not been fully realised. We were hoping to have received some benefit from the increased sales of tin, and the chairman has now told us that we have had a wire stating that that prospect is about to come off, seeing that we have cut the Carzise lode. (Hear, hear.)

THE AGENT SPEAKS.

Capt. CURTIS : I think we shall look better at the next meeting. Just after the last meeting we were cut off from the lode at the 20-fm. level, and uutil within the last fortnight we had not seen it again. The slide heaved the lode, aud we have only now got the lode in the shaft. I hope when we take down the lode we shall find it much better than before.

Mr. WAGSTAFF : You think now you have cut the lode?

Capt. CURTIS : We have the lode in the shaft, and have sunk 6 ft. The lode is soft, and has required to be timbered. We cut the lode 10 fms. away from where we lost it. I am hoping that we shall at least find it similar to what it was about the slide. If we do that the returus of tin will be considerably increased. I attach importauce to the cuttiug of the old Carzise lode. By extending the level 10 fms. further we shall be under the old tin workings, and below a shaft now down 11 fms. 2 ft. I should say that the old workers were driven out on aecount of water. I have six men driving under the shaft aud communicating it to the bottom, and when it is holed we shall be in a position to take away a large portion of the lode if it is good, but whether it will be found so or not it is, of course, impossible for me to say. Our prospects to-day are very eheeriug indeed. (Cheers.)

Mr. HODGKINSON : If tin is coming into the shaft there is certainly a very great improvement.

Capt. CURTIS : I consider it a very important point.

Mr. C. B. PARRY : The attractive point to us was that the former workers found 15 tons of tin in 17 fms. of sinking, and we thought we had only to clear out the ground, but we found that the lode had slipped away from us, but now we have come into it again.

Mr. HODGKINSON : How many men have you in the shaft?

VIGOROUS OPERATIONS.

Capt. CURTIS : Nine, and we arc paying 10*l*. per fm. I prefer saying nothing about the value of the lode until I have seen it. The lode was cut last Saturday, and it is now being worked upou day and night.

Mr. HODGKINSON : I consider that the news just received has entirely changed the prospects of the mine, and changed them for the better.

The CHAIRMAN : That is what you have been hoping to report to us for some time, is it not?

Capt. CURTIS : Yes ; we have been seven or eight months at work, and have cut it within a few feet of where I anticipated it would be cut. We are sinking the shaft with nine men about 1 fm. a week.

The shareholders then decided to make a call of 1s. per share.

They also decided, by resolution, to allow the committee to overdraw the banking account to the extent of 500*l.* if necessary for the purposes of the mine. The bankers had expressed their willingness to grant its accommodation if requested to do so.

The proceedings closed with a vote of thanks to Mr. Brittain for presiding.

EAST BLUE HILLS MINE.

A FAVOURABLE STATEMENT OF ACCOUNTS, AND A GOOD PROSPECT FOR THE MINE.

A GENERAL MEETING of the shareholders was held at the Offices of the company, Gracechurch Buildings, Gracechurch Street, on Tuesday, to examine and audit the accounts, and to transact the ordinary business of the company—Walter Pike, Esq., presided.

Mr. C. B. PARRY (secretary) read the notice calling the meeting.

The statement of accounts from the 23rd October to 11th February showed that the labour cost for the four months was 604*l.* 17s. 6d.; merchants' bills, 95*l.* 4s. 1d.; and with other items the total expenditure was 753*l.* 1s. 2d. The tin sold was 8 tons 18 cwt. 3 qrs. 6 lbs., and realised 582*l.* 15s. 5d. The liabilities over assets were 72*l.* 10s. 9d. The accounts were charged to date. The sales of tin were a week short, owing to the early period of holding the meeting.

A special report from Capt. Bishop was then read as follows :—

Baldhu lode: The 30-fm. level west on this lode has passed through some fairly good ground, from which most of the tin sold in the last quarter has been raised. The end, at present, is a little disordered by a cross-course. The lode, up to the cross-course, was worth 12*l.* per fm., therefore you may hope it will be of equal value to the west of it. The stope in the back of this level is worth 14*l.* per fm. Pink lode: A new horse whim is erected on the Pink shaft for the purpose of driving the deep adit level on this lode, which I consider to be a good prospect. This shaft is about 50 fms. perpendicular depth from surface, therefore, on the line of the lode, would be near 100 fms. deep. It can be driven for about 6*l.* per fm. There are six men driving it now. At present it is nothing to value, but as I am informed a good deal of tin has been raised from the back of this lode, further east, I think there are good reasons to hope that something good may be met with any day in driving this level. In conclusion I would remark, as the mine can be cheaply worked, a little discovery on the Pink lode would place you in a good position.—C. F. BISHOP.

BY THE DOCTOR'S ORDERS.

The CHAIRMAN: In moving the adoption of the report and accounts I would explain, in the first place, that shortly after the last meeting Capt. Bennetts, our late manager, was taken so ill that he had to consult his medical man, who told him he must not go underground again. He therefore reluctantly placed his resignation in the hands of the committee. The committee asked Capt. Bishop, of East Pool Mine, to inspect the property and report. He has been there two or three times, and has given you to-day a special report. I am sorry he is not here, but he has a very high opinion of the prospects of this mine, and especially of

THE PINK LODE,

which is the champion lode of the district. The mines to the west of our mine have raised very large quantities of tin. Our neighbour, Blue Hills, is more than paying the cost of the mine from that lode alone. The deep adit gives great scope for a discovery. The whole of the back of the lode was worked away by the ancients and a great quantity of tin raised, and from the appearances of the ground here I am of opinion that we shall soon meet with something to reward us. In the meantime the stopes we have in the 30 west furnish us with the sinews of war to carry on the concern. We meet to-day with only a liability of 72*l.*—a smaller liability than I have ever seen since the company started. We have also the prospect of a discovery at the Pink lode. I do not know that the accounts call for anything special to notice, with this exception, that I am glad to say the arrears are being reduced. The secretary states that since the notice was sent out 30*l.* has been paid. An improvement in the mine is always the best way to bring up arrears, and I believe they shortly will be wiped off.

QUESTIONS.

Mr. SIMMONS: Are the calls all good?

The CHAIRMAN: Yes, and the value of the shares is greater than the calls. There was a deep adit driving a mile away from the east level about 100 years ago, which cut the Pink lode to about 120 fms. The backs have been worked away for miles in former times.

Mr. SIMMONS: Is the agent continuing the drift?

The CHAIRMAN: At present he is driving east.

Mr. SIMMONS: Is he not driving east and west?

The CHAIRMAN: West would bring us to the Blue Hills boundary.

Mr. SIMMONS: What number of stamps have we going?

The CHAIRMAN: 24 heads is our total force, and 12 are going by water power. The water will last till about the end of May, and then we have an auxiliary steam engine. What we take away we discover fresh. We have 20 fms. more to drive to get to our boundary, and I hope that resources, will not fail us until we make a discovery in the Pink lode.

Mr. PARRY: Which way is the tin dipping?

GOOD OUTLOOK.

The CHAIRMAN: East, which is all in our favour. The prospects are very good if we make any discovery on the Pink lode. We might try the bottom of the lode by sinking deeper. I do not think there is enough prospect at present to warrant a large outlay on the bottom of the mine.

Mr. PARRY: The best way would be to follow the Pink lode in depth.

Mr. BRITTAIN: I beg to second the motion. I think there is not much ground for comment, but it is a

MATTER FOR CONGRATULATION

that the accounts are so satisfactory; in fact it must be within our knowledge that these East Blue Hills accounts have never been so favourable before. I have looked for the amount of arrears of call, and found that, properly speaking, there is only 30*l.* outstanding. I thought we should have shown a little more to our credit, but owing to the circumstances explained, we are short in a week of our tin, and I presume that no call is required, and that you expect to get sufficient tin to help us over our next quarter's course.

The CHAIRMAN: That is so.

Mr. BRITTAIN: I hope at the next meeting we shall be in a still better position.

The motion was carried.

THE CHAMPION LODE.

Mr. PARRY: I believe the Pink lode is the champion lode in the district.

The CHAIRMAN: That is so; it has given all the dividends that the district has produced. It made to the 80 in Penhall's, and then it had a dreadful heave, and we could not find it again.

Mr. PARRY proposed a vote of thanks to the chairman, especially for coming up from Cornwall in such inclement weather.

Mr. WAGSTAFF, in seconding the motion, said: I have visited the mine since the last meeting, and I must say, with regard to what Mr. Pike has said, I have great pleasure in endorsing it all. I am sure that everything is going on in the most satisfactory manner possible.

The CHAIRMAN said, in reply, that the greatest pleasure to him was to meet the shareholders under such favourable circumstances.

The meeting then closed.

THE BRITON FERRY CHEMICAL AND MANURE CO., LIMITED.

TWENTY PER CENT. DIVIDEND, WITH EVERY PROSPECT OF INCREASE—SUBSTANTIAL ADDITIONS TO RESERVE FUNDS.

THE ordinary general meeting was held at the Office, No. 9, Queen Street Place, on Wednesday, to receive the reports and accounts to 31st December, 1888, to declare a dividend, and for general purposes—Edmund A. Pontifex, Esq. (chairman of the company), presided.

The notice calling the meeting was read by the SECRETARY (Mr. J. C. Leaver), and the report of the directors was taken as read.

THREE SETS OF CHAMBERS AT WORK.

The CHAIRMAN: Gentlemen, I rise to move "That the reports and accounts now presented be received and adopted." Our operations during the past year have been conducted with such an even tenour, and have so accurately fulfilled the programme which we laid before you when we invited your subscriptions to this company, that it does not leave me very much to add to the facts which are stated in the somewhat brief report which has been presented to you. As therein stated, we got the third set of chambers into operation about the middle of the past year, and three sets have been in full and successful operation ever since. We are now making at the rate of about 1,356 tons of 61 per cent. acid per month, and the effect of bringing this third set of chambers into operation was immediately to make a substantial addition to the monthly profit previously being earned. We began in January, 1888, with 324*l.* a month, and that increased during the first six months, and when we got more completely into operation with the second set of chambers it advanced to 580*l.* per month.

1,000*l.* PER MONTH PROFIT.

In July we had the third set of chambers in operation, and the profit was then increased to the extent of 96*l.* per month, and it now averages about 1,000*l.* per month, or a little over. In the course of two or three months we shall have the fourth set of chambers in operation, and the profit will of course rise in proportion to the increase of production. We shall then be making probably at the rate of about 15,000*l.* a year, or 1,300*l.* per month. The result of our operations during the past year was to make a gross profit of 8,060*l.*, from which we wrote off 1,000*l.* for depreciation of plant; 1,100*l.* have been carried to chambers or columns renewal account, and 700*l.* to a reserve fund. The necessity of carrying a considerable amount to a chambers and columns renewal account will be manifest to you all when I remind you that what we call the acid chambers (which consist of a framework of wood, to which sheets of lead, which are united together by burning or soldering, are fixed), wear out somewhat rapidly, and the average duration of a chamber is only about seven years. They have to be renewed, therefore, every seven years, and consequently it is necessary to place a substantial sum to a renewal account.

DIVIDENDS.

We have also out of the amount of profit thus made paid an interim dividend of 5 per cent., which absorbed the sum of 1,250*l.*, and we have a balance of profit remaining of 3,927*l.*, out of which we shall recommend you to declare a dividend of 15 per cent., which will absorb 3,750*l.*, leaving somewhat less than 200*l.* to carry forward. I explained at the last meeting the mode in which we conduct our sales—that we principally sell to a few very large buyers with whom we have running contracts. Thus the elements of risk are almost eliminated from our consideration, and we can look forward with all but certainty to our calculations being verified, and to the amount of profit we may expect to make. It does not occur to me that there is any other information I can give you. The accounts are full and explicit, but if any question upon them should arise in the minds of the shareholders we shall be happy to answer them. In the meantime I will simply move the adoption of the report and accounts. (Cheers.)

Mr. JOHN GALSWORTHY (director) seconded the motion, which was carried without discussion.

ROUTINE.

The CHAIRMAN; The next business is that of the retiring directors.

Mr. BARCLAY (director): I have much pleasure in moving that Mr. Edmund A. Pontifex and Mr. John Taylor be re-elected directors of this company. I think it unnecessary to make any remarks upon the qualifications of these gentlemen, because they are all so well-known to you, and any words from me would be perfectly unnecessary.

Mr. JOHN EVANS seconded the motion, which was carried.

The CHAIRMAN, in returning thanks, expressed the hope that the company would continue to be successful.

Mr. JOHN TAYLOR also returned thanks.

Mr. T. REYNOLDS proposed the re-election of Mr. Roderick Mackay as auditor, at the same remuneration as before.

Mr. RAPKIN seconded the motion, which was carried.

The CHAIRMAN: From the statements made, I think you will see that the dividend we ask you to declare is adequate under the circumstances. It leaves us

20 PER CENT. UPON OUR CAPITAL,

which, considering that this is only our second year of working, is very good. (Cheers.) We have put by ample, but not too much, to the various reserve funds. I thiuk we have endeavoured to steer the medium course between caution and over-caution, and that I think we have arrived at about the mean of what we should do. The sums placed to the renewal account are not more than adequate, and 700*l*. has been carried to a reserve fund, which will be available for division at a future time, if desired. I will, therefore, propose "That a dividend of 15 per ceut. be declared, payable on the 2nd day of March, to the shareholders on the books of the company on the 22nd of February inst."

Mr. TRAPP seconded the motion, which was carried.

DIRECTORS CAN DECLARE INTERIM DIVIDENDS.

The meeting then was made special for the following purpose:—"That the articles of association of the Briton Ferry Chemical and Manure Company, Limited, be altered and varied by a further article, such article to be numbered 97A, and to be as follows:—The directors may at their discretion declare and pay interim dividends from time to time."

The CHAIRMAN: We arc holding this special meeting for the purpose of passing a resolntion, of which you have had due notice. From the nature of our business we can tell pretty accurately what profit we are making, and, therefore, we are able to declare safely a dividend from time to time without waiting for the annual general meeting. Our operations are not of such a sensational character that we need call you together for the purpose of performing a purely ministerial office like that. By an accident the provision was left out of the articles of association, which ordinarily give the directors the power to declare an interim dividend, and we ask you to snpply that accidental omission, and amend the articles to the extent of the resolution which I now propose. (See above.)

Mr. GALSWORTHY seconded the motion, which was carrried.

The CHAIRMAN: That concludes the business of the meeting, and I must thank the shareholders for having eome here in such iuclement weather.

GRATEFUL SHAREHOLDERS.

A SHAREHOLDER proposed a hearty vote of thanks to the chairman aud directors for the wonderful success they had already achieved, not to speak of the promised brilliancy hereafter.

The motion was carried by acclamation.

The CHAIRMAN said he wonld ask Mr. Galsworthy to express the views of his colleagues and himself.

Mr. GALSWORTHY: I have much pleasure in returning thanks on behalf of the chairman aud directors for the great confidence you have always placed in us. I hope we shall not only merit that confidence, bnt really do that which the chairman has shadowed forth—namely, make this an even morc successful company than it has already been. I hope it will be so, and assuredly what has been done already seems to afford snbstautial promise of a prosperous future.

The meeting then closed.

THE SHEBA GOLD MINING CO., LIMITED.

RESULTS OF THE ASSAYS.

7th February.—As already intimated, a large number of samples was obtained by Mr. Trench, takeu from ground at intervals of 10 ft., on the occasion of his recent visit to the mine last September; and it was decided to have all of them assayed, and the results published. These assays have now been completed by Mr. Fredcric Claudet, assayer to Bank of England, with the following results:—Drivc 1: Assays from the lode, which in September last exteuded at 60 ft. to 170 ft. from the mouth of the drive, show, for the first 90 ft., from traces to several pennyweights, and, for the last 20 ft., from 4 ozs. to 13 ozs. 17 dwts. 16 grs. of gold per ton of lode stnff. Drive 2.: Assays from the lode, extending 139 ft., aud 40 ft. cross-cut west, show from traces and a few pennyweights a gradual variation to 1 oz. 6 dwts. 3 grs. at 30 ft. in the cross-cut. In the eross-cut east on hanging wall, 140 ft., the assays vary from traces to 13 dwts. and 11 ozs. 5 dwts. at 20 ft. from winze. Drive 3: Assays from the lode, 50 ft. to 90 ft. from mouth, and 83 ft. ruu on the hanging wall, show from traces gradnally np to 1 oz. 10 dwts., and at 50 ft. from mouth, 10 ozs. 18 dwts., and at extreme west on hanging wall, 5 ozs. 11 dwts. Drive 4: Assays from the lode, extending from 140 to 174 ft. from month and 65 ft. on hanging wall, vary from traces gradually np to 2 oz. 5 dwts. 17 grs. Drive 5: Assays from the lode, 230 to 250 ft. from mouth, as far as then driven, show only traces. The absence of result in this drive may bc accounted for so far by the distance from the rich shoot. Western drive: Assays from the lode, 95 to 134 ft. from mouth, and 135 ft. additional on the strikc of the lode east, show from traces to a few pennyweights, 1 oz. and 3 ozs. per ton. The quarry assays vary in richness from about 1 oz. to 30 ozs. of gold per ton. The tailiugs assay from 2 ozs. to 4 ozs. of gold per ton.—J. M. MILNE, Secretary.

REVIEWS.

LAXTON'S BUILDERS' PRICE BOOK FOR 1889. London: Kelly and Co., 51, Great Queen Street, Lincoln's Inn.

The professions aud trades interested in these pages will again welcome the appearance of a work which has in the past merited their approbation by the fulness and accuracy of its iuformation. Above 72,000 prices are given in this issue, which was originally compiled by William Laxton. The forecast of the markets last year was very accurate, and their present position is set forth with much acumen and force.

THE MOUNT SHAMROCK GOLD CO., LIMITED.

CIRCULAR TO THE SHAREHOLDERS—TACTICS OF THE OPPOSITION.

IN a circular to the shareholders, dated 11th February, the directors say:—A report of the extraordinary general meeting held at Winchester House, on Thnrsday, the 24th ult., as reported in the MINING WORLD AND ENGINEERING RECORD newspaper, has already been forwarded to you, and you will thereby have been informed of the proceediugs of the meeting. In view of the persistent and continued agitation by Mr. Stanlake Lee and Mr. Rankin for the amendment of the articles of association of the company, as defined in their circulars and in the requisition lodged with the company, the directors thiuk it right to call yonr special attention to the fact that the resolution for amending the articles of association was abandoned by Mr. Rankin and Mr. Stanlake Lee at the meeting, and the dirccors having themselves submitted the resolution as amended to the meeting, that Mr. Stanlake Lee and Mr. Rankin voted against such resolution. It is difficult to discover an adequate reason for such a change of front on the part of these gentlemen, and the directors leave the shareholders to draw their own conclusions therefrom. The directors think it right the shareholders should be informed that the support accorded to Mr. Stanlake Lee and Mr. Rankin from the general body of shareholders, as evidenced by the proxies deposited with the company, had at the date of the meeting fallen from 29,606 shares (the number siguing the requisitiou) to 15,094. This fact tells its own tale. The shareholders will doubtless be surprised to learn that a proxy for 60,000 shares owned by Mr. George Lloyd, the vendor of the company, was lodged by him in favour of Mr. Rankin and Mr. Matthews. It will be seen that without this proxy Messrs. Rankin, Matthews, and Stanlake Lee would have been utterly powerless either to pass the resolution for the amendment of the articles, without the assent of the board, or to carry their second resolntion for the removal of the London directors, and it is difficnlt to see how consistently with the attitude they had previously assumed, they could in any way usc the votes of the person against whom the proccedings, which they had advocated, must be taken, without placing themselves under an obligation which would be calculated seriously to bias and iufluence their subsequent proceedings against him. It may be that this fact accounts for the uuexpected change of front to which yonr attention has already been called, and the directors therefore hope that the shareholders, who have given proxies in favour of Mr. Rankin and Mr. Matthews, will calmly consider the position of these gentlemen, iu view of the state of affairs as now devcloped, and if they think fit, send the secretary a letter cancelling the proxy previously given by them. Mr. Woodyatt has not yet arrived in England, but is expected to reach London on the 13th inst., so that the directors look for his presence at the adjourned extraordinary general meeting. I am directed to send for your information a copy of the last report received from Mr. Smyth, one of the local directors.—C. C. RAWSON, Secretary.

— December 10th.—In company with Mr. Simpson I visited the mine about 10 days since. Our former manager, Mr. Lalonde, having resigned to take the management of the Lady Florence Mine, 4 miles from Shamrock, his cause for leaving us was he is to receive a higher salary, and he will have an easier mine to work, the lodes being well-defined and the gold frec. We appointed Capt. James Higgins in his place. Capt. Higgins has spent a long life time mining, aud is a good hand crecting machinery. Having some knowledge of the machinery for concentrating, which he erected for Mr. H. Tozer, we eonld not do better than secure his services. We have ordered and have nearly completed four Brown and Stanfield concentrators. Capt. Higgins is now bnsy getting the timber framing together to receive the paus. They are very good pans, and are being nsed in all the colonies. Our intentions are to run the tailings from the battery to the pans, which are made to be so regulated as to concentrate to any degree of richness. Aftcr concentration assays will be made of the concentrates and tailings, and if we find the percentage of bismuth high, will ship the concentrates to Loudon, if not sufficiently high we will erect a revcrberatory furnace, and get from Rockhampton a chlorination plant; there are two firms who do a large business in constructing plants of this description, but you must destroy the bismuth by chlorination. The ton of ore sent to you lately is a fair sample from about 30 tons stacked at the mine. At the mine the damage doue by lightning has been repaired. The lode iu the bottom is heavily charged with mineral, aud at present has more the appearance of a lode. We have now a good hanging-wall, and will soon have a good footwall; the orc at the deepest part of the workings prospects very well, and is extending in length; should we find the pans answer we will remove the portable eugine to the flat, and treat the tailings separately from the ore passing through the battery. We have been suffering from want of water for a long time, and have had to place a small plant at Chowie Creek and force the water to our dam, 3,000 ft. distant. Siuce our visit heavy thunderstorms have taken place, carrying away one end of our dam; this can be repaired quickly, and we are now entering on our wet season, so the expense of paying three engine drivers at the creek will be dispensed with. The water going into the boiler was very dirty, and we ordered a stoppage of the mill for a few days to clean the boiler, which I have since learned was in a very bad state. Since the boiler has been re-set and the stack removed higher up the hill we have had plenty of steam and a saving of fuel. The line of railway from Mungar to Gayndah is getting on slowly, but there are nearly 20 miles of rails laid; the balance will be laid abont February; this will bring us within 27 miles of Monnt Shamrock. The next section will come within about 5 miles of the mine. Tenders for this section will soon be called. You will before this reaches you have in London Mr. Woodyatt, who has gone to London on business for the old company. Mr. Woodyatt is one of the discoverers of the Mount Shamrock Mine. The board here formerly consisted of four persons. Mr. Lissner failing to attend, his seat was declared vacant. Mr. Cowell has left the colony for Egypt, England, and America. The control of the mine is now in the hands of Mr. Simpson and myself. In my next I shall be able to report the working of the additional machiuery. —W. SMYTH.

THE YURUARI CO., LIMITED.

OFFER OF THE BALANCE OF UNISSUED SHARES—THE EUREKA PROPERTY.

12th February.—The directors having now allotted to every applicant the shares to which he was entitled as a shareholder in the New Chile Company, in terms of promise made at general meeting, now offer to sharcholders, at the nominal price of 1s. 6d. per share (6d. paid, leaving a liability of 2s. per share), the balance of unissued capital. The directors, in view of the favourable reports received from the mines, and notwithstanding the fact that Mr. Aikman has again taken charge, regret that many shareholders have recently sold their shares. During the last four months nearly 200,000 shares have been sold by old shareholders, the result being that, notwithstanding large purchases by the directors and their friends, the price has not proportionately improved. The directors are pleased to state that after lengthened negotiations the basis of an arrangement has been arrived at with the liquidator for the transference of the Eureka property to this company. The directors have also under consideration a scheme for the formation of a separate company to purchase, besides the Eureka property, two concessions immediately adjoining belonging to this company. Mr. Aikman is now vigorously pushing on operations underground, and increasing returns of gold may be safely anticipated. The directors, as proposed by Mr. Sneath, intend renewing the debentures maturing on 1st July next for five years, and as they will then be in a position to offer to the shareholders as collateral security the uncalled capital to the value of 100,000*l*., besides being a first charge on all the property of the company, there will be absolute security. The directors have instructed Mr. Aikman vigorously to recommence sinking the water shaft, and extending the levels therefrom so as to connect with the Cenicero shaft, which will effect a great economy in working, as some of the westward levels from the Cenicero shaft are now within 100 ft. to 200 ft. of the line of the water shaft. The ground lying between the two shafts is known to contain lodes of great value (Capt. Rogers expects any day to cut the payshoot), which, when worked both by the Potosi Company (the former proprietors) and afterwards by the Chile Company, yielded from 5 ozs. to 6 ozs. to the ton. The directors also intend to purchase and send out to the mines the most approved machinery for the treatment of the large amount of tailings, estimated at over 100,000 tons, now on the property, in terms of the recommeudation of the chief engineer (Mr. Clark). The assays of these average nearly 7 dwts. per ton, so that this should constitute a large additional source of revenue. The directors consider it is desirable the work should be proceeded with, as Capt. Rogers states that till then the returns obtaiued will be no fair criterion of the capabilities of the mine. The mill, with the addition of the double cams, promises when fully equipped to give better results, besides being capable of treating from 4,500 to 5,000 tons per month. Applications will be received up to and including the 18th inst. and the shares will be allotted pro rata in the event of applications exceeding the amount proposed to be placed.—F. R. ROBIN, Assistant Secretary.

QUEBRADA RAILWAY, LAND AND COPPER CO., LIMITED.

INTERIM REPORT.

12th February.—The past year has been devoted to carrying out the projects which were laid before the shareholders in considerable detail at the last general meeting. Copper production: Shareholders will remember that under its contract with the Societé des Métaux, the company has sold its output of copper for the three years, 1888, 1889, and 1890, aggregating, say, 13,000 tons. The precise quantities fixed by the contract are: 1888, 3,960 tons; 1889, 4,500 tons: 1890, 4,500 tons; total, 12,960. The operations at the mines and smelting works have been confined to the necessary work to carry out these deliveries, coupled with a due regard to works of exploration and development, which are designed to place the company in a strong and iudependent position when said contract has run out. The whole of the copper contained in the 1888 production cannot be here before the end of March or early in April; but the board will hasten the making up of the accounts as much as possible, and will convene the annual general meeting directly the balance of deliveries has been effected and the accounts of the year balanced. Thus the shareholders will be placed in possession of the profits of the year at the earliest practicable date, which under the present system of prompt cash payments, which is a favourable feature of the existing contracts, should not be later than the month of May. Shareholders will be pleased to know that the board has already paid all arrears of interest on debenture stock, and proposes at the end of the present month to discharge the arrears of interest due on the preference shares, so that when the general meeting is convened there will be no claims on the balance available for distribution, except those appertaining to the share capital of the company for the year to which the accounts will refer (1888). Railway department.—The receipts from general traffic have been satisfactory, and are about the same as in the previous year. The relaying of the railway with new steel rails of 50 lbs. section has progressed steadily, and at the 30th December only 19 miles of 30 lbs. rails remained in the permanent way. These will all be replaced during the year 1889, in time for the opening of the new railway, which will conneet the company's line with the City of Barquisimeto. This valuable feeder to the company's railway is being made by a separate company, and the Quebrada Company will work the whole system when the extension is opened to public traffic. The board has also availed itself of the opportunity afforded by the improved financial position of the company to make a large and necessary addition to the company's rolling stock and floating plant. New 3*l*. shares: The Court having approved of the resolutions receutly passed by the shareholders for calling in the old certificates for 10*l*. shares, and issuing in lieu thereof new certificates for 3*l*. shares (three for one), the final technicality to make the same legally operative was effected (in the form of registration at the office of Joint Stock Companies) this day. The board therefore takes this opportunity of informing the shareholders that the new certificates will be ready for delivery on and after the 20th inst., in exchange for the old, and the latter may be forthwith sent to the company's office. The works progress favourably in all departments in Venezuela.—N. G. BURCH, Managing Director.

THE CALAVERAS CONSOLIDATED GOLD MINING CO., LIMITED.

February, 1889.—The directors have instructed me to draw your attention to the following extracts from a letter, dated 18th January, 1889, from Mr. Lawson, the resident mining manager, which they consider to be of a highly encouraging nature:—I have great pleasure in being able to say that the work on the mines to the present time is thoroughly satisfactory, and also the ore bodies developed by the work done fully confirms estimates of value of property, I am entirely assured of a great success. Pipe has all been shipped from San Francisco, and is at terminus of R.R., and two loads are all ready on the ground, and balance will be here within a week. The water tank at head of pipe line is built, and carpenters are now at work erectiug the air compressor building; I expect to have the air-compressor on the ground within 10 days, and if nothing unforeseen occurs to retard operations, I intend to have the Ingersoll drills at work within 30 days. As I have been able to get on with present accommodations, I have done nothing in the way of buildings, either for living or office; when necessity requires it I will do so. I prefer putting the money into the mines developing ore bodies, rather than into accommodations such as buildings, &c., which I can for the present go on well enough without. On the 1st of January tunnel was in 533 ft. I stopped work on account of the rock getting so hard that it was too expensive to continue by hand labour. I have used every endeavour to expedite the erectiou of our drill plant so as to get to work again as soon as possible. In the tunnel I am still driving cross-cut ahead; have 35 ft. of ore mixed with slate and quartz that will average $4 per ton in free gold and 2 per cent. sulphurets, value, $50 per tou; vein is very soft and easily mined, little or no blasting required. It is of the greatest urgency to drive tunnel ahead, run cross-cuts to and through the vein, so that we shall have the mines opened, and capable of supplying the mills (when erected) with unlimited supply of ore; this policy carried out, will afford the company great satisfaction in being able to estimate a loug time ahead with certainty the product of the mines. The directors desire to point out that according to the opinion of the managing director, the 35-ft. cross-cut has been driven in what he considers to be the poorest portion of the mines. It is, therefore, highly satisfactory that such an enormous ore body should show an average assay value of 1*l*. per ton, especially considering that the estimated cost of working will not exceed one-third of this sum. Accordiug to a cablegram, dated 24th December, 1888, the first cross-cut driven from the shaft at the north end of the Santa Cruz claim, and at a depth of 100 ft. from the surface, showed the lode to have a width of 20 ft., and au ore value of 2*l*. per ton.—T. ROBERTS ORD, secretary.

CORTEZ MINES, LIMITED.

THE directors have received the following report from Mr. Welsh, the superintendent at the mines under date of January 26th:—The work done on the mines for past week was as follows:—Boss Tunnel: Advanced 26½ ft. Main Tunnel: East drift advanced 8 ft.; ground continues unchanged. Capo breast: Incline sunk 4½ ft. Middle tunnel—West drift upraise: Stoped 10 tons of ore of an average value of $50.00 per ton. Upper tunnel—West winze: Stoped 12 tons of ore containing 55 ozs. per ton silver. North-east upraise: In this section of the mine we have cut into what seems to be a new ore body. We cut into quite a large cave, on the hanging-wall of which is found a very rich ore. The footwall is completely covered with large pieces of ore which have become detached from the ledge overhanging them. Assays taken from the ore in cave show it to contain 870 ozs. silver per ton. About 25 tons of ore have been removed from the cave, and as far as can now be seen of the surroundings show a strong ledge of very high-grade ore; 67 tons of ore extracted. North-west or Big Porphyry: Stoped 42 tons of ore of an average value of $150 per ton. Ore hauled to mill, 90 tons. Ore treated at mill, 135 tons, containing 75 ozs. silver per ton. Bullion shipped, 13 bars, containing 11,048 61-100 ozs. silver and 10 ozs. gold. Also shipped 30,000 avoir. pounds of base ore, containing 3,000 silver.

The directors have received the following cablegram from Mr. Weuban, the managing director at the mines:—"Last month's profit was $34,000; the mines look splendid."

HOLLOWAY'S PILLS.—Nervousness and want of Energy.—When first the nerves feel unstrung, and listlessness supplants energy, the time has come to take some such alterative as Holloway's Pills to restraiu a disorder from developing itself into a disease. These excellent Pills correct all irregularities and weaknesses. They act so kindly, yet so energetically on the functions of digestion and assimilation, that the whole body is revived, the blood rendered richer and purer, while the muscles become firmer and stronger, and the nervous and absorbent systems are invigorated. These Pills are suitable for all classes and all ages. They have a most marvellous effect on persons who are out of condition; they soon rectify whatever is in fault, restore strength to the body and confidence to the mind.

PRESS OPINIONS OF THIS CIRCULAR.

"Financial World," 12th January.

"Mr. Thomas Thompson's literary proclivities, like the properties he writes about, seem to be exhaustless. His circular has now reached colossal proportions. But that in itself is nothing, and it is not on this ground that we recommend the perusal of his excellent work. It is in consequence of the reliableness of the information therein contained. We have been readers of it ever since he commenced its publication, and we do not remember ever meeting with a single recommendation which has turned out the reverse of what he predicted. This is about the highest compliment that can be paid to the writer of any circular issued for the guidance of the uninitiated, and happy ought the clients of Mr. Thompson to be who have so trustworthy and prescient a guide. A new departure has been made in the circular by the introduction of an claborate list of South African mines, their capital, the amount issued, their past and present prices, the dividends paid, quantity of ore crushed, number of stamps at work, and the extent of the property. Although he gives a full list—in fact, one of the best and most complete we have seen—he only recommends those which are worthy of attention. Should his advice on these turn out to be as accurate as that with respect to his other advices—and we have every reason to believe it will—his circular will be the best stock and share vade mecum extant."

"Mining World," 12th January.

"The January issue of Mr. Thompson's Mining and Investment Circular conveys a large amount of useful information, which cannot fail to be of interest to the public. Well arranged, and written in readable style, it is difficult, once the perusal is commenced, to set it down until the last page has been reached. Mr. Thompson takes a hopeful view of the present year, which he justly states has opened in a prosperous fashion. He is able to point triumphantly to his recommendations in the latter part of last year, and to the substantial rise shown upon many of them at the present time. He believes that this will be a booming year in all descriptions of mining speculations, and he is not without reasons for the faith that is in him. Of course, he believes principally in the mines of Colombia, which to a large extent, he has been the means of introducing to public notice—notably the Orita Company, the shares of which have (vide his list) risen from 27s. 6d. last January to 41s. at the present time, thus fulfilling not the least remarkable of his earlier predictions. He speaks very highly of Tetuan, in which, without doubt, there has been an enormous business, and market opinion points to a still further rise in a future that is neither dim nor distant. He gives a great deal of information respecting the somewhat mysterious mines of South Africa, and an excellent list for reference. He is not unmindful of the claims of other companies, and has much to say repecting promising concerns, such at New Emma, Eberhardt, Denver, and several Venezuelan Mines. The special article on 'The United States of Colombia' is well worthy of perusal, and the whole production, as we have said, will both interest and instruct the investor."

"Mining World," 2nd February.

"Mr. Thomas Thompson's Mining and Investment Circular.—The appearance of this circular will be welcomed by a large section of the public, who have come to regard it as the embodiment of much useful information and shrewd advice. Mr. Thompson does not profess to see further into the ground than other people, but his forecasts in respect to the probable advance of the shares he has recommended have been singularly accurate. Notably has this been the case with Tetuan shares, which from half a crown have advanced to half a guinea, and, in his opinion, look like rising still further. He takes up his parable again with respect to the Colombian Mines, which he was largely instrumental in introducing to the public, and specially mentions Orita—the December return from which is hourly expected. He does not forget Colombian Hydraulic Company, and a new concern which will be out in a few days, and which is being syndicated in the House. Lengthened reference is made to El Cana Mines, which are being worked by the Darien Company, registered in 1887, and whose chief offices are at Liverpool. Of South African Companies he gives in terse language a general synopsis of all the news that has come to hand since the issue of his last Circular. He condemns the action of the Committee of the Stock Exchange for not giving facilities to deal in these shares, which are now largely operated in on the Paris Bourse. He gives a map of the Witwatersrand Mines, which must prove useful for reference. We quite agree with Mr. Thompson in his estimate of Indian mines, the improvement in which has not escaped his attention, and in order to impress this view upon the public he has quoted the list which appeared in our columns early in the year, showing the actual position of all the mines and what they have done from the commencement in the way of gold returns. Altogether the circular apart from the recommendations which it gives to investors, and which are worthy of all consideration, should be read for the information it contains, which has been compiled with much industry and with commendable accuracy.

"Pump Court," 23rd January.

"We have before us the Mining and Investment Circular for the fortnight ending January 8th, of the judicious and well-esteemed broker, Mr. Thomas Thompson, of Angel Court. This circular is fast assuming the proportions of a very respectable journal, and the information contained in it is palpably the work of oue who knows what he is writing about, instead of the padding and mere hash up of stale news that we find in many a so-called weekly (or is it weekly?) newspaper. A paragraph iu the circular attracts our attention. Mr. Thompson modestly suggests to his readers that it is hardly fair that those taking advantage of the advice contained in his circular should transact their business (the value of which they were helped to the knowledge of by the circular) through the other brokers. Every honourable man will admit the truth of this. It certainly is not fair, but we go further and say it is not always safe. Between the time of the publication of the circular and the time when the reader determines to operate, many things may occur, and the master mind whose practised intelligence and experience is ever on the alert, is more than ever needed as a guide. No good ever came of stealing other peoples thunder, aud you can never tell where you may be landed if you make use of another man's brain without being guided by him at the final process."

"Stock Exchange Times," 12th January.

"Mr. Thos. Thompson's Mining and Investmeut Circular.—We have before us a copy of the issue dated January 8th. It is really most valuable for investors as well as spceulators, containing, as it does, so much information which has never before been published in so complete and convenieut a form. A very interesting feature of this circular is a complete list of South African Mines, giving the uame of each, amount of their respective capitals, amount issued, the pricc of the shares, aud the sum for which the mines are now selling their property, dividends, crushings, and result obtained, together with the address, name and address of the secretary or agent, and chief office, besides notes upon 40 different concerns, and advice with regard to them. There is also a very exciting report on the mines of Cana, translated from a recent work published in the Spanish language. Mr. Thompson's circular is, without doubt, the best which has yet been published by a London broker, and it would not be surprising to see it take a high place even in the financial press."

"Stocks and Shares," 12th January.

"We have been favoured with a copy of Mr. Thompson's Mining and Investment Circular, which appears to us to be, as a broker's circular, one of the most marvellous of the day. It now reaches 28 pages, and is replete with information of an interesting and withal a reliable character. One of the most interesting parts of the circular will be found in the notes on African mines, which are more complete and apparently better founded than we have yet seen even iu the newspapers devoted to this portion of the Stock Markets. Those of our readers interested in mining shares will do well to write for a copy, the perusal of which will amply repay them."

"Financial Times," 11th January.

"Mr. Thomas Thompson's Mining and Investment Circular, which is issued fortnightly, will be found very useful to investors, as the information given is put forward in a remarkably complete form."

"Money Market Review," 12th January.

"Mr. Thomas Thompson's January Circular covers, within a comparatively small space, an exceptionally large amount of information. A feature is made of African mines and, as these are now being largely dealt in, Mr. Thompson's circular will doubtless prove very interesting."

"Financial Chronicle," 5th January.

"There has been a gradual rise in Tetuans during the last few days, probably on the strength of favourable reports from the property. On the same grounds, they will no doubt see another advance before the close of the account."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"The Capitalist," 12th January.

"Mr. Thomas Thompson's Circular for January contains a review of the Mining Markets, which is written with a fulness of knowledge, and is drawn out in a decidedly interesting style. The remarks on South African shares are well worthy of perusal, as they treat in great detail on the subject of absorbing interest at the present time amongst those interested in mining matters. There is a good chapter on Hydraulic Mining, which leads up to a consideration of the Tetuan mine and its present position. Mr. Thompson confidently recommends these shares for an important rise."

"Stock Exchange," 12th January.

"We have to acknowledge the receipt of Mr. Thos. Thompson's 'Mining and Investment Circular' for January. Mr. Thompson's circular becomes more complete with every month, and he may fairly claim that his forecasts have been largely justified by the event."

"Life," 6th December.

"In our advertisement columns will be found Mr. Thos. Thompson's Monthly Circular, which contains useful information to intending investors."

"Citizen," 1st December.

"Clearly there are advantages in the process known as hydraulicing over all other classess of gold mining. Hydraulic mining, as Mr. Thompson, in his 'Mining and Investment Circular,' points out, consists only in the disintegration of auriferous gravel with the help of an enormous quantity of water falling from an immense height through pipes or hose, and the automatic collection of the gold by means of the rough bottom, into which it sinks, of a sluice down which the gravel passes, together with the water used in its treatment. The system has the advantage over quartz mining in the large quantity of so-called gold dirt, which can be dealt with at the time, and the extremely low cost of the operation, seldom exceeding more than one penny to threepence per ton, thus yielding profits from ground which, under any other system, could not be made to pay. In this way and under this system it is not surprising that the Tetuan gold shares have risen accordingly, and judging by what the *Financial News* says, that 'The Tetuan will, before long, take its place among the dividend-paying list,' and the *Money Market Review*, that 'the confidence in the Tetuan gold shares appears to be well founded,' the anticipation is not unlikely to be realised."

"Stocks and Shares," 15th September.

"The last issue of Mr. Thos. Thompson's Mining and Investment Circular is as readable, and, as appears by the rise in prices of the last few days, as reliable as ever. Mr. Thompson is showing himself both a capable writer and a good adviser on all matters connected with mining."

"Mining News," 5th December.

"The recent issue of Mr. Thos. Thompson's circular maintains that supremacy over other periodicals of a similar kind, which has made it so well and so favourably known amongst the investing public. We notice Mr. Thompson still gives considerable prominence to Tetuans, and justly so; both he and his followers are to be congratulated upon the firm market position held by these shares, and the favourable prospects of a further advance."

"Society Herald," 17th December.

"Mr. Thomas Thompsou, of 8½, Angel Court, Throgmorton Street, publishes a circular respecting mining stocks in general, to peruse which is a 'liberal education.'"

"Capitalist," 1st December.

"Mr. Thomas Thompson's Circular gives an excellent review of the mining markets. Great emphasis is laid upon the prospects of Colombian mines, and of Tetuan in particular. This is the most recently started hydraulic mine of the district. The Colombian Hydraulic shares are worth 32s. and Oritas 40s. These are neighbours of Tetuan, and beginning to show results of great importance. Mr. Thompson looks forward to see these mines greatly advance in price, and he predicts that as soon as the Tetuan Mine is fully equipped with the necessary appliances the shares will rapidly overtake the others. News of importance is expected daily, which may send the shares up like a rocket."

"Railway News," 1st December.

"In Mr. Thos. Thompson's Mining and Investment Circular of the 24th ult., a feature is made of hydraulic mining, of which Mr. Thompson appears to have had considerable experience, as well as of South African Gold shares, respecting which a considerable amount of information is afforded."

"Court Journal," 6th October.

"Among 'outside dealers' in stocks and shares Mr. Thomas Thompson is fast mounting to the first rank, and those who have business to transact in his way, especially mining shares, would do well to write for one of his investment circulars. These contain a large amount of useful information, besides some very readable articles upon a 'Marvellous Country,' which appears to be as extraordinary as regards its mineral wealth as it is little known. In many cases, as may be proved by former issues of this Circular, many shares recommended at only 1s. or 2s. in price have subsequently reached as many pounds."

"Court Circular," 17th November.

"That there are outside brokers of undoubted reputation goes without saying, and in naming Mr. Thomas Thompson, 8½, Angel Court, Throgmorton Street, we name one who has been established a good few years, as may be seen by referring to the Directory. Mr. Thompson periodically issues a mining and investment circular, in which he gives both information and advice, the worth of which may be gathered by the high ecomiums passed upon it by the leading financial papers."

"News of the World," 7th October.

"One of the best Mining and Investment Circulars which have yet been published is that issued by Mr. Thomas Thompson, of 8½, Angel Court, London. It gives reliable information upon no less than 56 different mining properties, besides a comprehensive article upon other stocks, including Foreign loans, railways, Americans, &c., and an article upon the United States of Colombia, a country which it is thought may prove an El Dorado to those possessing the energy, capital, and knowledge requisite for successful mining in any part of the globe. Those interested in mining shares especially will do well to obtain a copy."

"Pictorial World," 7th February.

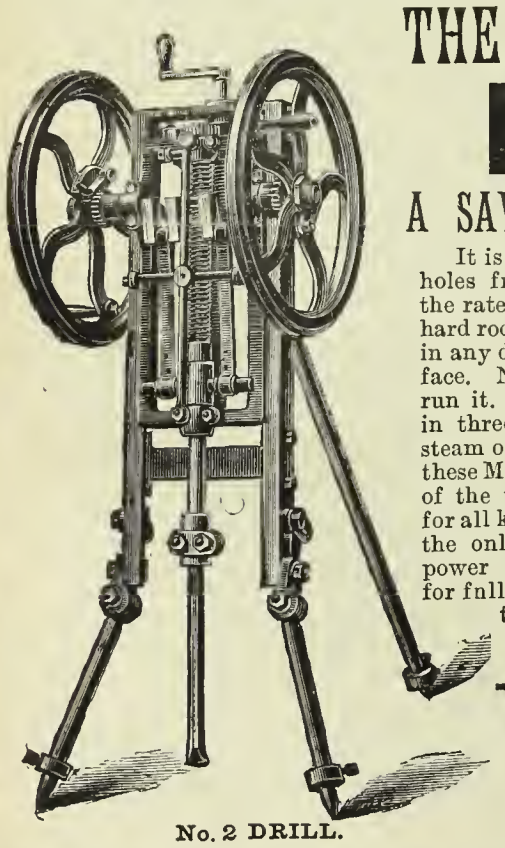
"Every two or three weeks there is a Mining and Investment Circular published by Mr. Thompson, of 8½, Angel Court, which, if the financial papers know anything, is invaluable to those interested in mining speculation. The last number, just issued, is rendered additionally attractive and valuable by four maps of the South African mining districts, which will be most interesting to the thousands who are now rushing after mining shares."

"Whitehall Review," 7th February.

"In the 'Mining and Investment Circular,' issued on the 28th ult. by Mr. Thomas Thompson, he suggests to his readers that 'it appears hardly fair that those taking advantage of the advice contained in this circular should transact their business through other brokers.' Considering that this gentleman is an acknowledged expert in mining matters, this seems only just; but, on the other hand, as the circulation of the circular is, we believe, 100,000, we hardly see how Mr. Thompson could transact the business of so many clients."

"Bullionist," 17th November.

"We have received Mr. Thos. Thompson's Mining and Investment Circular for the month of November. The articles upon 'South African Mining' and the 'Stock Exchange' show that the writer has put himself in possession of a vast amount of almost exclusive information relating thereto. On another page will be found an extract upon 'Hydraulic Mining and the Tetuan Gold Mines,' in which, like the generality of the Mining Market, Mr. Thompson appears to place much confidence."



No. 2 DRILL.

THE INGERSOLL DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND LABOUR.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in three sizes, and can be worked by steam or air if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made. Send for full description, testimonials, &c., to

SECRETARY AND OFFICES.

Mr. CHS. EGGERS, 4, EAST INDIA AVENUE, LONDON, E.C.

THIS Company has been formed to acquire and work the extensive hydraulic gold mining properties known as "Las Brujas," situate in the department of Tolima, in the Republic of Colombia, in the neighbourhood of the "Orita" and the Colombian Hydraulic Company's properties. The concession for Las Brujas has been granted by the Colombian Government to Mr. W. Cooke, of Honda, in the Republic of Colombia, an English resident engaged in commercial pursuits, who has agreed to transfer his property direct to this Company.

The Mining Grant covers an area of about 6,400,000 square metres, or 1,500 acres, of which 750 acres are free from any compensation for surface damage, the remaining 750 acres being subject to payment for surface damage only. 400 acres which have been lately surveyed are stated in the engineer's reports to contain an average depth of 20 yds. of gold-bearing gravel, immediately available for hydraulic operations.

The reports, extracts from which are annexed, state that the grant throughout is a free washing gravel, composed almost exclusively of disintegrated quartz and free from pipe-clay and boulders. Too much importance cannot be attached to the absence of these two impediments, which have proved so great a hindrance to the rapid development of many hydraulic mines in Colombia.

Taking the results of surface washings only, the returns show respectively:—

Taken from the summit ... 0 dwt. 4.60 grs. equal to 9d.
" valley of the creek Salinas ... ... 1 " 8 " " 5/4
Taken from the Naranjo Valley 1 " 16 " " 6/8
} per cubic yard.

or an average of over 1 dwt. (about 4s.) per cubic yd., which is equal for the above-mentioned 400 acres to a yield amounting to several millions sterling.

How far this yield is in excess of that of other alluvial mines is shown by the following table:—

Colombian Mines, average yield—
Colombian Hydraulic ... ... 9d. to 11d.
Orita ... ... 4d. to 5d.
} per cubic yd.
LAS BRUJAS ... highest 6s. 8d., lowest 9d., average 4s. 3d.

Californian Mines—

Smartsville	about	19½ cts.	equal to 9¾d.	per cubic metre.
Blue Tent	"	15 "	" 7½d.	" "
North Bloomfield	"	4 to 6½ "	" 2½d.	" "
Gold Run	"	4½ "	" 2¼d.	" "
La Grange	"	2½ to 15 "	" 4½d.	" "
Dardanelles	"	13½ "	" 6¾d.	" "
Sam "Christian"	"	25 "	" 1/0½d.	" "

It will thus be seen that only two of these mines show returns above the lowest yield of Las Brujas.

A great portion of the precious metal extracted from Las Brujas consists of *coarse* gold, resembling small nuggets, which fact will at once prove the high value of the gravel.

Samples of both coarse and fine gold extracted from the Las Brujas gravel can be seen at the offices of the Company.

The average cost of extracting gold from gravel at the Orita Mine, which is close to, and, in many respects, similar to that of Las Brujas, amounts to 1½d. to 2d. per cubic yard, which would leave a nett profit of about 7d. per cubic yard on the lowest, and a far larger profit on the average yield of Las Brujas gravel.

This fact alone will prove the great value of Las Brujas, if it is borne in mind that, with a yield of only 4d. to 5d. per cubic yard, the Orita Company is earning about 40 per cent. on the whole capital of that Company; and whereas the Orita Company has only acquired about 30 years' lease of the property it is working, and has to pay a royalty of one-seventh of the gross amount of gold produced, this Company will be the absolute owner of the most valuable portion of the properties included in its grant, free from any royalty or charges, except the usual Government tax, which is of trifling amount.

The report states moreover, that Las Brujas enjoys exceptional advantages in the matter of water supply; the Sabandija, a river about five miles distant, will give a plentiful supply of water at sufficient pressure at all seasons, which supply can be brought on at a very moderate outlay. Pending the construction of the necessary works for this purpose, sufficient water to work one monitor can be obtained from the Salinas Creek, which skirts the property, increased where necessary by water from Naranjo and Jimenes.

One monitor will wash at least 3,500 cubic yards of gravel per day, at a cost of from £200 to £300 per month. Taking the lowest yield of Las Brujas gravel (9d. per cubic yard), *one monitor*, it is estimated, will earn a profit of over £35,000 per year, or exceeding *Fifty per cent.* on the whole capital of this Company.

There is an ample supply of timber on the property, and a fall of several hundreds of feet for the tailings.

The climate of the district in which the property is situated is very healthy, and particular attention is drawn to the fact that European labourers can easily perform a full day's work. Abundance of labour is readily obtainable at the wages customary in the district. The average temperature of the locality is about 75 deg. Fahrenheit, its altitude being about 3,000 ft. above the level of the sea.

Under the mining laws of the Republic of Colombia no grant for gold mining can be made until the experts appointed by Government have visited and inspected the property, and are satisfied that gold exists there in workable quantity. This has been done in the case of Las Brujas before the grant was issued.

The mining laws of the Republic of Colombia admit foreigners to all the advantages enjoyed by natives, as is testified by the undisturbed working of Colombian properties owned and developed by English capital.

A report for 1887, lately issued by the British Foreign Office, contains the following facts:—

"The total amount of the precious metals which have been produced in Colombia since its conquest in the 16th century may be estimated at $653,000,000 or £130,600,000 ($5 being equal to £1 sterling).

"In almost every part of the country and at different altitudes, alluvial gold is to be found, but more especially in the valleys following the direction of rivers.

"The gold and silver veins are situated on mountains generally in healthy localities, under a moderate and sometimes cold temperature, where there would be no difficulty in obtaining supplies of provisions. It may here be observed that Colombia has no seasons, a perpetual spring (or summer) exists everywhere, varied only by its dry and rainy periods. Foreigners can acquire mines on the same conditions as natives."

In conclusion, the directors wish to draw attention to the fact that alluvial mining is free from many of the disadvantages and uncertainties of ordinary mining. The Company is dealing with a property combining an ascertained quantity of gold-bearing gravel with a stated average percentage of precious metal. The cost of working has been well established by the experience of well-known neighbouring alluvial mines. Consequently this property is almost entirely removed from the area of speculation, the amount of profit depending only on the amount of gravel treated.

Under the circumstances, the directors feel justified in recommending the shares of this company as a safe and profitable investment.

The Vendor will receive *No Cash* until a sufficient sum has been set aside for working capital, the Company only undertaking to pay the sum of £500 in cash to cover the expenses of the assignment of the property. The purchase consideration is £45,000, payable, except as to the £500 above-mentioned, wholly in shares or partly in cash and partly in shares of the Company, and a contract dated the 10th day of January, 1889, has been entered into direct between Mr. W. Cooke, the owner of the property, of the one part, and Mr. A. Aylard, as Trustee for this Company, of the other part. The directors understand that certain arrangements respecting the raising of the Company's capital have been entered into which will be discharged by the vendor. Applicants for shares shall accept the foregoing as sufficient notice within the 38th section of the Companies Act, 1867, and shall waive any further compliance with such section with reference thereto, or with reference to any other contracts, within the meaning of the section, which are or may be entered into.

A copy of this contract, together with the memorandum and articles of association of the Company, may be seen at the offices of the solicitors of the Company.

Applications for shares should be made on the form accompanying the prospectus, and forwarded to the secretary at the Company's offices, or to the bankers of the Company.

If no allotment is made the amount received on application will be returned in full.

Prospectuses and forms of application can be obtained of the secretary, at the offices of the Company, or of the bankers, broker and solicitors.

London, February 11th, 1889.

The List will Open THIS DAY (SATURDAY), the 16th February, and will Close on or before Noon on MONDAY, the 18th, for both Town and Country.

PROSPECTUS.

THIS Company has been formed to purchase, as from the 1st January, 1889, and as going concerns, the nitrate grounds La Patria and La Palma, situated in the Province of Tarapacá, in the Republic of Chili, comprising in all about 350 Peruvian estacas (equal to about 2,300 acres), together with the works belonging thereto, and to carry on, there or elsewhere, amongst other things, the business of manufacturers and exporters of nitrate of soda and iodine.

Both properties are on sidings of the Nitrate Railways, by which the produce is carried to port. The approximate output of both oficinas in 1888 was quintals 1,828,000, at an average cost of under 5s. per quintal, delivered in launches or alongside steamer at the port of shipment.

The Company has sold for like delivery during the present year about 1,000,000 quintals of nitrate, at a price of 6s. 6d. per quintal. As the bulk of this nitrate is for delivery during the first six months of the year, which is the slack season on the coast, an estimate based on this price may be considered a safe one for the whole year.

The directors estimate that the average cost of production of nitrate for the year 1889 will not exceed 5s. per quintal, thus showing a profit of about 1s. 6d. per quintal.

This profit on a production of 1,800,000 quintals gives £135,000 per annum, which, added to a further estimated profit of £20,000 on the manufacture of iodine, makes a total of £155,000 per annum, eqnal, after allowing for agency, commission in Chili, direction, and other expenses, to upwards of 22 per cent. on the capital of the Company.

The business will be taken over as a going concern as from 1st January, 1889, and will include all machinery, plant, nitrate in process of mannfacture, and everthing on the properties, except caliche and nitrate of soda and iodine, the extraction or manufacture of which was completed before the 1st January, 1889, and coals, consumable stocks, stores and provisions, as on that date. The caliche, coal, stores and provisions will be taken over by the Company at a valnation. Any stock of iodine belonging to either of the oficinas on 1st January, 1889, will be taken over by the Company on the basis of 3d. per oz. placed in Europe or the United States of America.

The price to be paid for the properties, other than iodine and what is to be taken at a valuation, is £590,000, payable in cash. This leaves £60,000 for working capital.

The only contract entered into by or on behalf of the Company is one dated the 15th day of February, 1889, between Mr. George Martin Inglis of the one part and the Company of the other part, which, together with the memorandum and articles of association of the Company, may be inspected at the offices of the solioitors of the Company. By this agreement the vendor has undertaken to bear all expenses in relation to the formation of the Company, the raising of the capital, and the transfer of the property to the Company. For this purpose he may have entered into arrangements which may be within the meaning of Section 38 of the Companies Act of 1867, but in order to prevent any questions, applicants must be deemed to have waived any further compliance with this section.

It is intended to apply to the Committee of the London Stock Exchange for a quotation of the shares of the Company in the Official List.

If no allotment be made to an applicant the deposit will be retnrned without deduction. Should a less number of shares than is applied for be allotted, the surplus of the deposit will be appropriated towards the amount payable on allotment.

Applications should be made on the form accompanying prospectus, and be forwarded to the Company's bankers, with a deposit of £1 per share.

Prospectuses and forms of application can be obtained at the offices of the Company, and of the bankers and brokers.

THE PAHANG EXPLORATION AND DEVELOPMENT COMPANY, LIMITED.

(*Continued from following page.*)

ACCESSIBILITY.—The property is easily accessible, being in direct water communication with all ports in the world. The Pahang River, the principal river of the State, is navigable for native boats through the greater part of its length. Pekan, at its mouth, is the port of shipment, whilst Singapore is distant only 220 miles.

RAILWAY COMMUNICATION.—Negotiations have been entered into with the contractors of the Sungei Ujong Railway, upon favourable terms for an extension of that railway through the Company's property, and the contractors have agreed to commence the survey of the line forthwith. This railway, when completed, will open up direct communication with Port Dickson, on the West Coast, and will enormously improve the value of the Company's property. The result of the completion of the railway in the adjoining state of Selangore has been to increase the revenue from $494,489 in 1884, to $1,500,000 (estimated) in 1888. The negotiations contemplate the payment of a subsidy to the contractors when the railway reaches the Company's property, and for the continuance of the line through the Company's property.

SOURCES OF REVENUE.—It is impossible to attempt to forecast the possible profits of the Company. It would appear that there will be little difficulty in realising an average profit of at least £5 per ton upon all timber exported; so that, assuming a shipment in the year of seven cargoes only of 1,000 tons each, this should alone give a profit of £35,000.

The following sources of revenue may be indicated:—

1. On sale of timber.
2. On production of gold, silver, tin, and other minerals.
3. On the sale or sub-leasing of portions of the Company's areas, as in the case of the Pahang Corporation.
4. On the sale of stores, provisions, &c., to the miners and employés of the Company and sub-lessees.
5. On the agricultural produce of the plantation.
6. On general trading.

TERMS OF PURCHASE.—The purchase price for the three concessions has been fixed by the vendor at £130,000, payable in cash or shares, or part cash and part shares, at the option of the directors, leaving £90,000 as working capital, of which £20,000 will be set aside and invested in the names of trustees for the purposes of the railway subsidy above referred to. The Vendor, who is the promoter of the Company, will provide all the preliminary expenses of the promotion and bringing out of the Company, and the issue and subscription of its capital, and the remuneration of brokers and others, and he has reserved to himself the right to enter into and has entered into arrangements with the London and Colonial Finance Corporation (Limited), for this purpose, and the Finance Corporation have also entered into subsidiary arrangements with other persons and firms. These arrangements do not affect the company, but as they may technically be contracts within the meaning of section 38 of the Companies' Acts, 1867, applicants for shares shall be deemed to have had notice thereof, and to have waived any fuller compliance with such section with reference thereto.

The only contract entered into by the Company is one dated the 10th day of February, 1889, and made between Tan Hay Seng, by Henry Nott Knight, his attorney, the London and Colonial Finance Corporation (Limited), and the Company.

The above contract, together with the memorandum and articles of association, certified copies of the concessions, and the original report of Captain Skewis, may be seen at the offices of the Company.

Application will be made in due course to the committee of the Stock Exchange to grant a special settlement and an official quotation for the shares of the Company.

Applications should be made on the form accompanying the prospectus, and forwarded, with a deposit of 5s. per share, to the bankers or secretary of the Company.

The directors have taken every means in their power to verify the statements contained in this prospectus, and they have every reason to believe the statements are strictly accurate.

Prospectuses and forms of applications may be obtained from the bankers, solicitors, and secretary of the Company.

London, February 22nd, 1889.

The List of Applications for Shares opened on Thursday, the 21st February instant, at 10 a.m., and closed on Friday, the 22nd instant, for London, and will close to-day, Saturday, the 23rd instant, for the country.

PROSPECTUS.

THIS Company has been formed to acquire and work 25 full mining claims, each 150 ft. by 400 ft., forming one compact block, laid off in double rows, situated on the well-known gold-bearing farm, "Luipaard's Vlei," about 18 miles west of the town of Johannesburg in the Witwatersrandt District, South African Republic.

The claims are bounded on the north-west by the property of the Osmond's Syndicate, on the south-west by the property of the Luipaard's Vlei Gold Mining Company, Limited, on the north-east by Donoghue's claims, and on the south-east by the property of the Caledonian Syndicate. All the claims are held upon the usual terms granted by the Government of the South African Republic, and are subject to the usual Government charges only.

The property has been fully reported on by Mr. R. L. McCowat, C.E., and by Mr. William Bevitt, M.E., of Johannesburg, and the statements in this prospectus are based upon these reports, extracts from which are enclosed herewith, and the originals of which may be inspected at the office of the Company's solicitor.

The amount of work done on the claims is considerable, proving by means of cross-cuts, trenches and shafts, the existence of the gold-bearing reefs upon the property.

There are several reefs upon the property, two of which have been proved to consist of the ordinary banket of the district; both are large and well defined, one being 5 ft. 6 ins. thick at the face, and about 8 ft. at the bottom of the shaft, at a depth of 35 ft. These are estimated both to yield over 15 dwts. of gold to the ton.

A valuable water-right has been secured, situated about a mile and a quarter to the south-east, in direct line with the claims, to which it is stated a light tramway could be laid from the mine, so that only haulage for empty wagons returning from the mill, would be required.

The directors are advised that there is sufficient water to supply a 25-stamp mill and engine with power.

Mr. McCowat, in his report, says that he considers the property a valuable one (the gold being free and coarse) and one which under good management should pay to work. He is of opinion that the return of gold per ton will vary from 15 dwts. to over 1 oz.

Twenty-nine tons of "banket" taken from the property was sent to the mill of the Evelyn Gold Mining Company to crush, and produced 22½ ozs., as per the certificate of Mr. W. E. McKenzie, the manager of that company.

Mr. William Bevitt, in his report, says that about 90 tons of ore have been taken from one of the shafts on the property, a quantity of which has been milled (being the 29 tons above referred to) with very satisfactory results. About 60 tons are now lying on the surface ready to be sent to the mill. He took eight samples from these and from various parts of the reef which he considered would average 15 dwts. to the ton. He continues:—"The result of my panning showed the gold to be coarse and free, there being no float gold; therefore very little of the gold should be lost after passing over the tables and blankets."

And he concludes his report:—"I congratulate you upon having a property, which will, I believe, when fully developed prove to be very valuable."

The compact position of these claims, their favourable situation for easy and economical working, and the proximity of the water-right, combine, as the directors believe, to make this an exceptionally desirable undertaking.

The directors have secured an offer of a new and complete 10-stamp mill, with driving machinery, now at Durban, which can be on the ground at the mines in a very short time. This would save at least three months delay in getting machinery sent out from England or America.

The vendor has fixed the price of the property at the sum of £45,000, payable as to £5,000 in cash, and as to the balance, wholly in shares or cash and shares, at the option of the directors. The balance of the total capital is available for working capital.

The directors are advised that the title to the property is in perfect order.

The vendor provides all preliminary expenses of the formation and bringing out of the Company and the issue of its capital, and he reserves to himself the right to enter into and has entered into contracts and arrangements with third parties for this purpose, and there are also other arrangements between part owners and others interested in the property and its purchase-money, to none of which has the Company been made party. Inasmuch as these contracts and arrangements may technically be deemed contracts within the meaning of section 38 of the Companies Act, 1867, applicants for shares shall be deemed to have had notice thereof respectively, and to waive any compliance with the provisions of such section.

The following contract, which has been entered into, namely:—A contract dated the 8th day of February, 1889, made between Frederick William Leeks of the one part, and William Richard Edwards, as trustee for the Company, of the other part, may, with the memorandum and articles of association, the reports, plan of the property and other documents, upon which the statements in this prospectus are founded, be inspected at the office of the solicitor to the Company.

Applications for shares should be made on the form accompanying the prospectus, and forwarded to the bankers of the Company, together with the amount payable on application. In cases where the number of shares allotted is less than that applied for the surplus will be credited to the payment due on allotment.

Prospectuses and forms of application may be obtained from the bankers, brokers, solicitor, auditor, and secretary of the Company.

London, 19th February, 1889.

These Concessions probably comprise the Largest and Richest Timber and Mineral Area ever offered to the Public by a single Company.

The List will Open on Tuesday, the 26th February, 1889, at 10 a.m., and will Close for London and the Country at 4 p.m. on the Same Day.

THE PAHANG EXPLORATION & DEVELOPMENT COMPANY, LIMITED.

CAPITAL, £220,000, IN 220,000 SHARES OF £1 EACH,

Of which 170,000 are now Offered to the Public at Par, Payable 5s. on Application; 5s. on Allotment; 10s. One Month after Allotment.

Directors.

Mr. Alderman HART (Director of the Provident Clerks' Life Association), Ewell, Surrey, Chairman.

Sir FREDERICK A. WELD, G.C.M.G. (Ex-Governor of the Straits Settlements and its Dependencies), Chideock Manor, Dorset.

GEORGE SIMS, Esq. (Messrs. George Sims and Co.), Great Eastern Street, E.C., and Manchester.

G. B. CLARKE, Esq., M.P. (Chairman Mining Corporated, Limited), The Holme, Wandsworth Common, S.W.

THOMAS H. HILL, Esq. (Messrs. Hill and Rathborne), 65, New Broad Street, E.C., and Malay Peninsula.

*HENRY K. KNIGHT, Esq. (Messrs. Knight and Co.), London and Singapore, Local Director.

*Will join the Board after allotment.

J. T. DONNOLLY, Esq.

Offices (pro tem.)
4, COLEMAN STREET, E.C.

PROSPECTUS.

This Company has been formed for the purpose of purchasing and working three very extensive and valuablo concessions in the State of Pahang, one of the protected States of the Malay Peninsula, granted by his Highness the Sultan of Pahang to Tan Hay Seng, of Singapore, to develop and work such portions of the various properties conceded as may be found desirable, to sell or lease portions of the property to companies or individuals, and to conduct trading operations in Pahang. The districts comprised in these concessions are estimated to cover an area of about 6,000 square miles, equal to 3,840,000 acres.

The concessions comprise the whole of the products which form the natural and mineral wealth of the country—timber, minerals, and agricultural produce, and offer unlimited possibilities to the capitalist. The timber export can he worked very advantageously concurrently with mining operations and plantations; and the friendly support of the Sultan of Pahang is guaranteed.

The potential wealth of Pahang and its natural advantages are uow fully recognised in this country as affording a profitable field for the employment of British capital. The Pahang Corporatiou, whose concession comprises an estimated area of ahout 3,000 square miles, was formed in December, 1887, with a capital of £200,000, of which £150,000 was paid for the concession, and the £1 shares are now at 6½, or a premium of 550 per cent., while the shares of the Pahang-Kabang, an offshoot of the Pahang Corporation, with a capital of £200,000, of which £150,000 was paid as purchase-money, are at a premium of 100 per cent. Apart from the enormous timber concession hereafter referred to, the mineral concessions to be acquired by this Company are believed to be as valuable as the concession of the Pahang Corporation.

Report by Capt. Skewis.—The directors have ohtained the report of Capt. William Skewis, the engineer selected to report upon the property of the Pahang Corporation, and a recognised authority upon Pahang and its resources; this report, which may he seen at the offices of the Company, is sufficient evidence of the high value of the Company's concessions. Of the timber concession, Capt. Skewis, who has visited the property, says:—

"I am persuaded it is one of the finest timber concessions ever brought before the public," and of the mining concessions he says:—

"The districts of Brah and Cherang Yang, which I have traversed, are rich in mineral, Brah notably for gold and Cherang Yang for tin, both alluvial and in lode, and also for gold. The granite range, around which the Pahang Corporation are now working and extracting tin, and in close connection with which all the tin and gold-bearing lodes exist, traverses your Cherang Yang concession from the uorth, and although I have not carefully prospected the latter, I am in a position to state, from my general observation as to the character and formation of the country, and my knowledge large quantities of gold and tin have already been returned from lodes on your property, that heyond question rich tin deposits exist there. The more extensively this portion of the country is developed, the more its wealth will be proved, and, in my opinion, at an early date, it will become one of the largest and hest mining properties ever known.

The following are brief particulars of the concessions referred to:—

1. Timber Concession (estimated area upwards of 6,000 square miles.)

The right and exclusive privilege of cutting, felling, and selling timhers from the districts lying along the right and left hanks of the Pahang River, from the mouth, and every river and arms of rivers, hranches of the Pahang River, up to the Sunghie Brah, and also at Sunghie Brah, its branches and tributaries, and also at all the places in the district of Sunghie Brah, for the term of 50 years, from the 4th June, 1887, on the payment to the Sultan of a royalty of 10 per cent. on the value of all kinds of timbers taken and worked either hy steam or manual labour.

Comprised in the concession is power to take necessary land for the erection of sawmills and timber sheds, and the admission, free of duty or taxes, of machinery, and all articles necessary to the timber trade. The Sultan covenants not to permit any other person to trade in timber within the area of the concession during its continuance.

The importance of this concession can hardly be over estimated. It embraces the heart of the country, and gives an absolute monopoly of the timber trade within the area conceded.

2. Goln, Silver, Tin, and Mineral Concession (estimated areas 1,000 square miles).

The right to dig, work, and get gold, silver, tin, and other metals, and mineral products in the district of "Brah," in Pahang, with the right to take possession of lands (other than private property), to use existing roads, and to open out roads, &c., for the end of the term of 55 years, from the 21st July, 1887, on the payment to the Sultan, of a royalty of 10 per cent, on all mineral products.

3. Tin, Mineral, and Agricultural Concessions (area about 800 square miles.).

The right to dig, work, get, aud dispose of all tin and other metals and mineral products from any mine, including existing mines in the district of "Cherang Yang," and to take possession of lands (other than private property), to use and open out roads, &c., for a term of 55 years, from June 4th, 1887, on the payment to the Sultan of a royalty of 10 per cent. on all mineral product raised; also the right to open plantations and plant pepper in the district demised.

In Stanford's Map of Pahang the Cherang Yang district is described as "Tin Country," and in the manuscript map of Pahang by the late Mr. Cameron, at the Library of the Royal Geographical Society, the Brah district is extensively marked as a gold district, from the personal observation of Mr. Cameron.

The "Brah" and "Cherang Yang" concessions both grant the use of water from the rivers, use of roads free from all taxes, use of timber for building purposes, and use of all building materials found on the property; also the exemption from taxes of engines, machinery, working tools and implements, articles of food, and smoking and other articles, otherwise than opium or spirituous liquors.

Colonial Office Reports.—Memorandum of Sir F. A. Weld, G.C.M.G., late Governor of the Straits Settlements (one of the directors of the Company), concerning Mr. Clifford's mission to Pahang, dated 25th April, 1887:—"The successful issue of Mr. Clifford's mission to Pahang opens out to our influence a State probably richer, and certainly larger, than Perak, and which, bordering the States of Perak, Solangor, Jelebu, and Sri Menanti, possessing mineral riches in gold and tin, vast agricultural and even pastoral capabilities, presents a great field for the extension of commercial enterprise."

Mr. Thomas H. Hill, another of the directors, who has personally visited the Cherang Yang property, and has resided for 10 years in the Malay Peninsula, states, from personal knowledge, that there are extensive alluvial deposits of tin, and that he had seen gold prospects there, and that he hclieves the property may be very profitahly worked by hydraulics for tin and gold. He also states that the formation of the country in the Cherang Yang concession is granite, and that he has seen gold in the quartz from the neighbourhood.

The timber comprised in concession No. 1 is practically inexhaustible. The forests of Pahang grow no less than about 140 distinct kinds of timber of great value and some of the choicest quality. Among them may be noted timhers classified by the Home trade as mahogany, satinwood, and teak, besides other woods unknown in the British markets, and of equal value. The trees in the forests are of large size (in many instances from 80 to 150 ft. high and upwards), and their qualities have been practically tested by the Indian and Straits Governments, as also by Messrs. Knight and Co., of Singapore, who have manufactured furniture from the timber for their native husiness, and have also exported to London and China. At the Company's offices, No. 4 Coleman Street, samples of the various woods, together with several articles of furniture, may he inspected. A shipment of ahout 50 tons of assorted timber (eight descriptions) from the Company's property has been shipped to London, and has realised £11 per ton. It has been inspected by some of our leading merchants, who have selected certain woods suitahle to their business, and would gladly take all imported woods of the particular classes at prices ranging from £10 to £12 per ton. The directors have satisfied themselves that the timhers will undoubtedly command a ready market.

The following letters from well known firms to the vendor's agent may be taken as samples:—

"Saw Mills, Hawley Road, Kentish Town, and Hawley
"Wharf, Chalk Farm Road, London, N.W., Feb. 8th, 1889.

"Having inspected the samples of timher from Pahang lying at the London and Colonial Financial Corporation Offices, 4, Coleman Street, I am certain those timbers must be a large success. Some of the softer classes are especially suited for our trade, also the dark and red wood. From your report, as to price, I have no doubt we can do with at least two small cargoes a year, cut to our dimensions.

"We shall also be pleased to give you a market value for a nice line of the better class of red wood that you have.

"For John Lawrence and Son,
"W. H. Lawrence."

"11, Dod Street, Limehouse, E., February 9th, 1889.

"I shall be pleased to take a good large and regular consignment of the one timber I selected at the offices in Coleman Street, cut to our width in plank thickness as I may point out, and I shall prefer the wood kept exclusively to my order. Price agreed ahout 4½d. per ft. super. "For H. Hermann,
"S. Hass."

Machinery for Timber, &c. — Saw mills, supplied with the necessary machinery (estimated to cost £9,000, and capable of treating 600 tons per month), will be erected at the earliest date, at Pekan, the capital, a port on the east coast at the mouth of the Pahang River, from which shipments direct to London and all parts of the world can he made. The site for these works has been already selected on the north bank of the Pahang River, in the vicinity of Pekan (under the powers of the concession as to a free grant of land), and consists of an area of ahout 2 square miles, with a river frontage of nearly 1 mile.

The whole cost of the native labour in felling, sawing, and loading at Pekan (based on the cost of the consignment to London already made) is estimated not to exceed £2 per ton, and the freight thence to London by sailing vessel is about £2 10s. per ton.

Minerals.—The directors propose, in the first instance, to secure the services of a competent mining engineer for prospecting the Company's property, and will commence mining operations upon such portions as he may select for early treatment. Arrangements will also probably he made to at once work portions of the property on tribute, a prevalent custom with the Chinese miners. Unlimited labour is procurable under this system, and at very moderate rates, dependent mainly upon results.

Plantations.—The rich alluvial soil and the character of the climate are eminently suitable for the growth of coffee, tea, pepper, tapioca, and almost every tropical product. The mining and agricultural concession, being within the area of the timber concession, timber lands may be cleared, and put under cultivation under exceptionally favourable conditions.

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

AFRICANS ON THE DOWN GRADE—MORE BUSINESS IN DIAMONDS—INDIANS NOT SO FIRM—RUBY MINES OF BURMAH—COPPER SHARES UNSTEADY, BUT BETTER AT FINISH—CHEAP SHARES IN DEMAND—AUSTRALIANS BETTER—RICHMONDS.

The market for South African shares has decidedly been weak, and in almost every instance a decline is shown. In some cases the fall goes into pounds. On the other hand, business in diamond shares has been more active. The immediate outlook is not particularly bright.

The Indian market has been slightly lower, without any warrant for the downward tendency. Mysore West is the exception, the new shares having advanced, and the belief being general that, 1s. paid, they will shortly go to 5s. Talking of India, we may mention that the shares of the forthcoming Ruby mines of Burmah have been dealt in at a big premium, running up to 3*l*., and the founders' shares, information as to the nature of which is purely of a negative kind, have been dealt in up to 330*l*.

Copper shares have been unsteady, and were getting very flat when, as usual, support was forthcoming, and the market revived. Prices, though much depressed at the finish, showed a marked improvement. The establishment of an auxiliary to the syndicate, with a capital of 1,600,000*l*. is announced. The general opinion is that the syndicate have found the money themselves, and that the support therefore is from within—not from without. The price of copper is maintained at about 79*l*., but it is generally believed that a quotation of 70*l*. would be better for the syndicate and certainly for the trade.

The demand for cheap shares—that is, shares below 5s.—has been unusually great, and large numbers of Eberhardts, Yuruaris, &c., have been sold. There are other shares a little above 5s. which merit attention.

The Australian market has been somewhat lively, and shares have gone up, notably Gympie Great Eastern, Cumberland, Mount Morgan Extended, and Livingstone. The Mount Shamrock market became firmer when it was known that Mr. Woodyatt would support the board and not the Lee party.

The market for Richmonds has been simply "banged" by the announcement that the Government intend to claim for timber removed from domain lands. The reply of the directors to the Government has been the shutting down of the works. It is most extraordinary that they should all these years have permitted, without remonstrance, this timber to be removed, and then suddenly to swoop down upon the company like the wolf on the fold. It is melancholy to see Richmond shares at about 30s., when we have known them at 18*l*. At the meeting next week, which of course we shall fully report, explanations will be forthcoming by the chairman, but, meanwhile, we have heard it stated that the company neglected to remove wood from its own land, preferring to take it from that which did not belong to it, and that the persons who have taken the land in question have complained, and forced the hands of the Government. The amount claimed by the Government exceeds the total amount of the profits made by the company, and the directors in their report state "these proceedings caused the greatest consternation throughout the State." Upon this, as upon some other matters, no doubt Mr. Hopkins will enlighten us next week.

The secretary of the New Emma company writes to say that this concern is in no way whatever involved in the dispute.

Home mines have been, as usual, neglected, and the call of 15s. on South Frances has not helped to improve them. The cost-book system is evidently dead and buried, and we this week report the meeting of West Wheal Grenville, which shows under fair terms that the limited liability system can be made to apply to these ventures. It is like crying in the wilderness to preach to Cornishmen, but we once more entreat them to look at facts as they are, and to set their house in order. Failing this, Cornwall, so far as the outside public are concerned, will be left to look after itself.

Africans.

There has been a large business done in the African Market, but there is a decided undercurrent of dread and uncertainty that present quotations will not be upheld. Hence the rush to close and take whatever profit there may chance to be, or, as is the case in numbers of instances, to cut the loss. In almost every case there is a fall from last week's prices. For example, Edwin Brays have fallen ¼; Republics, 6d.; Thomas, ord. and pref. Johannesburg Moodies, fully paid, ⅛ each: Aurora, ⅛; Bankets, 1/16; Banjes, ¼; Block Reef, ¼; Bothas, 1/16; Central Langlaagte, 1/16; Cornucopia, ⅛; Crown Reef, ¼; Croesus, ¾; Dornkop, 1/16; Durban Roodeport, ¼; Evelyns, ½; Ferreiras, 40s.; Geldenhuis, ¼; Goldfields of South Africa, ⅛; Golden Kopje, ⅛; Great Britain, 2s.; Heriot, ½; Henry Nourse, ½; Johannesburg Pioneer, ½; Jubilee, ¼; Knights, ¼; Langlaagte, ⅛; Langlaagte Block B, 1/16; Luipard's Vlei, ¼; Main Reef, ⅛; Main Reef United Roodeport, ¼; Mays, ½; Morkel, ¼; Moss Rose, ½; Nabob, ¾; Royals, ¼; Salisbury's, 40s.; Spes Bona ⅝; Stanhope, ½; Star, 20s.; United Langlaate, ¼; Van Ryn, ¼; Wemmers. 1¾; the only shares having a rise are Imperials, 1/16, and Western Langlaagte ⅛.

The following are the closing prices :—

Wolhuters	5¼	—	5½

Diamonds.

The activity which we noticed in our last issue still continues in the Diamond market, and prices have in consequence improved all round, and leave off this evening firm. The following are the closing quotations :—

Anglo-African	4¾	—	4⅞
Bultfontein, new shares—	4¼	—	4½
Central Dorsfontein	8	—	10
De Beers Consolidated	17⅝	—	17⅞xd
Gordon Diamond	19/	—	21/
Griqualand West	6⅝	—	6⅞
New Consolidated	24/	—	25/
New Jagersfontein	15⅞	—	16⅛
South African (Pullinger)	17/	—	18/
Spes Bona (Bultfontein)	5/6	—	6/6
United	2½	—	2¾
United Jagersfontein	18/	—	19/
London and Orange Free State Explor.	5½	—	6
London and South African Exploration	16½	—16¾	x rights xd
Read's Drift Land Co.	2⅞	—	3

Australians.

There has been a slight inquiry for these shares this week, with the result that the market leaves off somewhat firm. For instance, Cumberlands have risen 2s.; Gympie Great Eastern, 1s. 6d.; Livingstone, 1s.; Mount Morgan Extended, 1s. 6d.; and Mount Shamrock, 6d.; while British Broken Hills are down ⅜; Day Dawn Block, 1s.; Day Dawn P.C., Mosman and Mount Britain, 6d. each.

Indians.

Little or nothing has been doing in Indian shares, and, consequently, there are very few alterations to note. The only changes are a rise of 1s. each in Balaghat (fully-paid) and Nine Reefs; a fall being shown in Ooregum of 3/16, Ooregum Preference 5/16, and South East Mysore 6d.

Foreign Shares.

In the Foreign Market there has been a busy week. The principal dealings have been in Callao Bis, Colon, Don Pedro, Dickens Custer, Colombian Hydraulic, Denvers, New California, New Eberhardts, Orita, Palmarejo, Richmond, Tetuan, Victory, and Yuruari. If we were to say that 50,000 shares in the above companies have changed hands during the week we would be well within the mark. A rise has taken place in the following :—Colombian Hydraulic, 1/16; Don Pedro, 1/16; Fortuna, ¼; New Lisbon, Palmarejo, Potosi, and West Argentine, 6d. each; whilst the fall is in Balkis of 1s.; Callao Bis, 3s.; Dickens Custer, 6d.; El Callao, ¼; Frontino, 1s.; Garfield, 2s.; Montana, 1/16; New Organos, 9d.; Richmond, ¾; Tetuans, 1s.; and Victory, 6d.

Copper.

The week has been busy in Copper shares, and Rio Tintos have touched the lowest point marked on the tape for many months. They have, however, somewhat recovered, and, in consequence, none of the shares close at lowest quotation, although they are not so firm as last week.

The following have fallen :—Argentella, 6d.; Copiapo, ¼; Masons, 1/16; Quebrada, ⅛; Rio Tinto, 20s., and Tharsis, 1/16, the only rise to note being Bratsberg, 1/16.

The following list shows the principal changes in the mines which have taken place :—

	Last Week.		This Week.	
Cook's Kitchen	11½	12	11¼	11¾
East Pool	37¼	37½	33¾	34¼
New Cook's Kitchen	3	3¼	2¼	2¾
West Frances	9	9½	8¾	9
Wheal Agar	13	13½	11	11½
Anglo-African	4¼	4½	4 11/16	4 13/16

Latest from the Mines.

Indian Mines.

Indian Consolidated.—The directors have sold, through Messrs. Pixley and Abell, the following gold, the result of the December crushings :—From the Phœnix section, 139½ ozs., which realised 558*l.* 10s. 7d., and from the Colar section, 101¾ ozs., which realised the sum of 384*l.* 5s. 7d., making a total for the month of 942*l.* 16s. 2d.

Colonial Mines.

Day Dawn Block and Wyndham.—The result of the crushing for the fortnight ending 16th instant is as follows :—275 tons crushed; yield of gold, 335 ozs.; approx. value, 1,160*l.*; fortnight's expenses, 1,246*l.*; 15 head of stamps only.

Day Dawn P.C.—A cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending 16th February, viz. :—"870 tons; 920 ozs." (Estimated value 3,128*l.*)

Durham and Lord Byron Amalgamated.—The directors

have received a cable from the manager at the mines, stating that the next clean-up will take place on the 28th instant.

GOLDFIELDS OF NORTH QUEENSLAND.—Cable from the manager at the mines, dated February 18th :—"Battery in course of erection ; will shortly be completed. The ore in the Melbourne Exhibition Mine is 18 ins. thick, and continues as rich as ever. Teams cannot haul ore at present on account of floods."

IRONCLAD (AUSTRALIA).—The following cable has been received from the manager :—"Machinery started."

MIDAS.—Cable from the mine :—"Yield, 212 ozs. (870*l.*), equal to three days' work full swing. Prospects splendid."

FOREIGN MINES.

ANTIOQUIA.—Advices for the month of November state :—267 tons produced 392 ozs. gold ; average, 29 dwts. ; value of the gold, 1,031*l.* 12s. 5d. ; cost, 456*l.* 6s. 3d. ; estimated profit, 575*l.* 6s. 2d.

BENTONG STRAITS TIN.—A cablegram has just been received from the Singapore agents as follows :—"Expert returned. Preparing favonrable report." The report in question may be expected in about four weeks' time.

BOTALLACK.—The loss on the sixteen weeks has been 466*l.* There was a small adverse balance at the last account, with the balance against the mine at the present time. A call of 4s. per share was made.

CONSOLIDATED ESMERALDA.—The superintendent reports by cablegram that "The upraise from the lowest level Durand has opened up a considerable quantity of very good ore, and the mill will be started early next month."

COLOMBIAN HYDRAULIC.—The directors have this day received the following cablegram of the operations for the month of January :—"We have been very short of water during this run; unable to clean down." The company have received the following cablegram of the operations for the month of January :—"We have been very short of water during this run. Unable to clean down."

DICKENS CUSTER.—Advices from the agent state that bars 88 to 94 have been sold in America for $28,173.87. These figures are, of course, subject to the royalty, and the balance is retained by the agent to meet the current expenses in America.

DON PEDRO.—Telegram, dated Marianna, 21st February :—"Permanent incline drained below 50-fm. cross-cut ; the latter partially cleared."

FRONTINO AND BOLIVIA.—Advices for the month of December state :—Produce, 902 ozs. of gold, value 2,099*l.* 12s. 5d. ; cost, 2,584*l.* 13s. 5d. ; estimated excess of expenditure, 485*l.* 1s.

GRAVEL.—The letters of allotment of shares in the company have been posted.

KAPANGA.—Telegram from the manager :—"Since last message have crushed for the four weeks 130 tons ; quartz poor."

LAS BRUJAS.—Mr. Alexander Fowler, a director of the Orita Company, has joined the board of the Las Brujas (Colombia) Hydraulic Gold Mines, Limited.

MEXICAN SANTA BARBARA.—Messrs. Jno. Taylor and Sons have received from Mr. Varden, the manager at the mines, the following cablegrams :—"Mine looking splendid." "Mill working 24 hours per day." These shares ought soon to be above par.

MINES CONTRACT CO.—A dividend of 20 per cent. for the past three months has been declared by the Mines Contract Company, Limited, 63 and 64, New Broad Street, E.C.

NAMAQUA.—The directors have decided to declare, at their meeting to be held on the 26th February, a third quarterly interim dividend of 2s. per share (being at the rate of 20 per cent. per annum), payable to the shareholders registered in the books of the company on that day, and to holders of share warrants to bearer. The dividend will be payable on Tuesday, the 5th March.

NEW HOOVER HILL.—The directors have sold through Messrs. Pixley and Abell the bullion obtained during the month of Jannary, weighing 191.725, which realised the snm of 643*l.* 19s. 2d.

OPHIR.—The Right Honourable Lord Greville, General Needham Parsons, and James Shakespeare Langlands, Esq., have joined the board of the Ophir Concessions, Limited.

ORITA.—We are informed that Mr. William Thompson Hill and Mr. Alexander Fowler are no longer directors of the Orita Gold Mines, Limited.

OURO PRETO.—The directors have sold through Messrs. Johnson, Matthey and Co. the gold obtained in the month of December, which realised 3,382*l.* 19s. 10d. The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of December, which realised 3,382*l.* 19s. 10d.

PINOS ALTOS BULLION.—The out-turn for the week ending 16th inst. was $12,000.

ROCKY BAR WIDE WEST.—The following cablegram has been received :—"Partial clean up first two weeks February : Tons mined and milled, 225 ; ozs. of gold, 170 ; improvement in mine."

STAFFORD.—The following telegram has been received from Mr. H. B. Tilden, dated 19th February, announcing the result of the clean-up for the first two weeks in February : "Crushed 70 tons which yielded 30 ozs. of gold."

VICTORY.—The following cablegram has been received from Mr. Larchin (one of the directors now at the mine), with reference to the crushing of the ore :—"Two ounces to the ton.—LARCHIN."

WHEAL AGAR.—The serious accident which occurred on Saturday morning will, it is thought, cause a stoppage of work for a month or five weeks.

ZARUMA.—Telegram from the manager at the mines :—"Crushing commenced ; machinery has turned out very satisfactory.

HOME MINES.

D'ERESBY.—The requisite additional capital being now assured, no further shares will be issued at par. The latest report is of the most encouraging nature, showing that a new and valuable run of ore ground is being laid open in the No. 9, or bottom level, north of Gor's shaft in the valley.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (13th Feb.)—We have taken the men from the 40-fm. level east for a few days to assist on other imported works, consequently there is no change to notice in the value of the lode, which is still good. The various stopes in back of this level are producing their usual quantities of ores. Cook's stopes, below the 30-fm. level east, continues to produce over 10 tons of mineral per fm. The lode in the 40-fm. level east of junction on the north part produces 7 tons of mixed ores per fm. In the same level west there is no change to report; a strong orey lode. The large lode below the 30 west, at and near the junction, is producing a large quantity of mixed ores, and looking well for a continuance of the same.—T. Gregory.

BERTHA CONSOLS (20th Feb.)—We have a good lode for copper in the 40-fm. level east, and still likely for an improvement. The several stopes in back of this level are producing their usual quantities of ore. Cook's stopes below the 30-fm. level east are producing large quantities of mineral. The lode in the 40-fm. level at the junction has improved to 9 tons per fm., and is openiug a good piece of ground. The large lode recently opened on the north of former workings is producing full 10 tons per fm. There is no other change to notice.—T. Gregory.

BLUE HILLS.—The lode in the 66-fm. level east is still looking very promising, being 3 ft. wide, and apparently improving in its course eastward.

BLUE HILLS.—The 66-fm. level east on the Baldhu lode continues to look very promising. The lode is reported to be 2 ft. wide, producing good tin-stuff. This looks favourable for East Blue Hills.

BULLER AND BASSET (12th Feb.)—Copper Hill main shaft: The clearage of the 84-fm. level has been extended a further distance of 6 fms. during the week. The men have got through the choke referred to in my report of the fifth current, and are now employed clearing away another choke about 3 fms. further east. The necessary timber for securing the said level is being put in as required. The machinery is working well throughout.—J. H. James.

BULLER AND BASSET (19th Feb.)—Copper Hill Main shaft: The men employed clearing the 84-fm. level, have, during the week, advanced 4 fms. and securely timbered that distauce. They are now well nigh through the choke, and have let down a large quantity of water that the débris had kept back. A long piece of ground will now be available for stoping at this level, which will have immediate attention on the completion of present repairs. Castings: I have given an order for the castings required. Machinery: The engine and pumps are in thorough good working order.—J. H. James.

D'ERESBY.—The new course of lead at the No. 9 north—or now at Gors shaft—is opening out exceedingly well, and the agent thinks it is probable that the sinking of the Gors shaft to the No. 10 will be in a course of lead 13 ft. wide. He says it may not be that width of solid lead, and yet that even is possible. Bearing in mind that this course of lead is in whole ground, it gives a double value to the mine, and those who have held on to their interest have done well, and will have great reason to congratulate themselves on having done so.

D'ERESBY.—The great improvement in the No. 9 north continues, and extends both towards Gors shaft and to the upper levels. The new shares have been well applied for, and the required amount of capital, 2,000*l.*, is now assured.

DEVON CONSOLS (14th Feb.)—Wheal Maria, eastern shaft, Capel Tor lode: In the cross-cut north, at the 86, the ground continues favourable for exploration and congenial for mineral. All the other explorations in this part of the mines are being continued by the side of the lode for more speedy progress. Wheal Emma, Railway shaft, new south lode: In the cross-cut north, at the 260 west, on the middle part of the lode, the ground being of a hard nature, killos largely intermixed with quartz, is more difficult to explore, and progress is consequently slow. Watson's engine shaft: In the cross-cut north, at the 160, the ground is without alteration. In Lark's rise, in the back of the 148 west, the lode is 4 ft. wide, and coutinues to yield 4 tons of copper ore per fm. In the 136 east the lode is 2 ft. wide, very promising, and yields 2 tons of copper and mundic ore per fm. In the 136 west the lode maintains a good size (4 ft. wide), and is also very promising, and continues to yield 3 tons of copper and muudic ores per fm.—I. Richards.

DEVON-UNITED (14th Feb.)—Willesford's shaft: In Willesford's shaft sinking below the 120 the lode continues to present the same very fine appearance, and is yielding 9 tons of copper ore per fm., for length of shaft, 12 ft. The fixing of air machine at the 120 is nearly completed, and the pumping appliances in connection therewith will now be proceeded with. In the cross-cut south at the 60 west of Watson's shaft the ground is not at present so favonrable for exploratiou. We sampled on Friday last, for sale on the 21st inst., computed 50 tons of copper ore.—I. Richards.

DOLCOATH (13th Feb.)—Owing to the wet season very little has been done in the sinking of the engine shaft since the last account. The water is now in fork. At the 400 west, we are rising towards old sump shaft. The 400 east of new east is worth 65*l.* per fm. The winze under the 388 is worth 90*l.* per fm. The 388 east is worth 90*l.* per fm. On the south lode the 314 east of old sump cross-cut is worth 40*l.* per fm. The winzes under the 290, just over the 314 end, is sunk 8 fms., and is worth, for 9 ft. long, 80*l.* per fm. The other points on the south lode are of about the same value. Good speed is being made in sinking the eastern shaft under the 254.—J. Thomas, J. Johns.

DRAKEWALLS (20th Feb.).—During the past month the 147-fm. level east, on the south part of the lode, has been driven 1 fm. 5 ft., producing 8 tons of mundic per fm. The lode for the present is more mixed with capel, and will yield 6 tons of mundic per fm. The lode in the 147 driving east on the north part will produce 8 tons of mundic per fm., and occasional rich stones of copper ore and a little tin; distance driven during the month, 3 fms. The lode in the 147 driving west on the north part will yield 10 tons of mundic per fm., occasional stones of copper ore and small veins of tin, and is exceedingly promising; distance driven in the past month, 5 fms. 1 ft. 8 ins. The 132 has been driven east 1 fm. 4 ft. 2 ins.; the lode continues hard for exploration, and is yielding a small quantity of copper and mundic ores, but not of much value. The 132-fm. level west has been driven 2 fms. in the past month. The lode just now is disordered by a small cross-course; it is, however, looking very promising, and will produce 2 tons of copper and mundic ores per fm. We have commeneed sinking a winze in the bottom of the 132, 8 fms. west of the engine shaft, for the purpose of laying open the ground for stoping, and also to secure better ventilation from the 132 to the bottom of the mine, where it is rather hot for working owing to the gasses arising from the very large mundic lode. At this point the lode is looking well, and will yield 8 tons of copper and mundic ores per fm. for the length of the winze, 9 ft. In stoping the north side of the 132 west the lode will produce 6 tons of copper and mundie ores per fm. We are getting on well with the building of another set of arsenic chambers, and hope to have them completed in the course of a week or 10 days. We have also commenced building the house for another new calciner. All other necessary surface work is being got on with as little delay as possible.—H. Rossa.

EAST BLUE HILLS.—The general meeting was held on Tuesday last—a very satisfactory one. The 30-fm. level west on the Baldhu lode is opening good tin ground, from which most of the tin sold during the quarter has been raised. The pink lode gives great promise. The shaft on it is about 50 fms. perpendicular depth from surface, and on the line of the lode would be nearly 100 fms. deep. A good deal of tin has been raised from the back of this lode further east, and as it is the standard lode of the district, there are great expectations from its development in this sett. The expenditure for the four months was 753*l.* 1s. 3d., and the sales of tin 582*l.* 15s. 5d., which would have been increased, but for last sale being only three weeks' produce instead of a month.

EAST BLUE HILLS.—No late report has been received, but the operations are progressing satisfactorily, and an improvement on the Pink lode may any day be announced.

GREAT FORTUNE.—The level driving east on the Conqueror branches is reported to be looking better. This, together with the stopes and tribute pitches, give an aggregate value of over 34*l.* per fm. As the branches have not been much worked below the present depth, and apparently improving as they go down, the agents have great faith in the drainage of the 10-fm. level for increasing the returns.

GREAT FORTUNE.—The level driving on the Conqueror branches is improving, as also the tribute pitches and stopes.

HOLWAY UNITED (12th Feb.)—We are busy at the pitwork. Deep snow on the ground and snowing heavily now, which makes it very unpleasant for this sort of work. We have brought the old pole and case to land, and are now sending down new pole-case. Level engine is working very steadily, and so far the water does not rise very rapidly in Roskell's, and the dam holds good, so that with good luck we shall complete the job before the water rises to the 80 level.—H. Hotchkiss.

MELLANEAR (20th Feb.)—We have resumed the sinking of Gundry's engine shaft below the 155-fm. level in a lode 6 ft. wide, yielding a little mundic and copper ore, but not sufficient to value. The water is still very quiek, and we shall not be able to sink at our usual speed until the water has abated a little. In the 150 driving east of Gundry's engine shaft the lode is 6 ft. wide, composed of spar and peach, and yielding stones of copper and tin ores, and the ground is better for driving. The lode is 4 ft. wide, and well defined in the 110 driving east of Gundry's shaft, but at present it is unproductive. In the 120 driving east of Gundry's shaft the lode is 6 ft. wide, yielding 2 tons of copper ore per fm., and some good stones of tin; the lode is 3½ ft. wide in the 110 driving west of Gundry's shaft, yielding ½ ton of copper ore per fm. The ground is easy, and letting out a good deal of water, but rather disordered. In the winze sinking below the 120 east of Gundry's shaft the lode is 5 ft wide, and yielding 2 tons of copper ore per fm. We set 25 pitches to 64 men, at an average tribute of 9s. 3d. in the £. Gundry's engine is going about 7½ strokes per minute, and the water is in fork throughout the mine.—J. Gilbert.

MID-DEVON (9th Feb.)—Surface: The pumping machinery has given us some trouble again this week. The cotter and gib at crank connection broke, and caused a stoppage of 31 hours. It was set to work again yesterday at 6.30 p.m., and has since done good duty to cope with the underground influx. It has to be worked to nearly its maximum speed. As the rainfall for the past three weeks has not been excessive I am expecting an early abatement underground sufficient to ease our machinery considerably. C Shaft: The 60 east has been driven by nine men 1 fm. 1 ft. 6 ins.; total distance from shaft, 26 fms. 5 ft. We have intersected a small cross-course, highly mineralised and conducive to the yield of ore. The strata is chiefly garnet, with deposits of chlorite, axinite, and quartz, intermixed also with copper ore in saving quantities; about 10 cwt. of the latter have been saved this week. The 50 east stopes, Nos. 2, 3, and extreme point of drivage, worked on by six, six, and two men, are respectively worth 10*l.* 10s., 14*l.*, and 9*l.* 10s. per cubic fm. for copper ore.—J. Neill.

MID-DEVON (16th Feb.)—Surface: The pumping machinery has gone on regularly this week, making as nearly as possible five revolutions per minute, and is apparently working smoothly throughout. A shaft: The excessive influx of water shows no sign of abatement; it is now driven to within 6 ft. of bottom of the 80. The drivage here being rather extensive, causes our progress in draining to be very slow. C shaft: The 60 east has been driveu by nine men 1 fm. 2 ft. 6 ins.; the distance from shaft is now 28 fms. 1 ft. 6 ins. The strata is slightly harder, but unchanged in composition, and yields occasional deposits of ore. The 50 east: Stopes Nos. 2 and 3 and extreme point of drivage worked by six, six, and two men, are worth respectively 10*l.* 10s., 14*l.*, and 10*l.* per cubic fm. for copper ore.—J. Neill.

PRINCE ROYAL.—At the general meeting, held on Tuesday, the report stated that the work of clearing the adit was proceeding satisfactorily, and in about three or four weeks' time it was expected the engine will be again pumping. A small call of sixpence per share was made.

PRINCE OF WALES.—The engine shaft is now down 4 fms. below the 155-fm. level. In the last few days the sinking has been in the main lode, which is 5 ft. wide of a very kindly nature and tinny throughout. The flat, or north part, is left standing. The late severe weather has impeded their surface operations, but everything that can be done is being pushed on as fast as possible.

PRINCE OF WALES.—Good progress is being made in sinking the engine shaft below the 150-fm. level in the main lode, which is reported to be 6 ft. wide of a most congenial nature, and estimated to be worth 16*l.* per fm. for the length of the shaft. All other work proceeding satisfactorily.

ROMAN GRAVELS (14th Feb.)—At the 135 south yesterday we cut another portion of the lode standing on the footwall, or west side of the drivage, but whether it is the main footwall portion or not we

cannot yet say. It is well charged with lead ore of the usual rich character, and worth to-day, for the width laid open, 1¼ tons per fm. The stopes in back of the level are without any recent change, and the same may be said of all the other points at work throughout the mine. The heavy fall of snow has greatly interfered with surface operations, but we were able to resume the building work in connection with the new drum for capstan engine, and new shears, &c., to-day.—A. WATERS and SON.

RUSSELL UNITED (21st Feb.)—In driving the 80 west on Stephens' lode very satisfactory progress is being made, and the lode —now 5 ft. wide—continues to produce some fairly good stamping work, and looks very promising for further improvement. In cross-cutting the south lode at this level, it has now been driven into 4 ft., where it is composed principally of quartz and mundic, in which we have found some good samples of tin. It is also satisfactory to notice the lodes, so far as yet opened out, carry more regular walls, and are better defined than in the upper levels. The machinery is still going on all right.—W. GEORGE.

SOUTH CONDURROW (13th Feb.)—We have about 6 ft. farther to drive the cross-cut in the 66-fm. level to get under Pendarves's shaft. The lode in the 108 end west of Marshall's and in the rise is yielding low quality tinstone. The sinking below the 108 west of Marshall's is being urged on. The 93 east of King's is worth 7*l*. per fm. The back of the 80 is worth 7*l*. per fm. The north part of the lode above the 70 is worth 18*l*. per fm. Two stopes in the back of the 60 are worth 10*l*. and 12*l*. per fm. respectively. The 50 end east is worth 12 per fm.; the stopes in the back of this level are without material alteration in value. The 40 end east carries a little tin. Three stopes in the back of this level are worth 10*l*. per fm. each.—W. RICH, W. WILLIAMS, H. KING.

SOUTH CONDURROW (20th Feb.)—The lode in the 40 end east of engine shaft has a promising appearance; it is now worth 6*l*. per fm. Three stopes in the back of this level are worth in the aggregate 35*l*. per fm. The 50 end east is worth 12*l*. per fm. Three stopes in the back of this level are worth respectively 10*l*., 10*l*., and 12*l*. per fm. We have resumed driving the 60 east; the lode in the end is worth 10*l*. per fm. The lode in the back of the 70 is worth 18*l*. per fm. The 80 west and the 93 east are each worth 7*l*. per fm. The 108 end west of Marshall's is worth 5*l*. per fm.—W. RICH, W. WILLIAMS, H. KING.

SOUTH DARREN (14th Feb.)—The 142 end east is without change. In the same level west the end is worth fully 15 cwt. of silver-lead ore per fm. In the 110 end east the lode contains a good mixture of lead. The 100 end west contiuues in a large lode going in a north-west direction, and is underlying to the north, which no doubt accounts for the end going so for north. There is a fair mixture of lead all through the lode, but uot to value. A full report on all the pitches will be sent out next week. We have had a heavy snow storm and hard frost, but a thaw has now set in.—J. MITCHELL.

SOUTH DARREN (21st Feb.)—The following bargains are let for one month. To drive the 142 end east by two men, at 8*l*. per fm.; the end is without ore to value. To stope in this level by four men, at 3*l*. 10s. per fm.; worth 1 ton of silver-lead ore per fm. To drive the 142 end west by six men, at 8*l*. 10s. per fm. This end has improved greatly, being now worth 2 tons of very rich silver-lead ore per fm. The improvement was caused by another branch of ore coming in from the south side and joining the one we were driving on. Four men had commenced a stope immediately behind this end, but when we found the lead was going back in the side, we put them to strip. They have followed the ore 15 ft. back from the end, aud at this point it is 1 ft. wide, of very solid stuff, worth 2 tons per fm. It is going to the south as it comes back towards the east, and there are now 4 ft. of stone between it and the level. This discovery is practically in new ground, the 130 and 120 levels not being driven so far as this. Therefore, if it holds, it will be a very important discovery. To stope in end of old stope in this level by four men at 3*l*. 10s. per fm. worth, 12 cwt. of silver-lead ore per fm. To drive the 110 end east by two men, at 6*l*. 15s. per fm. There is a nice branch of lead in the end, and the stuff is being saved for dressing. To stope in this level by two men, at 3*l*. 5s. per fm., worth 10 cwt. of silver-lead ore per fm. To drive the 100 end west by four men at 8*l*. per fm.; the lode is large and leady, but not to value. To stope in this level by two men, at 3*l*. 10s. per fm., worth 10 cwt. of lead, and 10 cwt. of copper per fm. To stope in this level by four men, at 3*l*. per fm. worth 10 cwt. of silver-lead ore per fm., with a good mixture of copper. We expect to sample 15 tons of very good copper on Saturday next.—J. MITCHELL.

TIN ERA (11th Feb.)—Every effort is being made to get the deep adit end under the tin-bearing ground as quickly as possible. We are forcing on with a full pare of men, but the ground is again harder, consequently our progress is not so good as I should wish.—R. KNOTT.

TREGEMBO (11th Feb.)—We have completed the plat in the 42 at Pennick's, and intersected the lode east of cross-course, which is 18 ins. wide, yielding good tinstone. We expect this end to improve as we go east. We shall have to drive a few fathoms in the western end before intersecting the lode west of the cross-course. The 42 east of sump is worth 5*l*. per fm. In the two stopes in the back of said level I see no change: worth, say, 11*l*. per fm. The same remark will apply to other bargains.—T. HODGE.

TREGEMBO (19th Feb.)—The 42 east of Pennick's is worth 5*l*. per fm. The 30 east is worth 5*l*. per fm. The 42 east of engine shaft is worth 5*l*. per fm. The 42 west is poor. Nothing has been met with in the cross-cuts since my last. No other changes.—T. HODGE.

TREGURTHA DOWNS.—We are informed that the mine was in fork, that is drained to the deepest level, the 80 fm., on Tuesday night last. The engine was started on the 15th January, 11 days after the fire, which burnt out the engine-house, so that it has taken 28 days to re-drain the mine. This is considered to be the best piece of work of the kind ever done in the county. The agents state that 20*l*. will cover the damage underground. A sum of 200*l*. has been distributed amongst the most needy who had been thrown out of employment. All hands are now at work.

WEARDALE.—Report on Weardale mines for week ending 9th February:—Weather and frost unfavourable for surface work. Ore raised for the week, 81 tons; ore dressed for the week, 64 tons; ore, &c., smelted for the week, 129 tons, producing 71 tons of pig lead.

WEARDALE.—Report for week ending 16th February.—All work much retarded by frost. Ore raised for the week, 66 tons; ore dressed for the week, 32 tons; ore, &c., smelted for the week, 104 tons; producing 48 tons of pig lead.

WEST CARZISE.—The general meeting was held on Wednesday last, which Capt. Curtis, the manager, attended, and spoke most hopefully of the prospects. The lode heaved by the slide has again been met with in sinking the engine shaft, and he expects at the 40-fm. level, which the shaft is now within 10 ft. of, will open a good lode, seeing that it was worth 10*l*. to 12*l*. per fm. above it. Several other important points are now being vigorously prosecuted, which, from the rich tin district in which the mine is situated, give great expectations. A call of 1s. per share was made, and both the manager and shareholders present expressed great confidence in the future of the mine.

WEST CARZISE.—The lode in Mitchell's shaft has improved in size and favourable appearance since last taken down, it being now 3 ft. wide, containing good branches of tin.

WEST GODOLPHIN (12th Feb.)—The engine shaft is 11 fms. 2 ft. 2 ins. below the 107-fm. level. We are urging on the sinking as fast as we can. No change has taken place in the ends. We have only a few men on tribute. Our stopes suspended three mouths ago would not pay to work. This will account for the small sale of tin. our cost is not so high.—T. HODGE.

WEST GODOLPHIN (20th Feb.)—I have nothing new to report this week. The machinery is working very well. The engine shaft is below the 107-fm. level 11 fms. 3 ft. 10 ins.—T. HODGE.

WHEAL CREBOR.—The lode in the 200-fm. level, both east and west of shaft, present the same promising appearance as reported last week. In the eastern end the lode is more open, which is thought to be a good indication. The other points remain unchanged.

WHEAL CREBOR.—The copper ore sale on Thursday last realised 1,024*l*. 9s.

WHEAL GRENVILLE (13th Feb.)—I have nothing new to report in the ends. We have only three drivings; the others are under water. Our stopes in the upper levels are breaking low-price tinstone. I am pleased to inform you we are forking the water satisfactorily. The 178 east end is drained, but it will take some days to fork down at the shaft to enable us to draw from that level. I am hoping the worst is over. Everything connected with the pumping is working well. We are draining with the little engine to-day, which appears to work very well. The stamp axle to be connected to said engine is ready to lift on the wood horses. Frames for the same are made, but we cannot do any outdoor work until the weather changes. If we could have a few weeks' dry weather we would soon get engine to work to treat the leavings lying on the floors, of which we have hundreds of tons.—T. HODGE.

WHEAL GRENVILLE (21st Feb.)—We met with an accident on Monday morning last by the breaking of one of the bridles in the bottom of the downright at Goold's shaft; it did no damage to any other part of the machinery. Everything is now working well, and the water is being drained satisfactorily. No change in the bargains worthy of note.—T. HODGE.

WHEAL METAL AND FLOW.—The metal lode in the 35-fm. level east is reported to be from 1 ft. to 1½ ft. wide, of the same value as last week. The agents write that they are now in new ground, and may at any time strike a good bunch of tin.

WHEAL METAL AND FLOW.—In the Metal lode in the 35-fm. east the agents are expecting an improvement. The lode is 1½ to 2 ft. wide, of the same value as last reported. Increased tinstuff is being treated from the Flow, and, consequently, increased returns may be expected to result.

WHEAL UNY.—The sinking of Hind's shaft is being continued. The stope in the 203-fm. level west of sump shaft has very much improved, and a lot of tinstuff is now being raised from it.

FOREIGN MINING INTELLIGENCE.

ANDALUSIAN.—Extracts from this company's mine manager's report, dated La Carolina, February 12th:—At San Jorge, with four men, we believe we shall cut the real lode before the end of the month. All the indications are favourable, and I shall be astonished if we do not cut ore. At Cerro Lises we continue cross-cutting to cut the San Eugenio, or perhaps a junction of San Eugenio, with Lealtad lode. Barytes lode continues with a strong lode of barytes 1 metre wide, with pieces aud small veins of galena, rich in silver. One pure piece assayed 80 per cent. of lead, and 56 ozs. of silver per ton of ore, whilst other pieces not so pure assayed 140 ozs. per ton. We drive the barytes adit with three cores of men, so as to get deeper into the hill as soon as possible. This Barytes lode must turn out well. Panadera adit is now cleared, and we shall begin driving. The Belgian company have cut a lode with their adit, and have so far got ¾ metre into the lode, which is the same as our Panadera adit lode. It carries large lumps of galena in barytes, and looks splendid. Some men from the Belgian mine have seen our end now that it is cleared, and said we had got into the right sort of ground, but that as yet our vein of pyrites was too small. They urged us to go on with the end, as the pyrites were sure to increase, and ore would then appear. At the recently acquired Saturno Mine, north-east of La Carolina, the trial shaft is now 11 metres deep, and carries a nice lode of galena. Near the hanging wall we have 1½ ins. of galena, and in the middle of shaft a vein of 3 ins. of pyrites mixed with galena, which probably will turn to galena. At all events our trial shaft almost pays for sinking, and naturally discovers ground that will stope to a profit. I was very much pleased with my visit to this mine, and brought some nice lumps of ore back with me. I am told that the ore from this lode, which is rich in lead, assays about 20 ozs. of silver per ton of ore." A later letter from Mr. Haselden states:—"On my return from Linares I found a stone of ore on my desk which the men from the Saturno mine had brought. It is massive pure galena, and measures above 3 ins. (English) in width, the men say the ore runs that width right through the shaft. At this moment not only does the shaft pay for sinking, but leaves 2*l*. profit per metre, so, of course, it discovers valuable stoping ground. I have agreed to sell the Lises ores (about 500 quintals argentiferous shale, assaying about 70 ozs. silver to the ton of ore) at a price of 45 reales per quintal, the total value being about £[illegible]."

ANTIOQUIA (FRONTINO).—The directors have received advices for the month of November, dated 5th December:—267 tons produced 392 ozs., average 29 dwts.; value of the gold, 1,031*l*. 12s. 5d.; cost at the mines, Medellin and in London, less exchange on cost,

456*l.* 6s. 3d. ; estimated profit, 575*l.* 6s. 2d. At the adjourned general meeting, held on Tuesday, the 5th February instant, it was resolved that the same be further adjourned to Wednesday, the 5th June next, and it was arranged that in the meantime the annual general meeting of the company should be held, when the necessary operations for the development of the mine would be considered.

ASIA MINOR (26th Jan.).—76 men driving ; aggregate value of ends per fm., 4 tons 10 cwt. ; 180 men stoping ; aggregate value of stopes per fm. 10 tons 8 cwt. ; 16 men rising, 14 men cross-cutting, 172 trammers, labourers, &c. The Petri lode in Air shaft has improved again, and is now fully 4 ft. wide, and worth 10 cwt. silver lead ore per fm. We hope that this level is entering good ore again. The lode in Union level fully maintains its size and character, producing fully 1½ tons of rich silver lead. As soon as this drive has communicated with Savalan level in Air shaft we hope to open up some good stopes.

BRATSBERG.—Mining report No. 59.—Hoffnung Mine : No. 2 adit level is not looking so well as at time of reporting last week, the lode having become smaller and irregular in formation, producing at present ½ ton per fm. A very good lode is still being opened up in the winze in the bottom of No. 2, and it is yielding about 2 tons per fm. No. 3 adit level is worth about 1 ton per fm., but the rise in the back of this level remains unproductive. The mid-level at Ball's shaft appears to be developing pretty regular, but the lode here is not very rich in ore just now, being worth about ½ ton per fm., but considering the value of the lode for the length of level driven here, the result on the whole has been highly satisfactory. At No. 4 level there is not much change to notice. At No. 5 level west the lode is now yielding about ½ ton per fm. It is less in size than it has been for some considerable time past, being more of the size of the lode at the ore-producing points elsewhere in the mine, so we are now in hopes of meeting with good ore here. No. 5 level east is showing a leader of ore to-day, but it is difficult as yet to judge whether it will continue, and lead to what we have been expecting to meet with here, or not, viz., a good course of ore. The mid-level at Murchison's is worth about ¾ ton per fm., but the rise in the shallow workings produces nothing to value ; 86 miners are employed at this mine. Johannes Mine : The cross-cut is advancing satisfactorily ; in fact, better than we at first anticipated. The new driving appears to have received a kind of fillip, doubtless from the money they can earn, which I trust will eventually bring us in the position of getting duty here equal to what is obtained with the boring machine in other parts of the world. Better progress is being made in the winze than during last month, but still I am afraid it is not as good as we ought to be making, and probably we shall have to change the miners. The lode is nearly 6 ft. wide, and a few patches of quartz are found here and there. We are daily expecting to meet with a more regular quartz formation, and, doubtless we shall get ore to value. 10 miners are employed here. Næsmark Mine: Barker's shaft has been sunk about 2 metres since last report. We are glad to be able to report an improvement in the general appearance of the lode, and we hope to find something to value next week; no change in the number of men employed. Surface work and remarks : A heavy snowfall and severe cold has interfered somewhat with the despatch of the work at surface recently, we are, however, pushing on with the machinery as fast as possible, but having to set men to make the bolts and nuts, which did not arrive from England with the water-wheels, &c., speed in the erections has been affected.—J. D. Holman.

BRITISH BROKEN HILL PROPRIETARY.—Manager's report week ending January 9th says :—Main shaft sunk 5 ft. ; distance below plat, 77 ft., and from surface, 29 ft. No change in the character of the country sunk through ; no increase in the flow of water. Western cross-cut : The 212-ft. level extended 8 ft. ; total distance from shaft, 189 ft., and through the lode, 151 ft. Still in lode country, with no present indications of hanging-wall. No. 2 shaft : Contract let for driving the 188-ft. level 100 ft. south. No. 3 shaft : The 225-ft. level south extended 9 ft. ; should hole them to block 14 drive in about another week. Same level north drive 3 ft. in the galena, which is very bad and hard for working ; total distance from shaft, 103 ft. No. 6 shaft : The 100-ft. level has been driven 13 ft. by contract ; lode poor. The 184-ft. level south has been driven 9 ft. in the galena ; distance from cross-cut, 129 ft. Contract let for the further extension of 100 ft. Same level north advanced 8 ft. ; total distance from cross-cut, 160 ft. Driving in the softer country on footwall side of lode to get through to the North Broken Hill Mine as quickly as possible for air. Pumping plant : Good progress made with stone foundation of engine. One course of stone more will complete it. Putting in the heavy tiles to carry the bob.—T. Eyre.

CALLAO BIS (22nd Jan.)—Mine—Unda shaft : The cross-cut driving north at the 250-ft. level has been driven 13 ft. ; total distance from level, 38 ft. In this drivage we are passing continually through small seams of quartz, and seemingly dropping into something below. I am still doubtful as to what this may lead to, but should nothing better be found in a few more feet of drivage I shall stop it. My idea of this work is to prove the country north of shaft. In the 200-ft. level I have continued on the seam of quartz mentioned in my last report, but I am disappointed at its not opening up wider as we proceed, as I had thought at first ; 11 ft. has been driven. This is now stopped, and the men put in the 350-ft. cross-cut south-east, and as you direct this will be pushed on as fast as possible. Since receiving your directions (letter of December 12th, arriving here on 19th January) 2 ft. 9 ins. has been driven. At the start we found that from the shaft the ground was hard, and since it has become much harder and bad to break. I have set the work on contract at 25 pesos per ft., calculating that we ought to drive about 20 ft. per month. I will advise you very carefully every letter of the condition of the ground, &c., as I attach considerable importance to this point. Sosa-y-Mendez : In the level of which I mentioned in my last we have continued driving 24 ft. ; total distance, 28 ft. ; in quartz, and mixed mineral matter, assaying separately, quartz alone, 16 dwts. 18 grs. ; mixed mineral matter, 19 dwts. 18 grs. ; which, to say the least, is very encouraging for the company. I again made an assay of the extreme end of this drift with the same result, and I have now made arrangements to bring 50 tons of stuff to mill, at 5 pesos per ton, as a trail.—G. W. Eustice.

COLAR CENTRAL (29th Jan.)—Low's engine shaft : The 200 ft. east cross-cut has been driven 13 ft. ; total distance from shaft, 139½ ft. The character of the ground still remains unchanged. We have struck water in the foot of the level ; driven by one rock-drill. The 200 north drive from east cross-cut has been driven 12½ ft., making a total of 20½ ft. from cross-cut. The quartz that we were driving on has almost pinched out, and looks very unpromising. If no improvement takes place very shortly, we shall drive south on the quartz met with in the east cross-cut, to prove if it is only a small patch, or makes towards the south ; driven by one rock-drill. The 200 west cross-cut has been driven 12 ft. since last report, making a total distance from shaft of 143 ft. We put in a deep back hole yesterday, and I think this has tapped the water in Darlington's shaft. I hope it may prove so, as otherwise we should have had to hoist the water out of Darlington's shaft before holing through ; driven by one rock-drill. Underlay shaft : The 171-ft. level has been driven by hand labour 8½ ft. ; distance from cross-cut, 51 ft. 6 ins. This, I am pleased to say, is a great improvement in speed, but at the same time the ground has been somewhat more favourable. Two good floors came in and gave the coolies an opportunity for good blasts. The lode is standing nearly vertical, but the small amount of quartz is of no value whatever. East boundary shaft : The ground has given us much trouble here, and we shall have to timber the shaft all the way down. This is being attended to. Machinery at surface is in very good condition. We have a fair stock of good firewood on hand, and the consumption of fuel is being kept within the lowest possible limits. New boiler has been safely brought on to the mine.—A. S. B. Oakley.

CORTEZ (4th Feb.)—Work on the mines for week ending February 2nd has been as follows :—Boss tunnel : Advanced 26 ft. ; no change in ground. Main tunnel : East drift advanced 9 ft. Not any work done on the other levels, except on stopes of north-east upraise and big porphyry, and the ores stoped were not conveyed to chutes, as the Chinamen whom we employ as ore haulers were permitted to take a week off to celebrate the Chinest festival of new year. All the stopes in the mine are looking well ; 100 tons of ore were hauled to the mill ; 54 tons of ore treated at the mill. The mill was shut down for three days to do some needed repairs. We have broke ground on a new tunnel, which we have called the Development tunnel, of which I shall advise you more fully hereafter.—Welsh.

CUMBERLAND (28th Dec.)—The general outlook is far brighter than it was last Christmas. The mine is in first-rate working order, the we are now in a position not only to keep the stopes full of men, but also to push on the development in a satisfactory and economical manner at the same time. This means that we shall have the 5th and 6th levels driven, and the stopes over them opened before the stone between the 3rd and 4th levels is worked out. We shall be hauling stone from three levels, instead of as formerly from one. It is, of course, the case that we are passing through a poor bit of country, but from the past character of the mine it is highly improbable that this poor country should continue, and I firmly believe that the stone we have struck in the shaft is the beginning of a better state of things. The stone in the stopes, is poor, but still it is payable, which is a great thing, and it is of fair width throughout. Moreover, we know from the winzes that there is some good stone in the ground we are now stoping.

DENVER (8th Feb.)—Mine : The advancement during January in the east and west drifts at the 1,050 level is 45 ft. and 43¼ ft. respectively, and I cannot say that there is any improvement in the nature and value of the vein at any of these points. We have taken up the 1,050 drifts with the same number of men, and shall push them on with all possible speed during the present month ; the rock, however, is hard, and the vein tight, more particularly on the west side, and until this state of things changes we shall not find good ore. I expect to reach the junction of the north and main veins in about 200 ft. more driving. I fully expect to find softer rock, and a corresponding improvement in the lode before that, and, in fact, it is being looked for from day to day, as certain small veins or feeders should now be found running into the vein.—A. Rickard.

DEVALA MOYAR (28th Jan.)—The lode in the winze sinking below the deep tunnel is lasting down very regular, with two well-defined walls containing considerable pyrites. Since cutting the lode 100 ft. west of pyrites winze we have been driving east and west on the lode. The lode being too large to attack in its entirety, we are working on the hanging portion, which I regard as the best. Both tunnels are most promising, and each tunnel will produce 2 tons pyrites to the fm. We are working two stopes in the back of the deep tunnel west of pyrites winze; the lode averages 7 ft.—J. Williams.

EAGLEHAWK CONSOLIDATED.—Abstract of reports from the mine, dated the 29th December, 1888 : During the fortnight we have been driving both north and south at the No. 8 level, 550 ft. from the surface. The south drive has been extended 9 ft. for the fortnight, and the north drive 26 ft., 35 ft. in all. The reef is hard and solid, it looks well enough for gold, but we cannot find anything payable. We have a good quantity of water coming out of the drives, but they have not drained the shaft yet, as I expected. We shall start to sink the shaft after the new year. We have finished the rise, and made all secure, and started the men to drive south at the No. 7 level. We have driven 19 ft. for the eight days' work ; the reef at this level is 8 ft. wide, and carrying seams and all the metals that belong to a gold bearing reef.

ESSAMAN.—The company have sold, through Messrs. Johnson, Matthey and Co., 319½ ozs. gold, realising 1,251*l.* 8s. 2d., or at the rate of 3*l.* 17s. 9½d. per oz., being the product of 23 days' crushing in November and 17 days in December, with 12 head of stamps working below power. The manager writes as follows :—Prestea, Essien's tunnel : Faces are good, and if the 3 ft. of stone in the centre of the lode were crushed alone it would yield from 1 to 1 oz. 5 dwts. per ton. I have made tests and satisfied myself on that point. We may after a time crush only the best part of the lode, but at present it is next to impossible, as the labour must be trained to it. We are losing nothing by crushing the whole, as it must be taken out, and after being broken it more than pays cost for crushing, but, of course, reduces the average per ton. A later telegram advises 180 ozs. gold waiting shipment, and machinery working all right.

FRONTINO AND BOLIVIA (16th Feb.)—The directors have received advices from the mines, dated 24th December, 1888, and 8th January, 1889. Also a letter from Messrs. Restrepo, dated 12th December, 1888. The statement of profit and loss for the month of December is as follows, viz. :—1,075 tons from general mines produced 604 ozs. ; tributers' gold, 298 ozs. ; total, 902 ozs. Also 2,000 lbs. of sulphurets, containing 110 ozs. of bullion. Estimated value of the gold and sulphurets, 2,099*l.* 12s. 5d. ; cost at the mines, medillin, and in London, 1,997*l.* 11s. ; paid for gold bought of tributers,

587*l.* 2s. 5d.—2,584 13s. 5d.; estimated excess of expenditure, 485*l.* 1s. The dry weather still continues, and all operations are much restricted; consequently, the returns again do not meet the cost. The lode at the 285-ft. level in Silencio is opening out well and improving. Good returns from this lode may be expected very shortly.

FRYERSCREEK.—The directors have received the following advices, dated 9th January:—There has not been any work done below during the past fortnight, only the contractors driving north on the western line of reef. They have extended this drive a further distance of 7 ft. without discovering anything fresh in the drive. We shall put on some more men on this line of reef next week to drive north at the 420-ft. level. We have also taken out the condensing gear of the pumping engine and the old cistern, and have put the new cistern in its place with the condensing gear, and a portion of a new road for the air bucket; also cleaned out the flues and the boiler. Have also tested the boiler up to 68 lbs. pressure. I find the boiler to be sound, and in good condition. We have also had a thorough overhaul of the machinery, put everything in good working order, and we have commenced to pump the water out to-day. I expect it will take us about eight days before we get the water out from the bottom level. We have had one of the greatest floods that has ever been seen in Castlemaine district, which has let down a great deal of water to us through the old workings, which will take us a little longer to pump it out. There will be no damage otherwise.

HOLWAY UNITED (16th Feb.)—Roskell's engine is now at work, and new plunger is doing very well. Level engine: The pipe that feeds the boiler of this engine burst early this morning, causing a stoppage for to-day while we repair it. The water at level engine shaft is 2 ft. below the roof of the 60 level. This level will be cleared of water by Monday, when I intend to commence getting up the tributers' stuff from this level, while we are forking the levels below, and the shaftmen will go about putting Roskell's shaft in order for winding through. There is a good deal of work to be done here, such as making connection for drawing lift, fixing ladders, staying column and main rods, and dividing and casing the half of the shaft. This work I will try to get done by the time the water is out, so as to draw tributers' stuff up from the 80 level as early as possible.—H. HOTCHKISS.

JOSEPHINE.—Extract from superintendent's report for week ending January 26th:—During the week a tank station has been cut at the 500 ft. level, the drift run east 5 ft., and the main shaft sunk 5 ft.; total depth, 510 ft. Owing to getting into some bad ground in the footwall, considerable timbering was necessary at this point, hence the delay in sinking; but everything is now in good shape, and sinking will proceed without delay. There is no change worthy of note in the bottom of the shaft. Drifting west on the 300 has been resumed; this drift at present is not in quartz. I am at present milling samples of quartz from the 300 east and west; these samples will be carefully kept separate, and as soon as finished will report the result to you.

The following cablegram has been received from the superintendent: "Yield of free gold for fortnight, $2,500, 165 tons. 300 ft. level east looking well."

MONTE DEL ORO.—The following are the results of the latest assays of samples received from the mine:—No. 1 from the north of shaft No. 6, 6 dwts. 12 grs. of gold per ton; No. 2 from the south end, 7 dwts. 21 grs. of gold per ton; No. 3 from winze No. 1, 2 dwts. of gold per ton; No. 4 from old stuff from shaft No. 5, 3 dwts. 6 grs. of gold per ton; No. 5 duplicate from north of shaft No. 6, 2 dwts. of gold per ton; No. 6 duplicate from south end, traces of gold per ton; No. 7 duplicate from winze No. 1, traces of gold per ton; No. 8 duplicate from old stuff from shaft No. 5, 1 oz. 4 dwts. 7 grs. of gold per ton.

MOSMAN.—Extract from an article published in the *Northern Miner*, at Charters Towers, Queensland, on 1st January, 1889, reviewing the operations on that goldfield during the year 1888:—"The Mosman Gold Mining Company, which was floated last year (i.e. 1887) on the English market, and which has since met with very adverse criticism in several quarters, promises now to be one of the best properties floated in England. A crushing was completed from the Eastward Ho! shaft on this property, on the 20th December, of 1,042 tons for a yield of 3,557 ozs. 5 dwts. 10 grs. of gold, being an average of 3 ozs. 8 dwts. per ton, and during the week following 140 tons were raised. Another crushing of 550 tons is now going through from the North Australian shaft, which is situate on the same property, and when that is finished there will be another large paddock to operate on at the Eastward Ho! shaft, so that the prospects of this mine look decidedly encouraging. . . . . Taking it altogether, this goldfield is in a better position now than ever it was before."

MOUNT MORGAN EXTENDED.—Advices from the local committee, dated 1st January, state that a severe cyclone occurred at Mount Morgan, by which the English church (a brick building) and the theatre were destroyed; no damage done to your property. The earthworks, &c., connected with the incline road and Storm Bye Wash are now nearly completed. The erection of the machinery has been going on slower, but now Christmas is over we hope to make a good show. I think we may be able to get the mill to work fit to treat the oxidised ore in time for your June report, but I fear that I shall be some time in getting ready for general treatment of the sulphide ores, particularly those of the copper lode, which will require furnaces, vats, pits, sulphuric and chambers, and various appliances tedious to provide, especially with my limited capital, but which I must have to make the mine pay.

MYSORE (29th Jan.)—Fortnightly report: Three weeks will elapse between the last fortnightly report and the report for the end of the month; this will happen three or four times a year. I shall write you fully next week. We are getting on very well with the work generally; especially are the rock-drills doing good duty, and the places generally contain good and rich reefs. The reef in the 236 north of Taylor's shaft assays 3 ozs. 15 dwts. 3 grs. In the 400, 3 ozs. 10 dwts. 13 grs. In the 466, 1 oz. 14 dwts. In the 295 south of Plummer's, 19 dwts. 19 grs. We have commenced a rise in the 295 north of Taylor's shaft towards the new air shaft; there is a wide lode of quartz, assaying 6 ozs. 10 dwts. 16 grs. We are working three stopes in this section of the mine, containing good wide reefs, assaying respectively 2 ozs. 3 dwts. 3 grs., 2 ozs. 12 dwts. 6 grs., and 2 ozs. 9 dwts. per ton. The quartz in the bottom of Tennant's shaft is beginning to assay better; it is reported to be worth 1 oz. 15 dwts. 22 grs. Altogether the assays are satisfactory. We are pressing on the work at the new shaft as quickly as we can, and I think we shall be ready for the machinery as soon as you can possibly send it to us.—B. D. PLUMMER.

MYSORE REEFS (29th Jan).—Fortnightly report:—Harvey's shaft: The 320-ft. level north has been advanced 8 ft. 3 ins., now 24 ft. 6 ins. from shaft; small stringers of quartz and arsenical pyrites are traversing the hard rock, but of no value. The 320-ft. level south has been extended 8 ft. 3 ins., now 22 ft. 6 ins. from shaft; branches and patches of quartz, impregnated with arsenical pyrites, are intermixed with the hard rock showing a little gold. A sample of same gave, according to assay, 2 dwts. of gold a ton. Cross-cut west of plat at the 250-ft. level has been advanced 10 ft. 9 ins., now 107 ft. 3 ins. from plat; the rock is still very hard and difficult for cutting. Cross-cut east of the 250-ft. level has been extended 16 ft. 9 ins., now 116 ft. 6 ins. from level; stringers and patches of quartz are being met with in driving, but up to the present of no value. On the morning of the 25th inst. the flywheel shaft of the air-compressor broke, since which the rock-drills have been idle. This accounts for the low rate of speed attained during the past two weeks. In a few days we shall have a new shaft from Madras. We are for the present doing what we can by hand labour, in order to keep the force of men intact. Taylor's engine shaft has been deepened 6 ft., which makes a depth of 128 ft. 3 ins. from surface. We are now in very hard trap rock. Since the accident to the compressor sinking has been suspended, and the men engaged in casing and dividing the shaft. We shall hoist the poppet heads, and set the winding engine to work by the end of the week, when sinking will be resumed. Stopes in back of the 110-ft. level north and south of winze: The branch of quartz is from 3 ins. to 4 ins. wide, and assays 15 dwts. of gold a ton.—M. SCANTLEBURY.

MYSORE WEST (22nd Jan.)—Walker's: The timbering has been completed, and we are now changing the pitwork in this shaft. The 300 cross-cut east: This has been advanced 5 ft. 8 ins., making 16 ft. 8 ins. from shaft. The reef, which should have been here, appears to have faulted, and we are now driving north and south on the fault, as we had to do in the levels above under similar circumstances. We have as yet found only small strings of quartz, some of which have produced a trace of gold. The 300 north and south of cross-cut: These headings on the line of fault have been advanced 9 ft. 3 ins. We expect to come upon the faulted reef as we did in the levels above in one or both of these headings. The 225 north: This heading, which was suspended for facilitating the timbering in the shaft, has now been resumed, there being a considerable body of very promising quartz here. The 225 south: This heading, suspended under similar circumstances, has also been resumed, the quartz being of a promising character. The 159 north: This heading has been advanced 14 ft., making 347 ft. 1 in. from the cross-cut at Walker's. The reef here is 2 ft. thick, of promising quartz. Assays: Having run out of coke, we have been unable to make any. We received a supply last evening, and shall resume assaying immediately.—Capt. TREGAY.

MYSORE-WYNAAD CONSOLIDATED (22nd Jan.)—Engine shaft, 100 north: This heading has been advanced 14 ft. 9 ins., making 61 ft. 9 ins. from shaft. The reef here still continues the same thickness, about 4 ft. of ferruginous matter, but the strings of quartz are thinner as we advance northward. There being so much water here I am hoping to find a cross-course, or some change of rock, to account for the increase of water, and to change the character of the lode. Machinery: The shaft tackle is up and will be soon ready to work, when I hope we shall sufficiently master the water as to resume sinking.—Capt. TREGAY.

NEW AKANKOO (GOLD COAST) (3rd Jan).—Mining: This goes on very well. We are within 10 or 12 ft. of having the Prospect shaft connected with the main. When this is done we will have plenty of good air, and can make better progress in the levels and stopes. New shaft: This was commenced to-day, and every effort will be made to put it down quick. It is called the Harvey shaft, and Mr. Harvey will send you a drawing showing its position. It is 228 ft. from the centre of the main shaft to the centre of the new one. It is to be 11 ft. by 4 ft., clear of timber, and lies almost parallel to the reef, or 65 degs. east-north-east, and should strike the reef at about 430 ft. The first cross-cut from this shaft will be at a depth of 160 ft. Water pipes: The pump is in position, and the pipes are connected and laid to the water. The steam and delivery pipes are to be put on, and then we will be able to start milling again. It has been decided to take the water from the Lagoon, which will be about one-third of the distance at first proposed, namely, from the river. We have put in a flood-gate, and backed up the water, and find that we will have more than we need. This will more certainly ensure the pump working well, the suction being about 12 ft., and the length of pipe not quite 300 ft.

— (9th Jan.)—I send you a cablegram to-day, "Water pipes complete," meaning that the pipes for supplying mill with water are all laid, and all is now ready to test. I have no doubt all will work well. Mining: To-day we hope to connect the prospect shaft and main shaft. The men rising and those sinking are within a few feet of each other, and by evening we shall have the two shafts joined. The Harvey shaft is down a little more than 11 ft., and we are now going to put in some timber. Everything looks promising in the mining line, and with plenty of good air in the stopes and levels we will be able to get out a considerable quantity of stone. I am trying to get ahead in firewood, so that the mill may be run night and day. There are some water pipes to be altered at the mill, and then we will start crushing again.—RAMSAY.

NEW CALIFORNIA.—Manager's mine report for second half of January:—The 1,900-ft. level west in 400 ft.: The ground continues unsettled, and the lode bunchy; up to the present the drift has opened up only a few spots of pay. The 1,900-ft. level east in 74 ft.: The lode on this side is of a uniform and well-defined character, yielding ore of low grade. The 1,800-ft. level west in 880 ft.: Winze No. 2 down 50 ft.; the drift has been in ore for the whole distance advanced, and in the end we find a bifurcation which has all the appearance of a junction of a new vein with the main lode, as there are two distinct parts, one holding the course of the main lode over the porphyry dyke, and the other cutting through it; both are yielding ore at present. The men from the winze were put to stope and work up for connection with the winze (No. 4) from the 1,700 level. Connection was made, thereby effecting good ventilation. The lode in the stopes for 15 ft. above the back of the level is yielding 8 tons of high grade ore per fm. The 1,700-ft. level west in 1,062 ft.: Winze No. 4 down 76½ ft.; a good improvement has taken place in the lode, which is

now yielding good milling ore for width of about 3½ ft., which is equal to 7 tons per fm. The winze is completed. The 1,600-ft. level east, in 528 ft.: The lode has continued to improve, and in the end of the drift presents a very favourable appearance, which points to a further increase in its value. At present it is yielding 7 tons of fair grade milling ore per fm. The 1,600-ft. level west, in 910 ft.: In view of the discovery in the 1,700, work has been resumed at this point, with the object of testing the character of the lode at this level. The 1,500-ft. level west of Hidden Treasure shaft, in 254½ ft.: The lode is still pinched, except in the back of the level, where it seems to he opening out. A rise will be started forthwith in order to ascertain the exact nature of the vein lying over the drift. The 1,400-ft. level, rise cast, up 111½ ft.: There being no improvement in the grade of the ore in the vein it is not considered expedient to continue the rise for the present. The 600-ft. level, east of cross-cut, hanging-wall vein, in 15½ ft.: The vein shows a little ore from time to time, and is of a promising nature.—A. RICKARD.

— (4th Feb.).—Good progress is being made at all points underground under operation. Stoping has been resumed at the 1,800, and the discoveries at the 1,700 west and 1,600 east are also supplying ore to the mill. The output at present is at the rate of 40 tons per day, or rather hetter, and since the last "clean up," January 15th, we have shipped 512 tons of ore, from which we have, in retorted gold and gold amalgam, about 250 ozs. of bullion, which, in itself, indicates a good milling return. We shall make the final "clean up" for January on the 8th inst., when we hope to be able to report something over 300 ozs. for the month. The mine throughout is looking very well, although we have not yet found ore ground of any continuity at the 1,900 level. We shall push on some distance westward yet before attempting to prospect the ground lying between this and the 1,800 level, as it is of paramount importance that the drifts should not be delayed.—A. RICKARD.

NEW EMMA (2nd Feb.)—I have to report work carried on at the mine for the week ending to-day. Level running east from No. 1 advanced 18 ft.; total, 160 ft. Since my report of 26th ult. we have cut another seam fully 3 ft. wide, running diagonally across the level, carrying a large percentage of iron and manganese, and from an assay made from hand samples show 5 ozs. silver per ton, which I consider much more encouraging than anything heretofore found in this part of the mine. Have worked four men full time. Cross-cut from No. 1 towards hanging-wall advanced 10 ft.; total, 35 ft. No material change to report; however, it is looking fully as well as per letter of 26th ult. Have worked two meu full time. Level running north-west from No. 1 advanced 15 ft.; total, 157 ft. continues in old workings, and as heretofore reported this level is being run for the purpose of opening up ground to extract ore for the mill next season, consequently do not expect any important improvement; have worked four men here. Level No. 3 south-east advanced 10 ft.; total, 302 ft. Rock is still very hard, and is the same character as per my last report; have worked four men full time. Cross-cut from No. 3 towards footwall advanced 6 ft.; total, 63 ft. Not any change to report; Have worked two men full time. Level running north-west from uprise from Attwood winze advanced 12 ft.; total, 81 ft. The character of the ground has not changed; looking fully as well as per report of 26th ult.; have worked two men full time. The ore miued recently is from level running north-west from raise from Attwood winze.—H. C. WALLACE.

NINE REEFS (29th Jan.)—Mining operations:—Malleson lode, main shaft: The 310-ft. level north, driven by one miner and six coolies; advauced 2 ft. 10 ins.; total distance from shaft, 79 ft. 10 ins. Vein 5 ft. wide; assay, 2 ozs. 5 dwts. 17 grs. gold per ton. Morrison's shaft: Sunk by one miner and eight coolies, 3 ft. 2 ins.; total depth under 185-ft. level, 17 ft. 2 ins. Part of vein carried in shaft, 6 ft. wide; the assay, 2 dwts. 14 grs. gold per ton. The 185-ft. level north, driven by three coolies, advanced 1 ft. 6 ins.; total distance north of Morrison shaft, 86 ft. 4 ins. Vein 3 ft. wide; assay, 7 dwts. 19 grs. gold per ton. Bayuard shaft: The 310-ft. level north, driven by one miner and six coolies, advanced 4 ft. 9 ins.; a total distance of 37 ft. from shaft. Vein 5 ft. wide; assay, 19 dwts. 14 grs. gold per ton. The 310-ft. level south, driven by one miner and six coolies, advanced 3 ft. 8 ins.; distance from shaft, 37 ft. 8 ins. Vein 5 ft. wide; assay, 18 dwts. 6 grs. gold per ton. Stopes: No. 1, in back of the 185-ft. level, by one miner and eight coolies; vein 6 ft. wide; assay, 7 dwts. 19 grs. gold per ton. No. 2, in back of the 185-ft. level north of main shaft, by eight coolies; vein 6 ft. wide; assay, 9 dwts. 18 grs. gold per ton. No. 3, in bottom of 185-ft. level south of Baynard shaft, by 12 coolies; vein 4 ft. wide; assay, 8 dwts. 11 grs. gold per ton. No. 4, in bottom of 185-ft. level south of main shaft, by one miner and 18 coolies; vein 4 ft. 6 ins. wide; assay, 9 dwts. 2 grs. gold per ton. No. 5, in bottom of 185-ft. level north of maiu shaft, by 18 coolies; vein 8 ft. wide; assay, 9 dwts. 2 grs. gold per ton. No. 6, in the back of the 310-ft. level north of main shaft, by six coolies; vein 6 ft. wide; assay, 6 ozs. 15 dwts. 14 grs. gold per ton. Champion lode, Vyvyan shaft: The 145-ft. level south, driven by one miner and six coolies, has advanced 6 ft. 4 ins., a total distance of 295 ft. 6 ins.; vein 1 ft. 8 ins. wide; assay, 3 dwts. 22 grs. gold per ton. The cross-cut east at the 95-ft. level south of this shaft, driven by two coolies, has advanced 3 ft., passing through a very promising-looking vein of 2 ft. wide. The total length of the cross-cut is now 10 ft.; no assay of the vein intersected has beeu as yet made, but the result of the assay of the sample taken will be sent in due course. (Telegram received 12th inst., stating: "Lode 3 ft. wide, assaying 19½ dwts. gold per ton.") Stopes: North stope, in the back of the 145-ft. level north of Vyvyan shaft, by eight coolies; vein 1 ft. 4 ins. wide; assay, 2 dwts. 14 grs. gold per ton. South stope, in the back of the 145-ft. level south of Vyvyan shaft, by six coolies; vein 1 ft. 8 ins. wide; assay, 1 oz. 19 dwts. 4 grs. gold per ton. Milling: The stamps mill has been running well. We have had a little delay to enable us to make some alterations for the lessening of the consumption of fuel, and increased future crushings. Referring to the vein intersected in the cross-cut east at the 95-ft. level south from Vyvyan shaft, I would further say that this vein has to me every appearance of being the main Champion lode of this district, and that the Champion lode (so called) on which we have been working is a very strong offshoot from this newly-iutersected vein. These two veins probably unite in depth, and form one large and, maybe, rich lode. The point at which they meet is, I think, below the depth to which we have yet attained; but the prospect of discovering a rich portion of the new vein by cross-cutting is very encouraging, especially so if the cross-cuts be driven from those points where the old vein has proved richest iu yield of gold. I consider this discovery a very important one, materially affecting the value of this property.—Capt. BENNETTS.

NO. 2 QUEEN (2nd Jan.)—Fortnightly report.—Mill: The clean-up from our own stone, 319 tons 2 cwt. taken from our various stopes, has given us 239 ozs. 7 dwts. 21 grs., the gold being exceptionally good (3*l.* 7s. 8d. per oz.). The average per ton (over 15 dwts.) also shows a slight improvement as it does not include what remains in the concentrates that have yet to be ground. There is about 40 tons still on hand in the yard of about the same quality which we had not time to crush before the battery stopped for Christmas. Our tributers crushing has yielded them only 121 ozs. 10 dwts., melted from 171 tons 10 cwt. we put through for them, which gives the company a larger profit than they could possibly have made if the ground had been on worked wages in the ordinary way. Work was continued through the holidays, excepting Christmas and Boxing Day, cleaning the boilers, and getting the machinery ready for a fresh start, as some of the cams had to be re-steeled, and various other jobs done, which thus afforded a good opportunity of doing. We have a large lot of stone to crush from the Phœbe in January, which is being carted in as well as a small quantity from the Newton Butler.—A. G. CHARLETON.

NORTH MEXICAN (1st Feb.)—Within a day or two I will have the shaft connected from the surface to the bottom and then continue sinking. I cannot drive both ways in the shaft because I would have timbering going on in both parts, which would have to be taken down again, and now it is not necessary, as the connection will be made so soon.—R. J. CARLISLE.

NUNDYDROOG (29th Jan.)—Mining operations: Webb's shaft is down 396 ft. 6 ins., Taylor's shaft 350 ft. 8 ins., and the 300-ft. north of Taylor's shaft is driven 21 ft. 8 ins.; the rock continues to be hard and barren. The 370-ft. level north of Webb's shaft: I informed you some time ago we had discontinued driving on the wide band of quartz, and that the men had been set to work on the western side. In stripping down this side we found the rock easier than is usual; there are patches of quartz. An assay has been made, showing it to contain 3 dwts. 6 grs. of gold to the ton of rock. We are in hopes that this will untimately lead to a paying lode, as it is north of the north cross-course, and we never before saw anything of so promising a character in the upper levels north of that baud. The other places are looking much the same as usual; some are rich in gold, but we have not been able to break so much quartz for the mill as was broken in previous months, and the returns will be somewhat less. Stopes: The bottoms in the 370 and the 300 contain a lode 3 ft. wide, assaying 3 ozs. 16 dwts. 6 grs. and 2 ozs. 4 dwts. 12 grs. The stopes below the interuediate level and the 230 contain quartz 2 ft. wide and 1 ft. 8 ins. respectively, assaying 1 oz. 18 dwts.; the middle level contains a lode 1 ft. 8 ins. wide, assaying 6 ozs. 10 dwts. 18 grs. The rise iu the back of the 230 north of Webb's shaft looks very well; there is a lode of quartz 2 ft. wide, assaying 1 oz. 15 dwts. 18 grs., and the stope in the bottom of the 166 contains a small rib of quartz, assaying 1 oz. 11 dwts. 6 grs. Machinery: The compressor works exceediugly well, so does the stamp mill, &c. Weekly samples from the mill: Rough quartz, 1 oz. 17 dwts.; smalls, 2 ozs. 9 dwts. 6 grs.—B. D. PLUMMER.

OSCAR (8th Feb.)—Oscar lode: Since writing last the siukers have been cross-cutting towards footwall and stoping in bottom of shaft. There is no alteration in the general appearauce of the lode itself, but we are findiug a little visible gold in the small veins of quartz and calcite. Hitherto the gold has been found accompanied with telluride of bismuth, but this time we notice the absence of this mineral. The mill plates show a fair improvement on recent crushings. We hope to contiuue the sinking in a few days. The 400-ft. level west is making fair headway, and showing indications similar to those met with in the shaft. We may look forward to better stuff in a short time. No. 3 lode is advancing at the rate of 7 ft. a week, with two men. No alteration to note. Daw's lode: The improvement reported in bottom of shaft contiuues, and we anticipate in a short time being able to advise that quartz has taken the place of the decomposed vein referred to iu last report. The bottom level north is in softer ground, and has a small run of quartz on the footwall, while iu the southern level the quartz is as last reported. The rise and the stope in the back of this level is in very soft ground, having on the footwall about 5 ins. of quartz. We have not seeu any visible gold, but it will mill from 6 to 7 dwts. per tou. The 300-ft. level, with winze and stopes in back of ditto, show no alteration to call attention to. The rise in 170-ft. level is producing a good deal of quartz, which will be milled separately some time during the month. The weather is cold and stormy.—J. DAW, jun.

OSCAR (16th Feb.)—Oscar lode: The shaft siuk continues to show the same appearance as on last writing. The rock is traversed by numerous small strings of calcite and quartz, and is itself impregnated with the same minerals. We are now coutinuing the sinking, but have increased the width to 3 metres, setting the extra width at stoping price. The 400-ft. level west has a good appearance. We have not seeu any visible gold, but the face cousists of quartz and rock identical in appearance with that in the shaft siuk. No. 3 lode shows a slight increase in the quantity of pyrites, but no further alteration. Daw's lode: The vein of rotteu stuff in the shaft sink before reported on continues as before, but there are signs of its shortly turniug to quartz, for the whole width is traversed with small strings of the mineral. The 400-ft. level south is being pushed forward as rapidly as possible, in order to effect communication by the winze with the 300-ft. level above. The quartz here and iu the rise in the same level increases slightly. The 400-ft. level north shows no alteration of moment. There is a vein of broken stuff from 1 ft. to 18 ins. wide, with a little quartz, which we hope will turn to all quartz. No alteration to report in the 300-ft. level aud stope. The rise in the 170 ft. north level is producing a fair amount of quartz, which we shall crush as soon as there is sufficient broken to afford a fair test.—J. DAW, jun.

PERSEVERANCE (21st Jan.)—I really cannot say much this week, except that all the places are looking very favourable, and the stopes in No. 4 floor all show more and better mineral than might have been expected. Our concentrators are going ou well, and the masons are well forward with the furnace, so I hope we will soon raise our returns considerably. Mine measurements: B tunnel south in lode continued 1½ ft.; the ground is rather hard, but the contractors have not done good work. 2nd rise in lode coutinued 5 ft.; 2ud drive south in lode coutinued 2 ft.; drive south from 1st rise continued 10 ft.; west drive coutinued 1 ft., the stoue being very hard. No. 4

level drive south-south-east in lode continued 5 ft; 1st rise in lode continued 21 ft. No. 1 Prospect shaft: Drive south in lode continued 11 ft.

PESTARENA (16th Feb.)—Caunter lode: At the 90 level east an improvement has been caused by a junction with a branch from the north side, making the lode 1 metre wide, mineralised throughout, and estimated to yield 6 tons of ore per fm. of low-grade ore. The 90 west contains lodey matter, with pyrites 30 centimetres wide, and bids fair for improvement. The 90 east produces 7 tons of 9 dwts. ore per fm. The 100 end east shows a solid vein of pyrites, yielding about 6 tons of 1 oz. 10 dwts. ore per fm. The 110 east is worth 7 tons per fm., at 1 oz. 5 dwts. per ton, and the 110 west 8 tons of 14 dwts. No. 1 lode: The 130 end south is much more settled, and is producing 5 tons per fm., at 4 dwts. The branch in the 130 cross-cut has been opened on at each side, but not having the characteristics of the caunter lode the driving of the cross-cut has been resumed. The lode in the 140 north is split into two branches; the easteru one, which will be followed, is worth 4 tons per fm. at 9 dwts. per ton. The 130 winze is in mixed rock and pyrites of no value. The stopes continue about the same as before. A breakage to the sweep-rod of the turbine has interrupted the pumping machinery for 48 hours, and the water rose to within 12 metres of the 150 level, but the damage has been repaired and pumping resumed. A falling-off in the surface water has compelled us to stop six of the mills. Val Toppa: The various works of exploration lately described are being continued, but they present no particular feature to call attention to for the moment.—W. Roberts, W. H. Trelease.

PORT DARWIN.—The secretary advises receipt of a letter from the mines, dated Palmerston, 2nd January, in which the new manager (Mr. Salter) states that operations have been greatly delayed owing to the action of the late manager, which accounts for the delay in his being able to transmit telegram with the report of trial crushings. He had, however, now got to work, and his opinion from the appearance of the quartz was that it would yield probably 1½ ozs. per ton. The telegram since received shows that his prognostications were more than realised. The company have recently received several telegrams from Mr. Salter, advising that he is now crushing, from which it would appear that the free gold obtainable is more than sufficient to cover working expenses, as the instructions sent out by the directors were to delay commencing crushings until the plant for treatment of the tailings was at the mines and erected, so as to ensure a profit, it being estimated that an average of 3 ozs. to the ton would then be obtained. It is hoped that the director who left on the 1st inst. will arrive in Palmerston about the end of next month.

POTOSI (23rd Jan.)—The following will show the progress made in the mining department since last reporting on the 10th inst.:—New Lode: No. 2 tunnel has now a total length of 109 ft., thus showing the distance driven here since last writing to be 12 ft. The lode in present end of same is yielding 2 ft. of solid quartz, of just the same highly promising character as we have hitherto been breaking from this lode. No. 2 New lode: A deep tunnel has been commenced, and has since been extended 28 ft. in ground most favourable to progress on contract at $2½ per foot. We calculate to intersect the lode in driving another 60 ft., when we shall have some 250 ft. to drive upon the lode before coming under the first or No. 1 tunnel upon the lode. Upwards of 100 ft. of backs will also thereby be laid open between those two levels. As regards the mill test from this lode, we are making satisfactory progress, having already delivered 35 tons of the ore to the mill. Potosi Viejo—Zeiler's shaft: This now down 34 ft. below the bottom level. Since last writing, the lode here had continued of about the same size and value as previously reported, until two days ago, when the lode has shown an improvement in value of quartz, which, however, was making a little smaller. Socorro Lode: We have commenced driving a deep adit cross-cut, and same is already extended 23 ft. It will be seen that we are in a forward state as regards making a mill test from each of the four lodes now being developed, and as this can but be regarded as the most satisfactory means of ascertaining the respective values of the same, we accordingly await the results with interest. You will observe from the above that we have started two deep tunnels, one on No. 2 New lode, and the other on Sorocco lode. These sites have been carefully selected after survey and mature consideration, and I have not the least doubt as to their proving in every way beneficial and desirable. We shall be able to deliver the ore to the mill at a sufficient height to admit of a large dump, as well as sizing screens and self-feeders thereat.—Pryor.

RAVENSWOOD.—Mine manager's report for three weeks ending 22nd December:—General Grant Mine: During this time we have stoped out 54½ fms. of ground, and have advanced the levels going north as under:—No. 5 level, 10 ft. 6 ins.; No. 4 level, 12 ft.; No. 3 level, 8 ft.; No. 2 level, 6 ft. The total quartz raised during the period is 137 tons. The quartz in No. 4 and 5 levels has increased in size, but does not show much improvement in quality. Black Jack Mine: During this period we have raised 128 tons of quartz out of 31¾ fms. of stoping, sinking winze 14 ft. 6 ins., and driving 43 ft. 6 ins., in driving towards the Mellaneur, which lode has been cut out by a feeder for the time. I have the power drill at work with the following results:—Wages, 27*l.* 15s.; firewood, 1*l.* 15s.; explosion, &c., 9*l.* 3s. 9d.; total, 38*l.* 13s. d. for 31 ft. 6 ins. driving levels. This shows a great advantage over hand power, both with regard to costs and time.

ROCKY BAR WIDE WEST.—Report for week ending January 23rd:—Stopes Nos. 1 and 2: The ore throughout these stopes is more regular in size and value than before. The lode is strong, and has every appearance of continuing so. Raise No. 3: Four men stoping on ore here. No change in lode. Extension level west No. 2: There is now a continuous stope opened above this level for a distance of 80 ft. This part of the mine is looking exceedingly well. South cross-cut No. 1 has been extended 30 ft.; total, 96 ft.; passing through the Wide West ore vein, which is between 3 ft. and 4 ft. in width, and laying very flat. The lode is of a soft decomposed matter carrying very little ore at this point. I shall start driving a level east at this point (on the course of the lode) as fast as possible, and open up this part of the mine. Those not acquainted with mining may feel a little disappointed, and perhaps discouraged because we have not cut high grade ore at this point. Allow me to assure you that my faith in the property has not been shaken one particle, and the improvement in other parts of the mine quite makes up for this place; the mine has never looked better since my connection with it. Mill: During the past week the ore has averaged very regular in milling, and the amalgam on the coppers was never so heavy for the same number of days' running as it is now. All machinery is in first-class working order, and everything is working satisfactorily.—H. U. Thomas.

ROCKY BAR WIDE WEST (31st Jan.)—The manager writes:—I believe the ore from the main stopes will average higher grade this month than last. Having up to this time shown a steady increase in bullion receipts, and with an improvement in the mine, I certainly feel very much encouraged for the future.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending 20th January:—Dunderberg:—No change since last report. Eagle's drift: In the upraise from the tunnel the ground has become softer, and we have advanced 14 ft. during the week, making a total of 84 ft. upraise from the tunnel level. There are 28 tributers at work in the Dunderberg and six contractors at the Eagle's upraise. Lord Byron: Several more tributers have gone to work here, making a total of 12 now at this mine; no change at present.

SANTA BARBARA.—Advices from Mr. T. S. Treloar, dated Pari, 4th and 17th January, state:—The mineral delivered on the spalling floors from the mine during the month of December amounted to 1,466 tons, of which 276 tons were rejected as refuse stone, and 1,190 tons treated at the stamping mills. The total produce obtained was 3,744 oits. of amalgamated gold, or equal to 3.146 oits. per ton stamped. This produce of 3,744 oits. of gold, valued at 8s. 6d. per oit., amounts to 1,591*l.* 4s. sterling, and the estimated working cost for the month at exchange 27⅛d., being 1,401*l.* 6s., leaves an estimated profit of 189*l.* 18s. during December.

SICILIAN UNITED.—The following is from the mine captain's last report:—The works at the mines are proceeding satisfactorily. In the Carbone Mine the cross-cut gallery has been advanced very considerably this week towards the lode. Men are fixing frames of timber and logging up same. The total length of the gallery is now 89 metres. Pumea Mine: A cross-cut gallery has been advanced considerably this week towards the lode. The ground here is hard and compact, but still requires timbering.

COMMERCIAL NOTES.

Miscellaneous.

On and after March 1st the River Plate Trust, Loan, and Agency Co. will pay the half-yearly coupon due on that date of the Entre Rios Central Railway Extensions Six per Cent. Mortgage Bonds for 1,745,600*l.*

The Crown Agents for the Colonies announce the numbers of the Trinidad Government Five and Four per Cent. Debentures drawn for payment.

The list of applications in the Tamarugal Nitrate Co. was closed last Saturday at noon. The capital, we are informed, was subscribed for nearly four times over.

The transfer books of the Hotchkiss Ordnance Co. will be closed from the 23rd February to the 8th March, to prepare for the dividend.

Lord Suffield and Capt. Alexander Clarke-Kennedy, D.J.J.P., have joined the Council of Administration of the Metropolitan Coal Consumers Association, Limited.

The letters of allotment of the Southern Land Company have been posted, and the letters of regret will follow early next week.

It is announced that the letters of allotment and regret in the Ketehau (Pahang) Corporation, Limited, have been posted.

Dividends Declared and Announced for Week Ending February 23rd.

Carried forward.

Bristol Tramways and Carriage Co.	—	5s. per share.
Briton Ferry and Chemical Manure Co.	—	15 per cent.
British Land Co.	327*l.*	2 per cent.
Barrett's Brewery and Bottling Co.	—	6 per cent.
Canadian and American Mortgage and Trust	—	7 per cent.
Cork, Blackrock, and Passage Railway	100*l.*	1½ per cent.
Cockermouth, Keswick and Penrith Railway	175*l.*	5½ per cent.
Cagliari Gas and Water Co. ...	—	8 per cent.
Cagliari Gas and Water Co. ...	—	Bonus, 5s. per share.
County and Gloucester Banking Co.	—	10 per cent.
Caledonian Banking Co.	—	7 per cent.
Forth and Clyde Junction Railway	235*l.*	7 per cent.
Grand Canal Co.	1,119*l.*	2 per cent.
Grand Trunk Railway	75,212*l.*	5½ per cent.
Improved Wood Pavement Co. ...	—	10 per cent.
London Road Car Co.	—	3½ per cent.
Mercantile Bank of Australia ...	4,000*l.*	10 per cent.
Mines Contract Co.	—	20 per cent.
Neebe, London, and Transvaal Syndicate	—	30 per cent.
Ottoman Railway	—	18s. per share.
Oldbury Railway	51*l.*	4 per cent.
Rhondda and Swansea Bay Railway	242*l.*	1½ per cent.
R. Bell and Co.	—	12 per cent.
Robson and Sons	—	8 per cent.
Scottish Investment Co.	—	10 per cent.
Scottish Investment Co.	—	Bonus 3 per cent.
Severn, Wye and Severn Bridge Railway, Preference	—	1 per cent.
Scottish Reversionary Co.	—	6½ per cent.
Telegraph Construction and Maintenance Co.	43,376*l.*	36s. per share.
W. B. Fordham and Sons	1,161*l.*	12½ per cent.
Wigan Iron and Coal Co.	633*l.*	3 per cent.

"NOTES ON INVESTMENTS"

The OLDEST and SAFEST GUIDE to INVESTORS and SPECULATORS

Published Fortnightly. Free on Application.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be fonnd in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes, and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

South Africander.—A gold mining claim is 150 ft. by 400 ft.

J. W.—No office for registration in London.

C. W.—See answer to *J. W.*

Walter H.—Acquires mineral and water rights over 40,000 acres.

Anxious.—Yes, follow Mr. Schofield in Rossa Grande re-construction.

John T.—A good speculation.

Alturas.—By all means take up your proportion—more shares, in fact, if you can get them.

A.—A good and cheap share.

W. D.—Hold. Sure to rise.

J. B.—Sell Nos. 3, 5 and 6; hold the others.

D. M.—We have heard complaints about these people before.

John T.—We do not generally give such advice, but in your very hard case most decidedly say, consult a solicitor. Will give you the name of a good firm, if you wish.

Shareholder (Leeds).—No market.

W. M. T.—No. 1 should be held, but 2 and 3 should be sold at once.

T. J.—A guinea pig.

W. T. H.—Has 30 claims in Kimberley.

G. Slate (Hertford).—Is well managed, in a good district, and ought to yield satisfactory returns.

Enquirer (Leeds).—No occasion for your alarm.

C. W.—No. 1: Advise you to take shares in the company you name. No. 2: From inquiry we have made we believe that the mines are in an almost inaccessible region.

D. L. S. (Glasgow).—He is a director of about 12 companies—a "guinea pig" as you say.

W. P. F.—No. 1: We believe that one of the chief directors has resigned. It is a bad sign. No. 2: The company is going on very well. No. 3: About one-third. No. 4: The delay is unaccountable.

A. J. W.—We think the company was fairly worked.

H. M. (Exeter).—Yes, it has declared enormous dividends, which have surprised all those acquainted with the facts.

G. E. S.—Quotations nominal. No business.

M. S. B.—We believe, on inquiry, it will be found that the directors are not shareholders. There is no mention of any qualification.

G. C. M.—1: Good to hold. 2: Ditto. 3: Very promising. 4: On the rise. 5: Valuable discoveries lately made. 6: Very cheap speculation. You should have some Ooregums and Nundydroogs. Mysore Wests are very cheap, and should be bought. Mysore Reefs also.

Subscriber wishes to know address of Santa Teresa Copper Company, Limited. Can any of our readers supply the information?

Waygood.—All the mines you mention are wound up; they were promoted by Abbott, Page and Co. The firm is defunct.

E. N.—If this person wishes to be brought into public notice, he had better delay the completion of your transactions. Mr. Cottam will give a fresh transfer if wanted.

X. Y. (Wexford).—Yes, you can buy Colons and Organos for a rise.

C. W. (Leith).—We certainly think New Emma will go higher.

The Mining World.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

PAHANG MINES.

The discovery of "fresh fields and pastures new" by those who are in search of the precious metals and nature's other hidden treasures has many advantages, for not only does it benefit those who are immediately interested in the discovery, but it also opens up countries to commercial enterprise. In a lesser degree, too, the finding of new mineral districts, and the development of districts which are known to have been worked in more or less remote times, is of advantage, inasmuch as it induces one to look up one's geography, which in these days of business activity and pressure is apt to get rather rusty. For instance, how many amongst those of us who are not particularly interested in Eastern trade had any very definite ideas about the State of Pahang a year ago? Very few, we should say. And yet Pahang and its capabilities and its prospects is now absorbing a great amount of attention, and threatens to command a larger amount as time goes on. It may be of interest, therefore, if we refer briefly to the State, geographically and geologically.

Geographically, it will suffice to say that Pahang is a large State on the east coast of the Malay Peninsula, the western part of which is formed by the Straits Settlements, which, as our readers are of course aware, send vast quantities of tin to this and other countries, to the serious detriment of the mining industry in Devon and Cornwall. Pahang is probably over 10,000 square miles in extent, and it is ruled by a Sultan, with the protection of the British Government and the assistance of a Resident appointed by the Singapore Government. Geologically the State seems to be exceptionally rich, not only in tin, which is found over the greater part of it, but also in gold, silver, lead and copper. From the property of the Pahang Corporation, the pioneer undertaking, considerable returns of tin have been raised and smelted on the property, and sold in Singapore during the past three years, and the success of the undertaking is practically secured. The necessary machinery is being erected and, under the direction of Capt. Teague, a very large amount of tin-ground has been laid open for stoping. Capt. Teague is, we believe, a son of the well-known Capt. Teague, of Cornish fame. We are not surprised, therefore, that the resident director of the Pahang Corporation speaks of his services in very high terms. Mr. Fraser, who, it will be remembered, was the owner of the concession now possessed by the Corporation, has, as resident director, done and is doing good service to the shareholders. He says of Captain Teague, "He is a most diligent, active, careful, and sober man, with the Corporation's interests closely at heart day and night, and I consider that the choice made by the board has been most fortunate for the Corporation. I could not desire a better man for the post."

The Pahang Corporation having a vast property—over 2,000 square miles in extent—will be able to dispose of several portions of its concessions to subsidiary companies. It has commenced by forming Pahang-Kabang, "the letters of allotment and regret" in which have been posted this week. Pahang-Kabang has, like the Pahang Corporation, a nominal capital of 200,000, and it acquires the whole of the Kabang hills, estimated at an area of considerably over 50,000 acres, and a profit of 150,000*l.* a year is spoken of as probable, with tin selling at 90*l.* a ton. Captain Skewis, in reporting upon the whole property in August, 1887, concludes by saying, "I have no recollection of ever inspecting a mining property of such magnitude and value before, nor do I ever expect to do so again." The assays of tin in the ores made by Messrs. Johnson, Matthey and Co., run from 21 to 40 per cent., so that it will be seen the metallic contents of the ore is unusually large.

In another part of Pahang, the property of the Ketchau Corporation is spoken of very highly. The Ketchau district is reported to be exceedingly rich in its gold deposits, upon the development of which the Chinese and Siamese miners have been working for 500 or 600 years. We referred to the prospects of the Ketchau Corporation in our issue of the 9th inst: but we may here observe that the dis-

covery of old workings extending to a depth of 400 ft., and 300 ft. long by 400 ft. wide, proves incontestably that the Oriental miners must have found something well worth going for, for as their appliances were of the most primitive description, it is clear that developments of the kind could only have been made by an enormous amount of labour, attended with great danger. The ore yields up to 2 ozs. to the ton, and it is estimated that about 10s. a ton will pay all expenses.

The whole of the State is well supplied with water and timber, two essential elements in all mining operations, and particularly for tin-dressing and gold-washing. The tin-streaming industry is also likely to produce very good results ; so that altogether the new mining industry in Pahang has been initiated under the most favourable auspices, and we have little doubt that as operations are extended, and the means of transport are improved, results will be obtained that will prove the pioneers in the enterprise to have had good grounds for what many have regarded as over-sanguine anticipations of the future importance of the State as a producer of minerals.

THE SOUTH AFRICAN GOLDFIELDS.—No. 2.

By a Cape Colonist.

The date when gold was really first discovered in the Transvaal is a date which will probably never be fixed to an absolute certainty. Even before the Boers trekked into it from the colony and made it an independent territory it was alleged that gold was found there. My first recollection of seeing small nuggets of gold from the Transvaal goes so far back as 1868, and from that time to 1885 various small parties of prospectors made spasmodic efforts to develop the mineral resources of the country, but nothing was really done on anything like a large scale until the early part of 1885, when the now celebrated Sheba reef was found, resulting in the establishment of the now rising town, of Barberton. Even then there was so much uncertainty about the actual richness of the deposits ; and the want of sufficient capital and knowledge to work the reefs was so great that there was but little prospect of the discovery attracting sufficient attention to render the industry of sufficient importance to rescue the country from its state of comparative poverty. Nor was it until the discovery of rich quartz reefs in the Witwatersrandt district in 1886 that a complete commercial revolution was brought about. It was then that the mineral resources of the Transvaal became an acknowledged fact, and forthwith a township—now known as Johannesburg—was established, and which has become the centre of a gold-bearing district of such an enormous extent that up to this moment its length and breadth has not been clearly defined. It is known to extend to a distance of 60 miles in length, and about 40 in breadth ; but this is mere conjecture, and by no means embraces the whole of the gold-bearing region of the Transvaal, because reefs are now worked as far south as Klerksdorp, which is quite 80 miles from Johannesburg. Johannesburg has now a population of 20,000 white people, and within the last 12 months some fine buildings have been erected. The discovery in the Witwatersrandt district gave an impetus to the industry, which has resulted in a complete revolution of the commercial prospects of South Africa. Company after company was formed ; capital poured in from the two colonies of the Cape and Natal, until at the time of writing there must be nearly 200 companies at work with more or less success, and the amount of capital invested must be upwards of three million sterling. This is irrespective of the amount invested in the Barberton district in the north-east, the Malurani district in the north-west, and the Klerksdorp district in the south-west. Nor does this exhaust the whole of the auriferious area of South Africa. Companies are at work in the adjoining native territory of Swazieland, whilst almost daily we hear of prospectors being successful in their researches in the Bechuanaland territory, which is under the British protectorate. The consequence of these discoveries has been an influx of population into the Transvaal within the last two years which has quite equalled, if it has not exceeded, the original Boer population, and it is still going on to a surprising extent, and I need scarcely add that the majority of these people are men of capital, men of intelligence, and men of energy—in fact, the exact antithesis of the original owners of the soil.

It will not be out of place for me here to remark that when I first arrived in this country the Transvaal was almost a terra incognita, even to Cape colonists. It had then been occupied for some few years by what were called the emigrant Boers from this colony, who formed something that had the semblance of a Government ; but it was looked upon as a sort of Alsatia—a refuge for absconding insolvents and fugitive criminals, and doubtless it would have become a lawless territory had it not been for the conservative and law-abiding tendencies of the Boers themselves. To the average South African colonist it was looked upon at that time, and for many years afterwards, as a pastoral country only, and therefore just fitted for the occupation of a people nomadic in their habits and wholly unaccustomed to the cultivation of the soil. As years rolled on it gained a reputation for its wheat and tobacco, but these were produced in such small quantities as to win for those products little more than a local reputation. But within the last 10 years a few enterprising, and energetic Englishmen and Scotchmen have settled in the country —apart from those engaged in trading and mining pursuits—and now it is becoming an acknowledged fact that the Transvaal territory, besides its large grazing facilities, is one of the most fertile spots on the face of the earth, and that by reason of its geographical position and climate influences it is able to produce cerials and other products —both temperate and sub-tropical—in enormous quantities. For instance, there are several districts within its borders, and on the same farms, where wheat, barley, tobacco, and coffee can be grown with facility, and owing to the peculiar formation of the country these tracts of land are very numerous, but in detached positions of small extent, thus rendering them more fitted for the small husbandman than for men of capital. As I have already remarked the more recent gold discoveries are attracting a very large population into this State, and as these discoveries extend it is found that the consumption of articles of every day use is so far in excess of the local supply that large quantities of food have to be imported not only from England and Australia, but from the colonies of the Cape and Natal, and the Free State. On these imported articles the Transvaal Government has placed a tariff so exorbitant that the new comers are already beginning to growl, so much so that it may be taken as a foregone conclusion that this high impost will not be put up with much longer. That a country should be able to support 50 times its present population, and that breadstuffs alone are taxed so high as almost make bread a luxury is an absurdity on the face of it. The whole question has now assumed a phase which has rendered it of interest not only to South Africa, but also to those at home who are anxious to find an outlet for enterprise and energy, and I think I am not far wrong when I express a hope that not only the Transvaal, but the whole of South Africa, will very shortly attract the very serious attention of all classes of people in the British Islands.

(*To be continued.*)

ALTURAS RE-CONSTRUCTION.

The re-construction scheme, as submitted to the shareholders on Tuesday last, was unanimously accepted by them. It involves a liability of 3s. per share, to be called up at intervals, and it affords an excellent chance of saving a property, out of merely one-eighth of which gold has been extracted to the value of 115,000*l*. The opinion of about the best counsel on company law (Mr. Palmer) has been taken, and the scheme is endorsed by him as perfectly legal, and one that the shareholders may join without the least misgiving. It was a somewhat wearisome work for the committee to investigate the charges which have been freely made against the directors and officials—particularly by one of their former colleagues. They rightly devoted their first attention to the general position of the company, and found it suffering severely from the pangs of impecuniosity. When these had been relieved, mainly owing to the energy of the new manager, and to his production since December of 2,862 ozs. of gold, they sought to ascertain whether the charges made against the directors and officials were true, but like a tub without a bottom they found there was nothing in them. Equally unproven were the assertions made against the auditor and secretary. In fact, the thanks of the shareholders are greatly due to the directors and secretary for the manly courage with which they have faced that most difficult of all joint-stock positions—having to conduct an enterprise with absolutely no working capital in hand. Mr. J. H. A. Smith's statement of the labours of the committee was businesslike and wholly to the point, and his appeal for union at the close of his address probably had, so far as he was concerned, an unexpected result. A unanimous appeal was made to him to become liquidator of the company, and with him was associated Mr. Biggs, with whom, he says, he can work in perfect harmony. That the mine is worth saving is proved by the fact already mentioned, that under circumstances of great difficulty the manager has produced upwards of 8,000*l*. worth of gold. Mr. Watson has therefore earned golden opinions, and we agree with Mr. Smith's opinion, that with honest management Alturas ought to pay big dividends. Nothing, however, would please certain unscrupulous people in the States better than to see Alturas abandoned, for the shareholders' neglect would be their opportunity. If, however, the shareholders understand their true interest they will take up every share to which they are entitled in the new company, and more if they can get them.

AN ENTERPRISE OF PROMISE FROM VICTORIA.

HARRIETVILLE GOLD MINING CO., LIMITED.

We understand that early next week a company, under highly influential auspices, will be announced to the public with the above-named title. It comes from the offices of Messrs. John Taylor and Sons, Queen Street Place, and it has as its directors gentlemen of mining experience, who are connected with some of the most successful commercial enterprises of the day. The mines are three in number, situated on the banks of the Ovens River, near Harrietville, Beechworth, Victoria, Australia. Mr. Benjamin Davey, a trusted agent of Messrs. John Taylor and Sons, has carefully examined them, and his report may be accepted as that of a mining expert of unquestionable probity and intelligence. The mines adjoin each other, and are but 40 miles from a railway station. The lodes, generally speaking, are strong and masterly, particularly that of Tiddledee-Addle-dee. Three working men, assisted by a few others whom they employed, extracted from the Tiddledee-Addle-dee Mine 10,450 tons of stone, yielding 11,845 ozs. of gold of the value of 47,972*l*. 5s. This was obtained from the No. 2 tunnel, but the ore ground, Mr. Davey states, is "intact to the No. 3 tunnel, and in the

deep ground the shoots are quite as thick and richer than they were above." The assays of this ore are remarkable—up to nearly 25 ozs. per ton—whilst the width of the ore-bearing part of the lode averages abont 4 ft. In addition, there is the Monsmeg Mine, which yielded 6,065 ozs. of gold from 2,586 tons of ore, being an average of about 2 ozs. 7 dwts. per ton. Since the inspection a telegram has been received that splendid stone has been struck in the lowest tunnel. The third mine is the Gnerdon, which has yielded 484 ozs. of gold from 522 tons of stone. There are, as we have intimated, other reefs, and the property as a whole is undonbtedly one of great value. We say this because the reader must have observed that we have not been dealing with general statements, but with positive facts, which place themselves upon the understandable basis of figures. We therefore agree with the directors that "this should prove a highly remunerative investment." That it will be vigorously and intelligently worked may be safely assumed from the fact that the management will be in the hands of Messrs. John Taylor and Sons. The purchase has been effected at a price of 80,000*l.*, payable partly in cash and partly in fnlly-paid shares, and of the total capital of 170,000*l.* in 1*l.* shares we understand a very large proportion has been taken by the directors and their friends.

IMPROVEMENT IN MOUNT SHAMROCK AFFAIRS.

A Mount Shamrock meeting, without Mr. Stanlake Lee to the fore, and without a bellicose speech from Mr. Walker, would be like an opera without a cavatina, or an archipelago without an island. Mr. Stanlake Lee may be credited with putting his case fairly before the meeting, but to Mr. Walker that credit must be denied, probably for the reason that he has no case to put. If the directors send a good report to their shareholders they are accused by Mr. Walker of favouritism, and if they withhold it he detects a sinister desire to keep back information. The directors are doing their best to satisfy all reasonable shareholders, but we advise them not to attempt the impossible task of pleasing Mr. Walker. Turning to the real business of the company, we hold that the position has decidedly improved since Mr. Woodyatt came to this country. Whatever may have been the views with which he left the colony, careful consideration of the facts in London led him to see that salvation was not to be found with Mr. Lee. He wisely placed himself in the experienced hands of Mr. Dutton, of the firm of Wilkins, Blyth and Dutton, of Gresham House, and together they mastered the position and arrived at the conclusion that between the directors on the one hand and Mr. Lee on the other "Codling was the friend—not Short." In consequence of this decision Mr. Lee wisely withdrew his resolution for the appointment of a fresh board. Mount Shamrock position has improved, as we have intimated, because of the testimony Mr. Woodyatt gave to the value of the property. In fact, he told the shareholders a little of what, perhaps, they did not know before. The whole difficulty of the company, as the directors have repeatedly pointed out, has been, not the absence of ore, but its treatment by proper machinery. This has been the beginning of sorrows with the company, and until the problem is solved, the shareholders may seek fruit from this mining tree, but they will not find it. We earnestly appeal to the board to infuse, if possible, even greater energy into the solution of this difficult problem than heretofore, for upon it the future of a most valuable property wholly depends.

QUAYLE GOLD MINING CO., LIMITED.

A MINING INVESTMENT FROM NEW ZEALAND.

The gentlemen who have identified themselves with this company are, for the most part, the same as those who brought to this market the well known Iquique Silver Miuing Company, the shares of which were subscribed seven times over, were at a substantial premium even before allotment, and have remained at a premium ever since. To some extent the personnel of the company is also the same. For example, we observe the influential names of Mr. H. Hedley Bush and Mr. Ernest Haines, directors of the Iquique Company; and if we mistake not, the consulting engineers and solicitors are also the same. Another name that will strike those interested in mining matters is that of Mr. W. R. Fitzgerald Moore, C.E., M.E., who, as a miner, has had one of the most successful records of modern times. He is chairman of three colonial companies that are working with very great success, and is identified—we might almost say historically identified—with the famous Broken Hill Gold Mines which have been so wonderfully successful. Of the 120,000*l.* in 1*l.* shares constituting the capital of the company, 22,500*l.* will be allotted to the vendors as fnlly paid (in addition to 37,500*l.* in cash), and the remaiuing 57,500 shares will be offered for subscription. The property is in New Zealand, and is a contiuuation of the celebrated Coromandel and Thames Goldfields. The precise situation is that of the Maratoto Goldfield, upon which, although only recently discovered, three powerful lodes have already been met with, the assays from which are of great promise. It is at the junction of the reefs of which Mr. J. M. McLareu speaks that the greatest riches are to be expected, and this junction may occur between 70 and 80 ft. deeper than the present tunnel level. Mr. McLaren, who is a civil and mining engineer, and who was formerly inspector of mines, states :—"From the number of these reef junctions in your mine it may be expected, when the reefs are further driven on, and the mine opened out at a deeper level, that rich gold deposits will be found—that is over and above the good prospects you have obtained in the ordinary quartz, which is not near any junction." The quartz is free milling, as distinguished from refractory, and hence elaborate appliances, for its reduction are not required. We fancy Mr. McLaren's estimate of 2 dwts. per ton being payable is too low; but there is a wide margin between that calculation and the assays made, which shows upwards of 1½ ozs. per ton. The statements of this gentleman are practically endorsed by Mr. Henry M. Smith, authorised mining surveyor of the Thames Goldfield, and the directors very properly attach considerable importance to the joint statements of gentlemen of snch position. The company is formed to give to the property that vigorons development which past experience of its merits justifies. The directors propose to put up a mill of 20 heads of stamps at a cost of about 10,000*l.*, and anticipate that the result of doing so will be a profit of 50 per cent. upon the capital, quite apart from any improvement that may subsequently take place in the mine. Of course, great importance is to be attached to the presence of fuel and water—accessories without which mines, however valuable, cannot be profitably worked. We should not be surprised to see the shares of the Quayle Company at a high premium in the market. The lists will open on Monday and close on Tuesday.

PROPOSAL TO RE-CONSTRUCT PORT PHILIP.

The proposal to re-construct Port Philip Gold Mining Company was naturally heralded by a successful attempt to depose the somnambulists who have constituted the board. So much somnolence appears even to have overcome the energetic Mr. Schofield, who, when attending the board meetings has had great difficulty in keeping himself awake. He has, however, by a vigorous effort aroused both himself and the directors to a real sense of the situation and to a knowledge of the unpleasant fact that unless to the pecuniary disease from which Port Phillip is suffering the healing medicine of some fresh capital be not applied, the patient will die. In that case if a financial jury were asked to sit upon the body, the good and true verdict, we doubt not, would be, "Died from natural causes." The Port Phillip is worth saving. It has been a great mine in its time. Its shares once commanded 4*l.* and 5*l.* premium, and Mr. Peter Watson, who is rapidly becoming a patriarch in mining, has a vivid recollection of the time. May we express the hope, although he did not vouchsafe the information, that the Philosopher of Austin Friars was a seller at these prices, and not a buyer. He showed less than his usual shrewdness if such were not the case. The shareholders have decided to put Port Phillip through the re-construction mill, and to give it the fresh chance its merits justify. Whilst on this subject, may we express our devout thankfulness that the Clunes Company has ceased to exist. It would have puzzled a Philadelphia lawyer to understand its relationship to Port Phillip. It was a sort of mining Mrs. Harris that stood in the way whenever any attempt was made to reform Port Philip affairs. Now that it is dead and buried, no one will moisten its tomb with a tear.

INDIAN CONSOLIDATED.—A SUGGESTION.

The best tribute to Mr. Malcolm Low's performance at the Indian Consolidated meeting was a remark made, sotto voce, by one shareholder to another—"How well he manages a meeting." The tribute was thoroughly deserved. The shareholders came to curse, and if they did not remain to pray, at least they went away satisfied that the best was being done by the management in their interests. Mr. Low was able to state that in both the Phœnix and Colar sections the mining outlook was better, whilst the Madras block is still held in reserve. This company can claim the qualified honour of having produced more gold in the Wynaad than all of its contemporaries put together; though in this connection the latter might ask—"But what about the cost?" The gold produced from this section realised 4,200*l.*, and Mr. Low is not without faith that even in the Wynaad mining may yet be made to pay. We attach a good deal of importance to Mr. Low's mining faith, for we remember that when Ooregum was despised and rejected he alone was persistent in declaring that one day it would be a great mine, and so it now seems to be. In the Mysore the company is getting into a really valuable body of ore, and we shall watch its progress henceforth with increased interest. The capital in reserve is 12,000*l.*, and some of the last issue of preference shares may be had by shareholders who make application.

In considering Indian Consolidated affairs we are often surprised that the directors do not deal in a drastic manner with the enormous, and unreasonable capital account of the company. The number of shares—ordinary and preference—is 1,000,000, though the nominal capital is but 605,000*l.* Do no means suggest themselves to the directors by which this frightful burden can be lessened, even if it should be at the sacrifice of a large portion of the nominal holding of shareholders? We believe that if the capital were cut down by three-fourths the remaining fourth in the market would soon become of more value than the entire amount is at present. It is the very magnitude of the company's capital that prevents large numbers of investors from having anything to do with it.

ALASKA MINING AND EXPLORATION CO., LIMITED — AN ENTERPRISE THAT MERITS ATTENTION.

THE prospectus of this company should be read in conjunction with the exhaustive description which Mr. Brereton, C.E., has prepared. Mr. Brereton scarcely needs any introduction to our readers. He is known as one of the best and most careful professional experts of the day, and brings to bear upon the work he does an uuusually extensive range of experience, acquired in the chief engineering centres of the world. The property is in Alaska—a territory known to be immensely rich in minerals, but strangely neglected up to the present time. It is situate on Douglas Island, and is known by a name that somewhat deceives, from the geographical point of view. The Mexican Gold and Silver Mining Company is an American venture, consisting of 100,000 shares of the nominal value $100 each, held now by three American geutlemen in equal thirds. The interest of two of these gentlemen are acquired by the company, the remaining third being owned by a capitalist of San Francisco and New York, who does not wish to sell, and who provides one-third of the working capital required for the more aetive development of the property. The owners of the Paris mine, which adjoins this one, "are known to be realising over 100,000*l.* net profit per annum." The Mexican Mine, according to Mr. Brereton's description, contains four full mining claims of considerable extent, with four mill-sites along the shore of the Gastineaux Channel. It is in order that the property may be worked more vigorously that the present company has been formed. The business of the directors will immediatcly be to erect a reduction mill with the uccessary appurtenances, and these, including the opening up of the reef, it is estimated will cost 75,000*l.*, of which the company has to find two-thirds. By the end of the year it is expected the works will be in full operation. An examination of the plans, combined with a careful study of the reports, has brought us to the view that it is more a quarry than a mine which the company has acquired. For example, it is distinctly stated that the adjoining Paris Mine is worked "as an open quarry." It appears to be one vast mass of ore, which cannot be exhausted for very many years. Deep shaft sinking and cross-cuts are here not needed, the ore being exposed to surface, and being sent direct to the mill. Mr. Brereton speaks of this as the "largest (in width) gold quartz ledge in the world," with a vein, traced for over two miles along its strike, running down close to the shore of the Gastineaux Channel, open for navigation by steamers all the year round. The leading properties on the ledge are the Paris, the Mexican, and the Bear's Nest. The whole of the ore can be worked, and though of low grade, the average value, taken in the mass, in the Paris, has been found to be betweeu $5 and $6 per ton. The facilities for working are unrivalled. Water, timber, external communication, native labour and climatc, all conduce to aid an enterprise singularly favoured by nature, and promising the best results upon capital actively, ecouomically and intelligently employed. Miniug men will understand what we mean when we say that that mine is the richest in the long run which has low-grade ore in abuudance disseminated through a wide vein rather than high-grade ore pinched up to a few inches. The most suceessful and enduring mines of the world have been those of low-grade ore with a large vein. Other gold mines have an unpleasaut tendency to pinch out altogether, and leave their owners with their machinery at the top, but nothing coming from the bottom which can profitably employ it. Mr. Brereton, who spent a great deal of time on the property, and made numerous assays in conjunetion with Mr. J. B. Hammond, estimates the probable value of the ore on the front and back ledges at twelve and a quarter millions, and he adds :—"With a mill of 120 stamps working 3 tons of properly broken ore per stamp per day for 330 days per year, the output would be over 100,000 tons a year, which at 32s. per ton would yield 160,000*l.* nett. It would take fully 40 years for a mill of only 120 stamps to exhaust the above estimated 4,000,000 tons of ore in the front ledge. If the ore in the front ledge should be found, upon actual working, to average no more than 16s. nett per tou, the annual net yield would be 80,000*l.* with 120 stamps, and 160,000*l.* with 240 stamps." The ore actually in sight is estimated to be worth 375,000*l.*, and it is thought that within three years of starting the stamps the whole of the purchase-money and working capital will be returned in dividends. Under the contract with the owners of two-thirds of the share capital of the Mexican Mine, they are to receive 100,000*l.* in cash, and 15,000*l.* in fully-paid shares. We should not have devoted so much attention to this property had it not been for the names of the geutlemen by whom the prospectus is endorsed. From the board there appears to have been altogether eliminated the ornamental element, but its place is well supplied by the four business men who will admiuister the company's affairs. Mr. Samuel Bayliss is a brother, we believe, of Mr. John Bayliss, who, with his colleagues on the Montana board, saved that concern from the utter destruction to which, under bad management, it was fast hastening. Of Mr. Brereton we have already spoken, and Mr. F. P. Ward is known in connection with the Scottish Australian Investment Company, and the Scottish Australian Mining Company, one of the successful enterprises of the day. We attach great importance to the statement that Mr. Johu Darlington will have a seat at the board at all meetings as general adviser; and also to the further important fact that 75,000 shares out of the capital of 200,000*l.* have already been subscribed for at par on the terms of this prospectus by the directors and their friends. These shares will be allotted to them in full. All things considered, we are of opinion that the company starts with unusual prospects of success.

NEW CALIFORNIA DEBENTURES.

THE New California Company offers to the public 400 mortgaged debentures of 25*l.* each, redeemable in five years at the price of 110*l.* per 100*l.*, and bearing interest at 10 per cent. The trustees are well known and respected, namely Mr. H. T. Walker and Mr. Arthur Heiron. The company possesses several properties, and its record of progress has, especially of late, been very gratifying. Of course, the money now to be raised will be applied to the further development of the property, and we may add to the purchase of an adjoining property, which it is essential the company should possess—in other words to increasing the security of the debenture-holders. The directors include the gentlemen we have namcd, Major Cotton, Mr. Thompson and Mr. Barber. Thc company is at present making from 500*l.* to 600*l.* profit per month, and the directors anticipate that this will henceforth be raised to between 800*l.* to 1,000*l.* per month. The offer from an iuvestment point of view is very desirable, because the security is absolute, and the rate of interest is about three times that which can, in a general way, now be obtained.

THE PAHANG EXPLORATION AND DEVELOPMENT COMPANY, LIMITED.

THERE is some warrant for the statement that, "these concessions probably comprise the largest and richest timber and mineral area ever offered to the public by a single company." On Thursday last we had, for the second time, the pleasure of inspecting some of the specimens of timber in which this property abounds, and hearing from various authorities satisfactory information with regard to it. The authorities in question were well able to stand the cross-examination to which they were subjected, and there was uot a "total blank" so far as their minds were concerned. This company takes over three very extensive and valuable concessions in the State of Pahang, one of the protected States of the Malay Peninsula, granted by His Highness the Sultan of Pahang to Tan Hay Seng of Singapore, to develop and work such portions of the various properties conceded as may be found desirable, to sell or lease portions of the property to companies or individuals, and to conduct trading operations in Pahang. The districts comprised in these concessions are estiuated to cover an area of 6,000 square miles, equal to three million eight huudred and forty thousand acres. The concessions comprise the whole of the products which form the natural and mineral wealth of the country—timber, minerals, and agricultural produce, and offer unlimited possibilities to the capitalist. The timber export can be worked very advantageously concurrently with mining operations and plantations; and the friendly support of the Sultan of Pahang is guaranteed. The potential wealth of Pahang aud its natural advantages are now fully recognised in this country as affording a profitable field for the employment of British capital. The shares of all the companies that have been started to work this territory are at a premium, and there is every reason why those of this concern should follow this rule, which so far has not had its exception. The reports are by reliable authorities, and reveal a concession both of extent and value. The future that lies before such an estate, possessing minerals of almost all kinds and great natural advantages, cannot be set forth. For the purposes of agrieulture alone the property appears to have a value justifying the enconiums passed upon it at the informal meeting of Thursday last. The directors are gentlemen of influence, and the official appointments such as to give confidence to investors. The capital is 220,000*l.*, and we understand that a large portion of the 170,000 1*l.* shares offered to the public has been applied for. The purchase price for the three coneessions has been fixed by the vendor at 130,000*l.*, payable in cash or shares, or part cash and partshares, at the option of the directors, leaving 90,000*l.* as working capital, of which 20,000*l.* will be set aside and invested in the names of trustees for the purposes of the railway referred to in the prospectus.

THE MYSORE WEST GOLD MINING CO., LIMITED.

(IN LIQUIDATION.)

SHARE CERTIFICATES READY.

WE (the liquidators) are prepared to deliver the share certificates of the Mysore West Gold Company, Limited, on and after Thursday, the 21st day of February, 1889, in exchange for 1. The share certificates of the Mysore West Gold Mining Company, Limited (iu liquidation); 2. The allotment letter of the Mysore West Gold Company, Limited, and the receipts of the Union Bank of London, Limited; 3. For the 6d. per share already paid upon deposit; and 4. For the 6d. per share becoming payable on the 20th February, 1889. The exchange will be made at these offices upon surrender, either personally or by post, of the above-mentioned documents.—ROBERT WALKER, L. J. WOODMAN, Liquidators.

REPORTS OF MEETINGS.

PORT PHILLIP AND COLONIAL GOLD MINING CO., LIMITED.

A COMPANY FORMED IN 1853 WOUND UP—MR. J. H. A. SMITH APPOINTED SOLE LIQUIDATOR—HE PROPOSES TO SAVE OLD SHAREHOLDERS THE PENDING CALL, AND TO GIVE A CHANCE TO THOSE WHO WISH IT TO JOIN A RE-CONSTRUCTED COMPANY.

A SPECIAL MEETING of this company was held on Monday, at the Guildhall Tavern, for the purpose of confirming special resolutions to wind up the company, and appoint a liquidator or liquidators—Mr. John R. MacDonnell (chairman of the company) presided.

The CHAIRMAN: It becomes my duty to bring before you the resolutions which were passed at the last extraordinary general meeting, and which it is now necessary (if it is your wish) to confirm.

CALLS COLLECTED.

A SHAREHOLDER: We were told at the last meeting that there was an amount of uearly 700*l.* still outstanding on account of calls, and the chairman gave the meeting a promise that he would endeavour to collect them as far as possible. Calls were due by one shareholder alone who held 900 shares.

The CHAIRMAN: He has paid. We sent out a strong notice, and have got in 166*l.* We have now about 500*l.* outstanding.

Mr. SCHOFIELD: I do not think that that amount can be regarded as bad, because many people do not like to pay calls at the very moment the company is winding up.

A SHAREHOLDER: Have you sent a notice to all persons who are in arrear?

Mr. SCHOFIELD replied in the affirmative, and read the strongly-worded notice that had been sent out, and that had produced the result already mentioned.

A SHAREHOLDER: I should like to ask a question: In the report for 1888 it was stated that the Clunes Company not being able to pay on their shares, Mr. Bland was instructed to offer their lease to us and the whole of their plant.

DISAPPEARANCE OF THE CLUNES COMPANY.

The CHAIRMAN: They have handed over the whole interest to this company, and I believe that the Clunes Company has ceased to exist, under their peculiar law by which a man if he does not pay his calls can permit his shares to be forfeited. Practically there is no Clunes Company.

The SHAREHOLDER: What value was put upon the plant?

The CHAIRMAN: We cannot tell you.

The SHAREHOLDER: Why was it uot included in the assets?

Mr. SCHOFIELD: The plant belongs to us now, although it was erected originally at the expense of the two companies.

The SHAREHOLDER: But you make no difference in the assets of the company (97,500*l.*), although you have the plant of the Clunes Company to the good. It ought to be worth something, and if so that something should appear in the accounts.

Mr. SCHOFIELD: It is simply a matter of account. We took over a bad debt, and treated it as a bad debt, without increasing the assets. The debit to the assets was very much in excess of the value of the plant.

Mr. COBBETT: If we could have recovered the money owing it would have been different, but instead of that we took the machinery belonging to them and placed it upon our own grounds. If it had been a going concern this machinery would have been a valuable asset, but shareholders must know, after what has happened, that the machinery is only of value if the mine goes on. As it stands, we cannot possibly estimate its value, because we do not know whether it will be broken up and sold for old iron, or be kept to work the mine. (Hear hear.)

The CHAIRMAN: We have really given all the information we can on this point, and I think we may now proceed to put the resolution.

The motion to wind-up the company, which was seconded by Mr. ALFRED COBBETT (director) was then put and carried,—a SHAREHOLDER remarking "It ought to have been done years ago."

The CHAIRMAN proposed the resolutions as follows:—

1. "That the company be wound up voluntarily, and that a voluntary liquidator or voluntary liquidators be appointed for the winding up thereof, to be named at the confirmatory meeting." 2. "That the voluntary liquidator or voluntary liquidators, if appointed, be authorised to sell the mines, property, and effects of the company in the most advantageous manner possible, and for such a price as may be determined by a future meeting of the shareholders, to be called for the purpose, and to accept, with the consent of such future meeting, shares, either with or without liability, in any new company, in lieu of cash or payment, or in part payment, of the purchase-money." "That Mr. J. H. A. Smith be, and is hereby appointed liquidator."

Mr. COBBETT seconded the motion.

A SHAREHOLDER: I suppose you have received no further news from the other side?

The CHAIRMAN: Nothing, except that they have cleaned up the batteries and retorted the quicksilver—so far obtaining 40 ozs. of gold, and we may get a small quantity in additiou. Mr. Bland is taking steps to reduce expenses—of course in view of the resolution we have arrived at to-day, and for which he is prepared.

A SHAREHOLDER: I know the financial position is slightly altered; but is it materially altered?

PLAIN FINANCIAL STATEMENT.

Mr. COBBETT: The balance at the bank is 503*l.* 19s. 5d.; the amount on deposit, 1,500*l.*; second call outstanding, 9*l.* 15s.; third call, 27*l.* 10s.; fourth call, 465*l.* 19s.; total, 2,507*l.* 3s. 5d. to the good. The payments to-day will be for the use of the room, printing and advertising the meeting, making in all 21*l.* 4s. 6d. There is a bill due of 500*l.*, which leaves a balance of 1,985*l.* 9s. 5d., supposing the calls are paid.

A SHAREHOLDER: Up to what date have the expenses been paid, to which the bill refers?

The CHAIRMAN: The second week in January.

The motion was carried unanimously.

THE LIQUIDATOR—MR. J. H. A. SMITH PROPOSED.

The CHAIRMAN: We have now to appoint a liquidator or liquidators. The board have determined to take no part in this matter.

Mr. CRANE: I have great pleasure in proposing that Mr. John Henry Augustus Smith, of 6a, Austin Friars, be the liquidator of this company. (Cheers.) I think Mr. Smith is known to a great many in this room for his business ability and high personal character. (Hear, hear.) I have known him myself for a great many years in connection with mines, and think he is a very good man to carry out a business of this sort. I think he will do it speedily, economically, and judiciously, and he is a shareholder. I think that one liquidator is quite sufficient. (Hear, hear.) I do not see any object in appointing two. If there are two, neither of them attend particularly to their business. I beg to propose that that gentleman be, and he is hereby appointed liquidator.

Mr. VAUGHAN-WILLIAMS: I second the motion with great pleasure.

Mr. CROWE: I should like to know who Mr. Smith is.

Mr. CRANE: I have explained that he has been connected with mines for many years.

THE WHOLE POSITION EXPLAINED.

Mr. J. H. A. SMITH: Perhaps you will allow me to answer, as I am the individual referred to. I am the holder of 300 shares, which I bought at a small figure, because it appeared to me that there was a possibility of bringing out from this company something for the shareholders if the useless expenditure which has been going on for some time were stopped. We have been spending 250*l.* a month for the last six months for nothing at all, and many of my friends who have seen this, and who are interested in the company, have asked me if I would help them out of it. There are possibly gentlemen who would like to leave Port Phillip to its fate, and be saved, if practicable, from the further liability which may fall upon them, whilst there are others who would be prepared, under vigorous management, to give the mine a further trial. If we go on as we are at present we will find the assets rapidly diminishing. There remains a sum of 1,200*l.* or 1,300*l.*, which will speedily disappear, and after that there is the call of 1s. before us.

MR. SMITH'S POLICY.

Now, I am not at all anxious that that call should be made, and I want to get the thing wound up and sold as soon as possible—more especially as you have to give notice, six months, I believe, before you can get clear of the mines. The usual mining covenant is (and I suppose it is the same here) that you shall give up your mine unwatered and in good condition, but if you continue the present expense at the mine for another six months the 1s. call will certainly be made. When my friends suggested that I should allow my name to be put forward with a view to finding somebody who would buy the property, or join the shareholders in re-coustruction, as they may hereafter decide, I consented, because I thought that possibly there might be a future for Port Phillip yet. There is the whole secret of the matter, and the state of the case is plainly before you. (Cheers.)

A GENEROUS TRIBUTE.

Mr. STEWART: I have known Mr. Smith for a number of years, and am sure that to the office of liquidator he will bring not only a vast amount of intelligence and experience, but what is a valuable adjunct—that suavity which is requisite to carry out successful delicate negotiations. It requires something of a diplomatist to be a proper liquidator; in fact, it requires a man who can be "all things to all men." (Laughter.) I have for a number of years noticed that in delicate matters, such as will arise here, we have not an abler man than Mr. Smith, and I can speak confidently of him.

Mr. COUCHMAN: I should like to nominate Mr. William Russell Crowe, the chartered accountant. I think that he is a proper person to go into the accounts.

Dr. GOULD seconded the motion.

WHO SAID "PETER?"

Mr. PETER WATSON: I think I heard somebody behind me say "Peter." (Laughter.) My name is Peter—Peter Watson. (Laughter and cheers.) The last speaker made some allusion to a Peter, but I may tell him that I am a Peter who is in favour of the original proposition. (Cheers.) Although I may not be the largest shareholder in this undertaking, I think I have held shares in it almost from the commencement—something like 1853. We had our good days in Port Phillip. I remember buying the shares at 4*l.* or 5*l.* premium, and now we have fallen upon evil days, but I do believe this, that the property is worth a further trial, and

IF WORKED VIGOROUSLY IT WILL BE A SUCCESS.

I do not think it requires a large amount of capital to do it. If you were to put your shoulders to the wheel I think that success will again be attained.

MR. SMITH'S CREDENTIALS.

I have kuown Mr. Smith for years, and watched his successful career with interest. (Cheers.) I have been personally brought into contact with him, and so far as intelligence, experience and knowledge go, for the appointment before us, I do not know Mr. Smith's superior.

A RIVAL CANDIDATE.

Mr. CROWE (auditor to the company): To Mr. Couchman and Dr. Gould I beg to return my thanks for having proposed and seconded me respectively. I did not ask them to do so, and therefore I take it as a greater compliment. I should be pleased to act alone, but perhaps a better arrangement might be made than having one liquidator. It seems that the feeling of the meeting is divided, and two persons are proposed—Mr. Smith and myself. I shall be happy to work with Mr. Smith.

Several VOICES: One is sufficient.

Mr. CROWE: I essentially represent the old company. I have been connected with it as a shareholder for many years, and know something about its accounts. Mr. Smith has only recently become a shareholder, though he has certainly taken great interest in our committee meetings. He aspires to form a new company for the purpose of acquiring the assets of the old one, and it seems to me that that is not a question that one person can altogether deal with.

A SHAREHOLDER: Any offer to purchase the property has to be submitted to the shareholders.

MR. CROWE WRONG IN HIS PROXY LAW.

Mr. CROWE: I would rather not have a fight, but this matter may come to a poll or a division. Two liquidators need not increase the remuneration, and it seems to me under the circumstances it would be better to have two liquidators. Proxies cannot be used here to-day by your own deed of settlement.

Mr. MAPLES (solicitor to the company): All proxies lodged at the office at the requisite time for this meeting are available for it, or for any adjournment thereof, and I am told that proxies representing 30,000 to 35,000 shares have so come in.

Mr. CROWE: According to the deed of settlement they are of no avail.

The deed was here referred to, and the SOLICITOR showed under clause 14 that Mr. Crowe was wrong.

The CHAIRMAN: If a poll be demanded, the proxies here are available.

Mr. PETER WATSON: Are they on the table?

The CHAIRMAN: Yes, certainly.

A SHAREHOLDER condemned as a great mistake the appointment of two persons as liquidators to do work that could easily be done by one; divergence of opinion might arise, and, indeed, it had already done so on so simple a matter as that of proxies. (Laughter.) On the grounds of economy, decision, quickness—indeed on every ground — he urged the meeting to appoint only one liquidator. (Cheers.)

Mr. SHEARWOOD: This gentleman (Mr. Crowe) has said that he represents essentially the old company, but I think the shareholders have had enough of the old company, and particularly of

THE BOARD WHO HAVE BEEN ASLEEP FOR YEARS.

The motion was then put to the meeting, when four hands were raised in Mr. Crowe's favour—the vast majority in the crowded room being in favour of Mr. Smith.

Mr. Smith's name was then put as a substantive motion, and carried by acclamation.

WAS IT KIND?

Mr. CROWE: I have seen a good deal of professional liquidations, and I think it would be well that the liquidator should provide security. (No, no.)

The CHAIRMAN: I am told that it is not at all usual.

Mr. VAUGHAN-WILLIAMS: I would most cheerfully guarantee Mr. Smith.

Mr. SCHOFIELD: And I would with equal pleasure do the same. (Cheers.)

A DISCLAIMER.

Mr. CROWE: I did not intend to reflect upon Mr. Smith in any way whatever.

Mr. DIXON proposed that the fee of 150*l*., exclusive of all out of pocket expenses, except clerks and rent of offices, should be paid to Mr. Smith.

Mr. KEBBELL seconded the motion, and Mr. Smith was asked if he would accept that sum?

WISHING TO STOP EXPENSES.

Mr. SMITH: My object is to close up the old concern quickly, to enable those who wish to avoid the 1s. call to do so, and to enable those who desire to give the mine a further trial an opportunity of so doing. The balance is rapidly diminishing—2,300*l*. in December and 2,000*l*. now. A bill for 500*l*., and about 300*l*. costs since accrued, will reduce the amount still further and you have between 500*l*. or 600*l*. to collect in calls. The costs are only brought down to the second week in January, and you have to meet those from that time to the present—nearly six weeks. You have to give six months' notice to get rid of the mine, and your expenses are about 250*l*. a month, and six times 250*l*. will not be paid out of your present balance. (Hear, hear.) My friends are disgusted at the time that has been lost, and my object is to get them out of the concern and into a new one, if they like. The question of remuneration is entirely in your hands. If you think 150*l*. a fair amount, well and good. I am not a philanthropist, and do not profess to do other people's business for nothing, but I am not looking at this matter from a professional liquidator's point of view. I offer you my best thanks for the kind manner in which you have received my name. On the question of security—(No, no)—you can have my bankers or my solicitors, but I am surprised that such a question should have been mooted, for, of course, it is most unusual in a voluntary liquidation. To have done so shows that Mr. Crowe knows as little about this matter as he appears to do about that of proxies. (Laughter.) I shall not dispose of the property without letting the shareholders know what is proposed to be done.

A SHAREHOLDER proposed that Mr. Smith should receive 200*l*., but that GENTLEMAN begged the motion might not be put, as he was quite satisfied with 150*l*., and, moreover, it was pointed out that the shareholders could at a future date reward him further if they thought he had done his work well.

A SHAREHOLDER proposed a vote of thanks to the chairman, and with this the meeting was closed.

BIG GOLDEN QUARRY GOLD MINING CO., LIMITED.

SHAREHOLDERS MEET TO CONSIDER THEIR POSITION—THEY APPOINT A SMALL COMMITTEE—THE PROPERTY ONE THAT OUGHT TO BE SAVED.

A SPECIAL MEETING of this company was held yesterday, at Winchester House, called by the following circular:—"The scheme mentioned by the chairman of the meeting held on the 11th instant, for winding up this company, would entirely extinguish the rights of all the existing shareholders. It is believed, however, by some of the large shareholders, that the company may be reconstructed upon a scheme which, while providing for the raising of the additional capital required, would also secure to the present shareholders a substantial interest in the company. With a view to consider the proposed scheme, I invite the shareholders to meet me at Winchester House, on Friday next, the 22nd instant, at 3 p.m.—Yours truly, WM. W. WEST,"

Mr. W. W. WEST: I have called this meeting for the purpose of considering whether anything can be done to rescue this property.

Mr. WILLIAM HOUGHTON: I think the responsibility of presiding over an informal meeting generally falls upon its convener, because he has to explain himself. I therefore move that Mr. West shall take the chair.

The motion was seconded, and carried unanimously.

MR. WEST EXPLAINS THE POSITION.

Mr. WEST then took the chair, and first of all read letters of support he had received from Mr. Henry C. Smith, Mr. H. B. Trench, Mr. Herbert Thirl and Mr. W. B. Ogg. These gentlemen were ready to support any practical scheme that might be submitted.

The CHAIRMAN: Gentlemen, I attended the meeting called by the company last week, and heard the statement of the chairman as to a scheme which was foreshadowed by him, and was rather struck with the remark I had seen in the paper, that probably a scheme would shortly be put forward, by which it was hoped that the Big Golden Quarry company would be put in a much better position than hitherto, but that it would be probably necessary to throw over the vendors. It seemed to me that the scheme as shadowed forth by the chairman rather carried out this idea. As a general rule, I have not much sympathy with vendors, because they buy properties very often for 10,000*l*., sell them at 20,000*l*., and ask for 100,000*l*. in shares as well. In this particular instance, the whole of the purchase-money was paid in 100,000 shares of 1*l*. each. If the property had turned out worthless, there would be no objection to throw over the vendors, but we are assured by the directors up to the present moment that it is really a valuable property, and if so, it does appear to me to be rather hard that the vendors should be cast aside in this way, to say nothing about the other shareholders. (Hear, hear.)

NOT HOSTILE TO THE BOARD.

This meeting has not been called in a hostile spirit to the directors. On the contrary, I think myself that if the company is to be rescued from its present desperate condition, it can only be done by shareholders, and directors cordially co-operating in some feasible scheme that will save our property, and protect the interests of the shareholders. I am quite sure if we formed ourselves into two hostile camps, the chances are that the whole thing would collapse. I am not saying anything against the directors, and not attempting to bind them to their scheme, because it was not put formally to the meeting in any way, and the chairman rather protected himself by saying that the meeting was over, and that he was merely giving his idea of what ought to be done, That scheme amounted to this—that the present company should be wound up, and a new company formed with a capital of 50,000*l*. 25,000*l*. of which was to be called up, and that the liquidator of the old company should sell to the new the whole of the property for a sufficient amount to pay off the liabilities. That, of course, entirely threw over the old shareholders, the only benefit offered to them being, that they should have the chance of applying for shares in the new company. It did seem to me that that scheme was

PREJUDICIAL TO EXISTING SHAREHOLDERS,

and that it was not even honest towards the vendors who have parted with their property entirely for shares. (Hear, hear.) If such a plan were carried out by unprincipled people a company might be started to buy a property for shares, and directly possession was taken it might be wound up and sold for cash—the interests of the original vendors being thrown away. Talking over this matter with two or three shareholders who have a greater interest than I have—I have 800 shares, bought after the company was formed—they seemed to think that some alternative scheme might be submitted that would be likely to meet with success. The directors say we have a valuable property which would be remunerative if sufficient capital were at command to develop it. I will now read you three schemes that have been submitted. The first by the directors, the second, the alternative scheme, and the third, some ideas of my own.

DIRECTORS' SCHEME.

The first, which is supported by the majority of the present directors, is to form a new company with a capital of 50,000*l*. in 50,000 shares of 1*l*. each, all of which would be issued as working capital, but only 10s. per share to be called up, leaving the other 10s. per share to be dealt with when it should be decided by a general meeting to provide funds for the construction of a large water race with custom mills as originally intended. The present shareholders would have the option of subscribing to this capital, but in no other way would they derive any benefit from the new company, except their proportion of the purchase-money paid by the new company for the property in cash, which would be distributed pro rata after discharging all the existing liabilities. It is not anticipated, however, that after providing for these there could possibly be much left for distribution among the present shareholders, and the probabilities are that those who do not subscribe to the proposed new company will get nothing.

FIRST ALTERNATIVE SCHEME.

The alternative scheme which is proposed is as follows:—That a company be established for the purchase of the undertaking and property of the existing company, with a capital of 75,000*l*., in 75,000 shares of 1*l*. each, of which 25,000*l*. will be required for working capital. Each shareholder in the existing company to have one share in the new company for every five shares held by him in the present one. This will absorb 26,000 shares, leaving 49,000 available for the purpose of raising the necessary working capital; the shareholders in the existing company to have the option of subscribing to the extent of 20,000*l*., receiving a fully-paid bonus share for each share subscribed for and paid up. As regards the merits of these two schemes, it can hardly be contended that the first arrangement is a just one to those who are unwilling, or are not in a position, to subscribe to the proposed new company, but who have given value for the shares that they hold either in property or money. As will be seen from Mr. Woodford's reports, of which we have all had copies from time to time, the value of the property is unquestionable; and there is little reason to doubt that, had the working capital been adequate and economically applied, the prospects which were held out in the beginning would have been realised, and we should ere this have been in the possession of a highly remunerative property. The shares of many Transvaal companies which have been recently floated in England (none of which could claim to have been proved

to the same extent as this property) are now at a high premium ; and it would be far more reasonable and equitable arrangement (if a liquidator is appointed) to instruct him to dispose of the property so that the present shareholders may participate to some extent in the advantages of the re-construction. It is manifestly to the benefit of the shareholders in the existing company that the second scheme, as above set out, should be adopted, with such reasonable modifications as may be rendered necessary by circumstances or be considered advisable. If you are of this opinion, and if you are unable personally to attend the meeting called for the 28th instant and support the latter proposal, please be so good as to sign the enclosed proxy and return it to the address printed on the back in time to enable it to be lodged at the company's offices, in accordance with the requirements of the company's articles of associations not later than Monday, the 25th instant.

ALTERNATIVE SCHEME.

The existing company to be wound up and a liquidator appointed. A new company to be formed with a capital of 60,000*l*. in 30,000 preference shares of 1*l*. each, and 30,000*l*. deferred shares of 1*l*. each. The new company to take over and discharge all the debts and liabilities of the existing company, and give the liquidator 30,000 deferred shares of 1*l*. each, as the purchase-money of the whole of the property of the existing company. The liquidator to distribute 15,000 of the deferred shares amongst the shareholders in the existing company, in the proportion of one share for every 10 shares held by them in the existing company, and the remaining 15,000 deferred shares in the proportion of one share for every two preferred shares subscribed for and paid up in full in the new company. The deferred shares to receive no dividend until a dividend of 10 per cent. has been paid upon the preferred shares. If the company is able to pay a dividend of more than 10 per cent. upon the whole capital of the company, both classes of shares to participate equally in the dividend. If the whole of the preferred capital is not subscribed for by the shareholders in the existing company, the deferred shares not issued under the above arrangement to be absolutely cancelled, and the remainder of the preferred capital to be offered to the public at par.

FINANCIAL POSITION.

The following is about the present financial position of the company : —Assets : Cash, nil ; value of machinery already in the Transvaal, say 500*l*. ; property ? What value. Liabilities : Outstanding accounts in England, about 200*l*. ; outstanding accounts in the Transvaal, about 1,100*l*.; total, 1,300*l*.; machinery ordered in England, but not delivered, about 1,900*l*. ; total liabilities, 3,200*l*. ; additioual machinery required, including transport and erection, and to complete water-race, 3,600*l*. ; say, for getting quartz ready for mill and working property for six months until resnlts are obtained, at 250*l*. per month, including management and all expenses, 1,500*l*. ; total, 8,300*l*. This would enable the 10-stamp mill to get to work, and taking results at Mr. Woodford's lowest estimate of 23s. 6d. per ton profit, would give on 15 tons per day crushed with a 10-stamp mill a profit of 17*l*. 12s. 6d. per day.

I believe that the figures have been carefully drawn out, and I have no doubt they represent, practically, the position of the company.

WHAT IS REQUIRED.

They show that something like 10,000*l*. is wanted to clear of all liabilities and set the concern going, and another 10,000*l*. will be wanting to carry it on. Unless there is some reasonable prospect of getting at least 20,000*l*. in cash, we shall not be very successful, but if we get that money, I think it very likely the company will prove remunerative. Those are the suggested schemes for your consideration, and it will depend to a great extent upon the support the shareholders are prepared to give the new undertaking as to whether one of them can be carried through. I will uow leave the matter in your hands for discussiou.

VIEWS OF A DIRECTOR.

Mr. G. H. Leane (director) : I joiued the company last May, and at that time found it was merely a matter of time, if we did not soon get some additional funds, as to when we should come to a close. With the co-operation of the other directors I did my utmost to raise those funds. I think you all pretty well nnderstand that the property was floated with the idea that 10,000*l*. wonld be sufficient to work it. I believe the idea was, that with 10,000*l*. the property would be so far proved that we should get easily what further funds we wonld require. In fact the original estimate spoke of 30,000*l*. as working capital. Owing to the frost which came upon all Transvaal properties about the time this company was brought out, and when the present shareholders were asked to subscribe there was not snfficient confidence amongst them to raise fnnds enough, and so the attempt fell entirely flat. A prospectus was issued to the shareholders which was not responded to, and a similar result attended an appeal to the public. Debentures were next offered to the shareholders which resulted in a very small subscription, all of which has been returned, aud then this last scheme was formulated for leasiug the property.

WHAT MONEY IS NECESSARY.

The result of that was, that 20,000 shares were applied for, but these could only raise 2,500*l*. I think that Mr. West is a little wrong in saying that it is absolutely necessary to have 20,000*l*. at this point. The estimate here is only 8,300*l*. The last item of 1,500*l*. is for getting quartz for the mill to treat and to work the property for six months, until resnlts are obtained at a cost of 250*l*. per month—total. 8,300*l*. If we had that snm, according to this estimate we could work moderately for six months and get results. From a 10-stamp mill I do not think we shonld come to the end of that money before we were clear of all tronbles, and were ably to pay our expenses as we went. Mr. Ogle has desired me to say that no opposition will be offered by the board to any scheme that is suggested, and you will have my hearty snpport for any proposal that will obtain the necessary funds. We do not want the pnblic to provide those funds so much as our own people. We want the latter to save what we consider one of the most valuable properties in the world. We had a reef of unexceptional value, carryiug gold throughout, which is rather unusual for a reef of this enormous thickness. On an average through the whole width we have ½ oz. to the ton, and one part is 20 ft. iu width, worth 17 dwts. all of which I gather from Mr. Woodford's report. His faith in the property is so great that he is persuaded that lower down

WE HAVE AS RICH A REEF AS THE SHEBA.

Whether that be so or not time, labour, and money alone can find out, but at all events it is worth an attempt to get the funds to prove it. I think everyone who has read the reports must be convinced that this is really a good property. Once get the mill to work, and there will be a ready market for the shares. (Cheers.) Money is urgently required in the Transvaal for current expenses, and only recently I have become liable personally for a pressing claim. (Cheers.) I suggest that we should at once send ont another 100*l*., and invite your subscriptions for the amount. We are payiug for 12 claims ; but although that is enough to keep us going for a good many years, I think we should take over at least 10 more ; in fact, we ought to have 30, as we had before, and secnre some on the opposite side of the same stream, which could be dealt with by the same water race. I think we ought to have 10 claims on that side, and the two properties could be worked very cheaply, and the value of both would be enhanced. The large water-races originally anticipated would no doubt have been a magnificent iuvestment, but under the circumstances I think a smaller one will do. The whole valley terms with wealth in the way of reefs reqniring to be worked. Could we see our way to make this long race, and have customs mills upon it, we should never regret having invested our money in that direction. With regard to our present facility, we waut to work first a 10-stamp mill, and should require a smaller race than was at first anticipated. I do hope that you will do your best to support the scheme that may finally be decided upon. The second scheme was the one that I personally favoured, but siuce I have seen that of Mr. West I am not at all auxious mine should be carried. We should get a more substantial stake by adopting mine, but if the other will get the money by all means let us have it. The vendors took no cash for the property, and therefore I think they are cutitled to some consideration. (Hear, hear.) I hope you will do your best to formulate a good scheme and support it financially. (Cheers.)

The Chairman : We are all much obliged to Mr. Leane for giving us this information.

VIEWS OF THE CHAIRMAN OF THE COMPANY.

Mr. Ogle (chairman of the company) : I do not rise as a director but simply as one of the largest shareholders, holding 18,000 shares. Any of these schemes will suit me better than the proposition of the directors, because in either of them I should get a considerable nnmber of shares without paying for them, but my view is that the public will not support such a plan. Various propositions have previously been submitted to the shareholders, and the responses have been almost nil. The reason we suggested the first scheme is—the whole of the cash raised is to be used in payiug the company's debts, and it was never a proposition of the directors that any liquidator should be appointed to deal with the property in any particular way. His duty must be to get the highest price for it he can. The directors do not believe that more will be obtained by the sale of the property than would be sufficient to pay the company's debts. I do not believe either the public or the shareholders would subscribe to a scheme where a great number of shares were to be given to the shareholders. We want the company to be worked and the capital to be raised ; and any good scheme must do the latter.

I DO NOT OPPOSE ANY SCHEME, BUT IT MUST BE FEASIBLE.

I should object to any scheme being promulgated without some list of subscriptions to commence with. I am quite sure Mr. Leane's views as to the capital required are inadequate, and I would not subscribe to any re-organisation unless 20,000*l*. were provided. I have seen the folly in a number of companies starting with too small a capital. Things in De Kaap have been in a low ebb, and Witswatersrand has gone ahead of it, so that the possibility of paying additional money has been nil. Any scheme ought to provide for present necessities, and also mining and milling. When we see results then there would be no difficulty in getting additional funds.

AN APPEAL TO COMMON SENSE.

Mr. George Pauling, C.E. : I represent the vendors, and was told originally there would be no difficulty in getting 20,000*l*. in addition to the first 10,000*l*. subscribed. Everything fell to a low ebb in the De Kaap Goldfields, and that is why the various efforts to get more capital did not succeed. You tried to get your money at a time when nobody would touch a Transvaal property with a 40 ft. pole. (Hear, hear). I think matters have uow altered, and that the shareholders will make a vigorons effort to save their property.

Mr. Rummens : Would it not be desirable to appoint a small committee ?

A PRACTICAL SUGGESTION AND A RESOLUTION.

Mr. William Houghton : I thiuk we ought to congratulate ourselves upon having, if there are two parties on the directorate (and I do not think there are) both sides represented here this afternoon. I think we may also congratulate ourselves in not having furnished the gentlemen of the press with anything like startling quarrels or disputes, but have manifested a unanimous desire to find the best way out of our present difficulties. The board, as at present constituted, have put forward several schemes, but they have not met with adequate response. We put this down to the fact that the De Kaap district has been going through a period of depression, and not because we have not had confidence in the board, or in the property. On the contrary ; but now we arrive at this point : — the board have more less committed themselves to a scheme which does not quite meet with the views of the shareholders, and is certainly very hard upon the vendor. Our chairman has put forward a scheme, and another has gone round the room without a father. I have had the handling of one or two of these properties, and believe that if you could dissociate this one from the fact of apparent failure up to now, and put it before the public afresh, you would get your capital subscribed three or four times over. You cannot go to the public with this property, and with a record of its failure behind you. Although money has been spent on this property, and it has been proved to be of value, it is actually worth less than if it were a virgin property. Let us see whether we cannot, as suggested, appoint a small committee to confer with the directors to prepare a scheme, to get that scheme sufficiently underwriten, and then let us go to work again. Up to the present time we have had

no practical scheme, and no shadow of a resolution has been submitted. We have heard from Mr. Ogle, the chairman, that he would oppose any scheme that did not appear to give guarantees of success. I beg to move "That this meeting appoint a committee of three members to confer with the directors, and to prepare and submit a scheme for the formation of a new company."

Mr. RUMMENS seconded the motion.

COMMITTEE APPOINTED.

The CHAIRMAN: I am very glad we have elicited the opinion of the chairman of the company and one of his colleagues to-day. I quite agree with Mr. Ogle as to the futility of putting forward any scheme unless there is some reasonable prospect of making it successful—in fact I should not be concerned in a scheme that bore upon its face the stamp of failure.

The motion was carried unanimously.

The three gentlemen nominated as the committee were the following:—Mr. Kay, Mr. George Pauling, and Mr. George G. Wolf—the chairman kindly offering to give without charge any legal assistance that might be required. The chairman, we may remark, is a member of the firm of Messrs. Shaen, Roscoe and Massey, of Bedford Row.

The proceedings closed with a cordial vote of thanks to the chairman for presiding, and also to Mr. Ogle and Mr. Leane for attending in their capacity of directors.

SOUTH FRANCES.

CALL OF 15s. PER SHARE—THE WATER QUESTION.

A SIXTEEN-WEEKLY meeting of the adventurers in South Wheal Frances was held on Thursday upon the mine. There was a large attendance of shareholders, and Mr. Cornelius Bawden, the purser, in the chair. Labour costs for the sixteen weeks were shown by the statement of accounts to have been 4,292*l*. 4s. 2d.; merchants' bills, 2,583*l*. 5s. 11d.; stannary assessment. 4*l*. 19s. 7d.; Employers' Liability Corporation charges, 57*l*. 18s. 6d.; bankers' commission and interest for half-year, 98*l*. 10s. 5d., making, with minor charges, a total debit of 6,997*l*. 7s. 7d. Tin sold, 75 tons, 9 cwt., at an average price of 52*l*. 18s., produced 3,987*l*. 15s. The loss on the sixteen weeks' working was 2,884*l*. 8s. 3d., and the balance at present against the adventurers was 2,975*l*. 8s. 7d.

The CHAIRMAN said their accounts were in an unfortunate state this time. During nearly the whole of the sixteen weeks they had had the water in the bottom part of the mine, and that had reduced their produce of tin by at least one-third, and landed them with a loss of 2,884*l*. They would hardly call it a loss on the sixteen weeks' working; it was a loss on the sixteen weeks' pumping engine charges.

Mr. DAUBUZ proposed the adoption of the accounts, and a call of 15s., which would realise 3,300*l*. They thought this necessary, as Captain Hooper believed it would take six weeks to get the mine in fork—(hear, hear).

Mr. R. S. TEAGUE seconded, and the motion was carried.

This concluded the business.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

WITH the repayment of the loans borrowed at the settlement last week, which eased the Money Market for the time, the tone has at once improved, and while discount has risen to 2¾, ⅞, Short Loans have been in demand at 2¾, 3 per cent. The Bank return shows a reduction in the private deposits of 284,000*l*., the payment of taxes having increased the public deposits by more than half-a-million. The private securities show practically no change, this is due to the fact that the loans borrowed of the Bank on the Thursday for seven days, and it would seem that an amount equal to that borrowed previously, viz., 1¾ millions, must have been renewed when due this week. The private deposits now exceed the total last year by 448,000*l*., and the private securities those of last year by 2,257,000*l*., while the private deposits now only exceed the private securities by 1,307,000*l*., which is all indicative of a better position of affairs commercially than for many years past, and which it is to be hoped will develop more healthy results. Although over 100,000*l*. gold was lost by the Bank on the week by export the stock of metal has increased 127,000*l*., and with a return also of notes the reserve is 315,000*l*. better at 15,074,000*l*., which is 45½ per cent. of the liabilities, or rather better than last week. The exchanges which had turned against us have begun to improve, short bills on France and Germany being offered. An Argentine 4½ per Cent. Conversion Loan for over 5,000,000*l*., at 90 per cent. has been announced. The Queen's Speech, while referring to the intention to complete the conversion of the debt, makes no reference to the rumoured "National Defence" Loan for 100,000,000*l*.

Treasury Bills were allotted to-day, and the result was again all in long-dated paper, the average price being 2*l*. 6s. 1d. The discount market was decidedly weaker at 2⅝ per cent. for three months' drafts, so influenced by a large influx of gold, while money was in strong demand owing to the distribution of the Midland Railway dividend, and 2¾ to 3 per cent. was readily paid for short loans, but, notwithstanding, borrowers were driven to the Bank.

Gold to the amount of 77,000*l*. has been purchased by the Bank. Bar silver has closed stronger at 42¾d., and Mexican dollars were good at 41½d. per oz.

The fourth Session of the Twelfth Parliament under the Queen was opened by Commission on Thursday last, and a little more interest was shown in the City regarding the "Queen's Speech," several items of which have certainly great interest for bankers, merchants, and the Stock Exchange generally, such as the payment of the old Consols, the gold coinage question, and also how the "premiums" for our national safety are to be met. The amount required under the National Defence Bill is variously estimated at from 9,000,000*l*. to 100,000,000*l*. sterling, but of course this, as will be seen, is the merest guess work. With regard to political affairs abroad, there has been but little change. It is announced that another French Ministry has been formed, and there is a probability of its remaining in power for a time, as the French are anxious about their exhibition. Business at the Stock Exchange has been very quiet, and dealers in the present state of political affairs are advisedly acting with caution, as on any adverse news, prices might go down with a rush, and in all probability some difficulty would be experienced in putting the "break" on. The Funds and other sound securities have benefited by the action of the Government Broker. Foreign Government Bonds sympathised with the movements on the Paris Bourse, which have been affected by the various reports regarding the Copper Syndicate, and the market throughout shows a more or less fractional toss. Peruvian Bonds were heavy, as the Congress has not come to any decision respecting the "Grace" contract. There has been a steady demand for Home Railway Securities, and, as a rule, prices have risen ½ to 1, with an exceptional rise of 3 in Metropolitan, on the success of the Rickmansworth Extension, and a sharp collapse of 2½ in Hull and Barnsley, owing to the result of the meeting. American Railways were dull and listless throughout, and Union Pacific fell over 1½ on the "shelving" of the Funding Bill. Grand Trunk Stocks were buoyant on a traffic return, showing 11,000*l*. increase, and Mexican were also a shade firmer. Miscellaneous Securities were steady, and without special feature.

Business in the Stock markets to-day has not been particularly interesting, English Railways being about the only market that exhibited anything like vitality. The Funds were steady, and Indian Government and Colonial Inscribed Stocks were also well maintained. Foreign Government Bonds were irregular the "International" section being ⅛ to ¼ stronger in response to more favourable advices from the Continent, while South American Loans were ¼ to ½ weaker. In the English Railway Market Brighton Deferred touched 137 after "official" hours the traffic returns for the current week being very favourable, and the next monthly statement is expected to be very satisfactory. Hull and Barnsley Stock recovered 1 per cent. of yesterday's fall, as the result of the "poll" is favourable to the proposed absorption of the line by the North Eastern. Sheffield issues were also very good, and the undergrouud lines closed at higher levels; most of the heavy lines, however, gave way. American Railway Securities were inactive owing to the New York Market being closed, and prices show an average reduction of ⅛ to ⅜. Union Pacific Shares, together with Mexican Central, and also the Income Bonds, being the only permanent exceptions. Grand Trunk of Canada Railway Stocks were good, and ⅛ to ⅜ higher on the day, or ⅛ to ⅜ below the highest points, as at one time the 1st and 2nd Preference touched 74 and 54 respectively. In the Miscellaneous Market New Leeds Forge Shares changed hands at 6 on the closing of some bear accounts, but as soon as these were settled prices reacted to about 5 premium. The Nitrate group were dull, and mostly lower.

Annexed are the final quotations to-day:—Consols Account, 99 5/16, 99 5/16; Egyptian-Preference, 102⅞, 103⅛; Egyptian Unified. 86⅝, 86¾; French Four-&-a-Half per Cents., 102½, 103; Hungarian, 84, 84¼; Italian, 94 7/16, 94 9/16; Mexican, Serip, 93¼, 93½; Peru Five per Cents., 13⅝, 13¾; Peru Six per Cents., 15⅜, 15½; Russian, 1873, 102, 102¼; Portuguese, 64⅞, 65⅛; Spanish, 74⅝, 75; Turkish, 1871, 87, 87½; Turkish Defenee, 98¾, 99¼; Caledonian, 119⅛, 119⅜; Great Eastern. 70¾, 71; Great Western, 157¼, 157½; Brighton "A," 137, 137¼; North-Western, 180, 180½; Metropolitan, 79, 79½; Metropolitan District, 35¼, 35½; Midland, 141⅝, 141⅞; North British, 57⅛, 57⅜; North-Eastern, 164⅜, 164⅝; South-Eastern "A," 108¾, 109; Hull and Barnsley, 37, 37¼; Grand Trunk, 11¾, 11⅞; Ditto First Preference, 73⅜, 73⅝; Ditto Second, 53⅜, 53⅝; Ditto Third, 28¾, 29; Canadian Pacific, 53½, 53¾; Denver, 16¾, 17; Milwaukee, 64½, 64¾; Erie, 30⅛, 30⅜; Lake Shore, 106⅛, 106⅞; Louisville, 61⅜, 61⅝; Atlantic First, 34¾, 35; Ontario, 17¾, 18; Ohio, 23½, 24; Norfolk and Western, 53, 53¼; Reading. 24⅜, 24⅝; Reading Bonds, 86½, 87; Union Pacific, 66¼, 66½; Wabash Preference, 27½, 27¾; Ottoman Bank, 11 7/16, 11 9/16; Anglo-Telegraph, 48¾, 49¼; United Telephone, 14⅜, 15; Hudson's Bay, 19⅜, 19⅝; Suez Canal, 89., 89½; Guinness, 31, 31¼; Allsopps, 8⅝, 8⅞; Bryant and May, 13, 13¼; Bell's Asbestos, 17¾, 18; Nitrate Railways, 27⅜, 27⅝; Hyderabad (Deccan), 8½, 8¾; Mexican Railway, Ordinary, 43½, 43¾.

VOGELSTRUIS (17th Jan.)—Battery: Within a month we hope to have the battery complete. Two or three items of machinery and other parts are missing, and its actual commencement of work is, of course, dependent on duplication of these parts. The most serious is the outer bearing of the engine; but a telegram to hand a few days ago states it had been found at Ladysmith, and that it is being promptly forwarded. The other items we can make up on the ground. The mining activity along the Randt still causes skilled miners and artizans to be somewhat scarce. Wages for the classes referred to being 4*l*. 10s. to 6*l*. per week.—C. ROWE.

WEST ARGENTINE.—January crushing, 525 tons, yielded 202 ozs. gold. The following results are given of trial crushings from two new mines belonging to this company:—No. 1: Average of ore at pit mouth coming from below 60-ft. level: Weight of ore treatad, 224 lbs.; gold obtained, 4 dwts. 2.2 grs.; average per ton, 2 ozs. 22 grs. No. 2: Average of ore on brow of hill; width, 3 ft.; weight of ore treated, 224 lbs.; gold obtained, 7 dwts. 20 grs.; average per ton, 3 ozs. 18 dwts. 8 grs. The above are encouraging indications, but further explorations are being made to ascertain value of the respective reefs.

WEST TOKATEA.—Under date, December 29th, the company's agent, at Coromandel, writes:—Since my last, Stevens and party have been engaged in rising from the low level, on the course of the Colville reef, to connect with the upper levels. The reef maintains its regular course and size, and from time to time a little gold is seen. We are now going through a stiff bar of ground, which makes our progress slower than usual. In a week or so I intend prospecting and sinking on the new big reef discovered in the floor of the low level, but we shall not be able to make returns from it until we have more milling accommodation. At present it takes more time to crush the quartz than to get it out of the mine. We have unlimited quantities of stone to deal with if we had crushing power to reduce it.

KRUISRIVIER ("WHITEHEAD'S"), ROODEPORT AND BLOEMHOF (TRANSVAAL) ESTATES CO., LIMITED.

The property which this company is formed to acquire consists of 20,000 acres, and is known as "Kruisrivier" ("Whitehead's"), "Roodeport," and "Laagersdrift." It acquires also the right to prospect for minerals over six neighbouring farms, the approximate area of which is 31,000 acres, with the option to purchase each or all of them upon advantageous terms. The "Whitehead's" is on the Oliphants and Salons Rivers, within 40 miles of Middelburg, in a direct line with the Government course of the Main Trunk Line Railway from Delagoa Bay. The property has been exhaustively reported upon by Mr. Archibald E. Pinching, who holds the distinguished position of her Majesty's Inspector of Mines for the South-Western (Cornwall) Division of England, and who was formerly manager of a mine on the Kruisrivier estate. This gentleman states that from an adit level driven on the course of the lode, some 400 ft. or 500 ft. in length, ore was obtained which yielded no less than 16 ozs. of gold to the ton. One mine on the Kruisrivier estate has produced ore which has realised 25,112*l.* upon a capital of 13,000*l.*, and this, it may be added, when mining and transport charges in the Transvaal were necessarily considerably higher than they are at present. Mr. Pinching states, as a further evidence of the remarkable mineral richness of this estate, that on sinking some 40 ft. or 50 ft. copper was discovered on a very rich deposit, and he has no doubt whatever that a valuable lode could be opened up. The capital of the company is 250,000*l.*, in 1*l.* shares, and the price to be paid for the properties has been fixed at 200,000*l.*, payable 50,000*l.* in cash, and the balance in cash or shares, at the option of the directors. The company appears to be well officered, and from the extensive character of the property, and its situation in the heart of a gold-bearing district, it would seem to offer an excellent field for the employment of enterprise and capital.

MR. THOMAS THOMPSON'S MINING AND INVESTMENT CIRCULAR.

Mr. Thomas Thompson is certainly a hard-working man, and as a proof he describes how he prepares his circular, the effort it costs him, and the unearthly hours to which his labours are extended. Most emphatically Mr. Thomas Thompson's lamp "consumes the midnight oil." We have a fellow feeling with him, for our lamp consumes it also—in fact, it might be true to say that both our lamps rarely go out. The public, who casually glance over one page after another little think of the labour that has to be undergone before those pages, lightly skimmed, are put together. Naturally Mr. Thomas Thompson takes up his parable about Colombian mines, respecting which he again gives much valuable information. He has a great deal to say about Colon, his latest success, which bids fair, along with Tetuan, to become not merely market successes, as they already are, but dividend paying concerns. At least, that is the opinion of the market, and in such a case market opinion counts for not a little. The circular, as a whole, may in fact be described as one relating mainly to hydraulic mines, and the value of the information is not lessened by the fact that two admirable maps show the geographical position of the Colombian Mines, of which, it is no breach of confidence to say, many persons display in their communications an ignorance that is remarkable. The circular (a special issue) is worth reading by all classes of investors, and particularly by those who pin their faith to the mines of the Republic of Colombia.

SAVING THE BIG GOLDEN QUARRY.

Some of the shareholders are taking action to save a property that they believe to be valuable, and in this work we are glad to know they are meeting with the cordial support of the directors. No hostile camps have been formed as was at one time feared, but all are working harmoniously to one practical end. This company was registered in May, 1887, but proceeded to allotment upon an insufficient capital. The sins of the directors in this respect found them out at an early stage of the company's career, and their subsequent attempts to raise capital proved abortive, mainly because of the blight which fell upon the De Kaap district. At the meeting held yesterday, a small committee was appointed to confer with the directors to prepare a scheme by which the capital may be found and the property preserved for the benefit of the shareholders. Mr. West deserves the thanks of all concerned for his action in calling the meeting.

THE LONDON WHITE LEAD MANUFACTURING CO., LIMITED.

This is not the first time that we have directed attention to the dreadful effects produced by the white lead industry upon the workpeople who are engaged in it. On several occasions we have called attention to the mortality—as we have held, needless mortality—which the work of producing white lead entails, and we have asked—are the resources of science so feeble as to provide no remedy? The answer to this question is found in the advent of the present company, which appears to have secured very valuable patent rights by which loss of life may be prevented, and efficiency of manufacture at the same time secured. It appears that the system to be adopted by this company has both economical and sanitary advantages, the article being manufactured almost entirely by machinery. There will, moreover, be a considerable saving of time, as they will be able to do in 72 hours what by the old system took from 13 to 16 weeks. The vendor is Mr. Richard Biddulph Martin, and the price which the company pays him for the patent rights, goodwill, leases, buildings, plant and machinery is 35,000*l.*, payable in cash out of the first issue. The capital of the company is 75,000*l.*, in 15,000 shares of 5*l.* each, and the present issue is 10,000 shares.

BERTRAM LUIPAARD'S VLEI GOLD COMPANY, LIMITED.

This company has been formed to acquire and work 25 mining claims each 150 ft. by 400 ft., situated on the well-known gold-bearing farm, "Luipaard's Vlei," in the Witwatersrandt district. There are several reefs upon the property, two of which have been proved to consist of the ordinary banket of the district; both are large and well-defined one being 5 ft. 6 ins. thick at the face, and about 8 ft. at the bottom of the shaft, at a depth of 35 ft. Mr. William Bevitt, M.E., of Johannesburg, reports that about 90 tons of ore have been taken from one of the shafts on the property, a quantity of which has been milled, with very satisfactory results. About 60 tons are now lying on the surface ready to be sent to the mill. He took eight samples from these, and from various parts of the reef which he considered would average 15 dwts. to the ton. A valuable water-right has been secured, and the directors are advised that there is sufficient water to supply a 25 stamp mill and engine with power. The capital is 60,000*l.* in shares of 1*l.* each, and the directors and their friends have applied for an interest in the company to the extent of 20,000*l.* The price fixed for the purchase of the property is 45,000*l.*, of which only 5,000*l.* is payable in cash. The list of applications for shares opened on Thursday and closed for London yesterday. Applications from the country will be received up till to-day.

THE PONDOLAND EXPLORATION AND MINING CO., LIMITED.

The territory of Pondoland stretches from the north-eastern frontier of the Cape Colony to the Natal frontier, and is estimated to contain upwards of 5,000 square miles, equal to over 3,000,000 acres, and we have it on the independent testimony of Sir Donald Currie, M.P. (vide a paper read before the Royal Colonial Institute), that it is a territory abounding in minerals. A concession for 20 years to explore and work for all minerals and precious stones in the territory has been granted by Sigcau, the paramount chief of Pondoland, to Mr. James Read Girling, representing the Poudolaud syndicate of London. The concessionaire has resided for some years in the colony of Natal, and has also lived for some time in Pondoland, and states that he knows the country to be rich in both gold and copper, but that up to the present time no systematic prospecting or mining has taken place, owing to the refusal of the late paramount Chief of Pondolaud to admit Europeans to his territory for that purpose; that copper ornaments worn by the natives are made from ore found in the territory; that free gold has lately been obtained to his knowledge from quartz quarried from a reef in the country, and that he believes from personal observation that coal will also be found in parts of the territory. The territory included in the concession being of such vast extent the directors, wisely propose to proceed cautiously with its development—in other words, they intend to look before they leap, and thus escape the ills that have befallen so many new ventures. It is the intention of the board to prospect and develop the property in sections, and as the work proceeds, to establish sub-companies, and grant sub-concessions. That they will have little difficulty in doing the latter is pretty evident when we are told that an application has already been received from an influential gentleman in Natal for a sub-concession. The capital is 200,000*l.* in 1*l.* shares, 20,000 of which shares are held in reserve for issue in Durban. The terms upon which the company acquire the concession are as follows, viz., the sum of 40,000*l.* in cash, and 66,500*l* in fully-paid shares, and an annual fixed rent of 500*l.* payable under the concession, and a royalty of 2½ per cent. to the vendor on the the value of the mineral raised, leaving a balance of 93,500*l.* as working capital. The company will be fortunate in possessing an ample supply, of those invaluable accessories—timber and water. The climate is good; work can be carried on all the year round, and labour is both cheap and plentiful. We have little doubt that the prospects which are before this company will cause it to receive practical attention on the part of the investing public.

NEW CONSOLIDATED MINING CO., LIMITED.

GRAND CANON GOLD PLACER MINING CO. OF NEW YORK.

13th February.—I beg reference to this company's circular relative to the above, under date of 8th December, 1888, in which you were informed that my directors had for the moment decided to postpone the issue of the remainder of the 1,500 shares referred to in the original circular, of 2nd November, 1888, and of which 1,500 shares, 600 were issued. I enclose copies of both circulars, and also an extract from the Mining World, dated 10th November last. My directors are now in possession of information connected with the placers adjoining those in which we are interested, information which in their opinion, now permits their offering to the shareholders the remaining 900 shares, and which they now do, on the same terms and at the same price as the 600 were distributed. It is a source of great satisfaction to my board to have secured for this company participation in a property indicating such encouraging prospects for the future.—Ernest H. Collins, Secretary.

The registrations at Somerset House of new companies a week ago represented an aggregate capital of upwards of 5,300,000*l.* It was anticipated that there would be a lull in company promotion at present, but these returns indicate otherwise. The companies include conversions of all kinds of private manufacturing undertakings.

Removal.—The offices of the Cumberland Gold Mining Company, Limited, the Ilex Gold Mining Company, Limited, and the Barancaunes Copper Mining Company, Limited, are now at Blomfield House, London Wall, E.C.

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

NEW EMMA SILVER MINING CO., 1886, LIMITED.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—Several shareholders in this company having seen the report of the proceedings by the United States Government against the Richmond and other mines in the State of Nevada to recover damages for cutting wood on the public domain for mining purposes, have applied to me to know in what position this company stands as regards the mine timbers, fuel, &c.

I am instructed by my directors to state as regards fuel the company use coal, and that whatever timber is used for supports in the mine is obtained from other localities and duly paid for. The company have not cut any timber from Government lands, and therefore cannot have incurred any liability whatever to the United States Government.—I am, &c.,

RICHARD H. HOBBS,
Secretary.

15, George Street, Mansion House,
London, February 22nd, 1889.

WEST MOODIE'S GOLD AND EXPLORATION CO., LIMITED.

SIR,—I am an original shareholder in this company, and have mislaid my copy of the prospectus. Could any of your readers kindly supply me with a copy?

Why are the meetings of this company never reported in any of the financial papers? Are reporters refused admittance to the meetings? If not, will you see that the meeting on the 28th inst. is fully reported, and oblige,

Yours, &c.,
COUNTRY READER.

[Reporters are always refused admission to this company's meetings. This has been the case on three recent occasions when we have sent representatives.—ED. M. W.]

YURUARI SHARES.

SIR,—I am instructed to state that notwithstanding the fact that only 48 hours was given to applicants for the recent issue, about 100,000 shares were spplied for.

In response to numerous telegrams the directors have agreed to extend the time till Monday next for foreign holders, or in cases where reasonable excuse, such as absence from the registered address, is given.—I am, &c.,

J. R. ROBIN,
Assistant Secretary.

78, Queen Victoria Street,
London, E.C.
22nd February, 1889.

MOUNT SHAMROCK AFFAIRS.

SIR,—As you have so highly favoured the directors and Mr. Hume Webster by inserting reports of the Mount Shamrock meetings in your columns, and by so eloquently advocating their cause, I should deem it a great favour if you would insert this letter in your issue of to-morrow, if possible at the foot of the report of the extraordinary meeting of yesterday.

The shareholders should know that Messrs. Rankin and Matthews did not avail themselves of their large majority to turn the directors out, because Mr. Woodyatt emphatically said that he would bring to bear his enormous voting power (153,000 votes) to depose the new board.

It should also be understood that the gentlemen who had agreed to come forward as directors had no desire for office, and that two of them, who in no case would receive any fees, had arranged to retire within the year, or so soon as they considered the affairs of the mine in fair working order. The suggestion of a compromise which was made by Mr. Woodyatt's solicitor to me after consultation with the present board, in the shape of the retirement of two of the present directors in favour of two gentlemen to be appointed by Messrs. Matthews and Rankin, was scouted by my friends, and looked upon as equivalent to a condonement of transactions which they could not countenance. Mr. Woodyatt and his solicitor admitted the excellence of the proposed new board, some of whom hold seats on companies of the highest repute in the country.

He refused, however, to withdraw his support from the present board, whom he evidently regards as better calculated to serve his purposes and suit his views.—I am, &c.,

STANLAKE LEE.

London, 22nd February, 1889.

SOUTH AFRICAN NOTES.

LATEST TELEGRAMS, &c.

Since the publication of a telegram from Mr. Kynoch, M.P., to the effect that the Transvaal wants thousands of masons, carpenters, and bricklayers, who could earn 30s. daily, the Colonial Office in Whitehall, the Emigrants' Information Office at Broadway, Westminster, and even some large business institutions in the City, have been almost literally besieged with members of the classes named seeking for intelligence as to the readiest means of reaching the promised El Dorado. Unfortunately for them, neither the Colonial Office nor the Emigrants' Information Office, and certainly not the private firms, can give the desired knowledge.

BOTHAS REEF.—An office for the transfer of the shares will be opened at Warnford Court, on and after the 25th inst.

VOGELSTRUIS.—The board notify that on and after March 1st next their transfer office will be at No. 7, Queen Street Place, E.C.

VIRGINIA (TRANSVAAL).—The agent of the vendors of the company has, to-day, received the following cablegram :—"Struck third reef; assay, too much (? 2 ozs.)."

BERTRAM LUIPAARD'S.—We are requested to state that the lists of applications for shares closed to-day, Friday, for London, and will close to-morrow, Saturday, for the country.

KNIGHTS.—Robert Whyte and Co. have received a cable message from the board at Kimberley, announciug the distribution of 15s. per share, payable 26th March, also as promptly as possible a pro rata division of 15,000 shares in Balmoral Company. Register closes 18th March.

SOUTH AFRICAN.—The following particulars of work relate to the week ending January 12th :—Blue ground hauled, 4,555 loads; blue ground washed, 2,761 loads: diamonds obtained, 802 carats; estimated value, 925*l*. And the following to week ending January 19th :—Blue ground hauled, 3,170 loads; blue ground washed, 4,783 loads; diamonds obtained, 1,338 carats; estimated value, 1,400*l*.

TRANSVAAL GOLD EXPLORATION AND LAND.—The following particulars are from the manager's advices to this Company for the fortnight ending Jan. 21 :—Bullion: A shipment of four bars melted gold, weighing 264 ozs. 2 dwts., value 960*l*., has been made through the Standard Bank of South Africa, Limited. Mines—Theta vein: During the two weeks 105 tons have been extracted, assaying 7 ozs. 7 dwts. gold, and 4 ozs. 2 dwts. silver per ton. The vein continues to look well, and averages 4 ft. in thickness. It has every appearance of running into the hill. Incessant wet weather has hindered operations cousiderably. This company's assays show at one point as much as 7½ ozs. of gold to the ton.

WASSAU (GOLD COAST).—The remittances of gold for the month of December were 140 ozs. 3 dwts. of the net value of 521*l*. 4s. 10d. During the month the mill ran 23 days 13 hours, and crushed 338 tons of ore, the yield of gold per ton being 0.42 ozs. The resident manager at the mines writes on 2nd January :—"All is going on satisfactory, and prospects are encouraging for a good year." The superintendent also (who is now at the mines) writes at same date :—"We are opeuiug out shoot on the deep adit section, which prospects for not less than 15 dwts., and in some cases even 2 ozs. per ton. I feel confideut we shall now gradually work up to 400 tons monthly of at least 15 dwt. stuff—at no increase on the present cost."

STANDARD GOLD.—The directors have, this day, received a cablegram from their solicitors, Messrs. Cooper and Scholtz, of Johannesburg, to the effect that the whole of the claims have been duly transferred to this company. It may not be out of place to mention that the claims are 102 in number, embracing the famous battery and other reefs, and that a ten-stamp battery and sixteen horse-power engine, sufficient to drive additional ten stamps are now in course of erection. Taking the property as a whole, we consider it to be a very valuable one, being in possession of one of the most uniform reefs in Witwatersrand in its gold-bearing properties, and one which is of a convenient thickuess, viz.: 4 ft. for working, so that there need be little dead work. Besides the rich Douglas reef there is one, which in a milling test of 2½ tons, has given over an ounce to the ton; and the strike of this is as before mentioned in your claims. Assays of this reef were from two to three ounces.

GOLD ESTATES (TRANSVAAL).—The directors have received the following most satisfactory report from Mr. Sweet, the company's manager at the mine, Nooitgedacht, near Lydenburg, dated 22nd January :—The reef in the main drive is still rich, and continues 3 ft. in thickuess. In the cross-drivage started 100 ft. in from mouth of level the reef is 5 ft. wide, of high-grade ore, worth, as per amalgamation test, 5 ozs. 13 dwts. per ton. The most valuable lode I have ever seen. In the cross-drive going cast we have met with a horse of ground, which has pinched the lode somewhat, and also impoverished it. The parallel drive being driven in about 170 east has 4 ft. of massive quartz, carrying small pockets of decomposed pyrites, and yielding a fair show of coarse, nuggety gold. No. 4 section: The main drivage is in on course of lode 120 ft. The vein contiuues about 3 ft. in thickness, and is composed of 2 ft. of pyretic ore, worth, as per assay, 5 ozs. 4 dwts. 12 grs. per ton, and 1 ft. of laminated quartz of a low grade. New reef No. 3 is still going forth in good ore 2 ft. thick. The cross-drive going east of No. 2 is affording high-grade ore also. The cross-drive going west of No. 3 on "Buttons" has, as it now stands, a money value of 300*l*. per fm., and is equal in richuess to, perhaps, anythiug on the Rand.

PROSPECTUS.

This Company is formed to acquire the patent rights (English and foreign), goodwill, leases, buildings, plant and machinery, for the manufacture of white lead *by machinery*, at Ossory Road, Old Kent Road, in the County of Surrey, as specified in and on the terms of the contract for purchase hereinafter referred to.

Large sums have been spent on the buildings, plant and machinery, and the present Company is formed for the purpose of acquiring the undertaking and improving and adding to the present plant, and for the further development of the business, which is capable of great extension.

An expenditure of £5,000 in improving and adding to the present machinery and plant, will, it is anticipated, give an output of 50 tons per week.

The consumption of white lead, which is a staple article and the basis of nearly all paints, is very great. The trade is at present in the hands of comparatively few makers, whose method of manufacture, known as the stack process, has undergone little change during the past century. Compared with that process the system adopted by this company shows striking advantages, both economical and sanitary.

Firstly, as to its sanitary advantages:—Under the old system the white lead is made almost entirely by hand labour, with serious and fatal results to a very large number of the operatives, as will be seen from the leaflets accompanying the prospectus, containing articles which were published some time ago in the *Times* and the *Daily Telegraph*, and to which attention is particularly directed. By this Company's system it is made almost wholly by machinery, in the working of which insanitary risks are reduced to a minimum.

Manufacturing by machinery had been attempted for some time without success; but that most important object has now been attained by this Company. Their claim to success in that respect has been fully allowed by Alexander Redgrave, Esq., Inspector of Factories, who, referring to their process in his report to the House of Commons on lead manufacturing, says:—

Report of Alexander Redgrave, Esq., C.B., H.M. Inspector of Factories:—"In all these instances of various separate operations being performed by the aid of machinery, there remains a large amount of work to be done by hand, and as long as that is the case, very ample precautions must be taken to protect the workers, who are daily and hourly in contact with the white lead in some form or other. I have seen, however, the production of white lead by the aid of machinery so arranged that from the first process of the casting of the blue lead until the white lead is deposited in the casks as a completed article, no person comes in contact with it, and no hand touches it. This mode of preparation is that now in operation in the *British White Lead Company's Works, Ossory Road, Old Kent Road, London. Whether the white lead so produced is equal in quality to that produced by the old system of stacks and stoves I can offer no opinion, but to the entire isolation of dangerous products, and to the freedom from contact therewith by the workpeople, I can testify most fully."

*(Now acquired by the present Company.)

Indeed, when it comes to be known that white lead can be successfully made by machinery, it is anticipated, judging from the official reports laid before Parliament, that some steps must be taken to prohibit the further manufacture of the article by manual process.

The mechanical process shows great economical advantages, particularly in respect of the time occupied in the manufacture, and of the number of operatives required by the different systems. By the old system it takes from 13 to 16 weeks to convert pig lead into white lead, whilst by the new system the conversion is completely effected in the short period of two or three days. Taking the output of white lead at, say 50 tons a week, the old process would involve a working stock of 1,000 tons of lead, the cost of which alone would, at present prices, be £13,000, whereas by the new process the same output could be effected with a working stock of 100 tons of lead, costing £1,300. This difference has obviously a very important economic bearing in favour of the new process.

The advantages arising from the Company's method of manufacture may be summed up as follows:—(*a*) It is done almost entirely by machinery, thus reducing to a minimum the risks inseparable from contact with white lead. (*b*) It requires comparatively few hands, and wholly dispenses with female labour. (*c*) The manufacture can be accomplished in 72 hours. (*d*) A minimum of capital is required for working stock. (*e*) The white lead produced is equal in all respects to that made by the old process.

It may here be stated that repeated sales have been made to various railway companies; and that the lead has given perfect satisfaction, and sales are being constantly made to the wholesale trade.

The cost of producing by this process 50 tons a week, is estimated as follows:—

Cost of Production.

	£ s. d.
40 tons of pig lead at the current price of £13 per ton	= 520 0 0
Converting the same into ground white lead (including cost of other materials and labour) at £2 10s. per ton of ground white lead ...	= 125 0 0
	645 0 0

Returns.

40 tons of pig lead yield 50 tons of ground white lead, which at the current price of £19 per ton, give	950 0 0
Gross profit per week	305 0 0

In a year of 50 working weeks the following are the estimated results:—

Gross profits	£15,250 0 0
Deduct general expenses, say	3,250 0 0
	£12,000 0 0

Or the equivalent to a dividend of over 20 per cent. on the present issue.

The patent rights, as particularised in the contract with the vendor hereunder referred to, have been acquired for the following countries, viz: France, Germany, Austria, Belgium, Italy, and the United States of America.

Mr. W. H. Beck, patent agent, of 115, Cannon Street, E.C., reports as follows:—

"12th February, 1889.

"I have made a search through the English patents from A.D. 1616 to the respective dates of John Cowdery Martin's Patents for Improvements connected with the Manufacture of White Lead, Nos. 1300^{77}, 2958^{78}, 1054^{79}, and 864^{83}, with the result that I have found nothing which, in my opinion, anticipates Mr. Martin's patents.

"I am further of opinion that the said patents are good and valid."

It is anticipated that the profits arising from the sale of patents to other countries, and from royalties payable from other works in this country, should be very considerable to this parent Company, and the directors believe that these two sources of income, and the profit of the business carried on at their own works, on the basis of the figures given above, will give a dividend of about 20 per cent., and at the same time create a reserve fund which will put the Company in an unusually sound position.

Orders in course of execution at the factory will be taken over by the Company from date of allotment.

The factory is admirably situated close to the banks of the Surrey Canal, and held under lease for the remainder of a term of which 50 years is unexpired, at a ground rent of £105 per annum. This Company also acquires the lease from the Canal Company of the frontage adjoining the premises for 21 years, from the 25th December, 1879, determinable as in such last lease mentioned at a rental of £20 per annum.

The price which the Company pays to the vendor, Mr. Richard Biddulph Martin for the business as now carried on, including the said patent rights, goodwill, leases, buildings, plant and machinery, is £35,000, payable in cash or shares of first issue. The directors will reserve the first £15,000 subscribed for as working capital. The vendor agrees to subscribe for any shares of the present issue beyond the first £15,000 not subscribed for by the public, in accordance with the terms mentioned in the purchase contract hereinafter referred to.

The stock in hand will be taken over by the Company at cost price, which the vendor undertakes shall be saleable stock, and not to exceed £4,000.

The contract for purchase is made between the vendor of the one part and Robert William Bilby, on behalf of the Company, of the other part, and is dated 15th February, 1889.

All costs and charges incidental to the formation of the Company up to allotment will be borne by the vendor. In relation to these expenses and for securing the subscription of a portion of the Company's capital, certain arrangements with various persons have been entered into, and there are also various contracts and trading engagements incident to the business, and applicants for shares will be deemed to have waived the specification in the prospectus of any particulars of any of such contracts whether under section 38 of the Companies Act, 1867, or otherwise.

Application will be made to the London Stock Exchange for an official quotation of the shares of the Company.

Applications for shares should be made on the forms accompanying this prospectus and sent with the deposit direct to the Company's bankers. In case where no allotment is made the deposit will be returned in full, and where the number of shares allotted is less than the number applied for the surplus will be credited in reduction of the further amount payable upon allotment.

Copies of the memorandum and articles of association and of the above-mentioned contract for sale and purchase can be inspected at the offices of the solicitors to the Company.

Prospectuses and forms of application can be obtained from the bankers, solicitors, or at the offices of the Company.

London, February 22nd, 1889.

Applications for these Debenture Bonds will be received by the Bankers on Monday, the 25th day of February, 1889. and will Close on or before Wednesday, the 27th day of February, 1889, for both Town and Country.

TEN PER CENT. FIRST MORTGAGE DEBENTURES.

Secured upon the whole property of the Company consisting of mining estates or claims. The California, Hidden Treasure, Oakland, Badger and Berkeley, with the splendidly equipped 75-stamp mill, general mining plant, machinery, &c., thereon; as specified in detail in the Deed of Trust.

RE-PAYABLE AT £110 PER £100 BOND.

THE NEW CALIFORNIA, LIMITED.

PAID-UP CAPITAL - - £129,571.

Issue at Par, of 490 Mortgage Debentures of £25 each, redeemable in five years after date of issue at a premium of £10 per £100, with the option to the holder after one year from date of issue of covering the same into Ordinary Fully-paid Shares of the Company with the above-mentioned premium.

Trustees for the Debenture Holders, H. T. WALKER, Esq.; and ARTHUR HEIRON, Esq. (Directors.)

These £10,000 First Mortgage Debentures will constitute a first charge upon the entire property of the Company, consisting of Mining Estates, 75-Stamp Mill, Mining Plant, &c., as above specified, and are redeemable in five years, or after one year from the date of issue on six months' notice by the Company, at a premium of £10 per £100 of bonds, the holders having the option of converting the same into Ordinary Fully-paid shares of the Company, after one year from date of issue with £10 per cent. premium thereon.

Payment for the Bonds will be made as follow :—

£10 on each £25 Bond on application ; £15 on each £25 Bond in exchange for the Debenture Bond or final receipt. Interest will commence from 13th December last, and be payable half-yearly (June and December). The Debenture Bonds will either be registered in the name of applicant or issued as payable to bearer at his option.

The following are the Directors and Officers of the Company—

DIRECTORS.

H. T. WALKER, Esq. | Major J. W. M. COTTON.
JOHN ELLIOTT, Esq. | W. H. BARBER, Esq.
C. H. THOMPSON, Esq. | ARTHUR HEIRON, Esq.

MANAGER.

Mr. ALFRED RICKARD, City Central, Gilpin County, Colorado, U.S.A.

BANKERS.

Messrs. ROBARTS, LUBBOCK and CO., 15, Lombard Street, E.C.

SOLICITORS.

Messrs. ELLIS, MUNDAY and BARTRUM, 19, St. Swithin's Lane, London, E.C.

AUDITOR.

H. M. LESLIE, Esq., 59, Chancery Lane, E.C.

SECRETARY AND OFFICES.

Mr. W. H. ROWE, BLOMFIELD HOUSE, LONDON WALL, E.C.

DEBENTURE PROSPECTUS.

THE Company have acquired, and own, as specified in detail in the Deed of Trust, the well-known California Gold Mine, the Oakland, Hidden Treasure, Badger and Berkeley Mining Estates, situate in Gilpin County, Colorado, U.S.A., together with the machinery appertaining thereto: consisting of a splendid and well-equipped 75 stamp mill, costly and efficient hoisting engines, and general rolling plant, &c.

The above plan of extended operations has practically been carried out for the past two or three months, and is already showing substantial results. Monthly profits of from £200 to £600, on an output of about 500 tons only, are now being received, while it is expected that this will be eventually increased to about 2,000 tons, with proportionate profits, the milling capacity at the mines (75 stamps) being even now equal to the treatment of such a monthly output.

The paid-up capital of the Company is £129,571, out of an authorised capital of £160,000. There are no charges whatever upon the Company's property, consequently the mortgage debentures are now offered as a safe and lucrative investment, forming a first charge thereon.

The "option" secured to the holders of the debenture bonds of conversion into the ordinary shares of the Company, under the proposed plan of extensive developments at the mines, may early become a source of great advantage, either by the participation in increased profits over the interest of 10 per cent., or by the taking advantage of the ruling market price of the shares.

A copy of the Deed of Trust securing the above debentures may be seen at the offices of the solicitors, No. 19, St. Swithin's Lane, E.C.

Application for debentures may be made on the form accompanying the prospectus, and must be forwarded to the bankers, Messrs. Robarts, Lubbock and Co., No. 15, Lombard Street, E.C., with a cheque for the deposit on the amount applied for.

London, February 25th, 1889.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, FEBRUARY 23, 1889. [ESTABLISHED 1871.

REPORT OF MEETING.

ALTURAS GOLD, LIMITED.

SHAREHOLDERS TAKE HEART AND HOPE—RE-CONSTRUCTION PROMISES TO BE A GREAT SUCCESS—MR. J. H. A. SMITH AND MR. BIGG APPOINTED LIQUIDATORS—SHAREHOLDERS UNANIMOUS—IMPROVED RETURNS.

AN extraordinary general meeting of the members of this company was held at Winchester House, Old Broad Street, on Tuesday, for the purpose of considering, and, if thought expedient, of confirming the following special resolutions, duly passed on the 1st February, 1889:—

OBJECTS OF THE MEETING.

(1.) "That Alturas Gold, Limited, be wound-up voluntarily." (2.) "That the liquidator or liquidators be, and he is or they are hereby authorised and directed to sell and transfer to a new company, to be incorporated with limited liability under the Companies Acts, 1862 to 1886, all and singular the lands, hereditaments, mines, mining rights, patents, locations and claims, buildings, plant, machinery, stores, ores at surface or underground, bullion, debts due to and all other property and effects of this company of every description whatsoever, upon the following terms and conditions:—(*a.*) The name of the new company shall be such as the liquidator or liquidators may approve, and he or they may assent to the adoption by the new company of the same or a similar name to that of this company, and the nominal capital thereof shall be 300,000*l.* in 300,000 shares of 1*l.* each, with the usual power to increase and reduce the same. The memorandum and articles of association of the new company shall also be subject to the approval of the liquidator or liquidators. (*b.*) The consideration for the said sale and transfer shall be:—(1.) The payment of the sum of 255,000*l.* by the allotment to the liquidator or liquidators, or to his or their nominees, of 300,000 shares of 1*l.* each in the new company credited with 17s. paid thereon, and leaving a liability of 3s. per share and no more. (2.) The payment and satisfaction by the new company of the debts and liabilities of this company, so far as the same shall not be paid and satisfied by the liquidator or liquidators out of the proceeds of any of the said 300,000 shares which may not be required for distribution among the members of this company, so as to give each member a share in the new company for every share in this company, or out of the proceeds of shares to which dissentient members would have been entitled. (3.) The payment of the costs of and incidental to the winding-up of this company, and of and incidental to the formation and registration of the new company. (3.) "That the liquidator or liquidators be and he is or they are hereby authorised and directed to procure to be allotted to every member of this company requiring the same, as his or their nominee under the contract hereinafter mentioned, one share in the new company with 17s. credited as paid thereon, for and in respect of every share held by him in this company. Provided always that to entitle the members of this company to an allotment of such new shares, application must be made for the same in writing, accompanied by a payment of 6d. per share on the number of shares applied for, within 10 days next after notice requiring him to apply for the same shall have been given in the manner in which notices are required to be given to members under the articles of association of this company." (4.) "That the liquidator or liquidators be, and he is or they are hereby directed to dispose of so many of the said 300,000 shares as shall be in excess of the number to which the members of this company would if they all applied for the same be entitled, and also of the shares for which applications are not made within the time and on the terms aforesaid, and to apply the monies received by him from the said surplus shares and from the shares to which members who have dissented within the time prescribed by the Companies Act, 1862, would have been entitled in or towards payment or satisfaction of the debts and liabilities of this company, and to hold the monies received from any shares to which members of this company, other than such dissentients, would have been entitled had they applied for the same as aforesaid, after deducting all costs and expenses of realisation to the credit of such respective members; and in making such disposition of the said shares, the liquidator or liquidators shall not be treated as trustee or trustees for or in any fiduciary relation to the said members or to the new company, but shall have full discretionary power of selling and transferring the same to any person or persons at such prices (if any) and on such terms and conditions as such liquidator or liquidators may think fit, but all such shares shall in the first place be offered to the shareholders of this company who may have previously accepted shares in the new company under the terms of these resolutions, and the new company shall be entitled to retain all shares not applied for and taken by the liquidators or their nominees within three months after the incorporation of the new company." (5.) "That the liquidator or liquidators be at liberty to continue the works and business of this company pending the completion of the sale to such new company, and to pay the costs and expenses thereof out of the assets of this company." (6.) "That the liquidator or liquidators be authorised to enter into a contract in the form now submitted to the meeting, but with power to concur with the new company in any modification of the same which he or they may consider necessary or expedient for carrying into effect the arrangement embodied in the aforesaid resolutions."

George Forman, Esq., chairman of the company, presided.

Mr. ALFRED HARVEY (secretary) was present, but being under treatment for an affection of the throat, Mr. SHEWELL read the forcgoing notice.

LIABILITY OF SHAREHOLDERS TAKING SHARES IN THE NEW COMPANY.

The CHAIRMAN: Gentlemen, before formally moving the confirmation of these special resolutions, which were passed at the meeting on the 1st inst., I think it desirable that I should make one or two remarks. You will all bear in mind that there was a very important question raised, and that question was as to the liability of the shareholders taking shares in the new company, which shares are to he credited with 17s. paid; and you will also bear in mind that after considerable discussion and interchange of opinion amongst those present it was desired by everyone that we should take counsel's opinion upon that point, and most of them desired that Mr. Palmer should be consulted. We have consulted Mr. Palmer, and I thiuk before I proceed further I will read you his opinion.

COUNSEL'S OPINION.

It is this:—

"Assuming that the requisite contracts are in due course filed under sec. 25 of the Companies Act, 1867, I am of opinion that the 300,000 shares in the new company which are to be issued with the sum of 17s. per share credited thereon will not impose on the holders any liability beyond the 3s. not so credited. The case of re Almada and Tirito, 38 C., Div. 415, is not in point here. In that case the 1*l.* shares had been issued on the footing that 18s. per share should be deemed paid up thereon, although, in fact, nothiug had been paid either in cash or by making over property, and it was held that an agreement to the effect that capital should be deemed to be paid up which was not in fact paid up in cash or in some other way was not effective. But in the present case the 17s. per share, which is to be credited as paid up, is so credited in consideration of the making over to the new company of property which may reasonably be regarded of equal value."

I think, gentlemen, after hearing this very distinct opinion of Mr. Palmer's upon the point there can he very little doubt in the mind of anyone that in accepting or applying for the shares in the new company, which may perhaps come into existence, or the preliminaries settled to-day, they will run no liability of being called upon to pay more than 3s. per share. You were all desirous of having an opinion upon that.

MR. VERDEN'S OPINION CONFIRMED.

I think our solicitor (Mr. Verden) put it clearly to you at the last meeting that there was no such liability, and this is in confirmation of that. We also had the pleasure of hearing the views of Mr. Gretton, a legal gentleman, who is a shareholder in this company, upon the point, and I think it was he who suggested that we could not go to a better authority than Mr. Palmer.

THE APPOINTMENT OF LIQUIDATOR.

Then, again, there is another point, gentlemen. We are met here to-day to confirm the special resolutions passed 1st February last; we are also met here to-day for the purpose of appointing a liquidator or liquidators. Now, I am speaking for myself and my colleagues when I say that we are unanimous upon this point—that we do not desire in any way to influence the appointment of any liquidator or liquidators; it is our desire that you yourselves should make the appointment. Any person or persons whom you may see fit to select no doubt will be the fit and proper party or parties for that office. We have nothing to say in the matter, gentlemen, but I shall endeavour to carry out in a strict and legal way all that you desire me to do in respect of that. Now, before I put these resolutions to you, I must ask whether you desire to have them put as separate resolutions, paragraph by paragraph, or whether you will allow me to put them to you en bloc, as they were done on the previous occasion. You have heard them very clearly read, but in

that matter again I am entirely in your hands. (A Voice: Put them en bloc.) I beg, therefore, formally to move the adoption of the special resolutions, and for that purpose I will read this:—"Resolved that the several special resolutions passed on the 1st day of February, 1889, be, and the same are hereby confirmed." I beg to move that resolution.

Mr. Secretan (dircetor) seconded the motion.

MR. SMITH MAKES A STATEMENT ON BEHALF OF THE COMMITTEE.

Mr. J. H. A. Smith: Mr. Chairman and Gentlemen, I shall have to crave your indulgence for a few minutes, because the poiuts I have to bring to your notice do not bear strictly upon the resolution now before the meeting, but I think they may possibly assist you in coming to a conclusion. Those who were at the meeting held on the 1st February will probably recollect that we then—speaking for myself and colleagues on the committee—stated that in the course of our investigations of the different matters brought before us we divided the questions into two classes—one of finance, the result of which is before you in these resolutions, and the other as to the frauds and peculations alleged by Mr. Kyshe. As to the latter, Mr. Brotherton appeared a little chafed that we could not then express an opinion on the charges made against him and the directors. We however stated that, although we had disposed of a good number of the charges there were others which, in our opinion, required more continued investigation than we had had time to give. During the preparation of these resolutions, and the draft agreement to give effect to them, we had devoted our attention to Mr. Kyshe's charges, and had cleared off a lot of the minor ones, but were still left with several somewhat serious charges. These we have again sub-divided, so as to enable us to give you answers upon them, but there are still others which we have not yet had time to give attention to, and we, as a committee, propose to continue our investigations, liquidation or no liquidation, until we are able to give you such information as is in our power from the data before us.

GROUNDLESS CHARGES AGAINST THE AUDITOR AND SECRETARY.

The points to which we addressed ourselves more particularly were those which affected your auditor and secretary; and as the accusations, with which, I presume, you are all familiar, were made in public, we have thought it right that our judgment upon those accusations should be given with equal publicity. As regards the auditor—we have very carefully gone into the questions, and I may say that it involved going through intricate accounts, corresponding with people in different parts of the country, and with gentlemen who have severed their connection with the company, sometimes finding ourselves on the right track and sometimes on the wrong, all of which necessarily occupied considerable time; but having given the matter the fullest investigation in our power, we are pleased to be able to state that we can find not the slightest ground for believing that the auditor has failed either in his duty to you as your accountant, or in his duty to himself as a professional man, bound to certify no accounts as to whose correctness he was not perfectly clear. (Cheers.)

JUSTICE TO MR. KYSHE.

It is only justice to Mr. Kyshe to say that his charges were based upon a statement contained in an affidavit, and had that been borne out, Mr. Kyshe would uot only have been perfectly justified in making the statements he did, but would have deserved your thanks for bringing before you such subjects. Having, however, investigated this matter further, aud having had before us the gentleman who swore the affidavit, who stated that he himself had made the statement only on

HEARSAY EVIDENCE FROM A THIRD PARTY,

and that when he (the deponent) came some time afterwards to make inquiries on his own account he found that he had been misinformed, and that the figures in the books corroborated the auditor's statements, which were perfectly correct, he entirely withdrew the allegation. (Cheers.) Mr. Kyshe had not that information before him at the time, and he made the statement upon the evidence of the affidavit. We have traced it as far down as that, and find that there is nothing in it against the auditor. That, I think, was one of the gravest charges. I am glad to see that Mr. Kyshe has entered the room while I have been speaking. I think I am representing you correctly, Mr. Kyshe, when I say that you withdraw your charge against the auditor?

Mr. Kyshe: I should like to know whether the books have really been examined.

Mr. Smith: I was going on to say that Mr. Kyshe's position, as I understood it, was this—that he was not prepared to continue that charge against the auditor, but he suggested that if the whole of the accounts were examined from the commencement, and the documents from the other side were treated as suspicious, it was possible that they might be found to be incorrect. That was a labour, of course, that we could not undertake ourselves, and we did not think it right to put you to the expense that that would involve.

THE SECRETARY ACQUITTED.

As to the secretary, there were really only two allegations made, and we cannot find that auy blame whatever attaches to Mr. Alfred Harvey. (Cheers.) He has treated us with the greatest courtesy, has been at our disposal at all times, and has afforded us a great deal of information. The other questions we have not yet been able to finish, but I should hope that in the course of a couple of weeks or so (for we have to await information from other people) we shall be in a position to hand over to the liquidator our report, to be addressed to you gentlemen personally. I should also mention—as a matter of fact, it is known to many of you, but perhaps some may be unacquainted with it—that these charges do not affect two members of the board, Messrs. Shewell aud Secretan, who only joined in October. Since then there has been little done but what I may call simply ministerial matters, to carry the thing on until matters are placed before you, and you can decide for yourselves.

NO COERCION.

There is one other point I should like to mention, supplementing what the chairman has said, and it is that I and my colleagues have had many offers from gentlemen, representing different sections of shareholders, to give us their support either by proxy or in person, and asking us to take some steps in the nomination of liquidator, or to put one of ourselves forward. We have to tender our thanks to those gentlemen publically for the kind confidence expressed in us, but we feel that unless Alturas can regain confidence, it is not much good going on with it, and we, therefore, think that you ought to have this matter entirely in your own hands, and that there should be no attempt to coerce you at all. We therefore decline to put forward anyone at all, and we come before you without a single proxy from any person, and without any suggestion to make or nomination to offer. We can only trust that you will settle among yourselves whom you will select, and having selected them, that you will give them your confidence to enable them to push matters through with that rapidity which is necessary to ensure success. (Cheers.)

QUESTIONS.

Mr. Gretton: I should like to be allowed to say a word. Of course, we are all much obliged to Mr. Smith for his lucid explanation, but I want to ask him whether, in the investigations which the committee intend to continue, they are going to exclude the officers of the company, and those who have been connected with it in other ways than as directors? As far as I have followed Mr. Smith, he has only been dealing with the questions concerning the auditors and the board of directors, and I want to know whether other matters are going to engage the attention of the committee.

Mr. Smith: All matters of interest to the company in connection with these charges will be reported upon.

Mr. Haughton: With regard to future confidence in Alturas, have the board, at the present time, any knowledge or information as to where Mr. Watson is getting this ore from, and if there is any probability of its continuing? Since December last the newly-appointed manager has succeeded in obtaining from the mine 2,862 ozs. of gold, and, according to the calculations of various experts who have reported upon the mine, the expenses of breaking and reducing it are $8\frac{1}{2}$; that would leave a profit of 5,460*l.* in the hands of the company, calculating the gold at 3*l.* 10s. per oz.

Mr. Secretan: That is too much. We are only getting 3*l.* per oz.

Mr. Haughton: In that case it reduces it by some 500*l.* However, the question is—

WHERE IS MR. WATSON GETTING THIS ORE FROM?

The shareholders have received no information upon the subject other than simply the published returns. How is it that it has so suddenly been discovered, and at such an opportune time, and have you any knowledge that it is likely to continue? According to the last report it is already commencing to decrease a little.

PICKING OUT THE EYES OF THE MINE.

A Shareholder: Perhaps Mr. Smith can go further and give us some idea as to what opinion the committee have formed in their own mind as to the desirability of carrying on the mine at all, and as to whether the eyes of the mine have been continually picked out? We may then judge whether it is worth while throwing good money after bad.

Mr. J. H. A. Smith: I am not a mining expert, but I should say that the eyes of the mine have been very deliberately picked out in the past with a very sinister object. We are, however, I hope, at present in better hands. We have instituted inquiries with regard to our present superinteudent, Mr. Watson, and have communicated with his former employers—Messrs. Wells, Fargo and Co.—and they answered very cautiously, as a firm like that might be expected to do, and said that so far as they knew, from what they have been able to observe, Mr. Watson was deserving of our confidence. One of the members of your committee was connected with Wells, Fargo and Co., and we were thus able to get the best information. Really Alturas has been so disappointing in the past that one is almost afraid to express an opinion, but, personally speaking, I have no doubt that Alturas, under honest management, is

A MINE THAT IS GOING TO PAY DIVIDENDS,

and I have a very strong intention of taking up my full quota of shares. But I do not ask any gentlemen to follow me as this is a mere expression of opinion on a matter, which he is as well able to form a judgment upon as I.

Mr. Haughton: When the new board is formed I think that one member of it should be a practical mining engineer the directors can thus no longer say, "acting upon the advice of So-and-so, we did so-and so, and it turned out to be wrong." One of their own members being a practical miuing engineer makes them responsible.

Mr. C. H. Smith: Do you mean, sir, that we are to work the mine from England?

Mr. Haughton: No, sir.

Mr. C. H. Smith: What is the good of a mining engineer on the board then?

The Shareholder: If he knew his business he would understand clearly the reports sent from the manager at the mine, whereas the gentlemen who generally form boards of direction have no knowledge of mining—(laughter)—and in many instances are misled.

Mr. Hodgkinson: It would cost 1,000*l.* a year. (Hear, hear.)

The Shareholder: That would be a great deal better than losing our money. I hold nearly 1,000 of these shares, and they cost me 24s.

The Chairman: I take it from the very practical way in which you have made the suggestion that probably you are a man of some mining experience yourself.

Mr. Haughton: 25 years.

The Chairman: Therefore, you know that I can do no more than read the information we receive.

A THOROUGHLY RELIABLE MANAGER.

We have received cablegrams and letters from our manager, whom we believe to be thoroughly reliable in every respect—a man who, as I told you on a previous occasion, was recommended to us by one of the best houses in America, and recommended to us in an emergency, and up to the present time we have no reason to doubt his bona-fides in any shape or way. All his letters are open to any shareholder who likes to go down to the office to see them. Here is our record book, where everything is clearly stated, and our secretary has the authority of my colleagues and myself to give any shareholder the fullest information on all these technical points. Writing to us under date the 15th of January, he says, after referring to several other matters, "However, I am much encouraged with the favourable

appearance of the ore in driving to the east. There seems to be a reasonable certainty that matters will soon be in shape to open the property as it should be." He speaks there of the

IMPROVEMENT IN DRIVING EASTWARD.

All our riches have been found in that direction, and we have reason to believe that they will still continue to be found there. In addition to that we have the cables which you and the public generally have been put in possession of from time to time, and I do not see what more we can do at this present juncture. We have got rid of everybody in authority over there who had any taint or slur, or who was supposed to be labouring under suspicion of any sort, and we are quite willing to receive suggestions from anybody. The question, however, before us to-day is not so much a question as to what we are to do in respect to our mine, as to whether or no we shall carry it on at all, because from one or two very pointed remarks which have been made some gentlemen seem to suggest the possibility of our having no mine at all which is worth working.

THE CHAIRMAN'S CONFIDENCE IN THE MINE.

Now, I am quite of opinion, and I believe most conscientiously that we have a very grand property, and I repeat what I have said upon a previous occasion, that only about one-eighth of it has been developed, and we have reason to believe that the rest of it is equally rich. Out of that one-eighth we have had 150,000*l.* worth of gold, and we should be very poor shareholders and miners if we did not go on and prosecute further developments. After all this liability of 3s. per share is a mere bagatelle, and to lose the chance of a grand property for the sake of so small a sum—surely we must have a little more speculation in us than that—even if we put it on the low ground of speculation. But we come back to the point—whether you are going to adopt these resolutions, or throw up the sponge and leave the concern. What do you think will become of it if you do give it up? Do you suppose it will remain there fallow and unworked? I should think not.

A PERTINENT QUESTION.

Mr. HORSFALL: You say that the 3s. a share is a mere bagetelle. I am quite willing to pay 3s. a share and a good deal more, as far as my own shares are concerned, but will 3s. be sufficient? We do not wish to be told after having paid our 3s. that it is necessary to raise more money on debentures. It may interest the shareholders to know that I have for the last four or five years been getting private information with regard to our mine. I may say that it has come from a very competent authority indeed—a mining engineer of a good many years standing. My holding being small, I have not taken the trouble that I might have done with regard to it. If it had been large I should probably have obtained the permission of this gentleman to make public his name. I have not done so, however, and, therefore, do not feel at liberty to disclose it. He has told me from the very beginning that we have about one of the best properties that he knows, but he has said, "Do not put any money into it that it will hurt you to lose, because the thing is being mismanaged." What I want to know is whether we have finality in this 3s.?

FINANCIAL POSITION AFTER SUCCESSFUL RE-CONSTRUCTION

Mr. A. L. SECRETAN (director): I should like to mention that the amount that we will receive, supposing that everybody subscribes, will be 45,000*l.* We know we have 15,000*l.* of debts to pay on this side, and according to the last accounts we have 5,000*l.* of debts out there. But these we hope—we cannot be sure—Mr. Watson has paid off entirely out of the good results he has announced from the mine; we hope so, but we do not know for certain. (Cheers.) Mr. Watson, in his calculations, which were supported by Mr. McDermott, reckoned he would want about 1,500*l.* for six months before he was able to open up the mine. That would be 9,000*l.*, or altogether 29,000*l.* from 45,000*l.*—leaving 16,000*l.* for working capital, to be called up as might be required. I think you will be satisfied that that would be enough to develop the mine. It leaves us a very wide margin for further contingencies even supposing we had to sink a new shaft.

Mr. HAUGHTON: Does Mr. Watson not state more fully what he proposes to do?

Mr. SECRETAN: It was stated in his letter.

Mr. HAUGHTON: In that letter there is not sufficient information. He says he has obtained this good ore from a drive going to the east; he does not tell us in what level he has found it, or at what depth.

The CHAIRMAN: I only read, for the case of brevity, a short extract from his letter.

Mr. SECRETAN: If you had been at the last meeting you would have heard everything fully explained, and we shall only be going over the same ground by referring to these matters again. It was then explained that it was intended to shut down the mine on the 1st day of January, but circumstances would not permit this, and he went on with the results you all know. Had he shut down on the 1st of January when he wanted 1,500*l.* for six months, we should not have had the returns since announced.

Mr. HAUGHTON: Did he propose to shut down the mine altogether?

Mr. SECRETAN: He was on the point of doing so, and if you read Mr. McDermott's report you will see he supported Mr. Watson in that intention.

Mr. ARMITAGE: Have all the 300,000 shares been issued? Because Mr. Secretan's calculation is evidently made on that basis, and I remember that only 280,000 were issued.

The CHAIRMAN: We have still 20,000 shares unissued, and the figures are incorrect to that extent.

Mr. SECRETAN: The intention is to sell those shares, and our solicitor will explain how the matter works out.

DEALING WITH THE SHARES.

Mr. VERDEN (of the firm of Messrs. Kerly, Son and Verden) said: The scheme which is before you deals very fully with that point, and shows that any shares which remain after the shareholders have been satisfied will be offered again to the shareholders, who will be requested to bid for them, and, of course, the larger price they are willing to pay the more funds the company will have, but at any rate the company will have 3s. per share, which is provided for.

IMPROVED RETURNS.

The CHAIRMAN: A good deal has been said about the returns, and perhaps it might be interesting if I gave them to you as reported to us:—16th January cable: 10 days run, 420 ozs. 22nd January: 10 days run, 670 ozs. 2nd February: 11 days run, 677 ozs. 15th February: 13 days run, 680 ozs. (Cheers.) This makes a total of 2,447 ozs. (Cheers.) That would appear a satisfactory return, and I think there is every encouragement for us to proceed and not to burke the thing in any way.

Mr. HAUGHTON: Is it likely to continue?

The CHAIRMAN: That, as a mining engineer, you must know better than I can. We can only be encouraged by these returns to go on, because everyone will admit that if good returns will not encourage us to proceed, what on earth will. (Hear, hear.)

Mr. HAUGHTON: I quite agree with you, but there is an absence of information.

Mr. SECRETAN: If you had read Mr. McDermott's report you would have seen everything. (Hear, hear.)

The CHAIRMAN: I think we have somewhat deviated from the special business before us. This is a very interesting discussion, and I think that on another occasion we might have pursued it with advantage, but to-day we have really to determine this point—whether or not we will confirm the resolutions which were passed on the 1st of February, and I will now put the motion to the meeting.

The motion was carried unanimously.

WHO SHALL BE LIQUIDATOR.

Mr. ARMITAGE: I rise for the purpose of proposing the names of two gentlemen as liquidators. I think we are all agreed on one point, and that is to do the best we can to give the mine a chance, and I can only premise what I am about to say by affirming that I am actuated solely by that motive. I have a very considerable holding of shares, and stand here as representing some 36 or 37 fellow-shareholders in and about the town of Bradford, where I reside, and they have thought so much of the important question of appointing a liquidator that they have, without solicitation, given me their proxies, and I stand here as representing some 7,000 or 8,000 votes—the secretary informs me that is about the number. One thing we wish to do, and must do, and that is to appoint men of experience, energy, and discretion, who will work without fear and favour towards the institution of a better state of things in the Alturas Mine, and if we can get men of that kind as liquidators I think we shall be fortunate indeed. I have to propose the names of Mr. John Henry Augustus Smith—(cheers)—and his brother, Mr. Charles Harrison Smith—(renewed cheers)—as joint liquidators. It has been suggested that it is desirable to appoint a third, but I do not agree with that—my proposition is that these gentlemen be appointed as sole liquidators. They are both known personally to me, and you all know Mr. J. H. A. Smith and Mr. Harrison Smith, who is at my left hand, has spoken to you. They have worked together in business of this character connected with mines for the last 25 years with the utmost harmony, and both of them are men of experience and discretion, and I know them personally to be men of energy, who will push this thing through, and if the mine is capable of doing what we have been given to expect, I think we shall take the first step in the right direction towards bringing about that most desired result by appointing them. Gentlemen, I have nothing more to add than to offer their names for your acceptance as your liquidators. (Cheers.)

Mr. SPEAK: As being a large shareholder in this company, I have only one desire, and that is, that the liquidation should be carried out as rapidly as possible. I have long known the Messrs. Smith, and believe we could not place our affairs in better hands. I have great pleasure in seconding the resolution.

AN AMENDMENT.

Mr. THOMAS: I beg to propose as an amendment "That the name of Mr. Biggs be substituted for that of Mr. Harrison Smith. I have very much pleasure in endorsing the remarks Mr. Armitage has made in reference to Mr. Smith, the chairman of the committee, and I feel confident it would be desirable to have him as a liquidator; but Mr. Biggs has also been on the committee, and in business of this description it is very undesirable to have as liquidators those who are so intimately connected as brothers, and I think we should have an outsider. It is for that reason I move the amendment.

A VOICE: Is Mr. Biggs a large shareholder?

Mr. BIGG: 500 shares.

Mr. HAUGHTON seconded the amendment.

Mr. GRETTON supported it, not because he had anything to say against Mr. C. H. Smith, for, on the contrary, he supported the nomination of Mr. J. H. A. Smith, but he did so for a similar reason to that named by the proposer, and also because he thought that Mr. Biggs, being a member of a firm of accountants established for some considerable time, was a person to render essential service in such a matter as this. In this way, if Mr. Biggs were associated with Mr. J. H. A. Smith, the shareholders would have the advantage of the services of a professional man acting in their interests, and looking after their accounts—which was a very important matter indeed.

A SHAREHOLDER said he hoped to see Mr. Smith, the chairman of the committee, a member of the new board.

Mr. J. H. A. SMITH: Under no possible circumstances can that happen, but I am very much obliged to you for your kind remark.

A WORKING v. AN ORNAMENTAL BOARD.

Mr. BYDON: As Mr. Smith will not take a post on the new board, I can only strongly urge upon the liquidators, whoever they may be to endeavour to form as strong a working board as possible. (Cheers.) We do not want an ornamental board for this company—we want a working board. We want a board of directors, one of whom will occasionally go out to visit the mine—say once a year, at the least. Beyond that I should like the liquidators, in choosing the new board, to select those who have correspondents out there who will endeavour to keep their eye on the mine, and upon proceedings going on there. Will the liquidators take into account the desirability of appointing some expert to thoroughly report upon the property? (No, no.) I think it would be a benefit for all persons to have such a report. (No.)

MR. ARMITAGE DEFENDS HIS POSITION.

Mr. ARMITAGE: I am sorry there should be anything like opposition arise with regard to this question. I was hoping that the thing would be unanimous, for unanimity is all important. I have had some conversation before the meeting with Mr. J. H. A. Smith, and

have asked him if he would accept the appointment of liquidator, if I proposed him at the meeting. He acquiesced, and was decidedly in favour of having his brother appointed along with him, because they are practically one, and can both work in the matter, and get the thing forward in a very much better way than if it depended on only one. The appointment of two liquidators is a mistake under most circumstances, for how would differences of opinion be settled if they arose? I cannot accept the amendment. I must adhere to my resolution.

VIEWS OF MR. J. H. A. SMITH.

Mr. J. H. A. Smith: May I crave your indulgence for a few moments while I say, first of all, that Mr. Armitage is one of the gentlemen I referred to. He wrote to me a week or 10 days ago asking me if I would undertake the liquidation. I replied that my feeling was that I wished to terminate my connection with Alturas as rapidly as possible, as soon as I had finished my labours on the committee, and to sever myself from it in every way, save as a shareholder. As a shareholder, I believe in it, and think there is money to be made out of it. Mr. Armitage wrote back to say there was a strong feeling in his neighbourhood on the question of liquidator, and he hoped that I would allow my name to be brought forward. I brought the matter before my colleagues, and I said that I felt that there should be no attempt to have a cut and dried programme beforehand—that there should not be the semblance of the slightest pressure being put upon the shareholders, but that they should be at full liberty to select their own man, put their confidence in him, and let him feel that he had it. My colleagues on the committee were entirely in accord with me, and we declined even to receive any proxies. Mr. Armitage called on me this morning, just before this meeting, and was good enough to say that he and his friends in the Bradford district were of opinion that I could be of assistance. I have a great deal to do, but it appeared to me that if I were to take the matter up—my brother being associated with me without any additional expense to the company, working in harmony, would relieve me—it would be for the greater benefit of the company, and practically be one and the same thing, as if I were sole liquidator. Mr. Biggs I should cordially welcome as a co-liquidator, and a similar remark applies to every individual member of the committee.

THE COMMITTEE WORK IN UNITY.

We have worked together in perfect harmony. We have never had an unpleasant word with, or I might add, an unpleasant thought towards each other. We have been one of the most harmonious committees that it has ever been my good fortune to serve on—working heartily in the common interests. Mr. Speak, who, with his friends, represents a very large interest in the company, after the last meeting asked me whether if he nominated me I would serve. A number of other shareholders have been good enough to make the same suggestion. I declined, but the observations made since, especially by Mr. Armitage, have a good deal of weight. I told Mr. Armitage, and I tell you, that I should not allow myself to be put forward as liquidator in opposition to any gentlemen. Unless the liquidator, or liquidators, whoever he or they may be, should have the thorough and unanimous support of this meeting, they have a task before them which I do not envy. I should be

PERFECTLY HAPPY TO WORK WITH MR. BIGGS,

or more so to retire, and simply work on the committee until we have finished our labours. Do not let there be any opposition, but let the liquidator feel that he has the whole body of shareholders at his back, and then he can sweep away any opposition that may be offered to the prosperity of the company. (Loud cheers.)

Mr. Gretton: I hope Mr. Armitage will not think I am acting in opposition to him.

Mr. Thomas said that both Mr. Harrison Smith and Mr. Biggs were entirely unknown to him. He simply proposed his amendment as a matter of business; and although the feeling of Bradford should be considered, that of other parts of the country should not be overlooked. He was not prepared to withdraw his amendment.

Mr. Wells (member of the committee): Will you allow me to suggest, in the interests of unanimity, that there should be three liquidators, and that Mr. Bigg should be associated with the Messrs. Smith.

This proposal did not meet with general favour.

AN ULTIMATUM.

Mr. Smith: Unless the feeling is unanimous I must decline to serve. I do not wish to represent a section of the shareholders merely. Unless I have the confidence of every man I must decline to be your liquidator at all.

A Shareholder: I must say that I think if we do not have Mr. Smith as our liquidator it will be a very serious loss to the company. I think his services are absolutely essential to it. (Cheers.)

Mr. Armitage: I was sorry to hear Mr. Smith say that he must have an absolutely unanimous vote. I wish he had said a nearly unanimous vote. I think it will be a mistake to appoint three liquidators, because difficulties will arise, and details will be made much more troublesome.

Mr. Harding: Since I had the honour to be appointed as one of the members of your consultative committee I have not intruded myself to speak one word, but I do think that this is a matter of such serious importance that I should be perhaps thought shirking my duty if I did not say a word upon this occasion, and upon this serious matter. As regards Mr. Smith, nothing has occurred since we met that has so gratified me as the alteration in that gentleman's decision. Some while since he assured me that he would not take office as a liquidator, but we all agreed, as he has told you, to leave the matter of appointment of a liquidator or liquidators entirely in your hands, and this I am sure Mr. Smith will confirm me in saying. I am, therefore, somewhat surprised that he should be nominated to-day, and that he should be willing to stand. At the same time nothing better, nothing more favourable to the future history of your company could happen than that Mr. Smith should be one of your liquidators.

JUSTICE TO MR. SMITH.

The manner in which he has taken up this question as the chairman of the committee, the time he has devoted to it, the clearness of intellect he has displayed, the thorough investigation he has, I might almost say, daily made—all this has shown me that he is the man of all others whom I am acquinted with whom you would best consult the interests of the company by appointing. (Loud cheers.) Next to Mr. Smith, Mr. Biggs has done an immense service. (Cheers.) He has looked well into the books, papers and telegrams, but more especially into the accounts which are in his line, and, therefore, has already taken some step in the direction of the liquidation—that is to say, the knowledge he has gained should greatly facilitate future operations. I will suggest, for the sake of that unanimity which has been invoked, that the names which have been put to you should be put singly, and know that of Mr. J. H. A. Smith will be received with unanimous favour.

Mr. Armitage here withdrew the name of Mr. C. Harrison Smith, and said he would like Mr. J. H. A. Smith to be appointed sole liquidator.

Mr. Gretton: I will second that motion.

Mr. Armitage: I have done this in the cause of unanimity, but I cannot insist upon the other name being withdrawn.

RESULT.

Mr. J. H. A. Smith: If it is your pleasure that Mr. Biggs and I should represent you as liquidators—let me say there is no gentleman with whom I would be more pleased to work than Mr. Biggs. (Loud cheers.)

Mr. Bydon: That settles the question.

The Chairman: Then I will propose:—"That Messrs. J. H. A. Smith and J. W. Bigg be and they are hereby appointed joint liquidators at a remuneration to be fixed hereafter."

The motion was carried unanimously, and the proceedings were brought to a close with a vote of thanks to Mr. Forman for the ability and courtesy with which he had presided over the meeting.

WEST WHEAL GRENVILLE MINE, LIMITED.

GRATIFYING PROGRESS OF THE WORKS — ECONOMY WITH EFFICIENCY — VALUE OF THE PROPERTY ATTESTED BY MANY WITNESSES.

The first ordinary general meeting of the shareholders of the West Wheal Grenville Mine, Limited, was held at Winchester House, Old Broad Street, on Wednesday, "to receive the directors' report and statement of accounts to 9th January last; to fix directors' remuneration, and to elect the auditor and fix his remuneration."—Charles Clark, Esq. (chairman of the company), presided.

The notice calling the meeting was read by the Secretary (Mr. D. Julyan), and the report of the directors was taken as read.

The directors, in submitting their first annual report, state that they regard the financial position of the company as most satisfactory. The original estimate of 8,000*l.* being required for draining the mine, fixing pitwork, &c., it is fully believed will not be exceeded, while the expenditure on surface developments for the convenience and accommodation of an increasing number of miners has been completed, the whole cost of which is included in the present accounts, leaving no liability whatever unpaid, with a substantial balance of over 9,000*l.* in hand. Your directors desire to bear record that nothing has occurred to cause any change of opinion as to the statements in the prospectus and reports accompanying the same in regard to the run of the Great Flat lode throughout the entire property. On the contrary, since the commencement of operations various authorities have stated that a lode, supposed to be the Great Flat lode, was cut by the old workers in the bottom of the engine shaft previous to the mine being stopped. A short time will prove this, and if substantiated the great value of our property will be assured sooner than originally anticipated by cross-cutting.

A TALE OF RAPID PROGRESS.

The Chairman: It is my pleasant duty to move:—"That the report of the directors and the statement of accounts, together with the agents' report as presented to the meeting, be received, approved and adopted." I am glad to think that in doing so there will be no occasion for me to occupy more than a few minutes of your time. The reports, as you have seen, are very full and exhaustive—the agents' report especially so, and yet, full as it is, I think it also claims the merit, along with that of the directors, of being concise. (Hear, hear.) I am sorry to say that through an accident we have not the plans to exhibit to you, for a reference to them would have made clear anything that might have been a little doubtful as to the precise reading of the report by the agents, but, practically, we may say that we have during the past year accomplished more than two-thirds of the work which we had before us when we took possession of the mine. Shareholders will, no doubt, have noticed that in the opinion of the agents (who are quite competent to judge) the heaviest portion of the work, both in quality and in extent, has already been done. There have been unexpected difficulties, as I suppose there always are in operations of this magnitude, and these difficulties have occasioned from time to time unlooked for delays, but on the whole the directors feel that they can state with confidence that the performance of the past 12 months has not in any material respect fallen short of the promises they set before you in the prospectus. In connection with this it is only fair to the agents to state that all through that period there has been extreme difficulty in getting skilled labour, which has added to the expense, the trouble, and the responsibility of the management.

FUTURE COURSE.

Our most vigorous efforts will now be devoted to clearing the 80-fm. level, and driving on it with a view to open up the profitable ground beleved to be there. Simultaneously we shall go on with the clearing of the mine to the bottom when we think there is every reason to hope that we shall find ourselves in, or at any rate not far from the Great Flat tin lode of the district. I may mention that the nearest workings in actual operation to West Wheal Grenville are in the western ground of South Condurrow—a member of whose committee I have the honour of being, and that western ground is now opening out in a way to give the greatest satisfaction to the directors. In that mine we have the advantage of having an able and energetic chairman in the person of Mr. Herbert Marshall, who has urged on the development of that ground persistently for many years past. Our surface works I may say are complete in all respects except such as will be required when we need dressing machinery,

but for present purposes we have all that we want. Information of any important change in the mine will from time to time be communicated to the shareholders by special circular. The balance-sheet and statement of accounts, which are laid before you, can scarcely fail to prove satisfactory documents. There is only one trifling blot upon it, hardly worth naming, which is, 25*l*. unpaid out of the allotment money, but that is a perfectly good debt, and no doubt will be paid off in a very short time. The 9th of January, the date to which the accounts are brought up, may seem awkwardly chosen, but that was the date on which the labour and other costs to the 29th of December were actually paid, and the date on which, consequently, we were able to state, with perfect truthfulness, that our liabilities were nil.

COST OF DEVELOPMENT.

You will notice that the cost of developing the mine from the 3rd of December, 1887, to the end of last year, amounted to 4,969*l*. 14s. 11d., about equally divided between labour and materials. But then it must be borne in mind that a very large quantity of material was acquired along with the mine when we bought it from the vendors.

ALL LONDON EXPENSES PAID BY INTEREST.

Another feature in the balance-sheet which I hope has not escaped your notice is this—that the interest obtained from our deposit account has exceeded by more than 40*l*. the total outgoings for office rent, secretary's salary, stationery and petty expenses. That I think is extremely satisfactory—(cheers)– and consequently we begin the year 1889 with a substantial cash balance of 9,287*l*. 0s. 11d. When we add to this the statement that we have uncalled

A RESERVE OF 24,500*l*.,

I think we may very fairly assert we have proved there is no insuperable barrier to organising and working Cornish mines upon the lines of the limited liability system, but, on the contrary, that principle when properly carried out must afford advantages both to the adventurers and merchants who supply them, which the cost-book system with all its advantages cannot pretend to excel, even if it equals. (Cheers.) With these remarks I offer to you the resolution I have read, and which will be seconded by one of my colleagues. (Cheers.)

VIEWS OF MR. LANE.

Mr. FRANCIS G. LANE: It is with much pleasure that I rise to second this proposal. You will have seen, from the report of the directors, and also from that of the agents, that we have had a very considerable amount of work to do in the conduct of this mine. At the same time we are gratified with the results so far attained. Our works have been carried on with great vigour, and although we have met with many obstacles they have been overcome with a spirit and with an economy that are exemplified in the accounts, and that entitle the agents to your thanks. Remember, gentlemen, you are now in possession of a property that, if commenced at any time, would take you 10 years at least to develop to its present position in the matter of the sinkings and drivages that are available for you. (Cheers.) You have also a field of machinery, which if you set to work to erect anew, would cost you much more than you have paid for it, and very severely indeed in the matter of time. You have also a cash balance in hand and assets of between 33,000*l*. and 34,000*l*. out of our small capital of 50,000*l*. Gentlemen, you have a large property here, and as your chairman has told you, the nearest property to ours, and the nearest ground that is now being worked, has proved most valuable, and is a great encouragement to this company to proceed. It gives us greater hopes of success now than we had even when we took the mine over first of all. This must be a matter of great satisfaction to us all. The fact that the

GREAT FLAT TIN LODE, WHICH HAS RETURNED HUNDREDS AND THOUSANDS OF POUNDS

during the last few years in this district, will be found in the bottom, has, I think, been more than confirmed since we have had the property under our supervision.

A FAVOURABLE CONTRACT.

Should this be so you will have acquired a property of no mean value, and we shall be but a very short time before we prove its success. I think when you look around and see the companies started with capitals of hundreds of thousands of pounds, the large remuneration to the promoters and the big sums paid to the directors in fees, along with the small working capital for the properties themselves, you will be very favourably impressed when on a comparison you find that in this company all these conditions are reversed. The working capital has been the main point which your directors have kept in view, and I, as the promoter, have desired to place this property before you not for speculative, but for investment purposes. I will say nothing about my stake in the company, but this I will affirm, that from the company I have not benefited one farthing as yet. (Cheers.) Should this company turn out as I am led to believe by experts of great intelligence, repute, and ability, I shall be the principal gainer; should it not do so, I shall be the principal loser. Gentlemen, you have your shares at a price which even at the present time does not represent anything compared to the work done upon the mine, leaving on one side the value of the property and machinery. I repeat—you have a great property there, and all I ask of you is that you will give to your directors, and also to your agents, a little more time. Let us exhibit a little more patience towards our agents. We have been hurrying them on as we have felt disappointed in not getting to the bottom of the mine before now. We have done that, because, perhaps, we have not fully realised the difficulties, and it was not until we had received the plans from the Record Office that we could understand the large amount of work they had done, and yet have to do, but what they have to do is as nothing compared to what they have already done. The plans have proved that the amount of ground taken away has been very large, and you may depend upon it that the former workers would not have done this had it not paid them. It is of no use to tell you the quantity of work they did, measured in fathoms or in tons, but the excavations are there for you or anybody else to see who chooses to make the investigation. (Cheers.) All this proves the correctness of our assertion, that

THE GROUND MUST HAVE BEEN VALUABLE,

or otherwise it would not have been taken away. It was the impecuniosity of the late company that prevented them from continuing the operation of opening out on the lodes. That we know, because it was the creditors of the company who seized and sold the machinery, but for which circumstance the mine might have been continued in profitable working to the present time. (Cheers.) I do hope the time is not far distant when we shall be able to tell you that we have achieved something more tangible than draining the mine, deepening the shafts, driving the levels, and having at command a splendid field of machinery—in other words, I hope the time will soon come when we will be able to report something that can be turned into cash for the enrichment of your pockets. (Cheers.) With these few remarks, I beg to second the adoption of the reports of the directors and agents. (Cheers.)

VIEWS OF AN EXPERT.

Mr. ALFRED THOMAS: After the remarks you, Mr. Chairman, and Mr. Lane have made, there remains little to be said, either with respect to the accounts or the mine. As regards the accounts, these are set forth in a most plain and straightforward manner, and I think everyone who has perused them will agree with me in the opinion that the London charges have been very light, and considering the work done at the mine, economy has evidently been very much studied. With regard to the mine, there is no doubt that we, as well as you, are a little disappointed at the time it has taken to reach the present depth. At the same time, only those can appreciate the difficulties that attend the forking of an old mine, who have had experience of such matters. (Hear, hear.) We know very well that contingencies will arise that cannot possibly be anticipated, and, therefore, I think we have no cause for complaint on that head. Another misfortune has been that we have had an unusually wet season. I am interested in several mines in that part of the country, and I know the quantity of water in several of them has increased by 50, and in some cases by 75 per cent. I find by the report of the agents that you are pumping 550 gals. per minute, and I have made that up in my own way, and see that it requires your engine to work seven strokes a minute.

LESS PUMPING REQUIRED.

That state of things cannot continue, inasmuch as you are forking a mine, and at the same time pumping a pool and the whole surrounding country, because the strata discharges its water to you and you are draining it, so that as time goes on the influx will become less. (Hear, hear.) That is an important point for the shareholders to know, and therefore I mention it. With regard to the future operations of the mine, there is one matter I should like to suggest—and that is, that too much money should not be expended in opening up the shallower levels. Of course, we hear there are large courses of ore left; that may be so, or it may not; but my experience is that mines die hard, and before being abandoned they are generally stripped of all the ore laid open. (Hear, hear.) I do not mean to say that there are not courses of ore in the ends, but you must not expect to find courses of ore laid open for you to take away, because if you do you will be disappointed. I look upon copper in this mine as a secondary consideration. This mine was started to work

THE GREAT FLAT LODE

of the district, which we all know is very rich. Some people say we do not possess it in this sett, but I have taken the opinion of a good many, who I believe to be reliable authorities, and my view is that it is there. Capt. Josiah Thomas was told that the Flat lode did not exist in West Frances. One man, supposed to be a good authority, said he would as soon look for it in the moon, but in the result Capt. Thomas found the Great Flat lode, and you all know what followed. There is one matter you name in the report, and that is the remuneration of the directors. You have been very modest in not taking anything so far, and I think that the shareholders will have no objection at this meeting to pass a resolution respecting the remuneration of the directors. With these few remaks I have great pleasure in supporting the resolution.

MR. SAMUEL JAMES HAS AN EYE TO THE TIN.

Mr. SAMUEL JAMES: What is the depth you will have to sink before you meet with the Flat lode?

The CHAIRMAN: To the 120-fm. level—it is mentioned in the report.

Mr. JAMES: How long do you think it will take to reach it?

Mr. LANE: The board would not like to pledge themselves.

Mr. ALFRED THOMAS: If we had a plan we should be able to see the extent of the levels. The general inference would be that there are shorter levels at the bottom and less ground taken away, and consequently the pool of water will not be so large. Therefore, the remaining work from the 80 to the 120 will be done at greater speed from that above it. (Hear, hear.)

Mr. JAMES: I am more interested in knowing about the tin. (Laughter.)

Mr. LANE: The only level below the 80-fm. level is the 90, which has been driven but a short distance, and, therefore, there is very little to do in pumping the levels below the 80.

The report was then unanimously adopted.

FAITHFUL SERVANTS PAID.

Mr. ALFRED THOMAS: The directors are all men of business and integrity, and have served you faithfully, and I ask you to adopt this resolution unanimously:—"That the remuneration of the directors be the sum of 300*l*. per annum from the date of the incorporation of the company." They can divide the remuneration as they think fit. In some of the beautiful gold mines recently introduced they pay the directors not 300*l*., but 3,000*l*. (Laughter.)

Mr. WILLIS seconded the motion, which was carried unanimously.

The CHAIRMAN: We are very much obliged to you. We try to do our best and shall continue that endeavour—hoping always to merit and receive your approbation.

A SHAREHOLDER proposed the re-election of Mr. Sydney William Jackson as auditor, at a remuneration of 20*l*. per annum, with a similar sum to be paid to him for the present year. He thought they had a most competent auditor in Mr. Jackson. He was not a large shareholder, but he had a good deal of experience in company work, and he must candidly say that he never saw a balance-sheet so admirably arranged, or so straightforwardly and honestly put, as the one

that had been submitted that day. Whatever might happen in the future, he was sure they were going to have

A GOOD HONEST RUN FOR THEIR MONEY,

and that was a matter of satisfaction to all of them.

Mr. James seconded the motion, which was carried.

Mr. Jolly: I beg to propose a vote of thanks to the chairman and directors. The directors have worked gratuitously since the company started, not knowing whether this resolution would be carried in their favour or not. (Hear, hear.)

The motion was seconded and carried unanimously.

The Chairman: We are deeply indebted to you for your kindness, and we shall endeavour in the future as in the past in every respect to merit it.

The meeting then closed.

INDIAN CONSOLIDATED GOLD CO., LIMITED.

IMPROVED PROSPECTS IN BOTH THE COLAR AND PHŒNIX SECTIONS — VALUABLE ASSAYS — SHAREHOLDERS MUCH ENCOURAGED—THE ISSUE OF PREFERENCE SHARES.

The 10th general meeting of this company was held at Winchester House, on Monday—Macolm Low, Esq., M.P., J.P., in the chair.

THE POSITION CONCISELY EXPLAINED.

The Secretary read the notice calling the meeting.

The Chairman, who was heartily received, said: Gentlemen, at this half-yearly meeting, as you know, we have no formal resolutions and no accounts to submit to you. These will, of course, come forward in the ordinary way at the regular annual meeting, which will be held later on in the year. We meet to-day, as I understand it, in au iuformal sort of way to take counsel with each other as to the condition and prospects of our undertaking, and especially to speak of our mining department. I think that you will probably not care about my going at any leugth into the questions connected with our plantations in the Wynaad, for these will better come forward when we have the accounts before us. I will mention, and I am sorry to have to mention it, that the coffee crop this year will not be good. As to our cinchona plantation—that is now a very large affair. We have very many thousands of fine well-grown trees, and if it were not, unfortunately, for the extremely low price of bark we should now be reaping a very good return upon our small outlay in that direction. As it is, with the present low prices I do not see that we can do anything better than wait and let our trees grow until better times come. What you want to hear about mainly to-day is as to our mining, and especially our mining on the Mysore side, where our chief hopes lie; but before I go to the Mysore district, perhaps you will allow me to say a few words as to our mining in the Wynaad.

WYNAAD MINING.

Now, in the Wynaad, during 1888, we dealt altogether with 4,579 tous of quartz, which produced 780 ozs. of gold. The quantity would have been much larger had not the necessity arisen for completely overhauling part of the machinery conncctcd with the mill, which caused a stoppage for some months. Now, the quartz in the Wynaad, as we well know to our cost, is of a very low grade—at least it is very safe to say that no quartz of high grade iu bulk has yet ever been found there. For ourselves, we may say, at least, that we have done much better than any other company in the Wynaad. Indeed, it is the truth, and no sort of boasting, to say that we have got from our Phœuix Mine not merely more gold than has ever been got from any other Wynaad company, but actually more gold than has been got from all the other Wynaad companies put together. (Hear, hear.) Some of you will no doubt say, "bad is the best." I reply that is true, and that is just precisely the very reason why three years ago we, with your approbation, entered upon our advautageous purchases in the Mysore district. Our last month's Wynaad crushing was our best. We got 139 ozs. of gold. I have not the exact figures showing the actual number of tons, but I believe it was over 700, and that is at the rate of about 4 dwts. of gold to the ton of ore. Now, if we continue to deal with 700 tons of ore of this quality during each month we shall show, I have no hesitation in saying, a considerable balance of receipts over expeuditure for the current year. As to our reserves of quartz in the Wynaad—we had a report from Capt. Williams not very long ago, in November, in which he gave us the large quantity of 19,000 tons, but there appears to be some discrepancy between this estimate aud our most recent advices from Mr. Johnstou, and we have iustructed our resident director in India, Mr. Oakley, to proceed to the Wynaad to measurc up the reserves, and also to look to other matters which require attention.

MYSORE MINING.

As regards our miniug in the Mysore—you know that this has taken place only in what we call the "Colar section." The Madras section, a block of equal sizc—half a square mile in extent—we are keeping in reserve, and a very valuable reserve it will, I hope, turn out to be either to work ourselves or to sell as thc case may be, but the time has not yct come. We hope it will soon come for dealing with it. That Madras block, and thc 33,500 Colar Ceutral shares we own give us undoubtedly a separate and contingent interest in the Mysore goldfield, altogether beyoud and beside our present mining there. I know, of course, that some people think, or effect to think, slightly and lightly of these reserved interests. All I can say is that I emphatically disagree with them. We think they are of high prospective value, and time will show who is right. Of one thing we may be perfectly certaiu—that when their value is proved we shall find that everybody kuew all about it long ago. (Laughter.)

RESULTS.

To come to our mine in the Colar section—I find, taking the figures, that we crushed in 1888 2,721 tons of quartz, which produced 1,179 ozs. of gold of the value of about 4,200*l*. Now, I want you to examine these results a little, because I make no secret about it that they have greatly disappointed the directors. The quantity is 226 tons per month, but the quality, I am sorry to say, is only 8 dwts. and 16 grs. of gold to the ton of quartz. As to the quantity—that has been diminished considerably by the immense difficulties we had in the earlier part of the year about water. Those difficulties have since been completely and permanently overcome, but still considerable time and expense were needed to combat them. The average monthly yield of gold is just about 100 ozs.

AN EXPECTATION NOT REALISED.

Now, when Capt. Davey last year told us that he expected to get thence forward at least 200 ozs. per month he, of course, had in his mind a continuance of thc same character of ore as that with which he was then dealing. Unfortunately, there was no such continuance. Stopes which had been given from 17 dwts. to 16 dwts. yielded but 7 dwts. and 6 dwts. instead, and some of our stopes north of No. 5 shaft even became so poor that it was scarcely worth while to work them at all. All this, of course, is a very great disappointment, but I am auxious to tell you that it is no one's fault. You cannot get more out of the quartz than nature has put into it, and every mining man here will bear me out when I say that it is a characteristic—an essential characteristic, of even the best quartz veins to have their gold unevenly distributed. We have here rich shoots, there poor and even barren shoots, and, unfortunately, in our last year's work we had too much experience of the last and too little of the first. But I again say it is no one's fault, and it would bc childish, and worsc than childish, to blame anyone for that. What we have to do is to develop our property in a miner-like and skilful way.

THE REWARD OF PERSEVERANCE.

That is being done, and I have no hesitation myself in saying that with a fine and persisteut lode, such as we have at No. 5 shaft, time and development will bring us our reward. (Cheers.) I have now done with the past year, and with regard to our immediate future, I am glad to be able to say that our prospects are very much more cheerful. You know that our present two maiu works are at Davey's shaft and what we call the No. 5 shaft. These are two completely different mines on two completely different lodes, and situated a good distance the one from the other. Besides these we have a number of exploratory works going forward, but I do not think it will be worth while to take up your time by describing them. You will all understand how necessary it is for the directors to keep ahead with exploratory works, but at the same time I do not see at the present moment there is any need to go into them in detail. In Davey's shaft we are sinking on the same lode, which is giving such good results in the South-East Mysore property, which is immediately to the north-east of us.

A GOOD LODE IN DAVEY'S SHAFT.

We are down only about 170 ft., and it is perhaps rather early to venture to make any prediction, but the lode is good, between well-defined hanging and foot-walls, and it appears to be settling, as the miners call it, as we go down. I find that Capt. Davey, in his last advicc, dated the 14th January, says "The reef is again settling, showing good hard foot and hanging-walls, with veins of quartz throughout it. I am now hoping this will permanently improve. The quartz from panning gives traces of gold." Here we are only at preseut sinking, and have made no exploration on the course of the lode. We shall put down the shaft another 30 ft., and then on the 200-ft. level we shall drive north and south on the vein, and speaking for myself, I shall be grievously disappointed, considering the results they are getting from the same lode iu the South-East Mysore. if we do not get into a good run of orc.

NO. 5 SHAFT—BRILLIANT ASSAYS.

Turning to our No. 5 shaft, which is our oldest-established work, and where we are getting our present sources of supply of quartz—the state of things is this: that we are now down on the incline of the lode 360 ft., and that we have three principal levels going, that is six drives altogether—two ou the 230, two ou the 300, and two on the 360-ft. level. The three drives to the north of the shaft have not yet got us into good quartz, though there is one place where it is worth 9 dwts., but the reason for speaking of immediately improved prospects is to be found in the state of the drives to the south of the shaft. Here in the 300-ft. level we have now stopes going, worth from 16 dwts. to 1 oz. of gold per ton of quartz, and though the quartz in the forebreast of the 230 level is not at the mouent very rich, yet I find Capt. Davey iu his last advice saying that froun present appearances it would seem that we should speedily have the same run of quartz that we have in the 230 in the 360-ft. level, and he writes on the same day, "We have now got into the same run of quartz that we have in the south stope in the level above, showing at times a little free gold, and assaying 14 dwts. 13 grs. to the ton of stone."

"THE BETTER THE DAY THE BETTER THE DEED."

I had made that note yesterday—(laughter)—I mean Saturday—(renewed laughter)—before we received to-day's mail. Since I came here we have received it, aud to show you that there is good ground for our hopes of immediate improvement here I will just read you the assays that have at this moment been put iu my hands, which have come forward in the ordinary course, and were not in the least intended for this meeting. Mr. Oakley's letter of January 29th says:—The quartz in the forebreast of the 230-ft. level is worth 12 dwts. 21 grs.; the quartz in the south stope of the 300-ft. level of the south end is worth 3 ozs. 14 dwts. 9 grs. (Cheers.) That is rather startling. He goes on: Auother stope in the 300-ft. level at the shaft end is worth 6 dwts. 12 grs., and again in the lowest level, 360 ft., the drive on the forebreast is worth 2 ozs. 15 dwts. 12 grs. (Cheers.) He also says that the 360 south stope and drive are extremely good this week. The gold here is free aud coarse, and we obtained soue very good specimen stones. Thus, gentlemen, I feel I am warranted in saying we have good cause to believe that we are now

GETTING INTO A REALLY LARGE BODY OF ORE

on the south side of the shaft, and if it only lasts out on the course it is quite evident that between the 360 aud 230-ft. levels we shall be opening out very large reserves for the mill, and that not to speak at all of anything we may have overhead or above the 230-ft. level. (Cheers.) Mind we do not in the least despair of the ground to the north of this shaft. We believe we have here the same lode that is giving such brilliant results in the Mysore Mine, and we are determined thoroughly to search it northwards as well as southwards, but at the present moment the south part of our principal mine is very much richer than the thc north part.

APPLIANCES ALL IN GOOD ORDER.

I ought not to forget to mention that all our mining machinery and

plaut are in excellent order, and here I not only mean our engine and boiler power, but our stamp mill with its 20 heads of stamps, our pumping and hauling machinery, our settling and water tanks, our rock-drills and air compressors, and also the long run of feed pipes which give us water all the way from Davey's shaft to the battery. I can assure you that our staff out there, and I may specially name Mr. Oakley and Capt. Davey, are doing their best for us, and to be a success we want nothing more than a continuance of the supply of good ore which, as I said, we now believe we are going to have in the south part of the mine.

PITH OF RECENT ADVICES.

Before concluding, perhaps you will allow me to read to you short extracts I have made from the letters of the 14th January :—

Extract from Capt. Davey's report (No. 54) of the 14th January, 1889 :—"We have completed the incline shaft at No. 5, timbered it close throughout, put skip-road in same, and connected it with main road at bottom of No. 5 vertical shaft; erected 12-in. winding engine, shaft tackle, &c, complete, which will enable us to draw any quantity of stone from the mine. We have also re-timbered No. 5 vertical shaft from bottom to surface, put down double foot-way (or ladder road) in same for the convenience of ascent and descent. The water pipes from Davey shaft to battery are in good condition, and a sufficient supply of water is got therefrom to keep the 20 heads in full swing when required. We have fixed 10-in. plunger pole, and one drawing lift in Davey shaft, which is doing good work. Have also completed all necessary arrangements at the battery. Have tank capacity for 1½ million gallons, fixed a 6-in. plunger pole, and small engine to return water from lower to higher tanks when required, also settling pits for the sand. All the engines, boilers and plant, generally, are in good condition and working well. Now consider the mining arrangements to be in a satisfactory state, as we are able to deal with any quantity of stone that may be broken. The mill is equal to crushing 1,000 tons of stone per month with ease, and the mine is looking better than I have ever seen it before."

Extract from Mr. Oakley's report dated January 15th, 1889 :—"The mill is in capital order, and capable of dealing with from 1,000 to 1,200 tons of quartz a month. We have a sufficient water supply for the battery. We have erected during the year additional English miners' quarters, engine shed at Davey shaft, engine shed at battery, engine shed for incline shaft, coolie lines at Davey shaft, ditto at No. 5 shaft, and assay house at mill. We now have working on the property seven engines: Engine at mill, to run the stamps; engine at mill, to return water to tanks; engine at incline shaft, hoisting quartz; engine at No. 5 shaft, pumping water out of the mine; engine at main shaft, pumping water for feed purposes; engine for air compressor, for No. 5 shaft. I would point out that the most hopeful part of the mine is, as already stated, in our southern levels in No. 5 shaft. The full extent of this piece of ground we do not at present know, and we must await further development in this direction. I am pleased to state that the mine is now in very good working order throughout, and in a very much more efficient state than it was a year ago. The underground arrangements in No. 5 shaft are now such, that if at any time we come across good pay quartz every facility will be afforded for getting this to surface. Capt. Davey has been ably assisted by the staff in carrying through these improvements. All we want now is quartz of a somewhat higher grade; we have ample crushing power and enough water for our requirements at the mill."

I think that is all I need say. I have endeavoured to tell you plainly all that we know ourselves, and I hope that you will agree with me that we really do now appear to be getting into something good. I am very much obliged to you for the kindness with which you have listened to me, and I have only to say that I will, with great pleasure, answer any questions which any of you may be pleased to be put to me. (Cheers.)

FUNDS.

A SHAREHOLDER: If it is a proper question, I should like to ask what reserve of capital have you just now?

The CHAIRMAN: That reserve consists of 12,000*l.* outside of the balance we have at the bank. That is what remains to be called upon the 2s. preference shares.

Mr. WYLDE: Were all these preference shares allotted?

The CHAIRMAN: We should be glad if some more of these shares were taken up, in which case we should at once put on more rock-drilling machinery. The number of 2s. preference shares taken up is considerably over 250,000 out of a total of 550,000.

Mr. WYLDE: I think it does good at these meetings sometimes to be a dissentient shareholder, as it draws out information. Last time I suggested that the board should reduce their fees, and they promised to consider the matter. I suppose we shall see the benefit of that reduction in the ensuing accounts. The speaker complained of a letter of his not having received the attention it ought to have done, even although he held but 20 shares, and went on to suggest greater details in the accounts.

Mr. DYET: I own a large quantity of shares, and I agree with the last speaker that the balance-sheet should give more details, for we are in the dark as to the expenses. I know from my own experience that I have been able to get as many preference shares as I wished, for several applications I have made have been responded to in full. If any gentleman wants to get these shares let him apply for them.

Mr. POPE: What is the crushing capacity of the stamps already erected, and when will that limit be reached?

Mr. WYLDE: Mr. Dyet has rather mistaken my point, which was this, that it would have been an advantage to the company to have had the whole of the shares allotted at first.

A SHAREHOLDER: Is the Wynnad district paying for mining purposes?

The CHAIRMAN: I am afraid that last year it did not pay. That arises because of the stopping of the mill for a certain part of the year, but, as I said in my speech, I have not the smallest doubt that if 700 tons of ore could be dealt with per month, yielding 4 dwts., we should show a handsome balance of receipts over expenditure.

OUGHT DIRECTORS TO WORK FOR NOTHING.

With regard to what Mr. Wylde said as to the directors' fees—we all know that the tendency in cases where the undertaking is not paying is to come down upon the directors, and tell them they must reduce their fee.

A SHAREHOLDER: And it is a great mistake. (Hear, hear.)

The CHAIRMAN: I think business men will agree with me that it is not desirable the directors should take no fees, and that no undertaking should depend upon the charity of its directors. (Cheers.) It therefore is a question of degree. As my friend Mr. Lambert told you at the last meeting—for many years past we have only been taking half our fees, and as Mr. Wylde reminds me there has been a still further reduction, for without being asked, instead of taking half our fees we have for many months been taking only two-thirds of the half. (Cheers.) I do not think you could ask us to take less. (Cheers.) Then Mr. Wylde told us he was a small shareholder. Far be it from me to despise a small shareholder. I do not see why he should not have his say just as well as a large shareholder. With regard to the question of issuing more of the 2s. preference shares, I think I told you we issued some 250,000 out of the 550,000. Of course we should be very happy to issue more of these shares, and if we did we should, with the funds, put more rock-drills to work on certain parts of the property. At the same time we do not think it a good plan to be "touting" these shares. The shares were taken up on the circular we issued, and as we were able, with the funds in hand, to go along we did not think it desirable to worry the shareholders, but we shall be very glad to issue not the whole of what remain, but something like 100,000 more, which would give us 10,000*l.* additional. With regard to what Mr. Pope said—the undoubted capacity of our mills, both in the Wynaad district and the Mysore, is this—each is capable of treating 1,000 tons per month.

Mr. POPE: When will that limit be reached?

The CHAIRMAN: That is a question of reserves. I do hope we shall get on quicker with the large body of ore we have now got into.

Mr. POPE: We were told that the reserves were very considerable.

RESERVES.

The CHAIRMAN: The reserves were very considerable, but they did not turn out to be all reserves of good quality. You do not wish to crush paving stone—only what will pay. I do not see why we should not give you more details in the balance-sheet, and we always in our reports show how much has been crushed each month.

A SHAREHOLDER: How does the cinchona crop stand?

The CHAIRMAN: I hope the shareholders will allow us to deal with that in detail at the general meeting. We have between 250,000 and 300,000 trees, and want nothing more than an increase in the price of bark to make a good return from that source upon the small outlay made. That concludes the business.

A cordial vote of thanks was proposed to the chairman and directors, and carried by acclamation.

The CHAIRMAN: I am very much obliged to you. I only hope that at our next meeting I shall be able to give you a much better account than I have done to-day.

The meeting then closed.

EXTRACTS FROM LATEST MINING REPORTS.

28th January.—Phœnix section: A cross-cut has been driven west in midway 4 ft., 3 ft. of which is in lode matter. The entire width of the lode now in the forebreast is fully 6 ft., composed principally of decomposed gneiss, mixed with a little white quartz, but, so far as we can discern, and also by tests, it is perfectly free from any kind of mineral, therefore it is suspended for the present, and the same men removed to the tramway tunnel for the purpose of extending this level north. As I have estimated before the quartz in the upper workings gives a more liberal yield than that in the levels below; the ground here is fairly good for progress, and in a few months we hope to prove the shallow ground thoroughly. The stopes in back of the tramway tunnel: The lode here has in no place diminished in size, but considerably more blue rock is getting into the lode, consequently we have to select a large portion of it to prevent worthless matter going to the reduction works. How far up it will last it is difficult to say. Stopes in back of No. 1 and midway tunnels are without alteration both as regards value and size. The Koorumbers are still prospecting the Cobra reef, and have opened for some distance along its back, and the quartz washes fairly well.—J. WILLIAMS.

— (28th Jan.)—Colar section.—No. 5 shaft: The 360-ft. level driving south of shaft has advanced 10 ft., or 43 ft. 6 ins. from shaft; the reef is 1 ft. 6 ins. wide, and assays 2 ozs. 15 dwts. 12 grs. per ton stone. The 360-ft. level driving north of shaft has advanced 14 ft., or 41 ft. 6 ins. from shaft. 3 ft. from the present forebreast we passed through a small vein of quartz, but of no value. I shall push this end on for another week, and if nothing of value is met with I shall open on the vein before mentioned. I am now preparing to sink No. 5 shaft; this work will be commenced in a few days. The stope in the bottom of the 300 south level continues to produce good stone; reef 2 ft. wide. From two samples taken at the north and south ends it gave the following results :—South end, 3 ozs. 14 dwts. 9 grs.; north, or shaft end, 6 dwts. 12 grs. per ton stone. We are stoping here by rock-drill and hand labour. The stope in the bottom of the 300 north continues the same; lode 1 ft. 6 ins. wide, assaying 10 dwts. per ton stone. The 230-ft. level driving south of shaft has advanced 12 ft., or 78 ft. 2 ins. from shaft; the reef in this drive is small, but is showing a little free gold, and assaying better than it has done for some time past. Assay value 12 dwts. 21 grs. per ton stone. It shows more plainly than when last reported. We are getting into the same channel of ground we have at the 300-ft. level. The 230-ft. level north of shaft has been suspended, the machine being used in the 300 stope. The winze sinking below the 230 north has been resumed by a full complement of coolies; lode 2 ft. wide, low grade. We shall resume the sinking of the winze below the 156-ft. level north on the 1st inst. The stope in the back of the 156-ft. level south has fallen off in value, though the quartz continues the same in quantity. I intend suspending this stope and continuing the drive south; assay value, 2 dwts. 15 grs. per ton stone. Davey shaft: This shaft has been sunk 6 ft., or 173 ft. 1 in. from surface. There is no particular change to notice in the ground. We shall sink this shaft 1 ft. 6 ins. beyond present depth, and put in plat sollar to commence the levels north and south, when I hope to cut payable rock. Trial shaft, north-west of main shaft: This shaft has been sunk on the incline 17 ft. since my last. Not meeting anything to warrant further sinking, I put out a level north-west in appareut made ground, but no old works were met with. Have since changed the drive to south, where we seem to be coming into it. Levels exteuded 36 ft. 5 ins. Surface: All our surface work is in a forward state. Battery is in good order, and running well. All machinery in good order. Health of camp very good.—T. R. DAVEY.

THE GOLDFIELDS OF SOUTH AFRICA, LIMITED.

CAPITAL TO BE INCREASED TO £370,000—DISCUSSION AS TO THE PRICE AT WHICH THE NEW SHARES ARE TO BE ISSUED.

An extraordinary general meeting of the shareholders in this company was held at the Cannon Street Hotel, on Thursday, under the presidency of Thomas Rudd, Esq., for the purpose of submitting the following resolution:—

"That the capital of the company be increased to 370,000*l.* by the creation of 120,000 shares of 1*l.* each."

Mr. Herbert E. M. Davies (secretary) read the notice convening the meeting.

THE COMPANY IN A SOUND CONDITION.

The Chairman, in moving the resolution as above, explained that the board were asking the shareholders to sanction an increase of the capital of the company on the advice of the managing directors; the present capital being inadequate for the purpose of developing the Matabele concession recently obtained. He explained at some length the position and prospects of the property, and assured the shareholders that the managing directors would never have advised such a course had they not seen their way to a profit upon the operation. The company was never in a sounder condition than at present, nor were its future prospects ever brighter. The company no longer held any De Beers, or other diamond shares, and the shareholders would be glad to learn that they had been disposed of at a profit to the company.

Sir Richard Pollock seconded the motion.

HOW THE NEW SHARES ARE TO BE ALLOTTED.

Mr. Davies (secretary) said he was desired by the chairman to state that in deference to the wishes of the shareholders the directors had decided, if the resolutions were passed, to issue the shares pro rata to the present members, reserving 5,000 shares to be issued hereafter, if thought fit, upon terms to be arranged—that was to say, that the directors would offer to the shareholders one of the new shares for every two shares held at the present moment. (Applause.)

Several Shareholders: At what price:

Mr. Davies said it entirely depended upon the market price of the day. The directors did not see their way at the present moment to state at what price they proposed to issue the shares. (Oh!) They could not be issued until after the confirmatory meeting, and in the interval the shares might go to a much higher price than they stood at to-day, or, on the other hand, they might recede.

Sir Richard Pollock remarked that if the directors were

DESERVING OF THE SHAREHOLDERS' CONFIDENCE,

for the success they had achieved in the past, the shareholders should leave it to the board to study their interests in this matter. (Cheers, and "No.")

Mr. King said that the shareholders had a right to know the terms upon which these shares would be issued, as the board must have already made up their minds upon the subject.

Mr. Winch thought that in accordance with the resolution before the meeting the directors could not possibly issue the shares at anything but par. It was proposed to increase the capital to 370,000*l.*; they already had 250,000*l.*, and if they were to issue them at one premium that would bring it up to 490,000*l.*

AN IMPORTANT QUESTION.

Mr. Morgan thought they ought, before passing the resolution, to know something about the validity of the concession. They heard, on pretty good authority, that two envoys were on their way to this country to dispute this concession, and therefore they would be proceeding in the dark were they to authorise the issue of further capital for the development of a concession the validity of which was disputed. They should remember that they were

DEALING WITH A SAVAGE CHIEF

who was very powerful in his own country, and considerable difficulties might hereafter arise.

Several other shareholders having spoken,

Mr. Edward Matthey confessed to being greatly surprised to find that the directors in seeking to raise this capital were not prepared to state the price at which they were going to issue them—(cheers)—and without meaning any disrespect to the chairman or directors, he unhesitatingly said it was his intention to vote against the resolution unless the price were stated. (Cheers.)

Mr. John Fordred said he understood that the company was only to get half the concession, and he wished to know who was to get the other half.

Sir Donald Currie said that upon receiving the circular calling the meeting he wrote to the secretary saying that he presumed the shares were to be issued to the shareholders at par and pro ratâ; and that morning he received a letter from the secretary, which he (Sir Donald) supposed was official, telling him that he understood that was to be carried out. He wished to ask the chairman whether that was so.

The Chairman remarked that he was suffering from a severe sore throat, and asked the secretary to reply.

THE SECRETARY REPLIES.

Mr. Davies repeated that the board were unable to fix the price of the shares just then, and could not do so until the resolution was passed, and duly confirmed. A large amount of money was required, and a sufficient sum would not be placed at the disposal of the managing directors if the shares were issued at par. Rather than issue them at par the directors would withdraw the resolution. They would, however, be issued at a fair sum below the market price of the day, and that the shareholders would get a fair turn over upon the transaction. With reference to

THE VALIDITY OF THE CONCESSION

—rumours had been spread about in London from time to time that the concession was invalid, that it had been lost, and other things. The board had telegraphed to the managing directors asking if there was any truth in the rumour, and they replied that the concession was in every way as satisfactory as it could be, and that the relations of the company's agent with the king could not be better. As regarded the parties who held the other half of the concession—the company went into partnership with other gentlemen at the commencement, and it was never expected by the directors of this company that they would obtain more than half. Who those gentlemen were the directors were not in a position to state, as they had not their authority to do so.

Messrs. Livingstone, Whiting, Evans, Bourne, and others having spoken,

AN AMENDMENT

was proposed by Mr. Edward Matthey, to the effect that the following words should be added to the resolution:—"And that a future meeting shall be called to approve of the price at which the shares shall be allotted to the shareholders pro rata."

Mr. Walker seconded the amendment, which, upon being put from the chair, was carried by a large majority.

On the motion of Sir Donald Currie, a vote of thanks was passed to the chairman and directors, and the proceedings terminated.

THE MOUNT SHAMROCK GOLD CO., LIMITED.

MR. WOODYATT TESTIFIES TO THE VALUE OF THE PROPERTY—GRATIFYING RESULTS FROM THE ORE SENT HOME—COMPANY ONLY NEEDS THE RIGHT PROCESS TO TREAT ITS ORE.

The adjourned extraordinary general meeting of the Mount Shamrock Gold Company, Limited, was held at Winchester House, Old Broad Street, on Thursday.—J. H. Mace, Esq. (chairman of the company), presided.

The notice calling the meeting was read by the Secretary (Mr. Charles C. Rawsou).

BUSINESS OF THE MEETING.

The Chairman: Gentlemen, as you are aware, this is an adjournment of the meeting which was held on January 24th. The business before this meeting is that which was then left unfinished, and is known in the notice paper as No. 2. The objects of the adjournment were twofold—first, to await the return of Mr. Woodyatt, who is now here, and next, to receive some information as to the heavy ore which had been sent us. I will read you a copy of the report as to the heavy ore, and give you the results. They did not cable this message, as usual, on the ground of economy. The report appeared in the papers this morning, but there was an error made by the manager in adding up the number of ounces of gold. He added it 100 ozs. short, and in the *Maryborough Chronicle* this addition appears, which was partly in the papers—it is dated Jauuary 1st:—"In my haste this morning getting off the last retort aud weighing the tons I made an error in weighing up the gold. It should read 552 ozs. instead of 452. The same mistake has goue to Europe." It is very unfortunate, while correcting the error, that he did not tell us whether it referred to the stuff from the top or the bottom of the mine.

GRATIFYING RESULTS.

The result from the top, omitting the 100 ozs., was 283 tons, giving 175 ozs., or 12 dwts. 8 grs.; from the bottom of the mine 187 tons, giving 277 ozs., or 1 oz. 9 dwts. 15 grs., but an average on the whole of 1 oz. 3½ dwts. per ton; but if we add the 100 ozs. forgotten to the stone from the upper level it would give an average of 19½ dwts., or just under an ounce. If, however, it has to be added to the stone taken from the lower part of the mine, it would give us 2 ozs. to the ton, which everyone will regard as satisfactory. (Cheers.) This was the result of 23 days' crushing, and not the usual month, and the worth of the gold (taking the average we have had hitherto) was about 1,600*l.* It is very unfortunate that he did not give us a correct statement as to where the 100 ozs. had been missed. The heavy ore arrived, aud we had it crushed. We sent some to Vivian and Son, of Swansea, a first-class house, and one likely to give us reliable information. They say we "have hurried on the sample. The only metal contained in the ore of value to us is gold. Our assays show 6 ozs. to the ton, and we value such ore at 2*l.* 18s. per ton dry weight, delivered at our works, and will be glad to hear from you what you can supply." We also sent some to Johnson, Matthey and Company, of Hatton Garden. They gave us a return of bismuth, 1.85; produce of gold, 5 ozs. 17 dwts. 12 grs.; silver, 5 ozs. 0 dwts. 12 grs. per ton. We also got the aid of Johnson and Son, of Cross Street, Finsbury. They sent us an assay—product of fine gold, 6 ozs. 5 dwts., fine silver, 5 ozs. 15 dwts., and we asked them to give us the best information as to the most suitable mode of dealing with the ore. In reply we got this report from them.

23, Cross Street,
Finsbury, E.C.

To the Secretary
Mount Shamrock Gold Company, Limited,
88, Bishopsgate Street, E.C.

Dear Sir,—Herewith we hand you analysis certificate of four cases ore marked M S G M C. We have treated this by amalgamation, and find that it is of a most refractory nature, as will be readily seen by the analysis of the contents of gold and silver:

Gold, 6 ozs. 5 dwts.
Silver, 5 ozs. 15 dwts. } per ton.

2 ozs. 2 dwts. 12 grs. of the gold is free and extractable by passing it through the hydrogen amalgamator. The slime, however, is capable of concentration to about 20 per cent., and the gold is obtainable from the concentrates by the ordinary process of chlorination.

The only advantage of amalgamation is that any float gold (which would otherwise be lost in concentration) is secured. We should, therefore, advise, 1st, amalgamation; 2nd, concentration; 3rd, chlorination.

We are, dear sir,
Yours truly,
(Signed) Johnson & Sons.

23, Cross Street,
Finsbury, E.C.

CERTIFICATE.

Analysis of a sample of four cases (about 1 ton) marked M S G M C—

Iron	36.92	per cent.
Bismuth	1.75	„
Arsenic	3.72	„
Lead	.25	„
Copper	.16	„
Sulphur	27.97	„
Alumina	4.95	„
Magnesia	4.70	„
Silicia	8.99	„
Oxygen and Carbonic Acid	10.68	„
	100.00	

	ozs.	dwts.	grs.	
Gold	6	5	0	per ton of 20 cwt.
Silver	5	15	0	

(Signed) JOHNSON & SONS,
Assayers to the Bank of England, H.M. Mint, &c., &c.

I think that, on the whole, is very satisfactory. Our principal business now is to go on with resolution No. 2. Mr. Woodyatt is here, and will be happy to give you any information with regard to the mine.

A SHAREHOLDER SATISFIED.

Mr. HAZLEDINE: So far as what you have stated goes, it appears to me very satisfactory, but the main point with us to consider is the profit we shall derive per ton from this ore, which seems to be the refractory. If we get 6 ozs. to the ton, and it costs as much to produce, it is not of much benefit to us.

The CHAIRMAN: That question is answered by the Messrs. Vivian, who say they will give 2*l*. 18s., and bear all expenses per ton dry weight, delivered at their works.

MR. LEE WITHDRAWS HIS MOTION.

Mr. STANLAKE LEE: It must long have been sufficiently obvious that argument in connection with this mine is out of place, and unavailing. When the directors state in writing that they have 10,000*l*. worth of working capital, and when we see in the balance-sheet it is only 5,000*l*., we ask for an explanation, and the explanation is because there was 15,000*l*. subscribed. Take again this case: when I stated that for the last 12 months the mine had not made one single penny of profit, they referred me to a balance-sheet for the 14 months ending September last. It is, therefore, utterly impossible to argue on such premises as these. Therefore, I do not propose to discuss the eight or nine further charges which I have brought against the directors.

Mr. HAZLEDINE: I think we have had quite enough of that before. (Laughter).

SHAREHOLDERS REASONING BEINGS OR IDOTS.

Mr. LEE: It is evident to me that in place of regarding us as 300 or 400 reasoning beings, they take us for 300 or 400 consummate idiots. (Oh!) They have taken advantage of every possible objection to frustrate all our endeavours. As regards the votes—the original shareholders were unanimous as to their views of the management of this mine. We had about 30,000 supporters in votes, but to frustrate the opposition, which I have had the misfortune to start, the directors commence their scare about Mr. Woodyatt. They said he was coming home to protect my interests, to close the London office (vide Mr. Clark's speech), and to do various other things, and they closed my mouth at that meeting by denying me the right to speak. At the same time they invited persons to speak here who were neither English shareholders nor persons holding the same scrip as I hold myself. These gentlemen were invited to the meeting to frustrate all that we have done, and I was not allowed to say a word. Gentlemen, these tactics gain them a few votes, but several of their supporters have written to me. One of them, who was one of the largest shareholders, simply states this, that if the statements, in regard to Mr. Woodyatt's mission about closing the London office and supporting me is not true, he will subscribe very handsomely towards the prosecution of the directors, or such other legal measures as we may deem fit. (Laughter.) I may state frankly (and Mr. Woodyatt is here) that he has been represented as coming home to defend me. He will tell you what amount of truth there is in that statement. It is not only false that he has come to defend me, but he has in his operations opposed me in every point, and is going to support the directors. You will now see why these gentlemen waited for the arrival of Mr. Woodyatt, and would not allow me to deal with his mission before he arrived. This is the state of affairs at the present time—the legitimate shareholders have not a single voice in the matter. I am given to understand by Mr. Woodyatt and his solicitor that if we elect two directors it is possible for them to turn them out. The promoters and the vendors can do everything; therefore what is our position? We put in a new board—a board as Mr. Woodyatt and his solicitor admits are eminently fitted to look after our interests, and they can turn them out.

MR. WOODYATT'S SOLICITOR AND MR. LEE.

Mr. DUTTON: I am the solicitor to Mr. Woodyatt—in fact, the solicitor referred to by Mr. Lee. I do not think Mr. Lee ought to say that I admit this, that, and the other. If it becomes a question of what I have to say, I will, with your permission, be prepared to offer some observations, but content myself now by saying I have admitted nothing. (Cheers.)

Mr. LEE: I asked Mr. Woodyatt for his support, and failed to get it; therefore, I do not see the directors have any right to say that Mr. Woodyatt has come here to protect my interests. He distinctly says he cannot go with me because I am upsetting the mine. So far the state of affairs is this—the directors have resorted to every device which legal technicalities could put at their disposal to postpone meetings till Mr. Woodyatt comes home. I find now that the resolution which I have before the meeting, which we should have passed on the last occasion if the adjournment had not been carried, would, if passed, now be passed only by Mr. Woodyatt. He gives me to understand that my resolution would not be acceptable to the 125,000 or the 150,000 shares he holds, and, therefore, the new board can be turned out under that vote. Under such circumstances the five or six gentlemen who have borne the expense with me of this opposition, and interested themselves in the affairs of the company at immense personal inconvenience and great cost, feel that their best course is to have recourse to the Law Courts, and not to bring forward this resolution to-day.

Mr. HAZLEDINE: I am very glad to hear that, for we have had more than enough of Mr. Lee's opposition.

Mr. THOMPSON thought the resolutions before the meeting should be carried before they proceeded to discuss the condition of the mine.

Mr. GREENIP, of the firm of Messrs. Snell, Son and Greenip, solicitors to the company: I think it would be a little premature to discuss these resolutions; they will come on at the second meeting, which will be held at the conclusion of this one. The only business at this meeting is resolution No. 2, which was the business left untransacted previously.

MR. LEE'S POSITION AS AN ORIGINAL SHAREHOLDER UNDERSTANDS IT.

Mr. HAZLEDINE: I do not want to take up your time, but I do not like such remarks as Mr. Lee has made to pass unnoticed. He made a remark to the effect that we are all under the thumbs of the directors, but I beg to tell him that I have an independent opinion, and that it was the virulence of his circulars which he sent me that made me think the case of the directors much stronger than his. One of the remarks he made did not show much sympathy with the English shareholders. Mr. Lee said he held ordinary shares—Queensland shares. Now I am an original shareholder in this company, and Mr. Lee will excuse me for addressing him personally. (A VOICE: Address the chair.) I always like to face my opponent, and that is why I turn to Mr. Lee. (Cheers.) I am one of the old-fashioned type who like to face my adversary.

A SHAREHOLDER: I suggest that you should do so outside.

Mr. HAZLEDINE: If I face anybody outside it will be you. (Laughter). On the last occasion Mr. Lee made this remark, and he has told us in his circular that he is only acting in the interests of the original shareholders who have been bamboozled by the directors. He said, "I sold a lot of shares on the English market, because I knew I could replace them on the Queensland market at a much lower price." He asked, "Is not that legitimate?" I have nothing to say to that except what Sir Robert Peel said——

A SHAREHOLDER: Let Sir Robert Peel alone. (Laughter.)

Mr. HAZLEDINE: Mr. Lee puts his shares on the market, and our shares are knocked down in one day from 4s. to 5s. (Hear, hear.) You (to Mr. Lee) put a lot of shares on the market.

Mr. LEE: How many?

Mr. HAZLEDINE: All you could, and other people followed your example. Did you not say at the last meeting that you sold your shares? (No.) If you did not say that you said something so like it that the difference cannot be detected. I do not believe in gentlemen who have paid their money being bamboozled by the directors. The directors have had no time to develop this mine. I have been in mines for 50 years—before some of you were born, and have had to wait 10 or 12 years before I have had a return, and if I get a return in three or four years from this mine I shall be satisfied. I do not care twopence for the directors on the one hand, or Mr. Lee on the other. I am perfectly independent.

I AM NOT ONE WHO HAS BEEN BAMBOOZLED,

but I am satisfied that the directors are doing their best. (Loud cheers.)

Mr. DUTTON: If I may be allowed to say so, I think Mr. Lee has taken a very proper course in withdrawing his motion. (Hear, hear.) Representing Mr. Woodyatt, and as both that gentleman's name and my own has been made use of in Mr. Lee's speech, I think I may be allowed to say very shortly what was the view which Mr. Woodyatt, under my advice and after such consideration as we were able to give to the matter, determined to take in reference to this particular resolution.

MR. WOODYATT'S POSITION.

You, perhaps, all know that Mr. Woodyatt has only recently arrived in this country. He represents a very large interest in this company—very large indeed. Having arrived here for the first time he found a burning controversy going on between one section of the shareholders and the other. It must be obvious to everyone that this placed him in a very difficult position. He had either to decide definitely to throw in his lot with one or other of the contending parties, or else adopt the third and middle course of trying, as far as possible, not to prejudge the questions pending between the parties until he had further time for consideration as what it was desirable to do in the interests of the company generally. If he had decided to throw in his lot with Mr. Lee and his party, that would have resulted in the resolution being carried, and the whole of the board being removed from office. If you turn out one board you must put in another, and it would have been absolutely necessary that, as part of that decision, he should have been prepared to accept other names which might have been suggested to him, and proposed to the meeting to-day for formal election. It is not too much to say, considering his large interests, that it would have been unwise on his part without proper consideration to have turned out one board and elected another who might have been perhaps better; but still, at all events, he had not time to properly consider the question. Therefore it seemed to him that he ought not to throw in his lot with Mr. Lee. The alternative was that he must see the resolution was not passed. Therefore it was represented to Mr. Lee that while we had every desire to be perfectly impartial, it would be necessary for Mr. Woodyatt to protect his own position, and that if this resolution were forced to the vote he would declare against it. At the same time we intimated to Mr. Lee privately that we should prefer not exercising any voting power, and that for the present purpose he would do well to withdraw this resolution. I did not know until we came into this room to-day that that would be the course he would adopt, but I hoped he would adopt it, and I am very glad he has done so, because I think these noisy meetings never conduce to the interest of the company, and if there are reasonable grounds of complaint as to the action of the directors, the best plan is to see whether you cannot in a less public manner carry out what you want to do. However, that resolution has been withdrawn, and

fortunately, it is not necessary that there should be any vote upon it. All I wished was to explain the precise position Mr. Woodyatt has assumed. His wish is to see if anything can be done to improve the position and management of the company, and not in any way until that is determined to throw in his influence one way or the other.

Mr. Hazledine thought it highly desirable that Mr. Woodyatt should address the meeting particularly as to the state of the property.

The Chairman : I have great pleasure in introducing Mr. Woodyatt to the meeting. He knows the mine well, and I may say that he was one of its discoverers.

Mr. Hazledine : That is the very man we want. (Hear, hear.)

VALUABLE INFORMATION.

Mr. Woodyatt, who was heartily received, said : I ask you to remember that in coming over here from Queensland I have come in my private capacity. I am not one of the Queensland directors of your company. I take no part, whatever, in the management of the mine or the affairs of the company there. I am merely a shareholder, and came here in my own interests, and in those of my fellow shareholders in the colony. (Cheers.) I do not feel called upon either to accuse the directors of, or to defend them from any charge of mismanagement. I simply give you my opinion of the mine, and you may take it for what it is worth. I beg you will not attach official importance to what I say. I can quite understand that the shareholders who invested in the company when it was floated on this market two years ago are not pleased with present results. I might explain that when the company was floated here the mine was absolutely in its infancy. The ground had just been broken in at the surface. Good gold had been got, which apparently justified this company in taking up the mine, and those who sold it in believing it to be a thoroughly good property. It was generally considered by experts to be so, and it is considered so still. I would explain briefly why the mine has not borne out the expectations that were formed of it. You must understand that mining in Queensland is in its infancy. We have there, generally speaking, but one method of extracting gold from stone, and that is the ordinary crushing and amalgamation process, which is as old as creation.

CRUX OF THE WHOLE MATTER.

We have few men in the colony capable of advising as to the treatment of refractory ore, and no works capable of conducting experiments such as you have at Swansea and at Germany. In fact, when we find anything in Queensland that has the appearance of being richly auriferous, and at the same time refractory, we have been in the habit of shipping it to England, or Germany, and getting it treated there, and judge by the results and such advice as we get. Mount Shamrock Mine—although at the surface the ore was not found to be refractory, when the shaft had been sunk 90 or 100 ft., it was found to be so as we got down to the water level. Above the water level the gold was associated with oxides, and could be freely treated, but when you got down to the water level and below it the gold was associated with sulphides, and was not so easily treated. If we could have foreseen the nature of Mount Shamrock ore, the proper thing to do would not have been to have put up a costly crushing battery, but to have bored through the earth to the depth of 300 or 400 ft. to the sulphides, and had a parcel sent to Swansea, and obtained the advice of a skilled metallurgist as regards its treatment, following which the proper machinery might have been put up. (Hear, hear.) That was not done.

DIFFICULTY OF THE MANAGER.

Machinery was put up for crushing and amalgamating of the ordinary kind, and it has been working ever since, but as the boring becomes richer the ore becomes more refractory, and the manager finds it increasingly difficult to extract the gold with the appliances at his disposal. I need not say the gold is there—we believe it to be there. Every trial we make shows a good deal of gold, and it is merely a question of getting the proper appliances to extract it. When these appliances are on the ground, and you have the necessary skill and intelligence to use them profitably—then you can get good returns from the mine. This is nothing new in the history of Queensland. The managers of the great Mount Morgan were for several years endeavouring to make it payable. They spent money on experimental machinery before they hit on the right method. That method was eventually found in chlorination. What chlorination can do for Mount Shamrock I am not prepared to say. Chlorination may do for it, but I am not prepared to say it will. I took some of the stone to Sandhurst, and spent time in treating it there, as well as ores from other mines, and I found it could not be treated by chlorination. I think it necessary to get a skilled man on that mine who will investigate the nature of the ore and put up the proper appliances for extracting the gold. That is all I need say, but if you have any questions to ask I shall be very pleased to answer them. (Loud cheers).

A Shareholder : We want to know if you think it really a good mine ?

Mr. Jenkins : Were there not some reserves of the ordinary ore such as the machinery now existing can deal with ?

Mr. Woodyatt : No ; the machinery can deal with the ore you have, but not profitably. There are about 7,000 tons of tailings stacked. The machinery is not capable of treating them properly. There is a good deal of very rich ore stacked on the surface.

MR. WALKER'S MINING EXPERIENCE.

Mr. Walker : Is there any exploration work going on ?

Mr. Woodyatt : The whole work, so far, has been exploration. (Laughter.)

Mr. Walker : Have we funds to carry on successfully ?

Mr. Woodyatt : They had funds enough to ensure the mine being carried on.

Mr. Walker : Would an addition of capital be necessary to extend exploration work ?

Mr. Woodyatt : Certainly it would.

Mr. Walker : You are satisfied there is a sufficient amount of energy in working the mine ?

Mr. Woodyatt : The energy is there, but it is open to criticism whether it is properly directed. If the mine were my own private property I would shut up the stamp battery at once.

Mr. Walker said he received a letter the mail before last. His correspondent stated, "The mine is paying expenses, but the company is worked at great expense, the London board receiving large fees. (Laughter.) The machinery is in fair working condition, subject to ordinary wear and tear. A force is employed in removing impediments for the erection of four Brown and Stanfield's concentrators. He wished to ask whether the mine was worked at great expense. Mr. Woodyatt was a practical colonist, and he would rather take his views than those of the London board.

AN APOLOGY.

He found he had hurt the feelings of the editor of the Mining World. Certainly he was a great deal too hard in his remarks—impertinent, he had been told. He did say that the directors could not manage anything.

A Shareholder : A very improper remark.

Mr. Walker (continuing) said he was of opinion that if a man could manage his own affairs he could manage those of other people. (Uproar). He was not going to trespass upon their time—in fact, he would cut his remarks short. (Laughter). Editors of newspapers formed different opinions. The editor of the Mining World spoke well of the company, but the editor of another paper had spoken ill of it, particularly of the management. One journal, only recently, stated that directors could not be rendered responsible for incapacity or inefficiency, however gross those deficiencies might be. Mr. Walker went on to read copious extracts from newspapers animadverting on the conduct of the directors.

MR. WALKER'S VALUABLE BREATH.

Mr. Woodyatt : I wish to save this gentleman (Mr. Walker) the expenditure of much valuable breath. I have had a great deal of Mount Shamrock literature put before me—(laughter)—including a good many statements which have been made by this gentleman, and which he is now reading. I have read it all, and have come to the conclusion that the literature, especially in the way of circulars, has been far too prolific.

The Solicitor : I have advised the chairman to allow Mr. Walker to continue, feeling that such remarks as he has made and read carry with them their own condemnation. (Loud cheers.)

A Shareholder : Mr. Woodyatt has made a statement about sending the ore to this country or Germany for treatment, but does he know that works are being erected near our mine that will probably assist the Shamrock Company ?

Mr. Woodyatt : The information that has come to my knowledge since I arrived in London with regard to the erection of the Queensland Smelting Works in the Maryborough district and near the Shamrock Mine, has a most important bearing on the future of the company. I believe that a gentleman has been selected to conduct the works in every way fitted for the duties that will devolve upon him, and that he is now on his way. I passed his ship in the Mediterranean. I have not the slightest doubt the local directors of Mount Shamrock will make the fullest use of his ability for the benefit of the company, and that his advice as to the erection of machinery will be followed. I hope this will be done as soon as possible.

AN IMPORTANT QUESTION.

Mr. Lee : Is there any ground for the statement made that you were going to close the London office ?

Mr. Woodyatt : There is no ground for it whatever.

The Chairman : Mr. Weinberg, the gentleman selected for the Queensland smelting works established in Maryborough is considered to be one of the ablest men living for dealing with refractory ore. I had an interview with him before he left, and he promised to do all he could for us. If he can deal with Shamrock ore, it will bring credit to him and business to his company.

MR. WOODYATT'S MISSION.

With regard to Mr. Woodyatt's mission — I have a letter from one of the largest shareholders in Queensland, in which it is stated what that mission was to be. I am not at liberty to mention the writer's name, unless very greatly pressed to do so. The gentleman who received the letter kindly came to the office and showed it to me, and allowed me to take a copy of it, but said, "I do not wish my name mentioned in connection with it." I have the original here, and it has been shown to one of the shareholders, so that there can be no doubt about its authenticity. The date is 25th October, and it was on this letter I made my statements at the last meeting.

"In my reports of 27th July I advised that the shareholders do meet and resolve to procure the opinion of the two best counsel in Brisbane, and employ an agent in London in order to come to an understanding with the London board relative to the 120,000 shares that must revert to the vendors, and to make arrangements to abolish the London board. Another meeting was held on the 4th inst., at which not only were the resolutions confirmed, but Mr. Woodyatt, proprietor of the *Maryborough Chronicle*, one of the vendors, was appointed to go to London soon to represent the shareholders of the original company. I presume the directors will convene a special meeting of shareholders to discuss the position of affairs, and it will, I opine, become manifest to everyone concerned that as Mr. Lloyd is unable to pay the 60,000*l.* due, the 120,000*l.* in paid-up shares shall be accepted by the vendors in lieu thereof, and the articles of association be altered to abolish the London board, and have the company entirely managed in Maryborough by a local board, to be elected by the shareholders."

I will ask Mr. Woodyatt if the contents of that letter are correct.

The Solicitor : I think the better way will be for Mr. Woodyatt to state whether or not what is put forth in this letter was what actually occurred at the meetings.

MR. WOODYATT'S REPLY.

Mr. Woodyatt : I hold in my hand the minutes of the special meeting of shareholders in the parent company, at which I was appointed to come home. The resolution passed at the meeting of October 4th, and confirmed at the meeting held on the 18th, was "That Mr. Francis Power should be authorised by the Mount Shamrock Gold Mining and Quartz Crushing Company, in liquidation, and for the liquidator thereof, in so far as his consent thereto is required, to appoint Mr. Woodyatt, of Maryborough, journalist, attorney, to represent him, as aforesaid, and also this company in England ; with the fullest powers to do all acts that this company or its liquidator might do." There is nothing

about winding up here. This appears to be one of those cases in which

BOTH SIDES ARE RIGHT AND BOTH WRONG.

When I was about to start from home a great number of shareholders to whom this was known met me in the street, and asked me, "What are you going to do?" and each one had his particular views as to what should take place. I did hear suggestions about winding-up the company and bringing the whole thing back to Queensland. It was said, "Let us manage the company here." I have heard these suggestions right and left, and plenty of others equally wild, but they had no effect upon me. I am bound to say.

IT IS NOT A FACT

that my mission was to wind-up the company. I never entertained any idea of the kind.

The CHAIRMAN: It is very satisfactory to hear this. I have read you my justification, and you have heard Mr. Woodyatt's reply.

Mr. HAZLEDEAN: We are perfectly satisfied. (Cheers.)

The SOLICITOR: I think Mr. Woodyatt has covered the ground when he said he had a power of attorney which would enable him to carry out this mission if he thought fit to do so; as the Queensland Company hold the control they can carry it out, and if the Queensland Company can do it, Mr. Woodyatt, as their delegate, can do it.

Mr. WARDMAN: Has the mine plenty of quartz?

Mr. WOODYATT: There ought to be an enormous body of quartz when the mine is developed. I saw the statements in the original prospectus, but do not feel called upon to make any remarks upon them.

Mr. JENKINS: Mr. Smyth was here at the time.

Mr. WOODYATT: The statements were founded upon facts as far as they could be ascertained. The ground was not opened so far as I know, except at one part of the mine, and any measurements given I suppose were founded on surface indications. Let those who made the statements explain them.

Mr. JENKINS: Was Mr. Smyth one of your shareholders?

Mr. WOODYATT: I think so.

The CHAIRMAN: I now declare this meeting to be over, and I call upon the secretary to read the notice of the special meeting.

OBJECT OF THE SPECIAL MEETING.

Mr. C. C. RAWSON here read the notice convening the extraordinary meeting as follows:—An extraordinary general meeting of the company will be held for the purpose of confirming the subjoined resolution passed at the extraordinary general meeting of the company, held at Winchester House aforesaid on Thursday, the 24th day of January, 1889. That the articles of association be altered in manner following, viz.:—(*a*) That article 29 be amended by substituting the number "7" for the number "14," and the number "14" for the number "21;" also by adding after the word "meeting" the words "or meetings;" also by adding at the end of the article the words "nor exceeding in the whole 30 days in each year." The amended article reading "The directors shall be at liberty to close the register of tranfers during the seven days immediately preceding the ordinary general meeting or meetings in each year, and also at such other times as may be determined by the directors, not being more than 14 days at one time, nor exceeding in the whole 30 days in each year." (*b*). That article 83 be amended by striking out the words, "No person (except in the case of the first directors) shall, without the assent of the board, be eligible to be elected as a director unless he shall have been the registered holder of 500 shares for at least three months," and inserting instead thereof the words following, viz.: "No person shall be a director who is not the holder of 500 shares in the company, on which all calls shall have been duly paid." (*c*) That article 85 be amended by striking out the words ("except in the case of the first directors, and any director elected with the assent of the board"), the sentence as amended then reading "a director shall ipso facto cease to be a director upon his ceasing to hold the number of shares required by article 83, provided, nevertheless, that this article shall not apply to the present directors or either of them, if they or he shall procure the necessary number of shares within six months from the date of the confirmation of this resolution." (*d*) That article 86 be amended by striking out the words, "together with a sum equal to 5 per cent. upon the amount available for dividend in each and every year."

The special resolution was moved by the CHAIRMAN, seconded by Mr. CHAS. CLARK, and was carried unanimously.

On the motion of Mr. JENKINS, a cordial vote of thanks was passed to Mr. Mace for his courtesy in the chair.

The proceedings then closed.

LATEST REPORT FROM THE MINE.

Under date of December 31st, Mr. Higgins reports as follows to the directors:—"I have no special remark to make respecting the appearance or value of your mine. Although we meet with changes, they do not affect us very materially in the quality or quantity of stone reduced. My former remarks regarding the divergence of the auriferous matrix to the south and east is being borne out daily by facts. Sinking by the footwall has been suspended, and a winze is being sunk in advance towards the south-east ground referred to, but not far enough east to pick up the extreme or eastern hanging-wall. The reason of this will be duly explained in the course of this report; 4 ft. has been sunk in the winze, which produces crushing material of fair payable quality. Occasionally we meet with heavy dense mineral, principally iron pyrites, showing very coarse gold; this bears out my former statements that a large amount of stone is left standing in this direction. These are obvious reasons for urging the immediate sinking of a permanent shaft as begun, although only sunk 6 ft. leaders have been met with carrying gold. The shaft in question would pass through the eastern ground and prove its value, and enable you to operate on the auriferous ground east and west simultaneously, as expressed in a former report. I am also of opinion that eventually you will come on the regular formation of the reef defined within walls, as present appearances warrant this assertion. It is plain that an upheaval has taken place disturbing the line of reef, but this is only one of many in the immediate locality, and I do not hesitate to say that a connection will be traced from this to others of a similar character. I consider the present indications offer unusual promise for a vigorous exploration by following the works designed, and to facilitate the operations mentioned. I have a horse and whim in a forward state of completion. This will enable us to cope with the requirements of winding from each shaft for some time to come, as the water does not trouble us, excepting flood time, and this annoyance can be reduced by cementing a channel and conduct it through the lower tunnel. Battery: From the effects of last flood, I found it necessary to excavate a by-channel to prevent the continued damage occurring to the dam, and scooping the tailings into the creek. Crushing: 470 tons of stone has been reduced as follows:—283 from the upper workings, which yielded 175 ozs. of gold, and from the bottom of the mine 187 tons gave 277 ozs., or a total yield of 452 ozs. I have some remarks to make respecting the cleaning up, but time will not permit by this mail. The time occupied in crushing was 23 days." Under date of January 1st, the manager further reports:—"In my haste this morning getting off the last retort, and weighing the contents, I made an error in adding up the weight of gold—should read 552 ozs., instead of 452 ozs. The same mistake has gone to Europe."

MOUNT ALBION SILVER MINING AND SMELTING CO., LIMITED.

SPECIAL RESOLUTION CONFIRMED—OFFICIAL QUOTATION TO BE OBTAINED—AN EXTREMELY CAUTIOUS CHAIRMAN.

AN extraordinary general meeting of the shareholders in this company was held at Winchester House, Old Broad Street, London, on Monday, for the purpose of considering and, if deemed advisable, of confirming the special resolution to alter the articles of association passed at the general meeting, held on the 28th January last—G. Sichel, Esq., presided.

The notice convening the meeting having been read.

The CHAIRMAN said: Gentlemen, this is merely a formal meeting to confirm the various alterations in the articles of association agreed upon at the last meeting, and the secretary will be good enough to read them out, so that we can pass them in due form. It was absolutely necessary, from a legal point of view, that this meeting should be called, and we did not expect much of an assembly to-day.

SPECIAL RESOLUTION.

Mr. J. O. JACOBS (solicitor) read the special resolution as follows:—"That the articles of association of the company be altered in manner following, that is to say:—(1.) Art. 8.—That '5s.' in the fifth line hereof be struck out, and that '1s.' be inserted in lieu thereof. (2.) Art. 9.—That the words 'not fully paid' be inserted in the second line hereof, after the word 'shares.' (3.) Art. 11.—That at the end hereof the following words be added: 'Provided no call shall exceed 25 per cent. of the nominal amount of the share, and be made at intervals of not less than two months.' (4.) Art. 15.—That the words 'in such form as the board may approve' in the second line hereof be struck out, and that the words 'in the usual common form' be inserted in lieu thereof. (5.) Art. 50.—That the word 'fifth' in the third line hereof be struck out, and the word 'tenth' substituted in lieu thereof. (6.) Art. 70.—That the words 'other than the first directors and any other directors to be appointed under the next article' be struck out. (7.) Art. 73 (sub-sec. II).—That the following words be inserted after the words 'or raised' in the fourteenth line, namely, 'provided that, without the sanction of a general meeting, the amount borrowed shall not exceed 100,000*l*.'"

The CHAIRMAN: Gentlemen, I will now move the resolution embodying those alterations en bloc, and perhaps some gentleman will be good enough to second it.

Dr. R. MANSELL JONES seconded the motion, which was agreed to nem. con.

A STOCK EXCHANGE QUOTATION.

The CHAIRMAN: As soon as these resolutions are properly put into form we shall go to the Stock Exchange to obtain an efficient quotation for our shares, which I trust may have a salutary and advantageous influence upon their value. (Hear, hear.) The report from Mr. Bayldon, a mining engineer upon the mines, is in the printers' hands, and will be passed very soon, and the accounts are now with our official accountants, and we trust that we shall have them shortly. I think I may say they will read rather better than I led you to hope at the last meeting, as owing to a mistake in the cypher from the other side, we over-estimated our cost-sheet by something like 3,000*l*., which will be

3,000*l*. TO THE GOOD

on the year's working.

Mr. HOLLAND: Will you kindly let us know, if you are in a position to do so, what the results for the month, as stated in the circular forwarded to us, are likely to be?

The CHAIRMAN: I can tell you what one lot of bullion has realised—about 47*l*. to 48*l*. a ton.

Mr. HOLLAND: I refer to the 43,000 ozs. of silver—can you say what profit that is likely to leave?

The CHAIRMAN: I cannot possibly tell you, as it would be an absolute guess. 60 odd tons realised about 2,800*l*.

Mr. HOLLAND: It would leave a satisfactory profit, as far as you know?

The CHAIRMAN: We trust so, but I cannot say definitely until we get our accounts completed. I made a statement at the last meeting, which was based necessarily upon telegraphic advices, and now we find that through a mistake in the code we took the month's cost at 6,500*l*., instead of 3,500*l*.

Dr. MANSELL JONES: When will the desilverising plant be at work?

The CHAIRMAN: I believe it is at work now. You refer, I presume, to the enriching plant.

A SHAREHOLDER: The furnaces.

The CHAIRMAN: The furnaces are for smelting the ore into bullion. We then pass the bullion through an enriching process, and thus we get more silver and less lead in the shipments, and are able in this way to effect a saving in carriage. We are going to leave the rough lead out in the colony until next year, when we hope to have the railway and cheap communication, so that we can ship the lead itself with a very small portion of silver to advantage.

Dr. MANSELL JONES: When will the new smelter be at work?

HE NEVER PROPHESIES UNLESS HE KNOWS.

The CHAIRMAN: I am quite of the opinion of the Yankee, who said he never prophesied unless he knew. There is the difficulty of transport, and then putting up the smelter. If there is any little thing wanting it may cause us weeks of delay, and, therefore, anything I might say now you might afterwards throw in my teeth, and say I misled you. I think June or July ought to cover it, but I should not like to be positive about it. You have no smiths' shops or engine shops there that you can send to for anything; you might have to send to Sydney, or even further, for it. We, however, sincerely trust, and hope, that we shall not require to do so; for the machinery has been shipped under the careful superintendence of the engineer who attended to the building of it, and we expect he has everything perfectly ship-shape.

Dr. MANSELL JONES: When will it arrive at Port Douglas?

The CHAIRMAN: It has arrived at Brisbane, but not at Port Douglas.

Dr. MANSELL JONES proposed a vote of thanks to the chairman, which terminated the proceedings.

THE PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION.

LARGE INCREASE OF BUSINESS.

THE forty-eighth annual meeting of the Provident Clerks' Mutual Life Assurance Association was held at the Cannon Street Hotel, on Wednesday, 20th February—Edward Coleman, Esq. (the chairman of the company), presided.

Mr. JOHN EDWARD GWYER (secretary) read the notice convening the meeting and the report of the directors.

The CHAIRMAN, in moving the adoption of the report and balance-sheet, said it was a matter for hearty congratulations that the directors were in a condition to place before the assurers so good a report and balance-sheet. Their business had increased during the year fully as much as had been expected. The new assurances effected in 1888 were 1,184 for 241,524*l.*, producing a new annual income of 7,834*l.* 2s. The income for the year from premiums was 117,383*l.* 6s. 2d., and from interest and dividends 58,260*l.* 14s. 11d., and after payment of, or provision for, claims and all outgoings for the year, including 70,437*l.* 18s. 6d. for cash bonuses paid to members, the funds of the association at the 31st December, 1888, amounted to 1,449,482*l.* 19s. The claims by death included 292 policies, assuring with bonuses the sum of 83,780*l.* 17s., and 18 endowment policies for 4,598*l.* 10s. also matured. The management expenses had been less than last year—somewhere about 6s. 8d. per cent. less. He believed that the whole expenses of the association would be held to be very moderate indeed, when it was taken into consideration the large amount of details they had to encounter. With regard to interest—it was within the knowledge of all of them that the rate of interest on money was receding, and they could not expect to get the good 5 per cent. or a little more, but still he was pleased to say the rate of interest for the past year, including the unremunerative assets, produced a net return of 4*l.* 2s. per cent., and on invested assets, 4*l.* 7s. 3d. per cent. (Cheers.) He was sorry to say that Mr. Hy. Oakley had resigned his seat at the board through pressure of other business. The chairman concluded by urging the assurers to use their best efforts to make the 49th year of the association a much greater success than any of the previous years.

The report was then unanimously adopted.

The retiring directors were re-elected, and Mr. Wm. Grinling was elected to fill the vacancy caused by the retirement of Mr. Hy. Oakley.

A vote of thanks to the chairman closed the proceedings.

VAN MINING CO., LIMITED.

REPORT OF THE DIRECTORS.

THE directors submit the accounts, duly audited and made up to December 31st, 1888, embracing a period of 14 calendar months. During the time under consideration a very considerable amount of exploratory work has been done in the mine, especially in the 135 south of the main lode, where, as will be seen from the agent's report, the indications of success are cheering and satisfactory. The working account shows a profit of 86*l.* 15s. 5d. on the whole period, thus reducing the balance standing to the debit of the account to 786*l.* 14s. 11d. The efforts of the directors in the early part of the year were directed towards getting a reduction in the royalty, and the representations made were so far successful as to obtain a temporary reduction from 1-14th to 1-18th. The negotiations with the Van Railway, mentioned in the last report, have been discontinued, and the arrangements heretofore existing with that company therefore remain in force.—W. J. LAVINGTON, Secretary.

The report of the manager is a synopsis of those we have published from week to week.

UNDER the title "The True Position of Patentees," Mr. H. Moy Thomas has published through Messrs. Simpkin, Marshall and Co., a little book in which the patent laws and regulations at home, abroad, and in our colonies and depeudencies, are explained for the information of English inventors.

THE ARIGNA (CONNAUGHT) MINING COMPANY.—(From a correspondent.)—At the first half-yearly meeting of the above company, held at Ballinamore, the report of the directors and audited accounts having been adopted, the managing director reported that the coal shaft and incline plane were almost completed; coal of a superior quality was being raised and sold, and it was praised by the guardians of the Mohill Union, the locomotive superintendent of the Cavan, Leitrim, and Roscommon Railway, as well as the engine-drivers of that line. Prof. Tichborne, LL.D., of Duhlin, has given the following analysis of this coal:—"Moisture and loss on heating to 212 deg. F., 1.25; ash, 6.40; nitrogen, 1.55; sulphur, 1.20; carhon, with hydrogen and oxygen, 89.60: 100.00. It is a friable coal of a bituminous character, giving a flaming combnstion. Its heating power is high, and not much under fine Irish anthracite. One gramme of this coal hurnt in a Thompson's calorimeter gave a rise of temperature equal to 6.8 deg. of Farht. or 14.205.2 units of heat. The sulphur and nitrogen being low makes this a valuable coal. I should think it is specially valuable for making compressed fuel."

MINING IN CORNWALL.

(FROM OUR CORRESPONDENT.)

THE Mines Share Market during the past week has been exceedingly dull, and very few shares have changed hands. Just when the tin market was expected to improve it began to weaken, and it has been easier during the week, although the sale of tin ores last Tuesday was quite up to expectations. The most important feature in the mine market has been the drop in Wheal Agar and East Pool shares in consequence of the breakage of the heam of the pumping engine at the former miue. Agars have fallen to 11*l.* and East Pools to 34*l.* East Pools have receded in consequence of the fear of their heing unable to pump the water of the two mines, and also the fear that during the time Wheal Agar engine may be idle for repairs that the water may accumulate in the bottom levels of East Pool. If this should be the case it can only be temporary, and cannot warrant the heavy drop which has taken place in the shares. It is not at all likely that this can make any perceptible difference to the returns of East Pool, as they have plenty of ground available in the upper levels. Carn Breas have been firm at 13 for the settling and 13⅜ for the meeting. Cook's Kitchens have been steady at 11½ and 11¾ for the meeting. Good business has heen done in Killifreths at 26s. for the settling and 27s. for the meeting; South Croftys firm at 8; West Frauces advanced to 9½, but close easier at about 9. West Setons firm; there are buyers at 6; Wheal Uny, ⅜ to ½. There are sellers in Tincrofts at 11 for the settling and 11¼ for the meeting. West Kittys have been more enquired for at 6⅝, 6⅞ for settling, and at 7 for meeting, and close firm. It has been known that the water has been in South Frances Mine for the whole of the 16 weeks, and at the meeting on Thursday a heavy call was expected, but the majority of the shareholders thought a 10s. call would cover the loss, and they were rather surprised at the meeting to find the loss had been 2,884*l.*, which brought the balance against the mine to 2,975*l.*, and instead of a 10s. call, 15s. was needed to clear of this balance. However, as they were bound to accept the inevitable, the call of 15s. was unanimously adopted. This will briog in 3,300*l.*, and after deducting the 5 per cent. for cash payment of call, will leavc a clear sum of 3,200*l.* to wipe out the balance against the mine. There were bnyers in South Francis at 6 before the meeting, and after the meeting they rose to about 6¾. Closing prices of principal shares were as follows:—Carn Breas, 13*l.* 2s. 6d. settling, and 13*l.* 7s. 6d. the meeting buyers. Cooks Kitchens quiet, about 11¼. Dolcoaths, 102 to 102½ settling, and 102¾ to 103¼ for meeting. East Pools, buyers at 34 for the meeting; sellers, "sh7." Killifreths, buyers at 26s.; and sellers at 26s. 6d. for the meeting. Tincroft, 11 to 11¼ the meeting. West Frances, 9 to 9¼ for meeting. West Setons, 5⅞ to 6⅛ for meeting. Agars, buyers at 11 for meeting, and sellers 11½. Bassets nominal at quoted prices.

There was a slight stir in the share market here on Thursday night, when it was known that the price of tin had rallied 10s. per ton, and shares all became firmer. Hopes are now expressed here that the rise will continue, and even with the present price the outlook is much more eucouraging. Violet Seton engine was stopped on Thursday morning, and the men have pulled up the bucket rods.

THE YURUARI CO., LIMITED.

WE are informed by the assistant secretary that the mid-monthly mail from the mine has arrived, dated Chile 2nd January. In his letter the superintendent states that he informs the directors, with regret, that on the previous night a serious accident occurred in the mine by the falling of a portion of the hanging-wall in No. 12 stope east, causing the death of one of the corporals, aud serious injury to a miner. Owing to this accident operations were, as customary, entirely suspended until after the funeral, and he fears that a few days will elapse before all the men resume work. He regrets to state that the quartz milled up till the previous day had not given as good a return as he had anticipated. The amount put through the mill was about 900 tons, from which rather less than 300 ozs. of gold was obtained, being 10 days work, with an average of 40 stamps. He states that he has been enabled to make a further reduction in working expenses, especially in connection with the mill, which will amount to a considerable sum when he is able to keep the mill running continuously with 60 stamps. The superintendent's letter is largely composed of departmental details, with a report, as above stated, giving the result of investigation in the different departments with a view to further economies. The agents at Bolivar, under date 31st January, state that they have received a communication from Mr. Aikman since the mail left, advising that a considerable improvement has taken place in the appearance of the quartz, and that he expects a good result for the month of February. Shipping documents for the tailings have been received, and it is expected these will he delivered here in a few days.

THE WEST ARGENTINE GOLD CO., LIMITED.

BETTER NEWS FROM THE MINE.

JANUARY crushing, 525 tons, yielded 206 ozs. gold. The following results are given of trial crushings from two new mines belonging to this company:—No. 1, average of ore at pit mouth coming from below 60-ft. level: Weight of ore treated, 224 lbs.; gold obtained, 4 dwts. 2.2 grs.; average per ton, 2 ozs. and 22 grs. No. 2, average of ore on brow of hill, width 3 ft.: Weight of ore treated, 224 lbs.; gold obtained, 7 dwts. 20 grs.; average per ton, 3 ozs. 18 dwts. 8 grs The above are encouraging indications, but further explorations are being made to ascertain the value of the respective reefs.

HOLLOWAY'S OINTMENT AND PILLS.—These remedies are unequalled throughout the world for bad legs, wounds, foul sores, bad breasts, and ulcers. Used according to directions given with them there is no wound, bad leg, or ulcerous sore, however obstinate or long standiug, but will yield to their healiug and curative properties. Many poor sufferers who have been patients in the large hospitals under the care of eminent surgeons, and have derived little or no benefit from their treatment, have been thoroughly cured by Holloway's Ointment and Pills. For glandular swellings, tumours, "piles," and diseases of the skin there is nothing that can be used with so much benefit. In fact, in the worst forms of disease, dependent upon the condition of the blood, these medicines, used coujointly, are irresistible.

A large stock of Second-hand Machinery, in good condition, always on sale, viz., Cornish Pumping Engines, with cylinders from 100 inches diameter (500 h.p.) down; Winding and Stamping Engines, Steam Capstans, Ore Crushers and Dressing Plant, Boilers of various sizes, and Pitwork in great variety from 20 uches down.

The List will Open for Applications on Monday next, the 25th inst., and Close on Tuesday, the 26th inst. both for London and Country Applications.

Mr. Archibald E. Pinching, now her Majesty's Inspector of Mines for the South Western (Cornwall) Division of England, and formerly mining manager of one mine on The Kruisrivier ("Whitehead's") states that from an adit level driven on the course of the lode, some four or five hundred feet in length, ore was obtained which returned 16 ounces of gold to the ton, and he adds:—"I have no hesitation in saying that the further development of this property offers an excellent field for the employment of enterprise and capital." Ore raised from one mine on the Kruisrivier Estate has realised £25,112 on a share capital of £13,000. Area of Estates 20,000 acres freehold land, and the right to purchase 31,000 acres, making in all 51,000 acres, or about 80 square miles.

THE KRUISRIVIER ("WHITEHEAD'S") ROODEPORT AND BLOEMHOF (TRANSVAAL) ESTATES COMPANY, LIMITED.

SECRETARY AND OFFICES.

J. DURIE PATTULLO, Esq., F.S.S., 31, ST. SWITHIN'S LANE, E.C.

THIS Company is formed to purchase the mineral and freehold properties known officially and marked on the maps as "Kruisrivier" ("Whitehead's"), "Roodeport," and "Laagersdrift." Area, about 20,000 acres.

The Company also acquires the right to prospect for minerals over the following farms, with the option to purchase each or all of them upon advantageous terms:—

Name.	Approximate. Area.		District.
Grootlaagte	2,500	Morgen	Bloemhof.
Grootdoorns	3,000	do.	Bloemhof.
Harts Rivier Diamant...	1,000	do.	Bloemhof.
Wild Goose Lodge	3,000	do.	Bloemhof.
Hakdoornkuil	3,000	do.	Nylstroom.
Plaat Doorns	3,000	do.	Nylstroom.
Total	15,500	Morgen=31,000	English acres.

It is intended to prospect all the properties, and subsequently to form subsidiary companies to develop the rich mineral deposits.

The Bloemhof Estate is in the district of Bloemhof, and lies between Witwatersrand, Klerksdorp, and Kimberley, and also on the authorised line of railway. The Nylstroom properties are in the heart of that gold-bearing district.

The "Whitehead's" is on the Oliphants and Salons Rivers, within 40 miles of Middelburg, in a direct line with the Government course of the Main Trunk Line Railway from Delagoa Bay.

The reefs on the "Whitehead's" are in true silurian formation, and the lodes have an east and west bearing, with an average width of 4 ft. with a dip of about 70 degrees.

The following table shows a quantity of mineral ore produced at the mine on the "Kruisrivier" estate, and sold in Europe on the basis of Messrs. Johnson, Matthey and Co.'s assays:—

The *Manchester Guardian* of Friday, 15th February, 1889, state that:—"With reference to the alleged settlement of the dispute between the Delagoa Bay Railway Company and the Netherlands Company, which holds the concession for the continuance of the Transvaal section of the line to Pretoria (already reported by telegraph), a South African paper has the following: 'We hear on the very best authority that the conference between Mr. Steward, representing the Delagoa Bay Railway Company and the President, has led to a very satisfactory termination, insomuch as the tariff for 99 years has been decided upon, and the construction of the line will be commenced immediately. Barberton people will be pleased to hear that it has been decided to lay the line viâ Barberton, instead of by the originally contemplated route, the Crocodile River. This arrangement is approved of by the Netherlands concessionaires.'"

Mr. Archibald E. Pinching, now Her Majesty's Inspector of Mines for the Cornwall Division of England, and who for two years was manager at the mine on the Kruisrivier estate, in his report on the property, dated January 28th, 1887, which accompanies this prospectus, states that from an adit level driven on the course of the lode, some 400 or 500 ft. in length, ore was obtained which gave 16 ozs. of gold to the ton. This mine has produced ore, which, on the assays of Messrs. Johnson, Matthey and Co., has realised no less than £25,112 as certified by their account sales, now in the possession of the directors, and which can be seen at the offices of the Company. These remarkable returns were obtained on a capital of 13,000*l.*, when mining and transport charges in the Transvaal were necessarily much higher than at present.

The auriferous cobalt ores from the Kruisrivier Mine have realised extraordinary values, as seen from the tabulated statement above.

As another evidence of the remarkable mineral richness of this estate, Mr. Pinching states in his report that on sinking some 40 ft. or 50 ft. copper was discovered on a very rich deposit, and he has no doubt whatever that a valuable lode could be opened up.

The lots of cobalt ore marked * were also analysed for gold by Messrs. Johnson, Matthey and Co. The 3 tons 17 cwt. 2 qrs. 26 lbs. from the Kruisrivier Mine yielded 1 oz. 19 dwts. of gold per ton, and 2 tons 6 cwt. 1 qr. 8 lbs. from the same gave 2 ozs. 12 dwts. of gold per ton.

The vendor has fixed the purchase price for the properties at £200,000, payable £50,000 in cash, and the balance in cash or shares, or cash and shares, at the entire option of the directors.

The following contracts have been entered into, and copies of which can be inspected at the offices of the Company's solicitors—namely, a contract dated the 24th day of January, 1889, between Peter Alfred Taylor, Harry Taylor, William Taylor Malleson, Frank Rodbard Malleson, Morton Green, Paul Bradshaw Fearon, and Walter Malleson Fearon, of the one part, and John Berger Spence, of the other part; a contract dated the 26th day of January, 1889, between David Seeligsohn, of the one part, and John Berger Spence, of the other part; and a contract dated the 20th day of February, 1889, between John Berger Spence, of the one part, and the Company of the other part.

The vendor will pay all the expenses connected with the formation of the Company up to the date of the first allotment of shares. Arrangements relating thereto have been entered into by him with various persons, which may technically constitute contracts within the meaning of the 38th Section of the Companies Act, 1867. Applicants for shares must be deemed to have notice of and to waive the specification of dates and names of the parties to any such contracts, and to accept the above statement as sufficient compliance with Section 38 of the Companies Act, 1867.

Applications for shares should be made on the form accompanying the prospectus, and be sent to the bankers or the secretary, accompanied with a cheque for the amount of 5s. per share on the number applied for. In the event of no allotment being made, the deposit will be returned without any deduction, and where the number of shares allotted is less than the number applied for, the surplus will be credited in reduction of the amount payable on allotment. Forms of application for shares can be obtained at the offices of the Company, or from the bankers, brokers, or solicitors. Specimens of the ore can be seen at the Company's offices.

PROSPECTUS.

THIS Company is formed to acquire an important mining concession which has been granted by Sigcau, the Paramount Chief of Pondoland, to James Read Girling, representing the Pondoland Syndicate of London, giving the sole and exclusive right and title to the concessionaire for 20 years to explore and work for all minerals and precious stones in the territory of Pondoland.

MAP OF THE COUNTRY.—The map, which accompanies the prospectus, prepared by Messrs. Stanford, shows the country which lies between Cape Colony and Natal on the East Coast of South Africa, and is estimated to contain upwards of 5,000 square miles, equal to over 3,000,000 of acres. A good road has recently been constructed by the Cape Government from Kokstad, in East Griqualand, right across Pondoland to the mouth of the St. John's River.

MINERALS.—The Concessionaire has resided for some years in the Colony of Natal, and has also lived for some time in Pondoland, and states as follows:—That he knows the country to be rich in both gold and copper, but that up to the present time no systematic prospecting or mining has taken place, owing to the refusal of the late Paramount Chief of Pondoland to admit Europeans to his territory for that porpose; that copper ornaments worn by the natives are made from ore found in the territory; that free gold has lately been obtained to his knowledge from quartz quarried from a reef in the country, and that he believes, from personal observation, that coal will also be found in parts of the territory.

TIMBER AND WATER.—He further states that the country is well timbered and watered (the concession includes the right to timber and the use of water), and that there is always a sufficient depth of water at the mouth of the St. John's River, which flows through a part of the territory, to enable the Company to land all machinery there, and also to ship ores, without the heavy expense of long land carriage, which is so great a drawback in working the Transvaal Mines.

CLIMATE AND LABOUR.—The climate is healthy and mild, and labour both cheap and plentiful. There is practically no winter, and work can be carried on all the year rouud.

Sir Donald Currie, K.C.M.G., M.P., in a paper read before the Royal Colonial Institute on the 10th April, 1888, and published in "The Colonies and India," of the 11th April, 1888, refers to Pondoland as follows:—

"I have spoken of Pondoland as practically under British influence. This country stretches from the north-eastern frontier of Cape Colony to the Natal frontier, and with a sea-coast line of about 120 miles. The entrance to St. John's River, the Pondoland, is held by the Cape Colony, whose Government is represented by Customs officials and by a detachment of the Cape Mounted Rifles. I was much impressed with the magnificent scenery along the whole coast of Pondoland, and particularly the entrance to the St. John's River. It reminded me of Skye. The territory abounds in minerals."

DEVELOPMENT AND PROSPECTS.—The territory included in the Concession being so large, it is the intention of the board to prospect and develop in sections, and as the work proceeds to establish sub-companies and grant sub-concessions. An application has already been received for a sub-concession to mine for gold from a gentleman well known to the concessionnaire, and formerly a member of the Legislative Council of Natal.

By the terms of the concession, no tax or duty is payable upon machinery, plant, or materials of any kind, including provisions and clothing, imported into country, and the Paramount Chief guarantees full protection to life and property enjoyed under the concession.

The terms upon which the Company acquire the concession have been fixed by the vendor, and are as follows viz., the sum of £40,000 in cash, and £66,500 in fully-paid shares, and an annual fixed rent of £500 payable under the concession, and a royalty of 2½ per cent. to the vendor on the value of the minerals raised, leaving a balance of £93,500 as working capital.

In the Blue Book of Pondoland for 1888 some statements appear, from which it may be inferred that Nquiliso, a chief in the part of Pondoland to the south-west of the St. John's River, claim rights over that portion of the country, independent of Sigcau. (This portion is rather more than one-fourth part of the country.) The concessionnaire states this is not the fact, and that up to November last, when the concession was granted, Sigcau was the acknowledged paramount chief over the whole of Pondoland, but to prevent any loss to the Company in respect of Nquiliso's possible rights, the concessionnaire agrees that the directors shall retain one-fourth part of the consideration money and one-fourth part of the vendor's shares in hand until the Company shall have received possession of the mining rights over the whole country.

MANAGEMENT.—The concessionnaire is willing to make arrangements with the board to take the management of the Company's property, and to proceed at once to Pondoland to take charge of the exploring operations. Mr. A. Gordon, one of the directors who had been through Pondoland aud knows the country, is willing to accompany and co-operate with him.

The only contract entered into is dated the 20th day of February, 1889, and is made between James Read Girling, the vendor, of the one part, and J. A. Scrivener, as trustee for the company, of the other part. This contract, as well as the original concession, can be seen at the offices of the Company's solicitors. In addition to the above-mentioned agreement, the vendor has entered into agreements with various persons with reference to the promotion of the Company, and the distribution of the proceeds of sale. As these may technically constitute contracts within the meaning of section 38 of the Companies Acts of 1867, applicants for shares must be deemed to have waived the insertion of dates and names of the parties to any such arrangements or contracts, and, in order to prevent any question, must accept the above statements as sufficient compliance with that section, and applications will be received subject only to this provision.

The vendor will provide all preliminary expenses of the formation and bringing out of the Company, and the issue of its capital up to allotment.

Applications for shares should be made on the form accompanying the prospectus, and sent with the deposit of 2s. 6d. per share to the Company's bankers. Should no allotment be made to any applicant, the deposit will be returned in full, and if the number of shares allotted be less than the number applied for the balance of the deposit will be credited in reduction of the further amount payable on the shares allotted.

A Stock Exchange settlement and quotation will be applied for in due course.

Prospectuses and forms of application can be obtained from the bankers, brokers, solicitors, and at the Company's offices.

February, 1889.

THOS. THOMPSON,

STOCK AND SHARE DEALER,

ANGEL COURT, LONDON, E.C.

Telegraphic Address: "NOSMOTH, LONDON." **Telephone No. 509.**

Mr. THOMPSON transacts business in all classes of Securities, Bonds (Foreign and Colonial), Banks, Railways, Insurance, Telegraph, Tramway, Gas, Water and all Miscellaneous Shares.

Shares sold at special prices for forward delivery (one, two or three months) on deposit of 20 per cent.

ORDERS BY LETTER OR TELEGRAM PROMPTLY ATTENDED TO.

A FOURTH GRAND MINING PRIZE.

COLON GOLD SHARES (17s. 6d. Paid)

Now at 10s. to 11s., are rising, and may possibly before long reach £5 or £6.

ORDERS SHOULD BE TELEGRAPHED AT ONCE.

See Mr. THOMPSON'S MINING AND INVESTMENT CIRCULAR.

PRESS OPINIONS OF THIS CIRCULAR.

"Financial World," 12th January.

"Mr. Thomas Thompson's literary proclivities, like the properties he writes about, seem to be exhaustless. His circular has now reached colossal proportions. But that in itself is nothing, and it is not on this ground that we recommend the perusal of his excellent work. It is in consequence of the reliableness of the information therein contained. We have been readers of it ever since he commenced its publication, and we do not remember ever meeting with a siugle recommendation which has turned out the reverse of what he predicted. This is about the highest compliment that can be paid to the writer of any circular issued for the guidance of the uninitiated, and happy ought the clients of Mr. Thompson to be who have so trustworthy and prescient a guide. A new departure has been made in the circular by the introduction of an elaborate list of South African mines, their capital, the amount issued, their past and present prices, the dividends paid, quantity of ore crushed, number of stamps at work, and the extent of the property. Although he gives a full list—in fact, one of the best and most complete we have seen—he only recommends those which are worthy of attention. Should his advice on these turn out to be as accurate as that with respect to his other advices—and we have every reason to believe it will—his circular will be the best stock and share vade mecum extant."

"Mining World," 12th January.

"The January issue of Mr. Thompson's Mining and Investment Circular conveys a large amount of useful information, which cannot fail to be of interest to the public. Well arranged, and written in readable style, it is difficult, once the perusal is commenced, to set it down until the last page has been reached. Mr. Thompson takes a hopeful view of the present year, which he justly states has opened in a prosperous fashion. He is able to point triumphantly to his recommendations in the latter part of last year, and to the substantial rise shown upon many of them at the present time. He believes that this will be a booming year in all descriptions of mining speculations, and he is not without reasons for the faith that is in him. Of course, he believes principally in the mines of Colombia, which to a large extent, he has been the means of introducing to public notice—notably the Orita Company, the shares of which have (vide his list) risen from 27s. 6d. last January to 41s. at the present time, thus fulfilling not the least remarkable of his earlier predictions. He speaks very highly of Tetuan, in which, without doubt, there has been an enormous business, and market opinion points to a still further rise in a future that is neither dim nor distant. He gives a great deal of information respecting the somewhat mysterious mines of South Africa, and an excellent list for reference. He is not unmindful of the claims of other companies, and has much to say repeeting promising concerns, such at New Emma, Eberhardt, Denver, and several Venezuelan Mines. The special article on 'The United States of Colombia' is well worthy of perusal, and the whole production, as we have said, will both interest and instruct the investor."

"Mining World," 2nd February.

"Mr. Thomas Thompson's Mining and Investment Circular.—The appearance of this circular will be welcomed by a large section of the public, who have come to regard it as the embodiment of much useful information and shrewd advice. Mr. Thompson does not profess to see further into the ground than other people, but his forecasts in respect to the probable advance of the shares he has recommended have been singularly accurate. Notably has this been the case with Tetuan shares, which from half a crown have advanced to half a guinea, and, in his opinion, look like rising still further. He takes up his parable again with respect to the Colombian Mines, which he was largely instrumental in introducing to the public, and specially mentions Orita—the December return from which is hourly expected. He does not forget Colombian Hydraulic Company, and a new concern which will be out in a few days, and which is being syndicated in the House. Lengthened reference is made to El Cana Mines, which are being worked by the Darien Company, registered in 1887, and whose chief offices are at Liverpool. Of South African Companies he gives in terse language a general synopsis of all the news that has come to hand since the issue of his last Circular. He condemns the action of the Committee of the Stock Exchange for not giving facilities to deal in these shares, which are now largely operated in on the Paris Bourse. He gives a map of the Witwatersrand Mines, which must prove useful for reference. We quite agree with Mr. Thompson in his estimate of Indian mines, the improvement in which has not escaped his attention, and in order to impress this view upon the public he has quoted the list which appeared in our columns early in the year, showing the actual position of all the mines and what they have done from the commencement in the way of gold returns. Altogether the circular apart from the recommendations which it gives to investors, and which are worthy of all consideration, should be read for the information it contains, which has been compiled with much industry and with commendable accuracy.

"Pump Court," 23rd January.

"We have before us the Mining and Investment Circular for the fortnight ending January 8th, of the judicious and well-esteemed broker, Mr. Thomas Thompson, of Angel Court. This circular is fast assuming the proportions of a very respectable journal, and the information contained in it is palpably the work of one who knows what he is writing about, instead of the padding and mere hash up of stale news that we find in many a so-called weekly (or is it weekly?) newspaper. A paragraph in the circular attracts our attention. Mr. Thompson modestly suggests to his readers that it is hardly fair that those taking advantage of the advice contained in his circular should transact their business (the value of which they were helped to the knowledge of by the circular) through the other brokers. Every honourable man will admit the truth of this. It certainly is not fair, but we go further and say it is not always safe. Between the time of the publication of the circular and the time when the reader determines to operate, many things may occur, and the master mind whose practised intelligence and experience is ever on the alert, is more than ever needed as a guide. No good ever came of stealing other peoples thunder, and you can never tell where you may be landed if you make use of another man's brain without being guided by him at the final process."

"Stock Exchange Times," 12th January.

"Mr. Thos. Thompson's Mining and Investment Circular.—We have before us a copy of the issue dated January 8th. It is really most valuable for investors as well as speculators, containing, as it does, so much information which has never before been published in so complete and convenient a form. A very interesting feature of this circular is a complete list of South African Mines, giving the name of each, amount of their respective capitals, amount issued, the price of the shares, and the sum for which the mines are now selling their property, dividends, crushings, and result obtained, together with the address, name and address of the secretary or agent, and chief office, besides notes upon 40 different concerns, and advice with regard to them. There is also a very exciting report on the mines of Cana, translated from a recent work published in the Spanish language. Mr. Thompson's circular is, without doubt, the best which has yet been published by a London broker, and it would not be surprising to see it take a high place even in the financial press."

"Stocks and Shares," 12th January.

"We have been favoured with a copy of Mr. Thompson's Mining and Investment Circular, which appears to us to be, as a broker's circular, one of the most marvellous of the day. It now reaches 28 pages, and is replete with information of an interesting and withal a reliable character. One of the most interesting parts of the circular will be found in the notes on African mines, which are more complete and apparently better founded than we have yet seen even in the newspapers devoted to this portion of the Stock Markets. Those of our readers interested in mining shares will do well to write for a copy, the perusal of which will amply repay them."

"Financial Times," 11th January.

"Mr. Thomas Thompson's Mining and Investment Circular, which is issued fortnightly, will be found very useful to investors, as the information given is put forward in a remarkably complete form."

"Money Market Review," 12th January.

"Mr. Thomas Thompson's January Circular covers, within a comparatively small space, an exceptionally large amount of information. A feature is made of African mines and, as these are now being largely dealt in, Mr. Thompson's circular will doubtless prove very interesting."

"Financial Chronicle," 5th January.

"There has been a gradual rise in Tetuans during the last few days, probably on the strength of favourable reports from the property. On the same grounds, they will no doubt see another advance before the close of the account."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"The Capitalist," 12th January.

"Mr. Thomas Thompson's Circular for January contains a review of the Mining Markets, which is written with a fulness of knowledge, and is drawn out in a decidedly interesting style. The remarks on South African shares are well worthy of perusal, as they treat in great detail on the subject of absorbing interest at the present time amongst those interested in mining matters. There is a good chapter on Hydraulic Mining, which leads up to a consideration of the Tetuan mine and its present position. Mr. Thompson confidently recommends these shares for an important rise."

"Stock Exchange," 12th January.

"We have to acknowledge the receipt of Mr. Thos. Thompson's 'Mining and Investment Circular' for January. Mr. Thompson's circular becomes more complete with every month, and he may fairly claim that his forecasts have been largely justified by the event."

"Life," 6th December.

"In our advertisement columns will be found Mr. Thos. Thompson's Monthly Circular, which contains useful information to intending investors."

"Citizen," 1st December.

"Clearly there are advantages in the process known as hydraulicing over all other classess of gold mining. Hydraulic mining, as Mr. Thompson, in his 'Mining and Investment Circular,' points out, consists only in the disintegration of auriferous gravel with the help of an enormous quantity of water falling from an immense height through pipes or hose, and the automatic collection of the gold by means of the rough bottom, into which it sinks, of a sluice down which the gravel passes, together with the water used in its treatment. The system has the advantage over quartz mining in the large quantity of so-called gold dirt, which can be dealt with at the time, and the extremely low cost of the operation, seldom exceeding more than one penny to threepence per ton, thus yielding profits from ground which, under any other system, could not be made to pay. In this way and under this system it is not surprising that the Tetuan gold shares have risen accordingly, and judging by what the *Financial News* says, that 'The Tetuan will, before long, take its place among the dividend-paying list,' and the *Money Market Review*, that 'the confidence in the Tetuan gold shares appears to be well founded,' the anticipation is not unlikely to be realised."

"Stocks and Shares," 15th September.

"The last issue of Mr. Thos. Thompson's Mining and Investment Circular is as readable, and, as appears by the rise in prices of the last few days, as reliable as ever. Mr. Thompson is showing himself both a capable writer and a good adviser on all matters connected with mining."

"Mining News," 5th December.

"The recent issue of Mr. Thos. Thompson's circular maintains that supremacy over other periodicals of a similar kind, which has made it so well and so favourably known amongst the investing public. We notice Mr. Thompson still gives considerable prominence to Tetuans, and justly so; both he and his followers are to be congratulated upon the firm market position held by these shares, and the favourable prospects of a further advance."

"Society Herald," 17th December.

"Mr. Thomas Thompson, of 8½, Angel Court, Throgmorton Street, publishes a circular respecting mining stocks in general, to peruse which is a 'liberal education.'"

"Capitalist," 1st December.

"Mr. Thomas Thompson's Circular gives an excellent review of the mining markets. Great emphasis is laid upon the prospects of Colombian mines, and of Tetuan in particular. This is the most recently started hydraulic mine of the district. The Colombian Hydraulic shares are worth 32s. and Oritas 40s. These are neighbours of Tetuan, and beginning to show results of great importance. Mr. Thompson looks forward to see these mines greatly advance in price, and he predicts that as soon as the Tetuan Mine is fully equipped with the necessary appliances the shares will rapidly overtake the others. News of importance is expected daily, which may send the shares up like a rocket."

"Railway News," 1st December.

"In Mr. Thos. Thompson's Mining and Investment Circular of the 24th ult., a feature is made of hydraulic mining, of which Mr. Thompson appears to have had considerable experience, as well as of South African Gold shares, respecting which a considerable amount of information is afforded."

"Court Journal," 6th October.

"Among 'outside dealers' in stocks and shares Mr. Thomas Thompson is fast mounting to the first rank, and those who have business to transact in his way, especially mining shares, would do well to write for one of his investment circulars. These contain a large amount of useful information, besides some very readable articles upon a 'Marvellous Country,' which appears to be as extraordinary as regards its mineral wealth as it is little known. In many cases, as may be proved by former issues of this Circular, many shares recommended at only 1s. or 2s. in price have subsequently reached as many pounds."

"Court Circular," 17th November.

"That there are outside brokers of undoubted reputation goes without saying, and in naming Mr. Thomas Thompson, 8½, Angel Court, Throgmorton Street, we name one who has been established a good few years, as may be seen by referring to the Directory. Mr. Thompson periodically issues a mining and investment circular, in which he gives both information and advice, the worth of which may be gathered by the high ecomiums passed upon it by the leading financial papers."

"News of the World," 7th October.

"One of the best Mining and Investment Circulars which have yet been published is that issued by Mr. Thomas Thompson, of 8½, Angel Court, London. It gives reliable information upon no less than 56 different mining properties, besides a comprehensive article upon other stocks, including Foreign loans, railways, Americans, &c., and an article upon the United States of Colombia, a country which it is thought may prove an El Dorado to those possessing the energy, capital, and knowledge requisite for successful mining in any part of the globe. Those interested in mining shares especially will do well to obtain a copy."

"Pictorial World," 7th February.

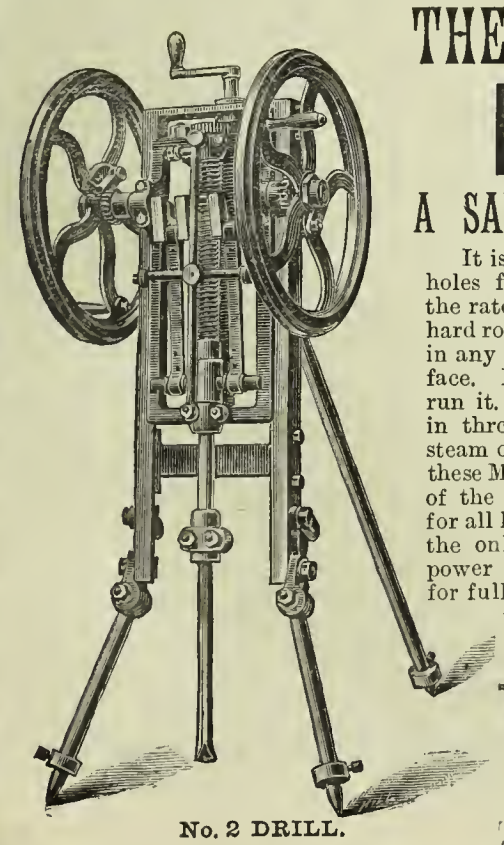
"Every two or three weeks there is a Mining and Investment Circular published by Mr. Thompson, of 8½, Angel Court, which, if the financial papers know anything, is invaluable to those interested in mining speculation. The last number, just issued, is rendered additionally attractive and valuable by four maps of the South African mining districts, which will be most interesting to the thousands who are now rushing after mining shares."

"Whitehall Review," 7th February.

"In the 'Mining and Investment Circular,' issued on the 28th ult. by Mr. Thomas Thompson, he suggests to his readers that 'it appears hardly fair that those taking advantage of the advice contained in this circular should transact their business through other brokers.' Considering that this gentleman is an acknowledged expert in mining matters, this seems only just; but, on the other hand, as the circulation of the circular is, we believe, 100,000, we hardly see how Mr. Thompson could transact the business of so many clients."

"Bullionist," 17th November.

"We have received Mr. Thos. Thompson's Mining and Investment Circular for the month of November. The articles upon 'South African Mining' and the 'Stock Exchange' show that the writer has put himself in possession of a vast amount of almost exclusive information relating thereto. On another page will be found an extract upon 'Hydraulic Mining and the Tetuan Gold Mines,' in which, like the generality of the Mining Market, Mr. Thompson appears to place much confidence."

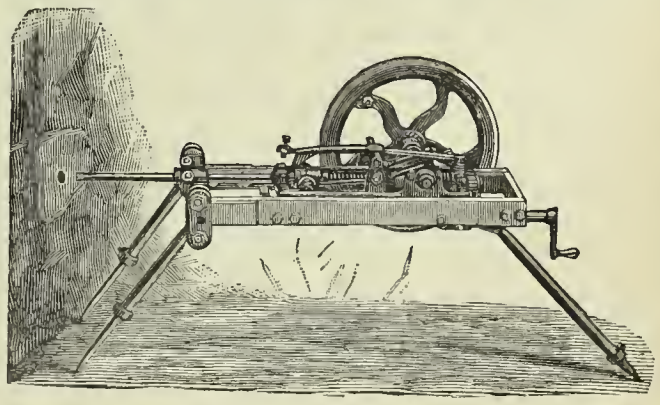


No. 2 DRILL.

THE INGERSOLL DUPLEX HAND-POWER ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND LABOUR.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in three sizes, and can be worked by steam or air if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made. Send for full description, testimonials, &c., to



No. 1 DRILL.

WELLINGTON & CO.,

(Successors to CLARK & WELLINGTON,)

MANUFACTURERS,

173a, QUEEN VICTORIA STREET, LONDON, E.C.

The List will Open on MONDAY NEXT, at 11 a.m., and be Closed for Town Applications at or before 4 p.m on that day, and at 2 p.m. on the following day for Country Applications.

THE

QUAYLE GOLD MINING COMPANY, LIMITED.

(NEW ZEALAND.)

Incorporated under the Companies Acts, 1862 to 1886, whereby the liability of the Shareholders is limited to the amount of the Shares.

CAPITAL - £120,000, IN 120,000 SHARES OF £1 EACH,

FIRST ISSUE OF 80,000 SHARES OF £1 EACH,

Of which 22,500 Shares will be allotted to the Vendors as fully-paid up in part payment of the property transferred to the Company, and the remaining 57,500 Shares are now offered for Subscription.

Payable 2s. 6d. per Share on Application, 7s. 6d. per Share on Allotment, and the balance in calls not exceeding 5s. per Share.

DIRECTORS.

ERNEST HAINES, Esq., Director of the Iquique Silver Company, Limited.

SECRETARY.

C. D. N. GRANT, Esq.

TEMPORARY OFFICES.

WOOLPACK BUILDINGS, GRACECHURCH STREET, LONDON, E.C.

THIS Company is formed for the purpose of acquiring and working the valuable gold mining property known as the Quayle gold mine. This mine is situated on a branch of the Paiakarahi, which is one of the main southern branches of the Hikutaia River. It is a continuation of the same mountain range in which are situated the celebrated Coromandel and Thames Goldfields, and is about 22 miles southward from the latter, and about 7 miles from the nearest steamboats and coaches. The district in which the mine is situated is known as the Maratoto Goldfield, New Zealand, and it is only about 12 months ago that gold and silver ore discoveries were made on this field. Up to the present three powerful lodes have been proved on the property. Assays made by Mr. J. A. Pond, Official Colonial Analyst, of samples taken from different parts of the lodes gave an average of 1 oz. 11 dwts. 17 grs. of pure gold and 15 dwts. 14 grs. of silver per ton of quartz.

As will be seen from the reports accompanying this prospectus, there is ample fuel and water available for the purposes of the mine.

Mr. James M. McLaren, civil and mining engineer, late Government Inspector of Mines, in his report of the 7th September, 1888, says :—"The total area contained within your mine is 44a. 0r. 8p., which is held by you under a gold mining licence from the Government. About 60 ft. above the creek or stream level a tunnel has been driven, and the first 130 ft. intersected no less than three large reefs or lodes, No. 1 being from 8 ft. to 10 ft. thick ; No. 2, 8 ft. ; and No. 3, 6 ft. to 7 ft. No. 3 has been driven on for a distance of 50 ft., showing gold all the way. A winze 15 ft. deep has also been sunk underfoot at this level, which proves the gold to be going downwards in the reef." Referring to the reef junctions, he says :—"The above reef junctions are vertical ones ; but, as No. 1 reef dips, or has an underlie of 1 to 1 ; No. 2, 1 in 3 ; and No. 3, 1 in 4, and all these underlies being towards the westward, it is evident that they must junction horizontally, if they keep the same course, at from 70 to 80 feet under the present tunnel level. From the number of these reef junctions in your mine, it may be expected, when the reefs are further driven on and the mine opened out at a deeper level, that rich gold deposits will be found—that is, over and above the good prospects you have obtained in the ordinary quartz which is not near any junction. The quartz proved to be what is called a 'free milling ore,' being nearly free from base materials, so that there is nothing refractory about it that will necessitate elaborate or expensive modes of reduction ; therefore, the stamper quicksilver process is all that is required, and is at the same time the cheapest process known for gold extraction. This is very greatly in favour of your mine, it being a fact well known among miners that a 'free milling ore' pays handsome dividends, while a refractory ore that tests to the same value per ton is unremunerative, on account of the great expense necessary for the gold extraction. A return as small as 2 dwts. to the ton ought to be payable."

Mr. Henry M. Smith, authorised and mining surveyor of the Thames Goldfield, in his report of the 10th September, 1888, says: —"Assays of the Quayle ore made at different times at the Thames have shown the bullion to be of a value equal to that of some of the best mines at the Thames . . . There are unmistakable evidences of other reefs which must traverse the Quayle property ; but, as no work has been done to open up or develop them, or to determine their course, I have not noted them upon my plan." He furthermore corroborates Mr. McLaren's report with reference to the nature of the ore and the size and value of the reefs. These reports the directors consider highly satisfactory, considering the official positions and recognised high character of the gentlemen who make them.

It is required to erect a mill of 20 heads of stamps, at a cost of about £10,000. It is confidently expected that with cheap milling, as laid down by the Government engineer in his report, that over 50 per cent. profit will be made, without considering any improved prospect in the mine.

The purchase-money for the property is fixed by the vendors at £60,000, payable as to £37,500 in cash, and £22,500 in fully paid-up shares.

A contract, dated the 4th day of February, 1889, has been entered into between Walter Robert FitzGerald Moore and Harry Hedley, Bush, as trustees and agents for and on behalf of the Quayle Gold Mining Syndicate, of the one part, and Charles Edward Mildenhall, as trustee for and on behalf of the Company, of the other part, reciting an agreement dated the 4th day of February, 1889, made between George Parsons Quayle, of the one part, and Walter Robert FitzGerald Moore and Harry Hedley Bush, as trustees and agents for the Quayle Gold Mining Syndicate, of the other part. This contract and the original reports of Mr. McLaren and of Mr. Smith, and the plan therein referred to, and the certificate of assays of Mr. J. A. Pond, may be seen at the offices of the solicitors to the Company, and prints of such reports and certificate, and a copy of such plan accompany this prospectus.

The vendors will pay all expenses attending the incorporation and registration of the Company, also brokerage and all expenses attending the issue of the Company's capital up to and including the first allotment, and the vendors have entered into arrangements with various persons with reference thereto. As these may technically constitute contracts within the meaning of the 38th section of the Companies Act, 1867, applicants for shares must be deemed to have waived the insertion of dates and names of the parties to any such arrangements or contracts, and, in order to prevent any question, must accept the above statements as a sufficient compliance with that section, and applications for shares will be received subject only to that provision.

Applications for shares should be made on the form accompanying the prospectus, and sent with the deposit to the Company's bankers.

Should no allotment be made to any applicant the deposit will be returned in full, and if the number of the shares allotted is less than the number applied for, the balance of the deposit will be credited in reduction of the further amount payable on the shares allotted. Prospectuses and forms of application can be obtained from the bankers, brokers and solicitors, and at the Company's offices.

22nd February, 1889.

STOCK EXCHANGE SETTLING DAYS.

Settling Days on the Stock Exchange are as follows :—

Consols—Friday, April 3rd, 1889.

Stocks and Shares.

Continuation Days.	Ticket Days.	Pay Days.
Tuesday, March 12	Wednesday, March 13	Thursday, March 14
Tuesday, March 26	Wednesday, March 27	Thursday, March 28

Telegraphic Address—

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

THE SETTLEMENT ABSORBS THE MARKET AND CAUSES BUSINESS TO FLAG—THE RUSH FOR RUBIES—SOUTH AFRICANS DOWN—COPPER SHARES WEAKER—CHEAP SHARES IN FAIR DEMAND—INDIAN SHARES FIRMER—BETTER NEWS FROM QUEENSLAND.

Home Shares.

The settlement has interrupted the flow of business, and, generally speaking, the market has been dull, flat, stale and unprofitable. The noticeable feature of the week has been the rush for rubies, to which, along with cognate particulars, we devote a leader this week. When windows are broken and people are injured, and the services of 48 policemen are called into requisition it is pretty clear that the belief prevails that there is something in the ruby mines of Burmah that is worth getting out, and that will pay for the labour and money expended. Most of the applicants who wish to secure shares will, we fear, have to pay the 3*l*. premium the market is demanding for the privilege of becoming holders. A little patience will probably enable them to come in at a much lower figure.

South Africans have been falling steadily. A decline of as much as 4*l*. in one case has been registered, and with scarcely an exception this market is on the down grade. Diamond shares are also down, and De Beers, which is the barometer of this market, indicate a fall of 1*l*. on the week.

Copper shares have also been weaker, consequent upon heavy sales in Paris reacting upon the market here. The Syndicate still stand to their guns, and copper is maintained at the old price of about 78*l*. per ton. Rio Tintos to-day fell steadily until the finish, when they closed above the lowest price reached.

Foreign shares have been in fair demand, and New Emmas rose at one time a shilling, but did not maintain the whole of the rise. The Colombian market has not been so good, and prices mark a decline. Victorys are well spoken of for a good rise, and Richmond, after the satisfactory meeting on Tuesday, recovered a portion of the late fall. The Pahang group has been well sustained, and prices are firm. We are informed that the shares of the Harrietville, the company to which we referred in favourable terms last week, are quoted at from par to a quarter premium.

The Indian Market has been strong, as well it may be. The last Mysore report shows that in some 15 points of working the average value of the quartz is 2 ozs. to the ton. We hear South-East Mysore and Eastern Mysore well spoken of for a rise, and Nine Reefs, Mysore West, and Mysore Reefs are also thought to merit attention. The rise in this market is not sudden, but it is progressive.

Queensland shares have been in better demand. There has been an excellent telegram from Mosman, giving an average of 2 ozs. 5 dwts. to the ton on a crushing of 580 tons.

Home mines have moved unevenly where they have moved at all. The Van meeting to-day, as will be seen, passed off most satisfactorily.

Africans.

Again we have to record a busy and anxious week. The feeling on the part of the public is, as we have advised again and again, to realise profits; but unfortunately prices continue on the downgrade, and shareholders are placed in a condition of doubt and uncertainty as to what is their best policy. We again say, "Sell the high-priced shares":—these will be seen below. Salisbury's have again fallen this week 4*l*.; De Villiers, 2½; Ferreiras, 1*l*., and so on. The market closes much firmer than it did yesterday. But it is almost impossible for present figures to be maintained, seeing that in many instances extraction has of late been much more rapid than development.

The following shares have had a fall :—Aurora, ⅛; Bantjes, ¼; Bixley, 1/16; Blaubank, 2s.; Bothas, ⅛; Central Langlaagte, 5/16; Central Roodepoort, ⅛; City and Suburban, ½; Cornucopia, ⅛; Crown Reef, ¾; Dornkop, 5/16; De Villiers, 2½; Durban Roodepoort, ¾; Evelyns, ½; Ferreiras, 20s.; Geldenhuis, ⅜; Golden Kopje, ⅝; Great Britain, ¼; Heriot, ⅝; Henry Nourse, 1½; Johannesburg Pioneer, 20s.; Jubilee, ½; Jumpers, ¼; King Solomons, ⅜; Kleinfontein, ⅛; Luipaards Vlei, ⅛; Main Reef United Roodepoorte, ⅛; Mays, 20s.; Modderfontein, ¼; Morkel, ⅛; Moss Rose, ½; New Grahamstown, ⅛; Randfontein, ¼; Royals, ¾; Salisbury, 4*l*.; Spes Bona, ¼; Stanhope, ½; Teutonia, ¼; United Langlaagte, ⅛; Van Ryn, 3/16; Vogelstruis, ⅛; Western Langlaagte, ¼; Wemmers, ¾; and Wolhuters, ⅜; the only rises being in Langlaagte of 3/16. and Nabobs, ⅛. The following are the closing prices :—

De Kaap District.			
Alpine	1	—	1½
Belfast	¼	—	⅜
Edwin Bray	1⅝	—	1¾ pm.
French Bob	½	—	⅝
Highland Reefs	¾	—	⅞

Star	2¾	—	3
Teutonia	1⅛	—	1¼
United Langlaagte	2¾	—	3
Van Ryn	2⅜	—	2½
Vogelstruis	3⅝	—	3⅞
Western Langlaagte	1⅜	—	1½
Wemmers	13¼	—	13¾
Wolhuters	4⅞	—	5⅛

Diamonds.

A fair amount of business has been done in Diamond Shares this week, but since the making up day (Tuesday) prices have not been so well maintained. The feeling is that there is a weak "bull" account, and prices have in consequence given way. De Beers, which are undoubtedly the touchstone of the market, closed last week 17⅝, ⅞ xd., made up at 17½, have since been offered at 16½, and close this evening 16⅝, 16¾. The following are the closing quotations.

Anglo African	4⅞	—	5⅛
Bultfontein, new shares—	4	—	4¼
Central Dorsfontein	8	—	10
De Beers Consolidated	16⅝	—	16¾
Gordon Diamond	19/	—	21/
Griqualand West	6⅝	—	6⅞
New Consolidated	24/	—	25/
New Jagersfontein	15¾	—	16¼
South African (Pullinger)	16/	—	17/ xd
Spes Bona (Bultfontein)	5/6	—	6/6
United	2⅜	—	2⅝
United Jagersfontein	18/	—	19/
London and Orange Free State Explor. ...	5½	—	6
London and South African Exploration ...	16½	—	16¾
Read's Drift Land Co.	2⅞	—	3

Queensland.

The following shares have risen :—Cumberland, 6d. ; Day Dawn, 1s. 6d. ; Day Dawn P.C., 1s. 6d., and Mosman 6d. ; and the only fall is shown in Mount Morgan of 1s. 6d. There is little or nothing doing in this market.

Indians.

A somewhat large amount of investment business has taken place during the week in Indian descriptions, and since the settlement prices have improved slightly. There is again every prospect that this goldfield is slowly but surely coming into favour with the investing public. A rise has taken place in Mysore Gold of ½ ; Ooregum, ⅛ ; ditto Preference, 3/16 ; whilst a fall is registered in Balaghat, 17s. 6d. paid, of 6d. ; ditto, fully-paid, 1s. ; Nine Reefs, 6d. ; and Nundydroog, 1/16.

Foreign Shares.

A large amount of business has been done in the low-priced Foreign shares, but the public have been taking profits, and thus have caused prices to fall slightly. We believe, however, that the relapse is only temporary. Such shares as New Emma, New Organos, Callao, Victory, and Yuruari certainly have every chance for a good rise from present quotations and should be firmly held.

The following shares shows a rise :—Colorado of 6d. ; El Callao, ½ ; Hill's Waterfall, ¼ ; Kohinoor, 6s. ; Montana, 1/16 ; New Emma, 6d. ; Palmarejo, 6s ; Richmond, ¼, and Transvaal, 1s. 6d., whilst the following have receded :—Carlisle, 2s. ; Colombian, ¼ ; Colons, 2s. ; Don Pedro, ⅛ ; Fortuna, ¼ ; Frontino, 6d. ; La Trinidad, 1s. ; Old Lout, ⅜ ; Tetuans, 2s ; Victory, 1/16, and West Argentine, 1s.

Copper.

There has been a large amount of business in Copper Shares during the week, and various changes have taken place since our last issue. Rio Tinto, for example, on the 23rd February closed at 19, 19⅛ ; they afterwards fell to 17½, and on Tuesday were carried over at 18¼ ; they then again dropped to 17¾ ; opened this (Friday) morning at 18⅜, went steadily down to 16, and close this evening at 16 1/16, 16 3/16. The market is very scarce of buyers.

The following shares have fallen :—Cape Copper, 5/16 ; Copiapo, ¼ ; Libiola, ½ ; Masons, ⅜ ; Namaqua, ¼ ; Panulcillo, ⅛ ; Rio Tinto, 2¼ ; Tharsis, ¼. There is not a single rise to note.

The following list shows the principal changes in the mines which have taken place :—

	Last Week.		This Week.	
Carn Brea	13	13½ ...	14	14½
D'Eresby	⅜	⅝ ...	½	7/16

LATEST FROM THE MINES.

Indian Mines.

Indian Gold (Glasgow).—A cablegram has been received, stating that 200 tons have been crushed, yielding 32 ozs.

Colonial Mines.

Anglo-Saxon.—The directors have just declared an interim dividend of 2s. per share, payable on the 4th inst.

Gympie Great Eastern.—A cablegram dated February 28th gives the result obtained during the past month, viz. :—"24 days, 600 tons, 990 ozs. : value, 3,460*l.* ; profit, 2,300*l.*"

Day Dawn Block and Wyndham.—The following cablegram is from Mr. David Rollston, general manager, Charters Towers :—"New mill of 60 stamps started 23rd February. I can confirm my statement of 8th September last." The statement to which Mr. Rollston refers was contained in his letter to the board under date

8th September, 1888, and was as follows :—At the present time, if all the stone in the gronnd opened np were payable, it would keep the new mill going for two years. I fully believe that before the new mill is ready for work we shall have payable stone enough to keep it going for that time.

Mosman.—The following cablegram is from Mr. W. Holliman, manager in Charters Towers, 22nd Febrnary.—"Have crnshed 580 tons of quartz from Eastward Ho ! mine, which yielded 1,300 ozs. of gold. One hnndred tons from North Australian mine crushing. Mines are looking better." Note.—The above crushing gives an average yield of 2 ozs. 5 dwts. per ton of quartz, and the approximate value is 4,500*l.*

Mount Leyshon.—Cablegram, "122 ozs., 380 tons, 15 head of stamps, 260 hours. Could crush only low-grade ore."

No. 2 Queen.—Cablegram, Charters Towers, 26th February :—"February crushing, 208 tons ; 128 ozs. gold ; 94 tons crushed for tribnters ; 115 tons for public ; deep shaft sunk 100 ft. ; present depth, 583 ft."

Foreign Mines.

Cortez.—The directors have received the following report from Mr. Welsh, the superintendent at the mines, under date of February 9th :—Ore hauled to mill, 117 tons ; ore treated at mill, 149 tons, containing 77 ozs. silver per ton. Bullion shipped, 14 bars containing 12,880 ozs. fine silver, and 6 ozs. gold.

Garfield.—The directors have received the following report from Mr. Hooper, the superintendent at the mines, under date of February 9th :—The mill has been running as usual, and doing good work.

Idaho.—Mr. James Thorne, director of the Nobel Dynamite Trust Company, Limited, has accepted the Chairmanship of the Idaho Gold and Silver Mines, Limited, and the company has secured the services of Mr. John Darlington, of the Montana Company, as consulting engineer, with a seat at the board.

Organos.—The mining profit for December was 433*l.*

Quebrada.—It is announced that warrants have this day been posted for interest on its 6 per cent. debenture stock due March 1st. Also that the coupons on the 6 per cent. bearer bonds of the company, due March 1st, will be duly paid on presentation at the Commercial Bank of Scotland, Bishopsgate Street.

Rocky Bar Wide West.—The agent writes (February 7th) :—Everything in and abont the mine is running smoothly and satisfactorily. The mine never looked better to me, and I believe my predictions last month of an increase in the prodnction of bar gold this month will be fully verified by actual results.

United Mexican.—The directors have to-day received the following telegram :—"San Cayetano property : Gross returns week ending February 23rd, $6,200 ; expenditure for week ending February 16th, $7,400 ; loss for week ending Febrnary 16th $900. El Cnbo property : Gross returns week ending February 23rd, $1,520 ; expenditure, week ending February 16th, $5,500 ; loss week ending February 15th, $4,290."

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES
SEE PAGES 360 AND 361.

Metals.

Copper has been weaker. G.M.C. copper has been sold at lower rates, especially for forward delivery. Spot warrants sold from 79*l.* to 77*l.* 15s., three months 66*l.* to 67*l.* 10s., and all the year seller's option is offered at 60*l.* Buyers shy. The Chili Chartres are cabled as 1,100 tons. To-day's statistics are again unfavonrable. Total delivery for February only 1,397 tons, while the visible supply which on February 1st was 108,526 tons, now stands at 118,140 tons. We quote English tough at 78*l.* to 80*l.* Best selected, 79*l.* to 81*l.* Strong sheets, 80*l.* India sheets, 79*l.* to 80*l.* Yellow metal sheets, 7d. to 7¼d. Ore, regulus, &c., 13s. to 15s. 6d. per unit.

Tin has been in good demand. The effect of the large shipments from Straits during last month (3,400 tons) seems to have been discounted. Straits sold from 94*l.* 15s. to 95*l.* 10s. ; closing 95*l.* 15s. cash ; three months, prompts realise about 15s. over spot tin, and Australian 12s. 6d. per ton premium over Straits. The total visible supply is 15,645 tons against 14,373 tons. The Dutch market has been steady. Banca 57¾-58fl., and Billiton about the same. The average price of the Billiton sale yesterday was 65.81 per picnl, or a parity of fl.58 per 50 kos., or 97 per ton laid down in Holland. English ingots, 98*l.*

Tin Plates are quiet, and quoted 13s. for ordinary coke, Liverpool.

Spelter firm. 17*l.* 10s. to 17*l.* 12s. 6d. for ordinary brands, ex ship here.

Lead closes better. Soft Spanish was vainly offered at 12*l.* 10s., but later on 12*l.* 12s. 6d. was paid, and now 12*l.* 15s. asked ; soft English, 12*l.* 17s. 6d. to 13*l.* ; L.B. China, 13*l.* 15s.

Quicksilver quiet. Rothschild's price, 8*l.* 10s. ; seconds, 7*l.* 15s.

Antimony firm. 47*l.* to 48*l.*

London Metal Market.

4.35.—Closing official report.—Copper : G.M. brands, 77¾, 8¼ ; three months, nom. ; best selected, 79½, 80 ; strong sheets, 80 ; English tough, 79½, 80. Tin : Fine foreign, cash, 95⅞, 6¾ ; three months, 96¾, 7¼ ; Australian, 96½, 7 ; English ingots, 98, ½.

COMMERCIAL NOTES.

Railways.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year : — Increases : — Caledonian, 2,895*l.* ; Eastern and Midlands, 206*l.* ; Great Northern, 5,704*l.* ; Great Western, 12,910*l.* ; Hnll and Barnsley, 418*l.* ; London and North-Western, 12,010*l.* ; London and Sonth-Western, 5,371*l.* ; London, Chatham and Dover, 2,468*l.* ; Manchester and Sheffield, 2,557*l.* ; Metropolitan, 890*l.* ; Midland, 12,226*l.* ; North British, 3,728*l.* ; North-Eastern, 8,172*l.* ; and North Staffordshire, 417*l.*

The Brighton Railway traffic return for the week ending February 23rd exhibits an increase of 5,195*l.*, and the Sonth-Eastern an increase of 4,249*l.*

The Buenos Ayres and Pacific Railway receipts for the week ended February 16th were $28,200. The traffic receipts of the Lombardo-Venetian Railway from the 12th to the 18th inst. amounted to 672,000fl, showing an increase of 59,161fl as compared with last year.

For the third week in February the gross earnings of the New York, Ontario and Western Railway were $27,402, compared with $24,872 in 1888. The Cincinnati, Washington and Baltimorc Railway receipts for the third week in February amounted to $39,500, or $1,300 less than last year. The Chicago, St. Paul and Kansas City Railway earnings for the week ended February 21st were $43,081, against $29,978 in 1888. For the third week in February the Mexican Central Railway receipts were $106,177, against $110,012 last year. The Dutch Rhenish Railway receipts for the eight days ended February 23rd amounted to 8,106*l.* being 1,662*l.* in excess of 1888.

Tramways.

The traffic receipts of the following tramway companies for the past week show the snbjoined comparative results :—Decreases :—London, 396*l.* ; London Street, 189*l.* ; London Southern, 41*l.* ; Southampton, 12*l.* ; Woolwich and South-East London, 7*l.* ; Hull, 7*l.* ; France, 131*l.* ; Calais, 42*l.* ; Burnley, 31*l.* ; Germany, 54*l.* ; Gothenburg, 25*l.* ; South London, 125*l.* ; Imperial, 19*l.* ; Southern of Paris, 30*l.* ; West Metropolitan, 41*l.* ; Southwark and Deptford, 94*l.* ; North London, 61*l.* ; North Staffordshire, 8*l.* ; Stockton and Darlington, 11*l.* ; and Bordeaux, 227*l.* Increases :—Provincial, 569*l.* ; Belfast, 197*l.* ; Edinburgh, 164*l.* ; Bristol, 66*l.* ; Calcutta, 148*l.* ; Swansea, 5*l.* ; Sunderland, 7*l.* ; and Hamburg, 94. The Anglo-Argentine Tramway receipts for the two weeks ended January 14th, were 9,557*l.*, against 8,613*l.* last year. BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (27th Feb.)—The several stopes in back of the 40-fm. level east continue to produce fair quantities of mineral. Cook's stopes below the 30 east are not quite so productive, but still doing well. The lode in the 40-fm. level west is producing fair quantities of low class ore. In the same level east of junction the lode is opening well, and produces 7 tons of mixed ores per fm. There is no change in the large lode and stopes below the 30 west of junction, which are producing large quantities of mixed ores.—T. Gregory.

BULLER AND BASSET (Feb. 26th).—Copper Hill main shaft: The men during the week have cleared a further distance of 10 fms. at the 84-fm. level, and are now in contact with another choke. This point is about 40 fms. east from the cross-cut. We have not yet discovered anything very rich in the lode at this level. The machinery is in good working order throughout.—J. H. James.

DRAKEWALLS (28th Feb.)—The lode in the 147-fm. level driving east on the south part of the lode will produce 6 tons of arsenical mundic per fm. The 147-fm. level driving east on the north part of the lode continues to yield 8 tons of mundic per fm.; good stones of copper ore and a small portion of tin. In the 147-fm. level driving west the lode has improved, and will produce 12 tons of good arsenical mundic per fm., with occasional stones of tin. There is no change to notice in the 132 driving east since last advised. In the 132 west we are getting clear of the cross-course referred to last week, and the lode, so far as cut into, is of a most promising character, now producing 2 tons of copper and mundic ores per fm. In the winze sinking below the 132-fm. level west of engine shaft the lode will yield 8 tons of copper and mundic ores per fm. for the length of the winze, 9 ft. In the stope on the north side of the 132 west the lode will produce 5 tons of copper and mundic ores per fm. The masons are pushing on with the buildings as fast as possible, and all the other surface work is progressing very satisfactorily.

GAWTON (26th Feb.)—We have communicated the winze sinking below the 105 east, which has given good ventilation in the part of the workings. In the back of this level we have commenced a rise in a lode 5 ft. wide, and yielding 11 tons of mundic per fm. The stope in the bottom of the 95 east will yield 10 tons of mundic per fm. The lode in the 95 east continues to yield 12 tons of mundic per fm.; the several stopes in the back of the 95 east are producing their usual quantities of mundic and ore. The stope in the bottom of the 82-fm. level will yield — tons of mundic per fm. We have no other change to notice.—G. Rowe.

LEADHILLS (26th Feb.)—Brown's vein: Eight men are set to drive the 145 level 73 fms. 3 ft. south of Jeffrey's shaft, at 110s. per fm.; vein above 4 ft. wide, charged with more promising quartz, but still without ore. Eight to drive the 145 level 23 fms. 3 ft. north of Wilson's shaft, at 100s. per fm.; vein 12 ft. wide, of a very kindly character, with ore worth 40 cwt. per fm. Six to sink the winze 10 fms. 2 ft. 8 ins. below the 130 north of Wilson's shaft, at 107s. 6d. per fm.; vein upwards of 4 ft. wide, showing quartz of a kindly nature, but only stones of ore. Seven to drive the 130 level 32 fms. 3 ft. 6 ins. north of Jeffrey's shaft, at 105s. per fm.; vein continues upwards of 4 ft. wide, charged with improving quartz and a nice stone of ore which has just come in. Four to No. 1 stope above the 130 south of Jeffrey's shaft, at 42s. 6d. per fm.; worth 25 cwt. of ore per fm. Four to No. 2 stope, at 40s. per fm.; worth 30 cwt. of ore per fm. Four to the stope above the 130 north of Wilson's shaft, at 35s. per fm.; worth 40 cwt. of ore per fm. Six to stope above the 130 south of Wilson's shaft, at 42s. 6d. per fm.; worth 45 cwt. of ore per fm. Two to stope above the 115, south of Wilson's shaft, at 42s. 6d. per fm.; worth 30 cwt. of ore per fm. Four to rise above the 100, south of Wilson's shaft, at 110s. per fm.; worth 30 cwt. of ore per fm. 14 to sink 3 fms. 2 ft. below the 85 north of Jeffrey's shaft at 180s. per fm.; vein 10 ft. wide, wholly charged with quartz and ore; worth 80 cwt. per fm. We have a heavy feeder of water here. Four to stope above the 35 south of Flat rod shaft, at 30s. per fm.; worth 35 cwt. of ore per fm. Four to stope above the 20 south of Flat rod shaft, at 30s. per fm.; worth 35 cwt. of ore per fm. George's Roust vein: Three to drive Gripp's adit 328 fms., 3 ft. 3 in. north of Muir's cross cut, at 110s. per fm., and 20s. per ton of ore; vein 4 ft. wide, showing kindly stone and quartz mixed with blackjack, but no ore.—T. Newbigging.

MARKE VALLEY (27th Feb.)—We beg to hand you the following report of our setting on Saturday last: To sink Bellingham's shaft below the 84 and carry ground for cistern plat, &c., as directed; 4 fm. stent, at 30*l.* per fm. The driving of the 25 fms. level west having been resumed, it is now set at 5*l.* per fm.; lode large, containing a little tin but not to value; this end is several fms. behind the 15, and from its average bearing, being north of the latter, we are inclined to think it is on another part of the lode; this we are driving to prove. The 15-fms. level is being driven east at 4*l.* 10s. per fm.; the lode, composed of capel, is at present small, but there appears to be a change taking place, the course of the Elvan has slightly altered, and there is more water issuing from the end. The 15-fms. level west is being driven at 5*l.* per fm., in which, the part of the lode carried, 6 ft. wide, is worth 8*l.* per fm.; this is a most promising end, and is still laying open profitable ground. We have put a pare of men some fathoms behind this end to strip down the side to ascertain its full width and value. The midway level east has been communicated with the large stope from the back of 15, the men having since been employed in stoping the back; present price for raising and stoping 2*l.* 10s. per fm.; value, 6*l.* per fm. To drive the midway level west, at 4*l.* 15s.; this is laying open ground, worth 5*l.* per fm. for the part carried. To drive the adit level west, at 4*l.* 10s. per fm.; the lode here continues to look very promising, and producing low class stamping work. There are seven other stopes being worked in different parts, at prices from 30s. to 60s., and varying in value from 5*l.* to 12*l.* per fm.—W. George, F. Renals.

ROMAN GRAVELS (28th Feb.)—The lode at the 135 south is 3 ft. wide; worth 2 tons of lead ore per fm. At the 110 south we have cut into a good branch of lead ore, worth 1½ tons per fm. This is no doubt a part only of the main portion of the lode, and will improve as we get further south into the dip of the course of ore now being worked upon in the stopes. The lode at the 80 north-west on caunter has greatly improved this week, being to-day 2½ ft. wide, and worth quite 2 tons of lead ore per fm. We are watching the driving of this level with very great interest, remembering that considerable returns were made by former workers of the mine upon this lode above the 50-fms. level, and that no work has been done below on this side of the Roman vein. Other points throughout the mine are just as when last reported.—A. Waters and Son.

SOUTH CONDURROW (27th Feb.)—The lode in the bottom of Marshall's sinking below the 108-fm. level carries a little tin, but not enough to value. The 108 end west and the rise in the back of this level carry low quality tinstone. We are opening out the end of the 66-fm. level west preparatory to rising against Pendarves's shaft. The lode in the back of the 93 east of King's is worth 7*l.* per fm. The back of the 80 east is worth 7*l.* per fm. The north part of the lode in the 70 east is worth 20*l.* per fm. The 60 end east is worth 10*l.* per fm. The stope in the back of this level is worth 12*l.* per fm. The 50 end east is worth 10*l.* per fm. The 40 end east is worth 5*l.* per fm. There is no material alteration in the value of the stopes throughout the mine.—W. Rich, W. Williams, H King.

SOUTH DARREN (28th Feb.)—The 142 end east is without change, being at present poor. The 142 end west is still in the good course of ore reported last week, and maintains its value, viz., 2 tons of silver-lead ore per fm. The lode is wide and large, and looks like holding on. The branch of lead in the south side is now stripped down to 4 fms. back from the forebreast, and is keeping parallel with the part of the lode on which the level was driven. It is not so rich as it was, but it is a nice branch of lead, worth 18 cwt. of silver-lead ore per fm. How far the lead may hold back here we cannot say; but we know that this part of the lode goes back 20 fms. About 12 fms. from the end a good deal of the lode was cut down, but as it only contained small strings and flashes of lead it was discontinued, and the drivage resumed on the north side, which seemed the strongest part of the lode. Two men have again been put to cut through the lode, which continues small strings of lead. If we can cut the lead that is coming back from the end at this place, we will then be assured of having a good long stope. The lode in the 110 end east has now been cut down this week. The 110 end west contains good spots of copper and small strings of lead, but not to value. There is no change to note in the stopes.—J. Mitchell.

TREGEMBO (27th Feb.)—The sumpmen are engaged cutting ground, &c., preparatory to sink the engine shaft. The 42 east of sump shaft is showing a lode 4 ft. wide, worth 5*l.* per fm. The 42 west is poor. In the 42 west of Pennick's we are driving to intersect the lode the other side of the cross-course. We have intersected a branch about 6 ins. wide, dropping down on the main vein. When we reach the latter we expect to open some good stoping ground. The 42 east is worth 5*l.* per fm. The 30 east is worth 5*l.* per fm. The adit end on the north lode is poor. We have met with nothing in the cross-cuts since my last.—T. Hodge.

WEARDALE.—Report for week ending 23rd February:—Weather stormy, and interferes with surface work; ore raised for the week, 66 tons; ore dressed for the week, 96 tons; ore smelted for the week, 27 tons, producing 16 tons of pig lead.

WEST GODOLPHIN (27th Feb.)—The engine shaft is 12 fms. below the 107-fm. level. The 107 west on Bellingham's is letting out more water; poor for tin. In the 107 west the lode is 3 ft. wide, producing low price tinstone in the foot part of the lode. The 107 west on Pink is poor. The 70 west is looking more eucouraging. No other change.—T. Hodge.

WEST WHEAL GRENVILLE (26th Feb.)—The forking lift has been dropped, and water drained to 2½ fms. below the 80-fm. level. We are still finding debris and timber, which is being cleaned up and deposited for the present in the 80-fm. level east. In the 80 west of shaft about 8 fms., we have filled some old workings in the back of same with attle, cleaned up from shaft; beyond this the level, as far as can be seen, is choked. Our object is to clear this level as rapidly as possible, and we consider the most expeditious way to do this is to put in skip road in Harvey shaft for drawing atttle, &c., accumulated in same to surface. This road will then be available for drawing ores that may be broken in said level when it is cleared. The timber and pulleys for shaft tackle, preparatory to this work, are already on the mine.—T. Hodge, J. Skeat.

WHEAL GRENVILLE (28th Feb.)—We have drained the 178-fm. level, and I hope to set end and stopes in said level in a day or two. I have no change to report in the other bargains in the upper levels. The machinery continues to work very well, and I hope if things go on as now to be able to set our stopes in the deeper levels in the course of a week or so.—T. Hodge.

FOREIGN MINING INTELLIGENCE.

ANDALUSIAN.—Extracts from the mine manager's report, dated 25th February. Saturno Mine: We have began a level at 19 metres depth, east of No. 1 trial shaft; this will be continued to hole to No. 2 shaft. The ore continues, varying from 2 to 5 ins. wide. We have 13 men working at this shaft, including those who draw water and stuff, which latter we dress. Our neighbours west have a foot of solid galena at a depth of 50 metres in a level they are driving towards us. No. 2 shaft is also being sunk as fast as possible. The ground is harder than we had it at No. 1, which is a good sign. As the men have to work night and day, owing to the water and our anxiety to push on. We are putting up a wooden house for them. Barytes lode: We have already driven 21 metres this month. The barytes is now ½ metre wide, and continues with galena now and then as before. We press on this adit as fast as we can. It is now somewhat harder. Panadera adit: This carries iron oxides and wad, but no pyrites just now. It is harder, and is going through quartzite. The hill consists chiefly of quartzite near the lode, this is good. I fancy the Belgian miners have not yet cut the principal Panoderos lode. Though they have cut good ore, the principal lode will be about 20 metres further east.

ASIA MINOR (Feb. 8th).—The lode in the main adit has a very promising appearance, and we are looking for good results shortly. The lode in Intermediate Hamburg is showing a little lead, and looking much more promising. The lode in Lower Union is 6 ft. wide, and worth fully 1½ tons of rich silverl-ead ore. We have started a drive from the Hadji Havous stope in a good lode worth fully 2 tons silver-lead ore per fm. The value of the ends and stopes are about the same as last reported.

BALAGHAT-MYSORE.—Report for fortnight ending 5th February is as follows:—North engine shaft: The cutting of the necessary ground for plat, &c., at the 410-ft. level is being pushed forward as fast as possible, and considering the hardness of the rock fairly satis-

factory progress is being made. We have just resumed the driving of the 330-ft. level north; present distance from shaft 329 ft.; the quartz is about 14 ins. wide, but of a low quality, it will, however, I think, very soon improve. The stope in the bottom of this level yields quartz of about 1 ft. wide, and assays 5 ozs. 9 dwts. 18 grs. of gold per ton. The stopes in the back of this level produce quartz of from 9 ins. to 14 ins. wide, and worth 2 ozs. of gold per ton. The No. 3 winze in the bottom of the 270 north has been sunk 6 ft. 3 ins., or 34 ft. 6 ins. below the level; the lode is improving a little in appearance and producing a little more quartz. The No. 2 cross-cut east has been driven 9 ft. 6 ins., or 17 ft. from the 270-ft. level north. The No. 2 cross-cut west has been advanced 6 ft. 2 ins., or 63 ft. from the level. The stopes in the back of the 270-ft. level north yield quartz of about 14 ins. wide, and assay 16 dwts. 23 grs. of gold per ton. The 165-level north has been extended 6 ft., or 456 ft. from the shaft; the quartz is from 2½ to 3 ft. wide, but at present only assays 2 dwts. 14 grs. of gold per ton. Air shaft: Satisfactory progress is being made with the driviug towards the stopes at the 165-ft. level north, and when communicated good ventilation will be obtained. Surface: The clean-up for last month is as follows—103 tons of quartz, yielding 195 ozs. of gold; this I hope will be considered satisfactory. The mill has been started again to-day.—Capt. PRYOR.

CANTABRIAN COPPER.—The following are extracts from the mine manager's last report:—The leugth of the galleries now exceeds 2,000 metres, and I have nearly completed arrangements for laying the proposed lines in the interior of the galleries. The mines are more promising every day, and I am convinced that, as soon as the proposed light tramway is completed. without increasing present expenses, the output of mineral can be tripled or even quadrupled. During the month the workings have been thoroughly repaired. I am still keeping the ore until I have a large quantity, so as to charter a vessel to take it direct to Swansea. The weather is getting much better, and in the course of about a fortnight or three weeks the snow will probably have cleared, when we shall be able to work more vigorously, and the results will be much greater.

COLOMBIAN HYDRAULIC (20th Jan.)—The following are the details of the operations during the month of December:—Run No. 153: I am glad to be able to inform you that, per hour of run, this is one of the best I believe, with the exception of general cleans up, ever made in this mine, and this is more encouraging, as there have been many thousands of dollars less taken from the rich deposit, which was below the sluice. After washing 498 hours we cleaned up on the 18th, from about one-third of our main sluice, $12,005.12, which, with $77.00 from New Papilla, and $410.00 of purchased gold, gives a return of $12,492.12, against a cost of $1,434.62, leaving a profit of about 1,611*l*. This run has not been made entirely from the reputed richest part, a large portiou came from the north-west corner, and we seem at last to have reached a pause in the rapid rise of the bedrock in that direction. Next run will be begun on the same banks, and unless there is shortness of water, which there seems every reason to expect, I do not anticipate any serious falling off in the returns.—T. P. SHARMAN.

DAY DAWN P.C.—Report for the fortnight ending 5th January. —The output of quartz is 1,426 trucks, estimated at 582 tons. Your underlie shaft has been sunk a further depth of 2 ft. No. 10 level has been extended a further distance of 8 ft. for the fortnight, making a total distance of 171 ft. The stone in this level is still improving in size and quality, being 6 ft. thick, of good quality. All the stopes above this level are looking well. Stoping is still being carried on the west side or boundary stope, and the shaft thoroughly secured with pigstyes. There still remains about 50 tons of stone to be taken out. No. 9 level has been exteuded a further distance of 9 ft., making a total distance of 266 ft.; we have holed through to No. 3 winze. There are 6 ft. of stone in the face of first-class quality. All the stopes above this level are looking well, except No. 1 stope, just under No. 8 level, which is carrying a large body of poor quality stone. No. 8 level has been extended a further distance of 7 ft., making a total distance of 521 ft. from the underlie. There is 1 ft. 6 ins. of stone in the face of medium quality. All the stopes above this level are looking well. No. 7 level has been extended a further distance of 5 ft.; total from the underlie, 599 ft. There is about 1 ft. of stone in the face of poor quality. The stopes above this level are turning out a fair amount of stone of medium quality. No. 6 level has been extended a further distance of 9 ft., makiug a total distance of 580 ft.; no stone in the face. The leading stope over this level is carrying 5 ft. of stone of medium quality. During the holidays we gave the eugine a thorough overhauling, and cleaned the boiler out; everything is now in thorough working order. Machinery working well.—T. LESTER.

DEVALA-MOYAR (4th Feb.)—The pyrites winze sinking below the deep tunnel is down 27 ft., and the water is easily kept under by manual labour. The lode is opening, and its appearance everything that could be desired. It is now 3 ft., and will produce 3 tons pyrites to the fm. The lode has been opened up east and west of the cross-cut 12 and 8 ft. respectively. In each end it will produce 2 tons pyrites to the fm. We are carrying 7 ft. of the lode with us. The stopes to the west of pyrites winze are better for pyrites, and will produce 1½ tons to the fm.—J. WILLIAMS.

DICKENS CUSTER.—The following are extracts from a letter from the company's agent received 1st March:—Custer Mine: The Vigus tunnel has advanced 80 ft.; total distance, 655 ft. The superintendent reports the face of drift of this tunnel as greatly changed, and the ground much easier to work. Face striated with streaks of quartz of a darkish hue; total width of ledge in face of drift, 2½ ft.; and the width of the streaks of quartz from 2 to 4 ins. The hanging wall is very irregular, but footwall continues regular and well-defined. Water is coming from the face of the drift, and we consider this a very good sign, in fact a very encouraging feature. The quartz assays nothing as yet.

GOLDFIELDS OF MYSORE (5th Feb.)—Fortnightly report.—Sinking bridge shaft has been discontinued, and we have commenced to drive a cross-cut west at 165-ft. and this has been driven 5 ft.; the end being in country. The north level at 105-ft. has been driven 3 ft., making a total distance of 62¾ ft. from the shaft. There is a small stringer of low grade quartz in the end. The west cross-cut from the south level at 105 ft. has been advanced 3 ft.; total length, 7¾ ft.; in the end there is low grade quartz. The east cross-cut from the south level at 105 ft. has been driven 3½ ft., and the end is in country. Driving north of middle shaft at 175 ft., an advance of 5½ ft. has been made; distance from shaft, 60½ ft. In the end there is a lode 2½ ft. wide, and worth by assay 3 dwts.; the lode is not looking as well as it did, as there is very little mundic. The south level at 175 ft. has been driven 5¾ ft.; total distance, 57½ ft.; the lode in the end continues pinched and of low quality. The north level of 108 ft. has been advanced 3 ft.; total distance from shaft, 129½ ft.; the lode is 1¾ ft. wide, and worth by assay, 4 dwts. This end is looking better, and I hope will improve in quality. The south level at 108 ft. has been advanced 11½ ft.; total distance, 291½ ft. from shaft; the old workings in the end are pinched. The winze below the north level 108 ft. has been sunk 4¾ ft., and has holed into the north level 175 ft.; total depth of winze, 60 ft.; before holing the lode in the bottom of the winze was 3 ft. wide, and worth by assay 18¼ dwts. The new shaft south of Bridge shaft has been advanced 1½ ft.; total depth, 67½ ft.; the bottom is in country. Poor speed was made here owing to stoppages from the rope breaking, and changing gangs of coolies. The new shaft south of middle shaft has been sunk 8 ft.; total depth, 89½ ft.; bottom in country. Champion lode: Coromandel shaft has been sunk 2¾ ft.; total depth, 169¼ ft. The bottom is in a hard band of country, with a few stringers of quartz. Driving south from the west cross-cut at 150 ft. an advance of 15 ft. has been made; total length, 64 ft. There is a branch of quartz in the end about 9 ins. wide, but of poor quality. Driving south at 100 ft. has been resumed, and an advance of 11½ ft. has been made; total length, 43½ ft. We are driving in old workings and are carrying a little of the hanging-wall. The west cross-cut from the south level at 100 ft. has been advanced 6½ ft.; total, 12½ ft., and has now been stopped. New Prospect shaft has been advanced 7½ ft.; total depth, 194 ft. A small branch of white quartz has just come in the bottom of the shaft, and was worth by panning 10 dwts.; this is very encouraging. During the month of January 15½ ft. was sunk by hand in this shaft in hard ground. New shaft near Balaghat is now down 30 ft. in fairly hard ground, and at a depth of 40 ft. it is proposed to cross-cut both ways to prove the ground.—J. SAMBORNE.

JOSEPHINE.—Extract from superintendent's report for week ending 2nd February.—During the week the main shaft has been sunk 10 ft.; total, 520 ft. The ground in the footwall has been bad, much broken up, and has caused us to take out much more ground than was necessary, in order to get a secure footing for the timbers. The vein continues about the same, we are apparently passing through a dead piece of gronnd the same as we had between the 220 and 300, or between the upper and lower shoot of ore. The 300 west drift has been run 10 ft.; the drift is quite wet, and the indications for striking quartz are favourable. During the week the mill has been at work finishing the four tests I had made, particulars of which I will report as soon as the returns from San Francisco come in.

MESQUITAL DEL ORO.—Mine captain's report, dated 25th Jan.—Work done in the mine during the week was as follows: Acerada level, east of Sans shaft: Six men, driven 9 ft. 6 ins.; total, 97 ft. A little improvement on the reef during the past week. The 85 level east: Six men, driven 6 ft. 6 ins.; total, 560 ft. 6 ins. The reef has greatly improved and shows a little free gold. The 137 level east: Six men, driven 2 ft. 6 ins.; total, 546 ft. 6 ins. The reef is 6 ft. thick and shows free gold. The 137 east winze C: Six men, sunk 3 ft. 6 ins.; total, 42 ft. 6 ins. The reef is 3 ft. thick, on an average ore. The 190 level east: Six men, driven 4 ft.; total, 378 ft. 6 ins. The reef is 3 ft. thick on an average ore. The 190 east winze B: Six men, sunk 6 ft.; total, 6 ft. The reef is 2 ft. thick. The 190 level west south part: Two men, driven 3 ft.; total, 284 ft. 6 ins. The reef is 2 ft. 6 ins. thick and has improved in quality. The 256 level east: Six men, driven 4 ft., total, 233 ft. The reef looks well and gives a good average ore. The 256 level west: Six men, driven 6 ft. 6 ins.; total, 159 ft. We are carrying the reef 5 ft., and still more standing to the south of the drift, and the reef shows free gold. Sans shaft: 12 men, sunk 7 ft. 6 ins.; total, 304 ft. The shaft is 6 ft. in country rock and 2 ft. in reef. San Miguel tunnel: 14 men, driven 11 ft. 6 ins.; total, 1,689 ft. Stopes 137 east: No alteration during past week.

MONTE DEL ORO (19th Feb.)—Fortnightly report.—Taylor's engine shaft: The 186-ft. level north of the cross-cut is still in old workings, but although fair speed is made in cleaning them out, yet progress is not so rapid as I could wish, being much impeded by the old timber constantly met with, which has to be replaced by new. The forebreast is uow 40 ft. north of shaft No. 6, but both foot and hanging-walls contain somewhat less quartz than formerly. During the last fortnight 13 ft. were driven, 26 ft. for the month, making the 186-ft. level south of the cross-cut 160½ ft. long. About 3 ft. is the average width of the lode for this driving, but it is not so wide just at present, being, however, more highly mineralised than I have previously seen it. In the cross-cut west of the engine shaft, which has an extent of 40½ ft., a leader of quartz varying in width from 6 ins. to 10 ins. has been intersected, this undoubtedly being the foot branch passed through in the shaft, at a depth of 130 ft. from surface. To prove if any more quartz is standing in that direction, I shall extend this cross-cut further west. Shaft No. 5: Having reached the end of the ancieut workings north of this shaft we have at that point commenced to drive on a lode of quartz 18 ins. wide, the country rock being a decomposed granite. The lode is a nice looking one, and yields a fair show of free gold by panning. Winze No. 1: Capital speed was made last month in sinking this winze, 36½ ft. being sunk, so that from the bottom of the 76-ft. level a depth of 167½ ft. has been attained. During the month the lode has varied in width, from 18 ins. to 6 ins. Just now work at this place is carried on with considerable inconveuience, but I am hoping to communicate with the 186-ft. level this month, The following are the results received to-day of assays made in London of eight samples taken from different parts of the mine, viz.:—No. 1, sample of quartz standing in the footwall, north of shaft No. 6, assayed none. No. 2, sample from the south end, assayed 1 dwt. gold per ton. No. 3, sample from winze No. 1, assayed 1 dwt. 7 grs. gold per ton. No. 4, sample of stuff from shaft No. 5, assayed 9 dwts. 3 grs. gold per ton. No. 5, sample of old stuff, from north of shaft No. 6, assayed 1 dwt. 18 grs. gold per ton. No. 6, sample old stuff from footwall north of No. 6, assayed 2 dwts. 14 grs. gold per ton. No. 7, sample from south end, assayed 2 dwts. 14 grs. gold per ton. No. 8, sample of stuff from shaft No. 5, assayed 5 dwts. 5 grs. gold per ton.—J. ROBERTS.

MONTE DEL ORO.—Results received 1st March of assays made in London of eight samples taken from different parts of the mine, viz.:—No. 1 sample of quartz from hanging-wall north of shaft No. 6 assayed none. No. 2 sample from south end assayed 2 dwts.

14 grs. gold per ton. No. 3 sample from branch of quartz in cross-cut west assayed none. No. 4 sample from north of shaft No. 5 assayed 1 oz. 17 dwts. 21 grs. gold per ton. No. 5 sample from north of No. 6 shaft assayed 1 oz. 4 dwts. 2 grs. gold per ton. No. 6 sample from south end assayed 1 dwt. 7 grs. gold per ton. No. 7 sample from branch in cross-cut west assayed 3 dwts. 22 grs. gold per ton. No. 8 sample from north of shaft No. 5 assayed 11 dwts. 18 grs. gold per ton.

MOUNT PERRY COPPER AND REID'S CREEK GOLD (1st Jan.)—Mount Perry: I beg to report that since commencing operations at the beginning of the year we have sunk Kennedy's main shaft to a depth of 225 ft. At 200 ft. deep we opened out on the line of lode, and have now extended north 42 ft. and south 62 ft. The yield is 2¼ tons of 20 per cent. pure copper to the fathom. We are continuing the sinking with equally good results, the lode being about 18 ins. wide, well defined, and carrying 2 tons of ore of 20 per cent. pure copper to the fathom. The general prospects are reassuring, and I see my way perfectly clear to give you good commercial results during the year we have just entered upon.—I. Bennetts.

MYSORE (5th Feb.)—Mining operations: This work is going on to my entire satisfaction. The 466-ft. level north of Taylor's shaft has been driven 469 ft. 9 ins.; there is a fine lode in the end, 5 ft. wide, assaying 1 oz. 14 dwts. to the ton. The 436-ft. level on the wide lode, a distance of 37 ft. 5 ins. were driven; there is a good wide lode 3 ft. 6 ins. of pure quartz; no assay was made. In the 400-ft. level north of Taylor's shaft the end has been advanced 557 ft. 2 ins. in the present end; the lode is 3 ft. 6 ins. wide, assaying 3 ozs. 10 dwts. 3 grs. The 296-ft. level north of Taylor's shaft has been driven 582 ft. 10 ins.; the lode in the present end is 5 ft. wide, worth 4 ozs. 18 dwts. The 236-ft. level north of Taylor's shaft has been advanced 390 ft. 9 ins.; the lode in the end is 3 ft. 6 ins. wide, assaying 3 ozs. 15 dwts. 3 grs. The 296-ft. level south of Plummer's shaft in the west branch was driven 11 ft. 4 ins.; total, 77 ft. 10 ins. The lode is 5 ft. wide, assaying 19 dwts. 19 grs. In the 236-ft. level south of Plummer's, and the 173-ft. level south of Williams', there is no improvement. In the 152-ft. level south of McTaggart's shaft, 32 ft. 2 ins. were cut; making a total of 336 ft. 10 ins.; the band of quartz has a promising appearance which is 3 ft. wide, assaying 7 dwts. 20 grs. The 220-ft. level south of Schaw's shaft was driven 8 ft., making a total of 48 ft. 4 ins.; the lode is 2 ft. 6 ins. wide, assaying 11 dwts. 18 grs. The 169-ft. level south of Schaw's, a cross-cut to the east was driven 5 ft., making a total of 85 ft.; the rock is exceedingly hard, and the coolies are not very capable men. The 180-ft. level south of Tenuant's shaft was driven 12 ft. 7 ins.; total, 58 ft. 8 ins.; the lode is 15 ins. wide, assaying 13 dwts. 1 gr. The 180-ft. north of Tennant's shaft was driven 11 ft. 8 ins.; total, 54 ft. 10 ins.; the lode is 12 ins. wide, assaying 7 dwts. 10 grs. Stoping in the back of the 466-ft. north of Taylor's shaft, the wide lode there is a band of quartz 3 ft. 6 ins. wide, worth about 14 dwts. to the ton. Stoping in the bottom of the 400 ft. north of Taylor's shaft, the lode is 4 ft. wide; the assay value is about 2 ozs. 10 dwts. Stoping in the bottom of the 296 ft. north of Taylor's shaft, the lode is 3 ft. 6 ins. wide, assaying 2 ozs. 2 dwts. 3 grs. Stoping in the back of the 466-ft. level south of the cross-cut, the lode is 2 ft. 6 ins. wide; the assay value is about 1 oz. 15 dwts. Stoping in the back of the 400 ft. north of Taylor's shaft, the lode is 4 ft. 6 ins. wide, assaying 2 ozs. 12 dwts. 6 grs. There is a second stope worked in the back of the 400 north of Taylor's shaft, in which the lode is 4 ft. wide, assaying 2 ozs. 9 dwts. Stoping in the back of the 400 south of Taylor's shaft, there is a strong band of quartz 5 ft. wide, worth about ½ oz. to the ton. Rising: We have commenced a rise in the back of the 296 ft. north of Taylor's shaft, towards the new shaft; there is a very fine lode in this rise; it is 6 ft. wide, and the value given by Mr. Hobb's in his last assay was 6 ozs. 10 dwts. 16 grs. Sinking: Taylor's shaft is down 531 ft.; the bottom continues to be poor. The new shaft north of Taylor's was sunk 27 ft. 5 ins.; total depth, 70 ft. Schaw's shaft was sunk 16 ft. 6 ins.; total depth, 261 ft. 6 ins. The lode is 15 ins. wide, assaying 3 dwts. 12 grs. We saw some fine specks of gold in the stone last week. Teunant's shaft was sunk 7 ft. 10 ins.; total, 207 ft. The lode is 15 ins. wide, assaying 1 oz. 15 dwts. 22 grs. The aspect, both at Tennant's and Schaw's, is more promising. The ore at the bottom of Tennant's is much richer than it was; the bottom of Schaw's shaft we obtained some excellent stones, showing gold, last week. New tailings machinery: The engineer is getting on very well with this. Rock-drills: Very good work was done by the rock-drills last month. Mill samples: 23rd January, 1 oz. 15 dwts. 22 grs. 26th January, 2 ozs. 1 dwt. 18 grs.—B. D. Plummer.

MYSORE WEST (5th Feb.)—Walker's shaft: Having got all things ready for changing pitwork with the least possible hindrance or delay, we started on this work on Monday morning, the 28th ult. We had to pull out the old pumping engine and boiler, and all the underground pumps, rods, and balance-bob, and flat-rods at surface. We had to replace this by larger pumps in the shaft, new shaft rods, new balance-bob at surface, new flat-rods, and connect to the large pumping engine. This we accomplished, and set the new pumping gear to work on Sunday, the 3rd inst., at one o'clock. I consider this a speedy and good job done, and the whole of this machinery is working exceedingly well. You are now prepared to deal with any probable influx of water, and to any depth this is likely to be required. The water which had risen while this work was in progress to the 125 ft. is now down to the 159-ft. level, and I expect to have it all out to the bottom in four days. The 300 north and south: These headings in the one week at work have been advanced 7 ft. 3 ins., making 16 ft. 6 ins. driven on this course. We are still on the fault, but expect to find the reef on this course as we have done in similar cases in the levels above. The 25 north: This heading has been advanced in the one week at work 3 ft. 3 ins., making 112 ft. 1 in. from shaft. The body of quartz here is larger than the level carried, and gives promise of productiveness. I hope now that the machinery is complete to direct steady attention to this development. The 25 south: This heading has been advanced 2 ft., making 100 ft. 9 ins. from cross-cut; the reef here is 2 ft. thick, producing a trace of gold. The 59 north: This heading has been advanced 5 ft., making 352 ft. 1 in. from the cross-cut at Walker's; the reef here is very changeable in its character, producing from a trace to a few grains of gold per ton. I shall not be surprised to see a still more important change as we advance.—Capt. Tregay.

MYSORE WYNAAD CONSOLIDATED (5th Feb.)—Engine shaft: The 100 north heading has been advanced 14 ft. 3 ins., making 76 ft. from shaft; the reef here is without change lately, being 4 ft. thick of vein matter, but very little quartz; the water is very quick. Pumping engine: This having now been taken out from Mysore West, which is supplied by a larger one, we have put it under repair. It will make a very good engine, and serve for a long while. Now that my staff have completed the machinery and pitwork on Mysore West, I can employ considerable force here, and hope to get through this work quickly.—Capt. Tregay.

NEW EBERHARDT.—The mine manager reports for the two weeks ending February 2nd as follows:—The south cross-cut from surface drivings has been advanced 2 ft.; total length, 40 ft. I have concluded to suspend work in this place for the present, as we had nothing more encouraging than was reported to you in my last. South drift: Amount of ore taken out and put on the ore dump, 5 tons; assay value of same, $50.28 per ton. I am unable at this time to report anything more favourable than heretofore of this place; the seam of ore has not increased or diminished, but remains about the same. South drift from north shaft: No. 1 has been advanced 14 ft. As per my last statement I moved the men back near the shaft, and they have run 14 ft. on a seam or break which contains quartz, but as yet we have not encountered anything worthy of note. North shaft: No. 2 drift westerly from the bottom of this shaft has been advanced 13 ft.; total length, 33 ft. No change to note since my last; lime still remains very hard. North shaft, No. 3: As per my last I have started a drift southerly, which is extended 12 ft., but as yet the ground remains unchanged. East cross-cut from bottom Gore incline has been extended 20 ft.; total length, 123 ft. We are still pushing along on this drift as fast as we can, and with the hope that we may come into something in the near future: ground still hard. Winze from bottom of new chamber: We have resumed work upon this winze; number of feet made, 4; total, 4. The bottom of this winze is in hard gray lime.

NEW EMMA (9th Feb.)—I have to report work carried on at the mine for the week ending to day as under:—Level No. 1 east advanced 12 ft.; total, 172 ft. Not any material change to report; rock continues soft, seamy, and is much mineralised. From two assays made it carries 2 ozs. silver, but no lead; this, of course, is too low to be of value, but gives great encouragement for improvement as we advance. Cross-cut from No. 1 towards hanging-wall advanced 10 ft.; total 45 ft. On Tuesday last we cut a seam of galena ore in face about 1 in. thick, which has now opened to fully 3 ins. thick, and as the surrounding rock continues soft, and this seam of ore shows permanencey, I have great hopes of its leading to an important ore body. I certainly consider this the most important discovery we have made, as it is in virgin ground, and in a part of the mine that ore has not heretofore been found. Immediately after cutting this seam of galena ore, I considered it of sufficient importance to advise Mr. Cullins by telephone that he might cable you at once. On the 3-ft. seam cut in No. 1 level, as mentioned in my last report, we have started a drift, and have advanced 8 ft. with no perceptible change, however is looking very favorable, and is being run towards hanging wall. We have also started a raise from No. 1 level on a seam of iron, and have raised 8 ft. with no material change in appearance. Level No. 1 north-west, advanced 12 ft.; total, 169 ft., continue in old workings and requires close timbering. Level No. 3 south-east advanced 10 ft.; total, 312 ft. Not any change whatever, rock continues very hard, and stained with iron. Level running north-west from uprise from Attwood winze advanced 10 ft.; total, 91 ft. Shows a slight improvement; a little ore coming in, but is low-grade, rock continues soft and very flattering.—H. C. Wallace.

— (9th Feb.)—On the 5th inst., Mr. Wallace telephoned me that they had cut a streak of galena ore in face of cross-cut from level No. 1 about 1 in. wide. This being the first instance of that character of ore being found in that part of the mine I considered it important enough to cable you at once, "Face cross-cut shows seam galena inch thick." While this strike in itself may not result in what we hope, but the fact of its being fully 75 ft. easterly of any ore of that character heretofore found in this part of the mine, and running in a north-east direction, and continuing in entirely virgin ground. I deem it of considerable importance, and have strong hopes of its proving so, especially as Mr. Wallace informs me it is now about 3 ins. wide in face, and surrounding rock keeps soft.—G. Cullins.

NORTH MEXICAN (8th Feb.)—The rise above the 100 ft. has been connected with the shaft from surface, which will have now to be cut down to make it fit the rise; the contractor has agreed to do it for $224. I have graded about 20 ft. square to place the iron hoist at the head of the shaft, and for that purpose had to blast off of the bluff a good deal of rock. Enclosed please find labour sheet, and cash account for last week.—R. J. Carlisle.

NORTH TOLIMA (18th Jan.)—As under, please find report of operations at the company's mines for December, and herewith enclosed underground agent's report, and the accounts. The latter, including exploratory work, &c., show an excess of expenditure beyond the receipts of 240l. 3s. 11d. Underground: Ground extracted for month—productive, 151.00 ft.; unproductive, 45.70 ft.; total, 196.70 ft. Stoping: Six men were employed stoping in the back of the No. 1 Esperanza level, east of the rise, and two men in the back of the No. 3 Fortuna. About 7 square fms. of ground were stoped in all, producing on an average 10 cwt. of export mineral per fm.—J. G. Green.

NUNDYDROOG (5th Feb.)—Mining operations: Webb's shaft is down 395 ft. 6 ins.; there is no improvement. The 370-ft. level has been driven 40 ft. 6 ins. north of Webb's shaft: there are small branches of quartz showing a small quantity of gold. The intermediate level has been driven 62 ft. 10 ins.; the lode is 2 ft. wide, assaying 7 dwts. 12 grs. The middle level has been driven from the winze 13 ft. 9 ins.; the lode is 1 ft. 8 ins. wide, assaying 3 ozs. 10 dwts. 18 grs. per ton. Taylor's shaft was sunk 3 ft. last week; total depth, 353 ft. 8 ins. The rock continues to be very hard and unproductive. Stoping: The stope below the 370-ft. level south of Webb's shaft contains a lode 3 ft. wide, assaying 2 ozs. 11 dwts. 6 grs. The lode in the stope below the 300 is 3 ft. wide, assaying 1 oz. 18 dwts. 12 grs. The stope in the bottom of the intermediate level is in a lode 2 ft. wide; there is no assay. The stope below the 230 ft. shows a lode 1 ft. 8 ins. wide, assaying 13 dwts., and the stope in the bottom of the 166 shows a small branch of quartz, assaying 2 ozs. 9 dwts. The lode in the rise in the back of the 230 ft. north of Webb's shaft looks very well; the lode is 2 ft. wide, assaying 1 oz. 0 dwts. 18 grs. to the ton. The machinery is working very well, and the health of the camp is satisfactory. Weekly samples from the mill:—Rough quartz, 2 ozs. 4 dwts. 12 grs.; smalls, 1 oz. 5 dwts.—B. D. Plummer.

OOREGUM (5th Feb.)—Fortnightly report.—Main shaft: The 250-ft. level south has been driven on course of lode 15 ft., or 163 ft. 7 ins. from cross-cut west; the lode is 3 ft. wide, and looking well; an assay from it gives 6 ozs. 6 dwts. 7 grs. of gold per ton of quartz. The band of country rock is still between the two parts of the lode, and is getting smaller; now 6 ins. wide. The 250-ft. level north of shaft has been driven 11 ft., or 111 ft. 4 ins. from cross-cut west; the lode is 10 ins. wide, and gives an assay of 2 ozs. 1 dwt. 9 grs. of gold per ton of quartz. The first branch of quartz intersected in the cross-cut has come into the lode here at this point. We think that as we drive on it it will widen out as it has done in the level south. Low's shaft: The 270-ft. level south of shaft has been driven 3 ft. 6 ins., or 20 ft. 3 ins. from cross-cut west; the lode is 10 ins. wide; the water being in on sampling day, we could not get a sample from here. The 270-ft. level driving north, south of shaft, 2 ft. have been cut; the lode is 8 ins. wide; no assays were made from it. The rise in back of the 270-ft. level south of shaft at the end of cross-cut west, 2 ft. 3 ins. have been done, or 8 ft. above the level; the lode is 1 ft. wide; no sample taken from it. The 270-ft. level driving north of shaft, 3 ft. 3 ins. have been driven, or 96 ft. 5 ins. from shaft. We have intersected the cross-course here, shall drive through it and then drive on it to intersect the quartz we had in the 200-ft. level above. The 200-ft. level driving north of shaft, 5 ft. 3 ins. have been driven, or 273 ft. 3 ins. from shaft; there is no change here, although the nature of the rock appears to be changing. The winze sinking in the bottom of the 200-ft. level north of shaft, 4 ft. 9 ins. have been done, or 38 ft. 3 ins. below the level; the branch of quartz here is still very small, is of no value. The stope in bottom of the intermediate level north of shaft, the lode is 1 ft. 6 ins. wide, and gives an assay of 6 dwts. 12 grs. of gold per ton of quartz. The winze sinking in bottom of the 200-ft. level south, south of shaft, at the end of cross-cut west, 7 ft. have been sunk, or 73 ft. below the level; the lode is 1 ft. wide, and gives an assay of 3 ozs. 3 dwts. 3 grs. of gold per ton of quartz. The 200-ft. level driving south, south of shaft, 5 ft. have been cut, or 127 ft. 7 ins. from cross-cut west; the lode is 2 ft. wide, and gives an assay of 1 oz. 6 dwts. 2 grs. of gold per ton of quartz. The intermediate level driving south, south from old workings, 5 ft. 3 ins. have been cut, or 116 ft. 5 ins.; the lode is 2 ft. wide, and gives an assay of 4 dwts. 8 grs. of gold per ton of quartz. The stope in back of the 200-ft. level at the north end of old workings, south of shaft; the lode is 1 ft. wide, and gives an assay of 2 ozs. 7 dwts. 21 grs. of gold per ton of quartz. The stope in back of the 200-ft. level south, south of shaft, the lode is 2 ft. wide, and gives an assay of 8 dwts. 17 grs. of gold per ton of quartz. Probyn's shaft has been sunk 5 ft., and is 18 ft. below the 300-ft. level; the lode is 3 ft. wide, and gives an assay of 1 oz. 12 dwts. 16 grs. of gold per ton of quartz. The 300-ft. level driving south of shaft 3 ft. 6 ins. have been done, or 9 ft. from shaft.; the lode is 3 ft. wide, and gives an assay of 13 dwts. 2 grs. of gold per ton of quartz. The 300-ft. level driving north of shaft, 3 ft. 6 ins. have been cut, or 9 ft. from shaft; the lode is 3 ft. wide, and gives an assay of 1 oz. 1 dwt. 19 grs. of gold per ton of quartz. The winze sinking in the bottom of the 230-ft. level, north of shaft, 2 ft. 6 ins. have been sunk, or 35 ft. 9 ins. below the level; the lode is 1 ft. 6 ins. wide, and yields, as per assay, 9 dwts. 19 grs. of gold per ton of quartz. The 230-ft. level driving south of shaft, 3 ft. 3 ins. have been cut, or 88 ft. 10 ins. from shaft; the lode is 3 ft. 6 ins. wide, and yields, as per assay, 1 oz. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level, south of shaft, 4 ft. 6 ins. have been done, or 13 ft. 6 ins. below the level; the lode is the width of the winze carried, 5 ft. wide, and yields, as per assay, 1 oz. 2 dwts. 21 grs. of gold per ton of quartz. The stope in back of the 230-ft. level, south of shaft, at the north end of No. 1 winze, 109 ft. 6 ins. superficial feet have been done; the lode averages 2 ft. wide, and gives an assay of 1 oz. 1 dwt. 19 grs. of gold per ton of quartz. The 166-ft. level driving south of shaft, 4 ft. 6 ins. have been driven, or 192 ft. 7 ins. from shaft; the lode is 2 ft. wide, and yields, as per assay, 13 ozs. 7 dwts. 20 grs. of gold per ton of quartz. The No. 2 winze south of shaft: 2 ft. 3 ins. have been sunk, or 16 ft. 9 ins. below the level; the lode is 4 ft. wide, and yields, as per assay, 1 oz. 8 dwts. 7 grs. of gold per ton of quartz. The stope in back of the 166-ft. level south of shaft: 211 superficial feet have been stoped; the lode is 3 ft. wide, and gives an assay of 4 ozs. 18 dwts. of gold per ton of quartz. The stope in bottom of the 166-ft. level north of shaft: 149 ft. 6 ins. superficial have been stoped; the lode is 2 ft. wide, and yields, as per assay, 2 ozs. 3 dwts. 13 grs. gold per ton of quartz. North battery shaft: The 130-ft. level driving south from old workings 6 ft. 3 ins. have been done. We have suspended this drivage for the time, as it increased our water so much at Low's and draining it away from main shaft. Stamps: These were put to work yesterday morning after the clean up, and are working well, 20 heads full time of 24 hours per day. The result of clean up for the month of January was—Crushed 454 tons of quartz, which produced 839 ozs. troy of bar gold. All our pitwork and machinery continues to look well.—W. Martin.

ORITA (18th Jan.)—The following are the details of the operations during the month of December:—When last writing we were shut down owing to a break at the Alto Cariano. This was repaired and made a good job of by December 28th. We were washing till January 1st, when we had another bad break on the syphon about half a mile Medina side of the Alto Cariano. It took seven days to repair the second break. To make good the damage done by both breaks we had to unjoint, carry, rejoint, and timber over 2,000 ft. of pipe; also excavate a lot of ground to get the pipe on a better foundation. Having two breaks on the syphon may appear as if the pipe is now giving way, but I have examined it very carefully and find, where it has not been buried up, it is now almost as sound as the day we put it down. Where the pipe is exposed to the air or simply laid on the surface it is quite sound. Mine: During the stoppage we drove the ground sluices well a-head, and fixed the monitor in a good position to bring down the bank. We have only run 14 days, but are moving the ground very fast, and working with a full water supply in the channel. We never moved more gravel (if so much) in 14 days as we have this run. Everything is in good shape to run off the dirt fast, and I have every hope, although we made a poor start, to make a good finish to this run. As we have cleared off a greater area of bed-rock this run than usual, it will take about eight days to clean down. From where the monitor now stands we have bank in reach for about eight days, and we cannot do better than throw bank till the 27th, then start cleaning down, so our clean up will be about February 5th. New water route: We are now getting up the bulkheads and carrying all spare pipe; by conducting the water to the mine through Suarez Quebrada for cleaning down and clean up, I hope to move the greater part of the mine pipe without any stoppage to speak of. We intend to have the water in by new route next run. The greater part of the men are now on the above work. Medina River: We are having a full supply, but nothing over, no rain here for three weeks. The river is now exactly halved at Malpaso Gate. If this weather continues, I fear the river will soon fall again.—H. J. Prender.

OSCAR (23rd Feb.)—Oscar lode: The shaft has been producing rock throughout the week of the same character as before reported. The western 400-ft. level also showing the same appearance. No. 3 lode continues to show a slightly increasing quantity of pyrites, and we have also for the first time here observed visible gold. The quantity of quartz is not great, but the level looks very promising. Daw's lode: The shaft shows no further alteration, and the remarks of last week also still apply to the bottom south level, with rise in same. The bottom north level has, however, shown a still further improvement, quartz having appeared in the vein previously reported on.—J. Daw, junr.

PERSEVERANCE (2nd Feb.)—I am glad to be able to say that all the workings look very favourable and encouraging. No. 4 workings: The lode in the Koorumber drive is about 7 ft. wide in sight, of quartz bands and mineralised slate. The lode in the stopes is about 15 ft. thick of the same nature as the above. No. 1 Prospect shaft: The lode here continues to improve, a most satisfactory feature when considering its relation to end of south drive in B tunnel. Thickness not known yet, probably 8 to 9 ft. The ventilation of the various workings is very good.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending February 3rd:—Dunderberg: No change to report since my last communication to you. We have about 140 tons of ore broken at present in the mine. Eagle's drift: We have raised 10 ft. during the week, making a total of 105 ft. raised. We have 28 tributers and six contractors at work in the mine. Lord Byron: We have eight tributers at work here, and about 15 tons of ore broken ready for shipment. This mine is looking better than it did. We have a nice streak of ore about 10 ft. above the tunnel level.

SILVER WOLVERINE.—The mining superintendent, writing under date of February 1st, says:—From 22 to 37 ft. the vein is gradually widening, and its gangue (calcite and quartz), with some leaf silver, increases in fluor spar, blende, and galena, all of which is argentiferous. From collar to bottom of shaft the footwall is well defined, and slickensided throughout. The hanging-wall is here much broken, and evidently by a vertical displacement, which goes to prove its true fissure character. Trap, on both sides, is, so far, the prevailing rock, and until we have penetrated the black or Cambrian shales, must not look beyond ordinary milling and concentrating ore. The present contract should almost, if not quite, take us into the black and regular silver-bearing slates. The outlook is at present exceedingly good, for both good ore and fair progress.

SOUTH-EAST MYSORE (29th Jan.)—Mining operations.—Lavelle's shaft, end north: Cut in the past three days, 5 ft. 6 ins.; distance from shaft, 133 ft. 6 ins. The reason why we have not made greater speed was that we cut a large stream of water, which, for the time, overpowered the pumps. From whence this large quantity of water is coming, I cannot yet say. We have it again in fork; but we have to considerably increase the speed of the pumps. It is a good sign to see so much water coming out of the end. At present the lode is 1 ft. wide, and showing unmistakable signs of going bigger. It appears the greatest volume of water is issuing out of the hanging wall. Whether any more lode is still standing inside, and separated from the lode, remains to be seen. To ascertain if there is, I shall cut in a few feet to prove it. Assay this week, 1 oz. 19 dwts. 14 grs. Stope in back: The lode is fully 4 ft. wide of solid quartz, and looking very well indeed. To obtain as much as possible of this quartz I shall, for a week or so, put all my force here, and only keep coolies in the drift to keep the drill at work in the end, and a large force stoping. Top level: I have had this cleaned out and secured preparatory to sinking the winze, which is now dry. You will remember this is the place from whence we took out such good rock, almost every stone showing visible gold. Before we drained this winze it was simply impossible to do any work here; now this has been overcome, we shall be able to send up good quartz for the mill. Rogers' shaft: Sunk by coolies during the past week 2 ft. 9 ins., and lode cut. I am very pleased to be able to send you this information. So far as seen, it is 2 ft. wide; quartz producing gold. I have now put the drill in the shaft, and every possible effort will be made to sink on the lode as fast as possible. A drive south will shortly be commenced from the bottom of the shaft to make communication with Lavelle's, and when holed a magnificent piece of stoping ground will be laid out. From the lode just cut I have washed several samples, each one of them showing very good results. Thomas' shaft—Stope: The ore ground is about 8 ft. long, and lode about 15 ins. wide. I feel confident we shall see the lode resume its usual size again soon. Machinery continues to work very well. Stamps: Mr. Bishop is getting on very well with the vanners, and hopes to get everything in full working order in about two weeks.—J. M. Rogers.

TOLIMA.—The directors have received advices by the mail of the 25th February from their mines, of which the following is an abstract:—Frias: December returns, 2,271*l.* 13s. 5d.; Frias: December cost, 1,278*l.* 7s. 10d.; difference being, profit, 993*l.* 5s. 7d. The underground agent reports 37 fms. 0 ft. 10 ins. of ground expended, of which 29 fms. 1 ft. 6 ins. was productive, leaving 7 fms. 5 ft. 4 ins. of unproductive ground. The underground agent reports high-grade ore in the 50 west rise, and that the 40 west end is being extended upon a very fine and favourable lode, while the 30 west No. 2 winze has yielded 2½ tons per fm. of very high-grade mineral, having improved very much during the past month (i.e., December.) The superintendent says he has no doubt but that the mine will give good returns from the western part above 60 and 70-fm. levels for some time to come, and adds:—I am exceedingly anxious to sink the shaft and get under the mineral lately discovered in the 80-fm. level on the south part of the lode. He again complains of a scarcity of water, and of consequent delay in the raising and crushing of mineral, and intimates that the January invoice will consequently be reduced.

TRANSVAAL.—The following particulars are from manager's advices of December 31st:—Mines, Zeta vein: At this place 9 tons,

assaying 1 oz. 7 dwts. per ton, were extracted during week. No change in size of vein to report. Theta vein: This vein is situate 200 or 300 yds. south of the Zeta vein. A paddock has been opened out, and there is every indication of the existence of a large body of ore. During week 10 tons had been extracted, assaying 3 ozs. 14 dwts. per ton. (Telegraphic advices, dated one week later than the present letter, announce that 60 tons had been extracted, assaying 4 ozs. 5 dwts. per ton.) "The Kaffirs who were prospecting at other places on Manniman and Ophir have been withdrawn, and will be put on the gang here, in order that the vein may be opened out as rapidly as possible. Columbian Hill: Bore hole No. 1 has been sunk 37 ft. during week; total depth to date, 62 ft. The slate formation still continues. Manniman: Inclined shaft No. 913 has been sunk 13 ft. during the week; total depth to date, 31 ft. The vein is 2 ins. to 3 ins. thick; assay value, 1 oz. 12 dwts. of gold, and 2 ozs. 14 dwts. silver per ton. Brown's Hill Mill—Battery: The battery was at work for 70 hours, and in that time crushed 74 tons of mixed ore from Delta and Eta veins; assaying 1 oz. 15 dwts. per ton. Figures for month will be given next week. Pans: The pans have been at work for 72 hours during week, and have treated 35 tons, mixed concentrates, assaying 1 oz. 6 dwts. per ton.

VICTORIA (LONDON) (3rd Jan.)—The following is the return of quartz raised and crushed at this mine for the fortnight ending the 28th December, 1888: Total quartz crushed, 1,438 tons; total gold obtained, 666 ozs. 12 dwts.; average per ton, 9 dwts. 6 grs. The above completed the return for the half-year. The following is the return of quartz crushed for the half-year: 1,645 tons; 723 ozs. gold; 9 dwts. 9 grs. per ton. Receipts, 2,366*l.* 17s. 9d. Two weeks' mine costs, 1,257*l.* 16s. 8d. Balance credit, 1,109*l.* 1s. 1d.

REPORT OF MEETING.

WEST MOODIE'S GOLD AND EXPLORATION CO., LIMITED.

AFTER FRUITLESS ATTEMPTS ON FORMER OCCASIONS, OUR REPORTER GAINS ADMISSION, AND USES HIS NOTE-BOOK—"LAST SCENE OF ALL THAT ENDS THIS STRANGE EVENTFUL HISTORY."

An extraordinary general meetiug of the above company was held at the Westminster Palace Hotel, Victoria Street, S.W., on Thursday last, 28th day of February, in order that the subjoined resolution, which was passed at the extraordinary meeting of the company, held at the Westminster Palace Hotel, aforesaid, on Friday, the 8th day of February, 1889, might be submitted for confirmation as a special resolution, that is to say:—

(1.) "That the company be wound up voluntarily under the provisions of the Companies Acts, 1862 and 1867. (2.) That Sir George Baden-Powell, C.M.G., of 8, St. George's Place, S.W., Thomas Hayward Budd, Esq., of 33, Bedford Row, W.C., and Col. Robert Edis, of 14, Fitzroy Square, W., be, and they are hereby, appointed liquidators for the purposes of such winding up. 3. That the company hereby approves of the action of the Investigation Committee in procuring a petition to be presented for the winding up of the company with a view to the voluntary winding up being continued under the supervision of the court, and hereby resolves that the company do consent to a supervision order."—Col. G. B. Malleson, C.S.I., presided.

Mr. J. Hiley (the secretary) read the notice calling the meeting, to which was attached the following note:—"Each shareholder is requested to attend the meeting personally if possible, but in any event to sign and return the enclosed proxy in favour of Thomas Hayward Budd, Esq., one of the Committee of Investigation, and, failing him, of Col. Malleson, the chairman of the directors."

A BRIEF ADDRESS.

The Chairman: Gentlemen, the three resolutions which you have heard read were proposed and passed unanimously at the last meeting. The law requires that they shall be confirmed at a subsequent meeting. I beg now to propose "That the three resolutions which the secretary has read be adopted and confirmed."

Mr. Hume Williams: If you will allow me, sir, I shall have great pleasure in seconding that resolution. I do not think it calls for any comment, because on the last occasion we had an exhaustive, able, and minute report from Col. Edis, and I have no doubt whatever that the committee appointed will do everything that is right to be done, and I am confident that all will be done that can be done on behalf of the shareholders.

THE MOTION OPPOSED.

Mr. Wilkins: It will not have weight, I daresay; I doubt it, but I must oppose it.

Mr. Williams: I am sorry to hear it.

Mr. Wilkins: Yes, I oppose it.

The Chairman: You have heard the resolution read, proposed, and seconded, I beg to call on all those who are in favour of that resolution being passed to signify the same by holding up their hands—13; on the contrary.

A Shareholder: The secretary is not allowed to vote, I think?

The Chairman: If he is a shareholder he is.

Voices: No.

A Shareholder: I protest against the secretary voting.

The Chairman: Order; as a shareholder he has a right to vote. (No, no.)

Mr. Williams: Take the secretary's vote out, then.

The Chairman: It makes no difference; the resolution is carried, at all events.

RECRIMINATIONS.

Mr. Williams: Exclusive of the secretary's vote!

A Shareholder: You have not taken the show of hands to the contrary.

The Chairman: I did.

A Shareholder: You did not.

The Chairman: I beg your pardon, sir.

Mr. Williams: Put it again.

The Chairman: I asked those against to put up their hands, and two gentlemen held up their hands against it.

Voices: Put it again.

The Chairman: I beg to put it to the vote again. All those in favour of the resolution being passed, will signify the same by holding up their right hands—13; on the contrary, six. The resolution is carried. (Expressions of dissent.)

Mr. Williams: As this is the only question before the meeting, I beg to propose a vote of thanks to the chairman.

Several Shareholders: What for, sir?

A Shareholder: I should like to know what for?

Mr. Williams: For presiding at the meeting.

A Shareholder: What meeting?

Voices: What about a dividend?

ANGRY DISCUSSION.

Mr. Williams: There is nothing more to state.

Mr. Wilkins: I would like to ask a question, please. You told us at the last meeting that you believed there was a certain sum of money—fees received by the directors from the commencement of the company. Now, may I ask what that sum of money is?

The Chairman (interrupting): I did not say that.

Mr. Wilkins: I beg your pardon, you did. You said they would return it, and you mentioned 900*l.*

The Chairman: I never said 900*l.*

Mr. Wilkins: You did.

The Chairman: I did not.

Mr. Wilkins: You did. I took notes at the time.

The Chairman: I am in possession of the chair. (Uproar.) Will you sit down?

Mr. Wilkins: No; answer that question, please.

The Chairman: I did not say anything about it. Sir Arthur Slade, Mr. Marriott, and Sir George Baden-Powell, are prepared to return their fees. (Hear, hear.)

Col. Robert Edis: As chairman of the committee of investigation, I announced the directors were prepared to return the fees. I made the statement at the last meeting.

Mr. Wilkins: Not the chairman?

Col. Edis: No; 900*l.* was not mentioned.

Mr. Wilkins: Not 900*l.*?

Col. Edis: No.

Mr. Wilkins: I am quite mistaken, then. I made a memo.; it was 900*l.* I have another question to ask.

The Chairman: Ask it afterwards. I have referred to what Sir Arthur Slade, Mr. Marriott, and Sir George Baden-Powell will do. I want to say, with regard to myself, I became a director on the 1st of October. (Hear, hear.)

Mr. Wilkins (interrupting): You know I excepted you in my remarks. I except you still.

COL. MALLESON GENEROUS.

The Chairman: Allow me to speak—(chair, chair)—I have never had a single farthing in fees. I do not intend to make any claim for them. (Hear, hear.)

Mr. Wilkins: Kindly tell me the amount that will be returned by the directors.

Mr. Marriott said he received a cheque for his first fees. He did not want to take it, he was told he was legally bound to do so. He would return the whole of that 130*l.*

Mr. Wilkins: 130*l.* Then I must ask, for the information of the meeting, the secretary to ——

The Chairman: Order, order.

Mr. Wilkins: To refer to the books. It is his duty to keep the books—I assume he has done his duty—and to state the amount of fees already returned, or proposed to be returned.

Voices: Answer, Answer.

The Chairman: These gentlemen are men whose word is as good as the bond of any ordinary man. (Oh.) They are prepared to return whatever they have had.

Mr. Wilkins: Either directly or indirectly?

The Chairman: Of course—there is only one way of receiving fees—that is directly.

"ANOTHER PLACE."

Mr. Wilkins: That is a question to be decided in another place.

Mr. Williams: I protest about these threats of another place. An honourable statement has been received from the board. (Uproar.) We have no further business.

Several shareholders rose to speak at once, and amid the confusion a Shareholder shouted "This is a most informal meeting."

Another Shareholder: A resolution has been carried to wind up the company. Is that the way to treat 76,000*l.*?

THE PROMOTER ASKED FOR.

A Shareholder: Where is the promoter? Why does he not refund? Where has he gone to?

The Chairman? The questions you are asking are in the hands of the liquidators—gentlemen of the highest respectability. You will have an opportunity of finding out, if anyone in connection with this company, has done anything which they ought not to do.

A Shareholder: That is exactly what you have done—trying to finish this meeting when it has not really commenced.

The Chairman: The meeting was called for four o'clock; it began at four.

A Shareholder: It is usual to allow a little grace.

The Chairman: The business is over.

Voices: A very disgraceful affair.

The Chairman then left the chair.

A Shareholder: Will those shareholders come to this end of the room who are not in favour of winding up the company.

The invitation was not responded to, and the meeting terminated in disorder.

Mount Shamrock Affairs.—Mr. Woodyatt writes (25th February):—"Allow me space to briefly refer to a letter from Mr. Stonelake Lee in your last issue, wherein it is alleged that I 'emphatically stated' I should use my voting power to oust any new board which may be elected by the Mount Shamrock Gold Company. There is evidently a violent misconception somewhere. My policy is not one of destruction, and I have not expressed any intention of ousting the present, or any future board."

THE MONEY MARKET.

City, Friday Evening.

There is little doubt that the Money Market would present a much more stringent aspect than it does, firm as it is, were it not for the powerful interests at work in favour of cheap money, Mr. Goschen's intention, according to his latest statement, to pay off or convert all the outstanding Consols or reduced Three per Cent., is taken to mean cheap money, or a return to par for New Consols. Other leading City financiers are interested in the conversion of various foreign loans, and wish to keep money cheap. Can they do so? is the question. The all powerful influence of supply and demand is against them until the turn of the financial year. The revenue payments have apparently absorbed all the spare money available in London, and all the attraction that the Bank of England can have upon the provinces, or even the Continent, has not had much effect in strengthening the position of the Bank. Coin, however, has still come back from circulation, but the notes this week have slightly increased, and the result is that, although over 300,000*l.* was taken for export to the Cape and Brazil, only 188,000*l.* has been lost to the reserve, which at 14,885,000*l.* is equivalent to 43½ per cent., or 2 per cent. less than last week, and 11½ per cent. less than last year, when the rate was 2½ per cent. The public deposits have increased 600,000*l.*, and the private deposits 300,000*l.*; while the private securities have augmented over a million, and are within half a million of the total of the private deposits. Discount has been firm at 2¾, ⅞ per cent., and money at 2¾, 3¼ per cent. Exchanges with dearer money have been more offered at dearer rates.

The value of money has been well-maintained to-day, the Consol settlement sweeping the market of its small balances, and compelling borrowers to again resort to the Bank for financial assistance. Short loans have ranged upwards from 2¾ per cent., and bills of three months and 60 days have been discontinued at 2¾, ⅞, the supply being good, and the closing tendency strong, notwithstanding a large purchase of gold.

At the Bank this afternoon, a purchase of 150,000*l.* in bar gold was notified, also a further efflux of 10,000*l.* in sovereings for Rio. Bar silver, Mexican dollars, and rupee paper have closed flat in conjunction with lower Indian exchanges.

At the Stock Exchange during the past week business has not been particularly brisk, owing to the attention of dealers and others being engaged with the arrangements of the fortnighly settlement. The rates for carrying over speculative bargains until the next account ranged from 3½ to 4 per cent. on Forcign Government Bonds, and from 3½ to 4½ per cent. on American Railway Stocks. Contangoes on Home Railways stiffened during Tuesday afternoon, that on North-Eastern being as much as ¾, ⅞ per cent. The chief event in connection with the City was the issue of the prospectus of the Burma Ruby Mines, when the "premium hunters" caused such a crush, that the interference of the police became necessary, and Baron Rothschild himself had to enter his establishment through a window at the back of the premises, and rumour had it as much as 20s. was paid for the application form, but 5s. was obtained in many instances The "Parnell Commission" was revived considerably last week by some exciting incidents, which have now been capped by the disappearance of a totally unreliable witness. In fact, so absorbing is the public interest in this case now that we may be excused for mentioning an incident that occurred in the smoking-room of the House of Commons. It was agreed by those present that anyone who mentioned Pigott's name should be mulct in a small fine, and this was done, those caught staying to watch for others, so that 40 half-crowns were soon collected amidst considerable amusement. Mr. Goschen's announcement caused the Funds to give way, the fall being checked by the purchases of the Government broker. Foreign Government Bonds have not been so well supported by the Continental Bourses, so that prices show a trifling reduction on the week, apart from Turkish Tribute and Defence Loans. In France it is believed that the "Exhibition Ministry" will remain in power for the rest of the year, owing to the anxiety of the French for the success of their exhibition. English Railway Securities have been buoyant, the upward tendency being assisted by a scarcity of stock, good traffic returns, and investment purchases, and in many instances a considerable portion of the dividends have been recovered. Brighton "A" touched 140⅝, but this was not maintained; still the price shows a gain of 3½, and most others rose 1 to 2 per cent. American railways were dull and listless, and but very trifling alterations are shown. Grand Trunks were good on the traffic return, but gave way on news of a serious accident. Mexican Stocks were pressed for sale on the traffic return. Miscellaneous Securities were steady, but without important change.

Business to-day has been quiet, but prices have been well maintained, with a further substantial rise in Home Railway Securities. The Funds were hardly so firm. The Consul settlement was concluded, and showed, as expected, a large amount of stock on the market, although the Government broker has purchased largely. Foreign Government Bonds exhibit a very moderate decline on the political news from Paris and Rouen; Egyptian and Peruvian exhibiting the greatest reduction, closing ¼ to ⅜ lower; Spanish Bonds were also flat. South American issues were irregular, the variations, however, being restricted to ¼ per cent. The feature of the Home Railway Market, in fact of the day, was the extraordinary firmness of Brighton Deferred Stock, which has risen to 141¾, or a rise of over 1½ on the day. It is stated that the forward booking in connection with the Paris Exhibition is something enormous. South Western rose 1½ as the battle over the new Wimbledon is settled, and by which they will benefit. Caledonian rose to 121⅜ but reacted to 119⅞, closing dull, but with a rise of nearly ½. South Eastern A rose ¾, and the majority of the rest ¼ to ½ per cent. American Railroad Securities have fluctuated in a listless manner, opening firm, but closing dull in sympathy with New York. The changes do not exceed ½ dollar apart from a rise of ¾ in Union Pacific Shares after being 68. Grand Trunk of Canada Railway Stocks improved on the issue of a favourable monthly statement, showing an increase of 20,000*l.* in the net profit for January, and the stocks improved ⅛ to ⅜. Mexican Railway Stocks rallied 1 per cent. Telegraph Securities were firmer, and there was a recovery of ¼ to ⅜ in Nitrate Group.

Annexed are the final quotations to-day:—Consols Account, 98¼, 98⅜xd; Egyptian Preference, 102½, 102¾; Egyptian Unified, 87¾, 88; French Four-and-a-Half per Cents., 103, 103½; Hungarian Rentes, 84¾, 85; Italian, 95⅛, 95⅜; Mexican, Scrip, 93½, 94; Peru Five per Cents., 13⅛, 13⅜; Peru Six per Cents., 14⅝, 14⅞; Russian, 1873, 101¾, 102; Portuguese, 65¼, 65½; Spanish, 75¼, 75⅜; Turkish, 1871, 89¼, 89¾; Turkish Defence, 99¾, 100¼; Caledonian, 119¾, 120; Great Eastern, 71⅝, 71⅞; Great Western, 155¼, 155½xd; Brighton "A," 141⅝, 141¾; North-Western, 178⅛, 178⅜xd; Metropolitan, 80¼, 80¾; Metropolitan District, 39¾, 40¼; Midland, 139¼, 139½xd; North British, 57½, 57¾; North-Eastern, 165⅛, 165⅜; South-Eastern "A," 110⅜, 110⅝; Hull and and Barnsley, 36¼, 36¾; Grand Trunk Railway, 11⅛, 12; Ditto First Preference, 73⅜, 73⅝; Ditto Second, 53⅜, 53⅝; Ditto Third, 29⅛, 29⅜; Canadian Pacific, 52⅝, 52⅞; Mexican Ordinary, 43⅜, 43⅝; Denver, 16½, 16¾; Erie, 29⅝, 29⅞; Milwaukee, 63, 63¼; Lake Shore, 106⅛, 106⅜; Louisville, 60⅞, 61⅛; Atlantic First, 34⅛, 34⅜; Ontario, 17½, 17¾; Ohio, 23½, 24; Norfolk and Western, 52⅜, 52⅝; Reading, 24, 24¼; Reading Bonds, 86, 86½; Union Pacific, 67¾, 68; Wabash Preference, 27⅜, 27⅝; Ottoman Bank, 11⅛, 11⅛; Anglo-Telegraph, 49½, 50; United Telephone, 14⅞, 15⅛; Hudson's Bay, 19⅝, 19⅞; Suez Canal, 89¾, 90¼; Guinness, 30¾, 31xd; Allsopps, 8⅜, 8⅝xd; Bryant and May, 13¼, 13½; Hyderabad (Deccan), 9¼, 10; Primitiva Nitrate, 32, 32½, Brush Light (4*l.*), 3⅜, 3⅝.

REVIEWS.

Miscellaneous Accidents in Mines, with Special Reference to the North Staffordshire Coalfield; their Causes, and the Means of Diminishing their Frequency. By Arthur Robert Sawyer, Associate of the Royal School of Mines, and one of H.M. Inspector of Mines. John Haywood. 1889.

During the last eight years the author of this work shows that 466 persons have been killed by falls of roofs and slides, 210 from miscellaneous causes, 105 by explosions, 96 in shafts, and 92 on the surface. We are extremely pleased to see that the number of accidents has a tendency to decrease.

South Africa, and how to Reach it by the Castle Line. Waterlow and Sons, Limited.

The importance of South Africa as a mining centre has been the theme of our pages for years past, and particularly during the last 12 months. How to get to the modern El Dorado it is the purport of the present volume to show. It is published in the interests of the Castle mail line of steamers—a service that has won golden opinions from all who know its conveniences and the capacity it has for satisfying the desires of even the most captious voyagers. South Africa, which used to be regarded as a sort of Black Hole of Calcutta, to which the traveller repaired only by bare necessity, and with all but certain belief that he would never return, has in later and more enlightened years blossomed into a health resort, to which patients suffering from pulmonary complaints retire with every prospect of re-establishing their health and regaining their strength. The author of this volume is Mr. Edward D. Mathers, who has had considerable experience of the subject upon which he writes, and also of the mail service which he has good reason for knowing. Quite apart from what is said about the Castle Mail service, the glimpses of South African life, of its goldfields, its harbours and its town, render the volume extremely interesting and well worthy of perusal.

MINING IN CORNWALL.

(from our correspondent.)

During the early part of the week the Cornish mine share market was rather active, and many shares changed hands, but towards the settling business has become easier. The chief business has been in Carn Breas, and very good reports are current with respect to this mine. The shares have advanced during the week about 14*l.* buyers. At West Seton the effects of the recent explosion have been got over, and the returns are increasing. Shares, however, in this mine have been neglected at 5½, 6. The bottom of the mine at Cook's Kitchen has turned up very well, and the returns are increasing. Shares have been little inquired after, and remain at 11¼, 11½. Both sides of the bob at Wheal Agar have been cast, and good progress is being made in preparing to put the new bob in its place. Share remain steady at 11, 12. The shares in Killifreth Mine are unaltered at 25s. to 26s. It has been said that the lode which they were expecting to meet had turned out poor, but this was no disappointment, as it was thought it would be so until several fathoms have been opened up. As we state above, Carn Breas have been largely dealt in during the week, both for settling and for meeting, at from 13 to 14, and they close very firm at 14¼, 14⅜, meeting. Dolcoaths have been dull, and the shares have receded from 102 to 100. They leave off steady for the meeting at 101¾. East Pool shares have been inquired for during the week, and their price have improved somewhat—from 34 to 35. This mine has gone down 60,000*l.* in value during the last few months. Phœnix Uniteds have been in moderate request at 2*l.* 18s. 9d., 3*l.* 1s. 3d., and close steady. In the early part of the week South Frances were moderately dealt in at 7, 7⅛ for cash, and at 7¼, 7½ for meeting. The price of West Kittys have gone from 6⅝ to 7¼, and shares have been in better demand. West Frances have been slightly inquired for at 9, 9⅛.

Holloway's Pills.—Nervous irritability.—No part of the human machine requires more constant supervision than the nervous system—for upon it our health—and even life—depends. These Pills strengthen the nerves, and are the safest general purifiers of the blood. Nausea, headache, giddiness, numbness, and mental apathy yield to them. They dispatch in a summary manner those distressing dyspeptic symptoms, stomachic pains, fulness at the pit of the stomach, abdominal distension, and regulate alike capricious appetites and confined bowels—the commonly accompanying signs of defective or diminished nerve tone. Holloway's Pills are particularly recommended to persons of studious and sedentary habits, who gradually fall into a nervous and irritable state, unless some such restorative be occasionally taken.

"NOTES ON INVESTMENTS"

The OLDEST and SAFEST GUIDE to INVESTORS and SPECULATORS

PUBLISHED FORTNIGHTLY. FREE ON APPLICATION.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes, and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

G. C. M. (Old Kent Road).—Mysore West and Wynaad and Mysore Reefs. All the others are good to hold for the rise.

Reader (Chertsey).—There is a run on these shares, and we think they will go very much better. Referring to the last part of your letter we will make enquiries and let you know by letter.

L. Jameson.—No 1: We advise you to sell. Nos. 2, 3 and 4 have a fair chance, and look like going better. No. 5: It would be as well if you sent us the full particulars.

B. G. M.—The call has been made, and the buyer must pay it seeing that it is not due until the 6th inst.

A. B. L. (Winchelsea).—New Eberhardts and Tetuans should be held. The prospects of a speedy rise are good.

Indian (R. A.).—We still advise a purchase of the shares you mention. Sell the Tramways.

F. D. Ralph (Wilts).—We advise you to go into the new company rather than sacrifice your holding. There is a good prospect of an immediate rise in the shares.

E. T. A.—The bank you mention is one of the safest investments of the day, as banks go.

E. T. B. (Liverpool).—Yes, you can buy Colon, Organos and New Emma, for a rise.

A. S. S. (Dunkirk).—Certainly not. Our advice is that you should not trust him with one penny. If committed, advise your bankers to pay only on executed transfers.

Manchester (H.).—We have already had several complaints about the party you mention. Forward correspondence to us.

J. Bird (Basingstoke).—Do not sell at present. They will, in our opinion, have a rise.

A. A. H.—See the meeting in this week's issue, and we think you will then alter your arrangements.

State (S. L.).—The shares you name are, to our thinking, not worth the paper they are written on, and if you hold any sell at once for what they will fetch.

Waine.—Send us your address, and we will then forward your letters, which we have taken care of since you wrote.

A. Pearce (Willesden).—Certainly not.

The Mining World.

LONDON: SATURDAY, 2ND MARCH, 1889.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE RUSH FOR RUBIES.

If the proverbial intelligent foreigner had chanced to find himself in St. Swithin's Lane on Wednesday last, he would have been considerably astonished, as well he might have been, at the scene of wild excitement which presented itself. He would probably have been aware that two or three years ago the West End of London was thrown into a state of chaos by a howling mob of ruffians, and he would have naturally concluded that the demon of lawlessness was *en evidence* in the City, and that the great house of Rothschild had presented a splendid opportunity for securing plunder. But upon a closer inspection he would have noticed that, although a large proportion of the surging mass of humanity were mud-bespattered, ragged and hatless, the people must have been decently dressed when the fray began, and that they were hardly of the footpad class. It was not an ordinary riot, at all events. What was it, then? "Oh," our intelligent foreign friend would have said, "that large building must be Bedlam, of which I have heard so much, and I suppose the patients have broken loose. How sad!" But again he would have been mistaken; the crowd was composed neither of thieves—at least to any large extent—nor of escaped lunatics. It was only a gathering of business men anxious to secure a prospectus of the Ruby Mines of Burmah Company, Limited, the issue of which had been announced that morning.

Even to the insular mind the sight was a strange one. Hours before the City is usually awake the neighbourhood of New Court was taken possession of by an eager crowd pushing and jostling and fighting to get a place near the doors of Messrs. Rothschild's establishment. The gathering continued to swell as the morning wore on, until a constantly increasing body of policemen found it almost impossible to keep a way for those who wished to pass through St. Swithin's Lane. But still the crowd extended. Clothes were torn, hats were converted into concertinas, horse-play was freely indulged in; to such an extent, indeed, did the scrimmage go, that it is marvellous that greater injury was not done to life and limb. As it was, one unfortunate youth was pushed through the window of a shop opposite Messrs. Rothschild's premises. Meanwhile, the great leaders of finance and their employés had to gain access to the New Court building by means of ladders placed against the first-floor windows, both in St. Swithin's Lane, and at the back of the premises near the Mansion House. Fancy the great Rothschild family getting into their own offices like so many burglars. Well, the aforesaid intelligent foreigner would have had the laugh of us this time.

Seriously, the sight was one which reflects little credit on the business life of the present day in the metropolis. It was, of course, a development of the premium-hunting mania, which set in when the Guinness and Allsopp conversions gave rise to a sort of beer-frenzy. Let us hope that the climax has now been reached, and that henceforward operations of the kind may be conducted with more regard for common sense. How many of those who fought for prospectuses last Wednesday wished to make a real investment in the Ruby Mines of Burmah? It is impossible to say with any certainty; but we should be greatly surprised if the proportion exceeded five per cent.; probably, one per cent. would be nearer the mark. But the whole business had been carefully manipulated. Rumours had been in circulation for weeks previously, that the company, so long expected was at last about to make its appearance, and for days before the prospectus was advertised the whole of the particulars of the constitution of the company were known, and dealings both in the ordinary shares and in the founders' shares were freely transacted on the Stock Exchange by brokers who, it is reasonable to assume, had been assured of a certain allotment. Public attention had, therefore, been attracted to the venture, and as the discussions in Parliament have led to the general belief that Mr. Streeter had caught the Indian

officials napping, and had in fact secured a concession of enormous value on exceedingly advantageous terms to himself, it was only natural that the market manipulations should have had the desired result.

In our opinion, however, those who have paid 3*l.* premium on the 1*l.* ordinary shares and 350*l.* each for the founders' shares, will find before very long that they have acted very unwisely. The capital of the company is 300,000*l.*, in 299,000 ordinary shares of 1*l.* each, and 1,000 founders' shares, also of 1*l.* each, the latter being entitled to a moiety of the profits over and above an amount required to pay 15 per cent. to the ordinary shareholders. The price paid for the concession is to be 55,000*l.* That in itself would be a small sum ; but the concession, which has only seven and a-half years to run, is subject to a payment to the Indian Government of 28,000*l.* per annum, besides one-sixth of the total net profits of the undertaking. Seven and a-half years is not a long term for a concession carrying such conditions, especially when it is borne in mind that the industry is in its infancy. The concession is renewable at the end of the present term, but the basis upon which it is renewed rests with the Indian Government ; so that if the compauy be as successful as the most sanguine expect, it is quite certain that no extension of the concession will be granted, expect upon terms much more onerous to the company. But even as it stands, we do not see that the prices quoted for the shares on Wednesday—they have declined somewhat since—were at all justified. Taking the ordinary shares at 3*l.* prem., and the founders' shares at 350*l.*, we get a market price for the property of over a million and a quarter sterling. Ten per cent. is not an unreasonably large dividend for an enterprise of the kind, but to pay such a dividend on the ordinary shares purchased at 4*l.* net, the company would have to earn 195,000*l.* per annum. To pay the ordinary shareholders only would, of course, require a much less sum ; but the founders, as we have pointed out, take half the profits over 15 per cent., so that instead of the company having to earn 40 per cent. on its capital to pay a purchaser at 4*l.* a share, 10 per cent. on his investment, it would really have to earn 65 per cent., or, as mentioned above, 195,000*l.* To those who have secured an allotment, no doubt, a very handsome premium is obtainable ; but outside the charmed circle there are not likely to be many successful applicants, if we may judge from previous issues by some of the leadiug financial houses.

THE UNFORTUNATE SHAREHOLDERS OF WEST MOODIE'S GOLD AND EXPLORATION COMPANY, LIMITED.

The story of the rise and fall of West Moodie's Company, as told in our report of Thursday's meeting, will be a rude shock to the investor who pins his faith to Members of Parliament. and who deludes himself with the idea that Government officials should be trusted with the management of commercial affairs. That the story is permitted to be told at all will be a relief to the shareholders, for the reason that from several recent meetings pressmen have been excluded. The object of Thursday's meeting was to wind up the company—in other words, to receive the open confession of the directors that they had utterly failed to realise any of those promises with which the prospectus was as thickly studded as a Christmas pudding should be with plums. The names of these gentlemen should be handed down to an admiring joiut stock posterity : The Right Hon. W. T. Marriott, M.P., Sir Alfred Slade, Bart., Mr. G. S. Baden-Powell, M.P., and Mr. W. H. Penning, F.G.S. Justice to Col. Malleson demands the remark that he was not an original director, and that he joined the board quite recently. The way in which the original board threw themselves into the arms of Mr. W. H. Penning is a sublime instance of faith in one's fellow creatures which directors only seem to display when dealing with the money of other people. The prospectus was issued in January, 1888. The capital was 100,000*l.*, and 67,000*l.* was invited from the public—76,000*l.* being paid for the property in cash and shares. Mr. Penning, who was its sponsor, stated that he had visited it, and the prospectus talked of the area as seven square miles. The board were full of good intentions, but only failed at the point of execution. They "intended" to erect a mill, or to exercise their right to call upon the vendor to erect one, a mill house, a house for the manager, reservoirs for the water, and to deal with a large quantity of quartz—the yearly profit being put at 35,640*l.* Shareholders seeing the names of Messrs. Marriott, Slade, and Baden-Powell on the board naturally expected that after an existence of less than 15 months a better fate would have been reserved for the company than that of going incontinently into bankruptcy, and that they would have had, in common parlance, "a run for their money," but instead of a run, there has been a sort of funereal procession to the bourne whence no company returns. No wonder the shareholders (as will be seen) said some plain things to the directors. No wonder they asked "Where is the promoter ?" We cannot tell them ; but this we know, that if in another place "they wish to pursue this affair further they have some good names to proceed against, and at the present time a ventilation of this wretched company's affairs seems to be peculiarly desirable.

HYDRAULIC MINES AND THEIR CHIEF SPONSOR.

INTERVIEW WITH MR. THOMAS THOMPSON.

Mr. Thomas Thompson, who is now staying at the Hotel Métropole, was found by our representative, after the fatigues of an exhausting day, reclining upon one of the couches of that luxurious establishment.

This, he explained, is not the hour at which I am usually able to leave my office. As you very truly remarked in the Mining World last week, "My lamp consumes the midnight oil ;" and, as a matter of fact, for some time past it is rarely indeed that I have been able to leave my office much before the chime of the midnight hour has sounded. To-night is, however, exceptional. I live in the country in ordinary times, but press of business compels me to stay near the office, and in coming here I have made a good choice. You wish to ask me about hydraulic mines, and your opening question will naturally be, When was hydraulic mining first brought to the notice of the English public ? Well, it was about the year 1870, in connection with the mines of the Republic of Colombia. In that year a concern was floated called the Malpaso, which afterwards merged itself into the successful mine, or group of mines, now owned by the Colombian Hydraulic Company. It struck me in connection with Malpaso that the gravel deposits in which it abounded afforded a vast quantity of ground, poor in quality as regards its gold, but yet which might be profitably worked if attacked on a proper system, involving only a moderate outlay. This was no new idea, because mines in California and elsewhere had made very handsome profits from gravel, yielding only, perhaps, two pennyworth of gold per ton.

Probably you mean 2 dwts. ?

Not at all, two pennyworth, but in such cases facilities for working existed, such as I do not hesitate to say obtain in greater abundance in Colombia than elsewhere. It was the knowledge of these facts that led me to give special attention to the mines of Colombia, and to the hydraulic system, which I may fairly say have been the study of the greater part of my business life. The results obtained in California and elsewhere were so striking that the application of the same system to the mines of Colombia became more and more impressed upon my mind. When the Malpaso Company sought to profit by the experience of California very great difficulties had to be encountered. We were new men, working new mines in a new country, and under a comparatively new system. At first we had Californian miners, but the conditions of mining were in many respects so different that we had practically to inaugurate our own system, and to put it roundly—the Californians were a failure. Just as we saw success in view our money became exhausted, and we had to work from hand to mouth, and to open up the mines, with their own resources — the mines themselves furnishing their own working capital. Had they failed to do so the mines could not have been worked — such at that time was the distrust of the public of mining generally. About three years ago the Colombian Hydraulic Company startled the mining community by its success, and began to pay dividends of about 20 per cent. per annum, and there is every probability that the distributions will become greater. When the Malpaso Company was formed I took 1,000 shares myself, and at one time nearly two-thirds of the whole issue belonged to my clients and me. I was always a steadfast believer in this property. Its original discoverer was Mr. W. S. Welton, C.E., whose knowledge of hydraulic mines in California led him to the belief that Colombian Mines could be worked on a similar system. He offered several properties in Loudon to Mr. Charles Ogle Rogers, of Blomfield Street, and it was then that I was asked to join the floatation of the Malpaso Company on the basis already mentioned.

Did you not introduce the successful Orita Mine to the public ?

Yes. I heard that they adjoined those of the Colombian Hydraulic Company, and I was asked if I would purchase and bring them out as a company. I declined to purchase them, but took out a lease and floated a company, with a capital of 20,000*l.*, the whole of which was working capital. You will observe that the concern has a very small capital, and that the whole of it is working capital. The lease was handed over to the company as I received it, and virtually, therefore, I asked the public to join me in working the mines on precisely the same terms as those submitted to myself.

What has been the result in that case ?

We had difficulties to contend with there also, but not so great as those which confronted the Malpaso. Among other adverse influences I should mention that a revolution broke out in the country just at the very time we were carrying out our most important works, and many materials sent from this country could not be passed up the river Magdalena. Mr. Welton was the discoverer of Orita also, and was the engineer who laid down the iron pipes to bring the water into play upon the mines. The character of this undertaking may be judged from the facts, that the iron pipes are about four miles and a half in length, 5 ft. in diameter at the intake, and about 18 ins. at the outlet. The quantity of water they are constructed to carry is nearly 100 cubic ft. per second.

I gather from all this that as you have gone on with hydraulic mining in this Republic your difficulties have gradually diminished ?

That is so ; but it is specially the case with Orita, because the

water being conveyed in iron pipes, there have been no breakages whatever for a period of three or four years, whereas in the case of the Colombian Hydraulic Mine, the topographical features of the country made ditches necessary, and for a long time there were continual accidents.

Describe the hydraulic process?

Hydraulic mining differs from quartz mining in this respect, that the lode containing the latter may be only a few inches to a few feet wide, so that the ore has to be dug for, sometimes at very great cost, and it is only comparatively very rich ore that will pay. Speaking generally, nothing yielding less than ½ oz. to the ton will pay—unless indeed, as in the case of the St. John del Rey, it be treated on an enormous scale, when a less yield will prove remunerative—the general establishment expenses being spread over the whole. With hydraulic mines, however, you have a large tract of country before you, probably thousands of acres in extent—varying from a few feet up to 300 or 400 ft. in thickness, all of which may be more or less auriferous, and carrying for the most part gold, but only at the rate of a few pence per ton. The reason that profit can be made out of such poor stuff is because nature is made to open nature's own storehouse. The process of extracting the gold consists simply in bringing water on to the mines and directing it by means of a pipe or hose on to the gravel. If you have seen a fire and the hose playing upon it you get a fair idea of hydraulic mining, only in the one case you are trying to prevent mischief, and in the other you know you are adding to the world's wealth, and, I may add, to your own. The force of water breaks up the gravel, which is then washed away down a sluice, paved in the bottom either with stones or blocks of wood—the interstices being filled in with quicksilver. These sluices are oftentimes many hundreds of feet in length, and in the course of its path down such a sluice the gravel deposits its gold contents into the quicksilver, by which it is caught up, while the gravel itself is washed away by the force of the water. The process is so simple and inexpensive that, as I have said, a mine yielding only two cents worth of gravel will, under favourable circumstances, yield a profit, and I have myself been connected with a mine where the cost of treatment has not exceeded ¾d. per ton.

What do you consider the conditions necessary for hydraulic mining?

First of all, a gravel deposit, containing gold more or less disseminated through it; second, an adequate quantity of water, with a sufficient fall to enable it to be directed with force against the gravel; and, thirdly, an outlet by which the enormous quantities of gravel being worked can be washed away. The importance of having a good outlet can be well understood, when it is mentioned that 1,000 miner's ins. of water, by no means an extraordinary quantity for a hydraulic mine, ought to be capable of washing 3,500 tons per day.

How do you reach the hydraulic mines of Colombia?

By means of the Magdalena River, which is the main roadway of the country, and is navigable for 600 miles out of the 1,500 which constitute its length. As to the climate, it is very equable, there being no winter or summer, but two wet and dry seasons. Sometimes there is a drought, and at the present moment the Colombian and Orita Mines are suffering from that cause, which, however, is quite exceptional. In any case it rarely lasts more than a month or six weeks, and it has never been sufficient to entail an actual stoppage of hydraulicing. Colombia is the finest country in the world for this kind of mining, because of its mountainous character. The consequence is that you have larger and swifter rivers, and a better outlet for working the mines than is to be found in almost any other country of the world. Another point in favour of Colombia is that mining is recognised as its main industry, and there is no trouble with the farmers for damaged land, &c., such as we have heard so much of in California.

I believe you have lately associated yourself with two other mines in which the public have become largely interested—Tetuan and Colon?

That is quite true, and, unquestionably, a very large amount of attention has been excited on the part of the public. I refer (as you do) to Tetuan and Colon. I have had piles of telegrams each day respecting them, and I may truly say that my work is scarcely ever done. The Tetuan Mine ought undoubtedly to be a very fine property—the gravel deposit being large and the outlet equal to any in the country, while the operations, being now conducted, should be completed in three or four months at the outside, when the company will be in a position to wash about 10,000 tons a day. Some fine returns may then be expected. It has already been stated that about 2 cents worth of gold in a ton of gravel will pay very well, but that which is now being taken out under the hand process gives at the rate of 30 cents per ton. Many parts of the gravel will no doubt go richer than this, but if we only get 15 to 20 cents the dividends must be enormous. The Colombian and Orita Companies are each using only 1,000 ins. of water, and they pay 20 per cent. on a yield of less than 12 cents per ton.

Now about Colon.

The Colon Mines, like the Colombian Hydraulic and Orita Mines, were first discovered 10 years ago, and quite possibly form a portion (though six or seven miles off) of the same gravel deposit. In this case also Mr. Welton was the discoverer, but for reasons which it is not necessary to enter into, it has hitherto been found to be impossible to do Colon the justice its intrinsic merits warrant. The mines have been worked more or less all this time under the hand process, and have never failed to yield a handsome profit. Portions of the gravel, for a period of many months together, have yielded as much as 30s. per ton, and although it cannot be expected that all will give at anything like this rate, yet sufficiency of gold has been obtained to show that we have in the Colon Mines an enormously valuable property.

My final questions are as to the Government, the people, and the mining laws?

The Government is a Republic, and the property of the stranger has always been respected, even in revolutionary times, and whenever injury has been done during political disturbances, compensation has always been promptly paid. The population consists of Spaniards and half-castes, and taking the people as a whole, they are exceedingly straightforward and honest. Mining is practically the first industry of the country, and after a little training, under experienced men from this country, the natives make the very best of miners. The mining laws, are of the most favourable character—indeed, probably more liberal than those existing in any other part of the world. The general conclusion I draw from all this will be obvious, namely, that before the hydraulic mines of the Republic of Colombia there lies a great future, and with that future I shall be not a little proud of having my name identified.

THE MYSORE GOLD MINING COMPANY.

[From a Correspondent.]

In one of your recent issues you stated that you had always pinned your faith to the success of the mines working on the Colar Mysore Goldfields. You want nothing from me, nor indeed from anyone, to testify to the way you have always given effect to your thoughts, as my newspaper-cutting books, numbering some seven volumes, and containing all your leaders and remarks on the subject, will abundantly show. More than once I have had to trouble you to insert a letter respecting the Mysore Gold Mining Company in particular, and generally as to other mines working on the same fields. Without trespassing too much on your space, I venture to submit to your readers that the last report received from the Mysore Gold Company, written by Capt. Plummer on the 5th of the present month, is far away the most satisfactory ever sent from the mines. The figures below will show at a glance that at 19 different points in the mine, or, rather, I should say *mines*, the average width of the lodes is no less than 3 ft. 6 ins., and the value 2 ozs. to the ton!

As probably few of your readers take the trouble to wade through the whole of the reports, I have tabulated—I trust correctly—each and every point mentioned in Capt. Plummer's last report, giving the width of lode and value:—

	ft.	ins.	ozs.	dwts.	grs.
466-ft. level north of Taylor's	5	0	1	14	0
400 " " "	3	6	3	10	3
296 " " "	5	0	4	18	0
236 " " "	3	6	3	15	3
296-ft. level south of Plummer's	5	0	0	19	19
152-ft. level south of McTaggart's ...	3	0	0	7	20
220-ft. level south of Schaw's	2	6	0	11	18
180-ft. level south of Tennant's	1	3	0	13	1
180-ft. level north of Tennant's	1	0	0	7	10
466 stope north of Taylor's	3	6	0	14	0
400 " " "	4	0	2	10	0
296 " " "	3	6	2	2	3
466 stope south of cross-cut	2	6	1	15	0
400 stope north of Taylor's	4	6	2	12	6
Second stope	4	0	2	9	0
400 stope south of Taylor's	5	0	0	10	0
296 rise north of Taylor's	6	0	6	10	6
Schaw's shaft	1	3	0	3	12
Tennant's shaft	1	3	1	15	22

Average width of lodes, 3 ft. 6 ins.

Average value ... 2 ozs.

Hitherto almost all the payable stuff has been raised from Plummer's and Taylor's shafts to the *south* of this large property, but now it will be observed that a long way to the *north* at Tennant's shaft the lode is yielding no less than 1 oz. 15 dwts. 22 grs., and if I understand correctly, even Tennant's shaft, the most northerly at present sunk, is something like half a mile from the boundary of the Ooregum Company, where such magnificent results are being obtained, so that a large tract of land in this direction remains to be explored. What a brilliant prospect the success of the Mysore opens up for the Goldfields of Mysore, Limited, with its huge property of 13 square miles.

I hope you will not deem my letter too long for insertion, as I have done my best to contract my remarks within as brief a space as possible, having reference to the importance of the subject. If our old friend William Abbott, whom we so greatly miss, had now been living he would have prophesied an early and phenomenal rise in the price of the shares; but as no one that I know at the present moment can take upon himself Elijah's mantle, I cannot lay claim to foretell the future, not being possessed of the gift of prophecy.

W. H. B

OCEANA FACTS AND FANCIES.

THE speeches delivered by Mr. Pasteur (the chairman) and Mr. Henderson (the local director), of the Oceana Company, showed the extensive and valuable nature of the property the company has acquired, and went far to justify the enormous rise that has taken place in the shares. Mr. Henderson, in particular, elucidated the position in a speech that erred only on the side of extreme length, but his excuse must be the magnitude of his subject, and the enthusiasm which led him away; and not only him, but also led away, though in another sense, many of his listeners whose time was exhausted. The company owes its existence to a syndicate that was formed, which ultimately blossomed into the Oceana Transvaal Land Company, with a capital of 50,000*l*. This, again, developed into a capital of 150,000*l*.; and meanwhile the company was adding farm to farm, at nominal prices, which are now proved to be of great value. Mr. Henderson talked of one million acres, and of 5,000 acres on the Koppieskraal alone. This vast estate seems to be capable of all the purposes for which land at surface and underground is valuable as a means of creating wealth. Alluvial deposits, agriculture, cattle, minerals, gold reefs—some of them assaying up to 28 ozs. to the ton—in fact, everything exists here that can make the mouth water, and that can to the shareholders bring home the remark of Dr. Johnson, that they have "the potentiality of growing rich beyond the dreams of avarice." Mr. Cooper's speech did not strengthen the favourable impression which the elaborate address of Mr. Henderson had produced. Mr. Cooper seems to be a gentleman strangely neglectful of his own interests. We judge him out of his own mouth. This (Oceana) Company, he said, is "the very best investment that I know of as yet in connection with the Transvaal." He then proceeded to add "I am not a shareholder." Mr. Parks, whose strong point seems to be figures, and who by arithmetical methods, of which he is the sole, because the only understandable exponent, arrives at the value of Koppieskraal Farm as 7,000,000*l*., should really take Mr. Cooper on one side, and point out to that neglectful gentleman the logical sequence of his original deduction. It is, however, upon the speeches of the chairman and Mr. Henderson that we fasten, and these certainly show that the company, whilst possessing a property of no ordinary magnitude, may also claim to own one of no common value.

BRATSBERG AND ITS SMELTING ADJUNCT.

THE speech of Mr. Barker at the Bratsberg meeting on Wednesday made it perfectly clear that if the proprietors do not take advantage of the golden opportunity that is presented to them, of taking shares in the new smelting company, there are those who will promptly profit by their neglect. The new smelting company starts with every prospect of success, because that success is based upon one at least of three conditions which the Bratsberg Company seems well able to fulfil. It can supply the raw material, whilst the directors may be trusted to select the proper process of treatment; and practically the copper market may be left to look after itself. Copper can be put upon the English market at 25*l*. a ton. At that price, as Mr. Barker truly observed, every producing mine would shut up, in which case "the price of copper would quickly right itself by cutting off supplies." The three mines now producing ore can do so to a quantity estimated at 6,000 tons per annum. The Hoffnung, from 60 tons a month, has increased to 160, or, in other words, to quote Mr. Barker again, enough to pay 30 per cent. on the smelting works; and in addition it has the Johannes mine, which is expected to yield 2,000 tons per annum, and the wonderful Naesmark mine, the assays of whose ores have shown the following surprising result:—55 ozs. of silver, ¾ oz. of gold, and 35 per cent. of copper per ton. The estimated production of this mine is 1,200 tons per annum, and the profit 14,000*l*. "In dealing with our ores—(Mr. Barker made the significant remark which Cornishmen should note)—we shall not have to put up with the iniquitous system of Cornish assaying which is the custom of the copper ore trade, and which practically robs the mine owner of about 6 per cent. of the value of his ore." Mr. Barker has become chairman of the new company, the full particulars of which will be seen on another page, and after a careful consideration of the prospectus in the light of the facts adduced at Wednesday's meeting, we are of opinion that, unlike most documents of this kind, the estimates of profit are well within the mark. The Bratsberg shareholders will benefit considerably by the formation of this concern, because their profits will be applied largely to dividend purposes, and they will also have the advantage of a large portion of the handsome surplus that is expected to remain upon the smelting operations. They will, of course, benefit in a double capacity if they become shareholders in the new company; and they are invited, though not pressed, to do so. The ridiculously low prices of Bratsberg shares constitute them about the cheapest of their kind in the market. There are no debts, no mortgages, no preferences; but, on the contrary, there are developed mines showing an ever-increasing output, ample funds, and dividends in a future that is neither dim nor distant. In our opinion, the shares in the new smelting company should be taken up by all those shareholders who are awake to their own interests, whilst those of the parent company should be bought to enable the shareholders to participate in the fair allotment to which the board are pledged.

CARLISLE GOLD REPORT.

THE meeting of this company will be held next Thursday, and in anticipation thereof the report of the directors has been issued, showing a balance of net revenue, 7,430*l*., after the payment of interim dividends amounting to 2s. per share, free of tax, out of the profits realised during the past year—being equivalent to 10 per cent. net on the capital of the company. The shrinkage in the profits has been due to the reduced amount realised on the sale of the concentrates. In view of the necessity of further providing for contingencies, it is proposed that a sum of 4,000*l*. should be added to the reserve fund, and, although after setting aside that amount, there would be a balance of 3,430*l*. 10s. 2d. left, it must not be overlooked that no less than 8,333*l*. 6s. 8d. is represented by bullion and concentrates on hand on the 31st December last and, therefore, not available as cash. The mine has been specially inspected by Prof. Clayton, who does not think any improvement could be made by a change in the management, and, in fact, thinks that possibly a good deal of harm might be done by any alteratiou in this department at the present juncture. The report of Prof. Clayton is favourable to the mine, and the directors may be credited with having rendered a good account of their stewardship under very difficult circumstances.

VAN MEETING.

THOSE who regard the Van Mine as played out may find reason to alter their opinion if they read the report of the meeting that took place yesterday. Mr. Charles Clark, the chairman, in general terms lucidly explained the position, and was followed by Capt. Williams, the manager, who entered into the fullest detail of the mining operations. The miue, according to his statement, is in a most interesting condition, and any day an important discovery may be made, which will advance Van shares, instead of leaving them the sport of the market, as they have been for too long a time past. It is also possible that the Van Hill part of the sett may prove valuable for gold, and certainly tests, so far as they have gone, and specimens, so far as they could be seen at the meeting, are most satisfactory. We agree with the shareholder who suggested that a substantial crushing should be made in order that the shareholders and the observant public may know whether a property that has yielded so enormously in lead is capable also of justifying its reputation as a producer of the precious metal.

BARANCANNES COPPER MINING CO., LIMITED.

THE re-constituted Barancannes Copper Mining Company, Limited, held the statutory meeting on Thursday. The new company possesses a nominal capital, in 1*l*. shares, of 120,000*l*., of which 110,000*l*. has been issued, the remaining 10,000*l*. being held in reserve. Unfortunately, just at the time when appearances at the mine began to look hopeful, every fathom sunk giving greater promise, the previous company found themselves in a dilemma for lack of funds. The necessary working capital has, however, now been provided by the re-construction, and the company bids fair to have a successful career. The general opinion of the mining experts, who have examined the property, is that as depth is attained the mine will become more and more valuable. The company has the good fortune to possess a board of directors who are thoroughly well acquainted with the copper mining industry, and Mr. Edmund A. Pontifex, the chairman, was able to state that the erection of the uew engine and machinery will be completed in the course of a few days, when the work of raising ore from the lower levels will be at once proceeded with.

DICKENS CUSTER.

THE shareholders of this company, in our opinion, acted wisely in accepting the re-construction scheme submitted to them on Monday last. The company has had a somewhat chequered career, this making the second re-construction in the course of 12 months. The mistake made in the previous scheme was that it did not provide sufficient capital for the purposes of the mine; but this is a mistake which the chairman assured the shareholders would not be repeated on the present occasion. The amount received under the new scheme will be 73,400*l*., which it is proposed to apply as follows:—First of all the redemption of the Charles Dickens debentures, with a bonus, 13,200*l*.; then for stores and opening up the Charles Dickens Mine, 10,000*l*.; upon the purchase of the two claims, the Pilot and the Ward Beecher, 8,000*l*.; the water-ditch to the mill, 4,000*l*.; the new road to Ketcham, 2,000*l*.; the telegraph line to ditto, 1,000*l*.; the Cupola furnace (for reducing old iron), 1,000*l*.; and 1 per cent. commission for guaranteeing the new issue of shares, 4,200*l*.; leaving a balance for a new mill of 30,000*l*. Upon the two new claims which it is proposed to acquire it is expected to strike ore at a very early stage in deep sinking. The directors have come to the wise determination not to spend any money whatever upon the different

items suggested in the Committee's report until a competent mining engineer has made a careful examination of the Custer claims.

HUMBOLDT ELECTRIC POWER AND MINING CO.

The meeting of this company showed that the board have acted with commendable vigour in pushing on the affairs of the company, and that they have been greatly aided by the parent company—Consolidated Esmeralda. The shares were allotted on November 12th, and work seems to have been started under the experienced direction of Mr. Colcord. The chief feature of the meeting was the speech of Mr. A. E. Ann, who announced the important discovery of a ledge of solid quartz 150 ft. thick. In 10 weeks 414 ft. of ground was gone through—a record of progress highly satisfactory to all concerned. Developments appear to point to a junction of lodes which usually implies great mineral wealth. The company has most valuable water power, and will utilise it for working the mine by electricity. The further progress of this company will be watched with interest, and, meanwhile, the directors feel themselves so strong that they will issue no more shares save at 7s. 6d. premium. The favourable opinion we expressed of the company when the prospectus was first issued we desire to emphasise now.

RICHMOND MINE—THE WOOD QUESTION.

One can scarcely believe that the United States Government is serious in the action it is taking in regard to the wood question in Nevada. On this side it is generally regarded as a political move, though Englishmen are not sufficieutly acquainted with American politics to understand its proper bearing. The conduct of the Government has been condemned by the State Legislature and also by the Press, not merely of Nevada, but of the whole of the United States. It is impossible to believe that the Government can deliberately intend to starve the mining population of Nevada, and yet that bids fair to be the practical effect of its action. All the incorporated mining compauies have shut down their works, and amongst them the Richmond, to whose prosperity the town of Eureka owes by far the largest part of its prosperity. We have nothiug to add to the exhaustive statement of Mr. Hopkins, supplemented as it was by the protest of the State of Nevada and the extracts from the American press, which are reproduced verbatim in another column. We ask our readers to peruse the whole of the report of this meeting, because it will acquaint them with the full position, and probably at the end of this exercise induce them to ask whether the Government of the United States can be composed of sane people to place in the way of the State of Nevada an insuperable barrier to the prosecution of the industry to which it owes at least nine-tenths of its importance and of its progress.

THE PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION.

The large increase of business reported at the meeting of the Provident Clerks' Mutual Life Assurance Association must be as gratifying to the members as it is creditable to the management. To a report of this kind the directors have long been accustomed. The progress of the association has known no interlude. A meeting of the members, at which Mr. Coleman did not announce progress would be like an opera without a chorus. The new assurances effected in 1888 were 1,184 for 241,524*l.*, producing a new annual income of 7,834*l.* 2*s.* The income for the year from premiums was 117,383*l.* 6*s.* 2*d.*, and from interest and dividends 58,260*l.* 14*s.* 11*d.*, and after payment of, or provision for, claiius and all outgoings for the year, including 70,437*l.* 18*s.* 6*d.* for cash bonuses paid to members, the funds of the association at the 31st December, 1888, amounted to 1,449,482*l.* 19*s.* The claims by death included 292 policies, assuring with bonuses the sum of 83,780*l.* 17*s.*, and 18 endowment policies for 4,598*l.* 10*s.* also matured. The management expenses have been less than last year—somewhere about 6*s.* 8*d.* per cent. less. Figures like these tell their own tale, and the tale told is one that the office is thoroughly sound, and is growing in the estimation of the intelligent public, who are able to appreciate the force of figures, and who allow themselves to be governed by their kuowledge of facts.

THE NOOITGEDACHT ESTATE AND GOLD MINING COMPANY, LIMITED.

Subscriptions are invited for 65,000 shares of 1*l.* each in this company, which is formed to acquire and work the Freehold Gold Farm Nooitgedacht, comprising about 4,951 acres. The water supply is stated to be "practically inexhaustible," and there is every facility for working the property economically. Operations have been carried on by the manager, Mr. Sweet, since September last, and on the reports of this gentleman the facts in the prospectus are based. About 630 ft. of levels have been driven on two reefs known as "Buttons" and the New Reef. A trial crushing has resulted in an average of over 1 oz. 4 dwts. to the ton, and it is stated that the reefs have greatly improved since the crushing was made. The area of the property being so large (4,951 acres) and there being other reefs or extensions of the present ones already discovered, besides strong indications of payable alluvial deposits, it is intended to thoroughly explore the unproved portions, and if other rich discoveries are made, to form subsidiary companies to work them. The price to be paid for the property including buildings, plant, machinery, and ore on dump, is 135,000*l.*—95,000*l.* of which is payable in shares. The capital of the company is 160,000*l.* in 160,000 shares of 1*l.* each. The subscription list will open on Monday, and will close the same day for town, and the following day for the country.

SOUTH AFRICAN NOTES.

LATEST TELEGRAMS, &c.

We have received the following from the Emigrants' Information Office:—"Inquiry has been made of the British Representative in the Transvaal with regard to the statements which have lately appeared in the newspapers as to the demand for labour in the Transvaal, and from a telegram received at the Colonial Office, dated the 22nd inst., it appears that there is a good opening at Pretoria and Johannesburg for some 600 artisans, mostly masons and carpenters, of whom it is advisable that not more than 300 should arrive at first. The wages of masons, bricklayers, carpenters joiners, plasterers, and painters are at Pretoria as high as 20s., and at Johannesburg as high as 30s., a day. On the other hand, the cost of living in the Transvaal is understood to be very high, and the cost of the journey there over 30*l.* There is an urgent demand for female domestic servants."

Vogelstruis.—Cablegram from superinteudent: "Shall commence crushing ore 28th February."

Revolver Consolidated.—Shares may now be registered and transferred at the London office of the company, Warnford Court.

Sheba.—A telegram from Barberton, dated 27th inst., states:—"Struck rich shoot in No. 5 drive west." (This is the lowest drive in the mine.)

Kruisrivier ("Whitehead's") Roodeport and Bloemhof (Transvaal) Estates Co.—Letters of allotment and of regret have been posted.

South African.—The folowing particulars of work relates to the week ending January 26th:—Blue ground hauled, 3,025 loads; blue ground washed, 4,400 loads; diamonds obtained, 1,127 carats; estimated value, 1,200*l.*

Wemmer.—Robert Whyte and Co. have received from the company the following report of work done during the month of January:—Quartz and casing raised, 954 tons; quartz and casing crushed, 1,447 tons; gold wou, 1,660 ozs.

Witwatersrandt "Venture Syndicate."—Notice is given that the first general (statutory) meeting of this company will be held the 7th March, 1889. The transfer books of the company will be closed from the 27th day of February to the 15th day of March, 1889, inclusive.

Hill's Waterfall Estate.—Advices from the consulting engineer, Mr. Thomas, dated 1st February, states:—"I have surveyed the Waterfall, fixed battery sites, &c., the plans and particulars I will send you by next mail." The first consignment of 20 stamp heads with appliances complete will leave by steamer to-morrow for the mines.

Transvaal Gold Exploration. The following particulars are from the manager's advices of January 28th:—Battery: The battery was at work for 120 hours during week, on ore from Delta and Eta veins; weight crushed, 149 tons: assay value, 1 oz. 8 dwts. per ton; clean up of plates yielded 143 ozs. of amalgan. Pans: The pans were at work 132 hours during week, and treated 40 tons of concentrates, assaying 1 oz. 5 dwts. per ton.

Cape Copper.—The directors, on Wednesday, resolved, "That a dividend of 4*s.* per share, free of income tax, be and is hereby declared, payable on the 25th day of March, 1889, to the shareholders on the books of the company on the 8th March, 1889, and that the transfer books be closed during the said 8th March." No. 3 coupons will be paid at the above rate of 4*s.* per share, free of income-tax, on presentation at the company's office. They can also be sent to the Comptoir d'Escompte de Paris, which will undertake their presentation.

Ophir.—Notice is given that the first ordinary general meeting of the Ophir Territory Concessions, Limited, will be held on Monday, the 11th March, for receiving and adopting the report of the directors. The transfer books of the company will be closed on and after Friday, March 8th, after which date the share certificates will be received for examination, and in due course exchanged for share certificates in the Ophir Concessions, Limited, in the proportion of 10 shares of 1*l.* each in the latter company for each 5*s.* share in the original company.

Mitchell Gold.—Kimberley, 4th February:—On the 29th ult. we cabled as under, which we now confirm:—"Have received telegram announcing discovery two new reefs Mitchell property; one supposed extension Ida reef." With reference to this important discovery we may say that its effect here has been to enhance greatly the value of the company's shares. The manager's report to this office states that he has taken measures to ensure every facility for working the reefs without unnecessary delay, and he is now opening up and thoroughly testing the ore, and should the reasonable anticipations of the directors be realised the company will become one of the most successful ventures that has been launched here. There is little doubt that one of these reefs, as stated in our cablegram, is an extension of the Ida reef, and it is certain that the Mitchell property must on this account become very valuable. We hope to write you at length upon this subject by a later mail.

Sale of Billiton Tin.—At Wednesday's auction in Batavia, 30,000 slabs Billiton sold at an average equal to 97*l.* 12*s.* 6*d.* in Holland.

At the copper ore ticketing at Redruth on Thursday last, 2,131 tons were sold for 6,855*l.* The Devon Great Consols ores (580 tons) realised 912*l.* only, just 1*l.* 10*s.* per ton. One parcel of 25 tons from Levant brought 24*l.* 7*s.* per ton.

The London Nitrate Company, Limited, notify that their transfer books will be closed from the 25th to the 28th inst., for the purpose of preparing dividend warrants.

REPORTS OF MEETINGS.

THE BIG GOLDEN QUARRY MINING AND WATER POWER CO., LIMITED.

DIRECTORS AND SHAREHOLDERS UNANIMOUS IN GIVING THE PROPERTY A FAIR CHANCE—THE LIQUIDATOR REQUESTED TO FORM A NEW COMPANY, AND SHAREHOLDERS PART INTENDING TO SUPPORT HIM.

An extraordinary general meeting of this company was held at the Offices, 4, Bishopsgate Street Within, E.C., on Thursday, "To confirm the special resolution passed at the extraordinary general meeting of the above company on the 12th of February, 1889, to wind up the said company voluntarily in pursuance of the provisions of the Companies' Act, 1862; and in the event of such resolution being confirmed, to appoint a liquidator or liquidators"—Major Travers, one of the directors, presided.

Mr. J. G. Hallimond (secretary) read the notice calling the meeting, and also the minutes of the last meeting.

WHO SHALL BE LIQUIDATOR.

The Chairman: You have heard the minutes of the last meeting read, and our business to-day is to confirm the resolution passed at the extraordinary general meeting, held on February 12th, to wind up the company. I will simply propose the first resolution.

Mr. John Ogle (director) seconded the motion.

The Chairman, after having invited discussion, put the resolution to the meeting, and it was carried. The next business, he said, would be the appointment of a liquidator or liquidators, and he begged to propose "That Mr. Hereules Nicholls, of 7, Minciug Lane, E.C., be appointed liquidator." He had been the auditor, and, therefore, knew as much as anybody could as to the position of the company, and would find the matter easier to deal with than an outsider.

Mr. Fisher seconded the motion.

Mr. West: I beg to propose an amendment—that Mr. George Garcia Wolf be elected. I find some of the large shareholders have a very strong objection to any of the officials of the company being placed in the position of liquidator. I think it not unnatural that Mr. Wolf should be appointed, because from inquiries I have made, I believe he would be a man who would bring not only a good deal of experieuce to bear on the work, but be an excellent liquidator, and that would be iu a position to give us material assistance in forming the new company, which it was intended should take the place of the old one. I think, under these circumstances, Mr. Wolf would be a very fit and proper liquidator of the old company.

Mr. Houghton: I beg to second that motion. Mr. Wolf will bring to bear on his duties a very intimate acquaintance with South Africa, and also, I fully believe, will be supported in a substantial manner by parties who are interested in seeing the company going forward. I apprehend therefore that the directors will be not unwilling to accept this amendment.

DIRECTORS ANXIOUS TO MEET SHAREHOLDERS' VIEWS.

Mr. Ogle: I do not think the directors have any objection to the appointment of Mr. Wolf, but I do take exception to the way in which it was put—that the reason Mr. Wolf was to be appointed was that it was considered right no official of the company should be liquidator. Apart from that, I am quite willing to vote for Mr. Wolf. I would merely observe that if he forms a new company he will find it somewhat invidious and difficult to occupy the dual position of buyer and seller. If he is only interested in the one capacity there will be no objection, but to the two positions of buyer and seller I expect they would attach some difficulty—at least, it may be said the position is a very delicate one. I understood from Mr. West that Mr. Wolf would be the founder of a new company, and that gentleman can see that the two positions would be incompatible.

MR. WOLF'S VIEWS.

Mr. Wolf: Of course they would be in the way that Mr. Ogle puts it; but I have no intention of being buyer and seller. I will bring my influence to bear simply in the formation of a new company for the benefit of all concerned. I am considerably interested in the company as far as my own shares are concerned, but that would not bias me one jot either in buying or selling. Mr. Ogle is the largest shareholder, and I would have his interest at heart as much as those of anyone else—in fact, my duty would be to protect the interests of the shareholders, and not the interests of those who may bring any new scheme afterward.

Mr. West: Mr. Ogle misunderstood the effect of my observations. I never intended to convey that Mr. Wolf was to get up the company; but I said that Mr. Wolf would have a certain amount of assistance from people who were likely to form a new company—in other words, that these people would have confidence in Mr. Wolf. That was all I inteuded to convey.

The Chairman: As the question of a new company has come up it will not be out of order before we go further just to ask Mr. Pulbrook his opinion of the scheme as put forward.

VIEWS OF THE SOLICITOR AS TO A NEW COMPANY.

Mr. Pulbrook (the solicitor): I had this circular (referring to the circular which was published in extenso in the Mining World of last week) put into my hand last night with the request that I would peruse it and be prepared to advise you to day on the three distinct schemes which have been put forward for re-constructing the company. The first scheme is to form a new company with a certain amount of capital divided into shares, which shares are to be paid-up in the ordinary way, whilst this company is to sell to its liquidator its mines and assets. Of course no legal objection can be taken to that. It is perfectly feasible to any gentleman in this room who likes to form a new company to buy up the property and assets of this company. It is the duty of the liquidator to sell the same to the best advantage. If any outsider is prepared to give a higher price than the proposed company it will be the liquidator's duty to sell to him, and, therefore, that needs no consideratiou. There is an alternative scheme which appears to be this—that the shareholders in the existing company will have the option of subscribing to the extent of 20,000*l*., receiving a fully paid bonus share for each share subscribed for and paid up. Now, the courts have decided that you cannot issue shares at a discount, and if that is not issuing shares at a discount I do not know what is. I should advise that that scheme should not be carried through. There is a third sheme, to issue the remaining 15,000 deferred shares in the proportion of one share for every two preferred shares subscribed for and paid up in the new company. Here, again, a bonus is given of one share for every two shares taken up, but it is no use flying in the teeth of the courts. You must have shares upon which you pay up the full nominal amount—you cannot have shares given you.

THE SOLICITOR QUESTIONED.

Mr. Pauling: I think Mr. Pulbrook rather missed the point of the whole thing. I take it that that circular was intended to convey what is being done every day. Underwriters who underwrite certain shares in certain properties get from the vendors certain company's shares and no exception has ever been taken to that. It is not so expressed here, but that is what is meant to be conveyed.

BAD OUTLOOK FOR UNDERWRITERS.

Mr. Pulbrook: Underwriters who underwrite in consideration of receiving a bonus from the company will one of these days find themselves in the very unpleasant position of having to pay that bonus back to the company. The difficulty with the vendor here is that the vendors are yourselves. If you own a property you may do what you like with it, but I say most decidedly the liquidator has not that free hand that you have.

Mr. Pauling: If the liquidator received the same sum in shares or cash for his property he is to distribute that sum to the old shareholders. Do you mean to tell me that the old shareholders are not allowed to give shares in any way they like?

Mr. Pulbrook: Certainly, the old shareholders.

Mr. Pauling: That is exactly what I mean.

Mr. Pulbrook: You must get the consent of everyone of them.

Mr. Pauling: Then that will have to be done.

Mr. Pulbrook: If the holders of 20,000 shares say they would like to give up a certain portion of their interest they are at liberty to do it, but a scheme to compel the company or the liquidator cannot be operative. I may say that precisely a similar scheme was proposed in a company I was advising the other day. I advised that it could not be done, but they insisted on taking Mr. Buckley's opinion, and he confirmed my view. Individual people may give away individually what they like, but a company or a liquidator cannot.

Mr. Pauling: I suppose individual people can appoint the individual to act for them.

Mr. Pulbrook: Yes, that is so.

Mr. Pauling: Then if the company gets so many shares in this property, and if the shareholders choose to appoint one of their number to say "If you get so much capital raised for the new company, we will give up so many shares"—I suppose that can be done.

Mr. Pulbrook replied that it could.

DIRECTORS WANT TO AID THE NEW COMPANY.

Mr. Ogle: The directors are not taking any objection; they simply thought it their duty to the shareholders to obtain the advice of a solicitor upon the circular that is before them. They make no exception to it, because it does not affect them as individuals.

Mr. Pauling: It only affects the directors favourably.

The Chairman: We have no feeling at all in this matter, and if you will allow us

WE WILL WITHDRAW OUR MAN

so that the liquidator may be appointed unanimously. (Hear, hear.) I will formally propose the name of Mr. Wolf as liquidator of the company.

The motion was carried unanimously.

Mr. Wolf: I thank you for the unanimity which has characterised this meeting, and trust that the way in which I will protect the interests of all the shareholders will meet with your approbation at a future meeting.

The Chairman: The only other thing we should do would be to consider what the liquidator should get for doing this work, but as the circumstances are rather peculiar I think it would be best to leave that to a subsequent meeting, because I do not think the liquidator is now in a position to calculate how much work he will have to do. We had better leave ourselves in his hands now. (Hear, hear.)

SUBSCRIPTIONS INVITED AND MADE.

Mr. Leane (director): I think that some means should be taken at once to protect our property, and to keep the claims, and acquire the water-race, with full possession. I do not know how we are to do that unless by a subscription made at once in this room. I think we ought to send out 100*l*. at least to South Africa, in addition to the 30*l*. already sent.

Mr. Pulbrook: If it is the wish of the meeting I should advise you to pass a resolution authorising the liquidator to carry on the business. According to law he is only bound to keep on the company for the purpose of selling and disposing of its assets, so that he cannot hereafter be called upon to refund what he has expended.

The Chairman: Mr. Pulbrook has drafted this resolution for you to pass:—"That the liquidator be authorised to carry on the business of the company in such manner as he deems expedient for the purpose of disposing of the company's property as a going concern."

Mr. Leane seconded the motion, which was carried unanimously.

Mr. Pulbrook: Any money now subscribed will be a first charge upon the assets of the company. If the claim licenses are not paid up others will take possession of them, and the property will be lost, which would be a pity, seeing that it is only a matter of 30*l*. or 40*l*. a month.

The following subscriptions were then announced:—Mr. Pauling, 10*l*.; Mr. Ogle, 10*l*.; Mr. Leane, 10*l*.; Mr. West, 5*l*.; Mr. Rummens, 5*l*.; Messrs. Pritchard and Groenenold, 5*l*.

Mr. Leane: That will do as a beginning.

Mr. Wolf: I will draw up a statement of the probable cost and let the shareholders have it.

CORDIAL THANKS TO THE DIRECTORS.

Mr. West: I beg to propose a vote of thanks to the chairman, and in doing so must express my gratification at the friendly feeling with which the shareholders have been met by them, and the very amicable manner in which the proceedings of to-day have been

carried through. That is one of the best guarantees we can have that the property will ultimately be put into a satisfactory position. If there were divided counsels amongst us it would end in its entire ruin, and the whole of the money of the shareholders would be lost. As it is, I feel every confidence that if we all work amicably the property will ultimately be placed in a satisfactory position.

Mr. Pauling seconded the motion, which was carried.

The Chairman: I am extremely obliged to you, and to the shareholders. I can assure you we will do all we can in the future, as we have done in the past, to help the matter through, and to save such a good property as we believe this to be. I thank you very much.

The proceedings then closed.

THE VAN MINING CO., LIMITED.

IMPORTANT DISCOVERY — GOLD ON THE VAN HILL SETT — DIRECTORS MAKING CAREFUL INQUIRIES—ENCOURAGING STATEMENT FROM CAPT. WILLIAMS.

The ordinary general meeting of shareholders was held at Dashwood House, New Broad Street, yesterday, "to receive the directors' report and statement of accounts, to elect a director and an auditor, and to transact the general business of the company."—Charles Clark, Esq. (chairman of the company), presided.

Mr. W. J. Lavington (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

SYNOPSIS OF THE POSITION.

The Chairman: The accounts which we are asking you to pass to-day must, I fear, be looked upon by the shareholders as somewhat disappointing. They are better, indeed, during the last year by about 900*l*., and so far they have fully redeemed the promise made by Capt. Williams, at our meeting at the end of 1887, that the mine during 1888 would at any rate pay the costs of working. But still the result, I am bound to say, is a great way below what we have been aiming at, and hoping for, and what we are still expecting ultimately to find. Our sales of lead for the 14 months, as you will see, have aggregated 1,110 tons, or an average of rather less than 80 tons per month, instead of the 100 tons per month, which we look upon as our normal yield to enable us to pay a dividend; but I hope the shareholders will clearly understand that this diminution has not resulted from any lack of lead ore, but simply from the fact that under present conditions, with the price of lead at what it is and the cost of labour also, we found we could not profitably have produced the additional 20 tons per month, and we felt, and I am sure you will agree with us, that it would be a very thriftless policy to take away our reserves of ore to sell at present prices, which would barely recoup us for the cost, regardless of the fact that by and by we shall probably be able to take this away to much greater advantage. We must be thankful, however, that we can set against this diminished yield of lead an advance in the price. The average price that we have obtained during the past year has been about 17s. a ton higher than that of 1887. We have also to report a very substantial increase in the yield of blende—865 tons in 1888, as against 300 tons only in 1887. Our ordinary costs have been heavy, though not much heavier than usual, for we have had to do, as usual, a large amount of development work. This development work is continually going on, and there is in addition a constant demand for repairs, which, though not as a rule specified under any particular head in the detailed expenditure, will add very much to the current cost month by month. Then we have in the 1888 account two special and exceptional items—one for new wire ropes, which, unfortunately, we are obliged to supply to our shafts, 272*l*., and the other for machinery and repairs, 394*l*. There was no corresponding item to either of these two in the year 1887.

ROYALTIES SLIGHTLY REDUCED.

You will remember that when we last met here there were some very strong remarks made both from the chair and from the shareholders in regard to the royalties, and it is gratifying to me to be able to state that in answer to our representations on the subject a concession was temporarily made from one-fourteenth, which we have hitherto been in the habit of paying, to one-eighteenth, which, though insufficient in our judgment, we are of course glad to accept; and we allow ourselves to hope that the representatives of the Dowager Marchioness of Londonderry will see their way to make a much larger abatement until the mine is in a position to pay dividends. Capt. Williams' report upon the mine itself is as usual very full, and carefully prepared. He is here to answer any questions, or supply any additional information you may desire, and therefore it is needless for me to go through the report in detail. I can only say I visited the mine yesterday, and I am happy to be able to confirm, from personal observation, every statement that Capt. Williams has made in his report in regard to both the 120 and the 135. I had no time to go over any other points in the Van Mine itself yesterday, but it is not very long since I went thoroughly through it, and I am glad to be able to say that during the whole time I have known it I have never seen it look more encouraging or more promising. I believe the mine has been visited during the last few months by several shareholders, and if, as I think is the case, one of those gentlemen is here to-day, it would be satisfactory to hear what his impressions were, especially in regard to that cross-cut south of the 135.

AN ENCOURAGING PROSPECT.

For myself, I can only say that I considered it so remarkable, that I thought it desirable that we should have a specimen of the solid lead here, and it is now on the table. It is mere casual stone, you will observe—just as it has been broken, and as it stands for anyone to see in the mine. How long it will last, or what it will lead to, it is impossible to say; but at the present moment no one could fail to say it is as encouraging a prospect as any mining adventurer could wish ever to have set before him.

GOLD ON THE VAN HILL PROPERTY.

The last paragraph in the report relates entirely to Van Hill, specimens of the quartz of which have been sent to the assayers, which yielded in the last instance the remarkable result of 1 oz. 12 dwts. 6 grs. of gold to the ton. (Hear, hear.) I should tell you that we were led to go into this investigation of the ground at Van Hill simply from these facts: In October, 1887, Capt. Williams was requested to go and visit some gold setts—so called, at any rate—in the neighbourhood of Dolgelly. Whilst staying at Dolgelly he met Mr. Pritchard Morgan and his mining manager, Mr. Roberts. At their invitation he went with them to see Mr. Pritchard Morgan's mine, and having every facility for making observations there, he was struck with the fact that the quartz resembled very closely the quartz at Van Hill. He accordingly took steps when he returned home to have it examined. He sent a few specimens to the office and they were assayed and found to contain small quantities of gold—sufficient to justify us in making further examination. We accordingly applied for a fresh grant of the Van Hill sett, which had formerly been in the possession of the company, but which was abandoned several years ago. Van Hill is a sett about 4 miles in circuit, containing promises of lead, which, of course, is our product. I went yesterday into the deep adit level with Capt. Williams, and whilst I was there some of these stones which you see were broken. I do not know what they contain, but it is evident that they are very highly mineralised, and that they are well worth investigation. I should say further that the particular specimens which yielded this satisfactory assay were taken, not from the level—they had been taken from the level years ago—they were picked out by the men, under Capt. Williams' instructions, at the mouth of the level simply because they seemed to resemble very closely the Dolgelly quartz. What it will lead to we do not know. One would require to speak very guardedly indeed in reference to any prospects of gold in that district; but there is the fact, and we should be blamed if we tried to conceal it from you, and still more blamed if we attempted to raise in you any undue hopes with regard to it. There is, however, sufficient to induce us to go on with our researches and find out what it really contains. The same remark applies, with still greater force, to those discoveries in the 135 and 120.

HAMPERED BY LACK OF FUNDS.

We have been, and are, hampered by lack of funds. We are obliged to go on, slowly, paying our way, and doing very little more. The question therefore comes—whether it would be desirable that we should endeavour to obtain, in order to prosecute our work more quickly, some additional funds from the shareholders? Of course, we have borrowing powers, but we have not considered as yet, at any rate, whether it would be wise to exercise them. Our object to-day is to try and elicit from you some expression of opinion as to what you think it would be wise to do under the circumstances. I want you, however, to clearly understand that we can go on as we are, but we cannot increase our operations very much or very quickly. You will hear presently from Capt. Williams what operations he would advise, supposing we are obliged to continue as we are, and also what he would advise if our hands were strengthened by the provision of further funds. I will now move, "That the directors' report and statement of accounts as circulated be received and adopted." (Cheers.)

Mr. A. G. Kitching (director) seconded the motion.

A Shareholder: How many hands have you now employed?

Capt. Williams: 145, all told.

A Shareholder: Do you expect we shall be able to get the lead out of the mine to more advantage? What ground is there for supposing that the price of gold will advance?

The Chairman: I did not say that there is any ground for that.

The Shareholder: Then we shall not get the advantage of which you spoke. We did not get so much this year as we might have had, but you seem to hold out the hope that we shall get more next year to greater advantage.

The Chairman: What I intended to say was that we could extract it now to greater advantage from the mine—indicating, of course, that the extraction would be cheaper. I did not venture to prophesy anything in regard to the price of lead. I should explain that our costs are heavier because we are getting into the "deads," which compel us to use much more timber and to work much more carefully and slowly. If things were hurried now we should simply add to the cost and do no good.

EXHAUSTIVE STATEMENT BY THE MANAGER.

Capt. Williams, in a long and exhaustive speech, said: We could not increase the yield at present. During the past year we have worked out two narrow pieces of ground, as shown on the plan. We had to do this very carefully on account of the width of the lode. From the 150 to the 135-fm. level will be left in reserve for next year, but what is above that we shall work out during the present year. The lower workings are upon the main lode. The big specimen on the table, weighing 70 to 80 lbs., came from the cross-cut at the 135 south from the main lode, and was found under a ceiling of hungry grit which cut everything off. There is no lode above, but we cross-cut it at the 120, and found it ore-bearing for about 47 ft. wide. At that time we did not find a hanging wall, and I suspended the driving because it was very hard ground, and because I wanted the men for other work. I should explain that we utilise the waste stuff for filling in the stopes that have been exhausted. I tried to find the cross-cut south again 24 ft. from the main lode right away from the main lode, and now have got into a nice rib of lead. The cross-cut at present is 75 yds. south of the main lode. In that cross-cut we have 6 or 7 ribs of lead of various thickness, just enough, as one of the shareholders remarked who saw it, to "tantalise us," but when we got 60 yds. south of the main lode we got into 3 ft. of solid lead. Our vein varies from 6 to 7 ft. wide, to 24 to 30 ft. wide, with a soft hanging-wall and very treacherous, so that we have to employ a good deal of timber to protect our levels, and to ensure the safety of the men; if we did not do that we should have this hanging-wall down upon us. The map shows the ore ground taken away, and the dip which lies before us.

THE 120 EAST.

We proved the lode in one place to be 60 ft. wide. We are driving upon the north wall, and have already 35 fms. driven west of shaft, and appear, to all intents and purposes, to have got into a similar zone of ground to that we had above. Had the levels been prosecuted at this point we should have done better. We have the lode in the 105, and also in another level before that. As we drive eastward we shall again get into productive ground, but this will necessitate sinking a shaft which will make the working of the mine much cheaper.

A COURSE OF LEAD THAT MUST BE FOLLOWED.

In the 135 there was lead in the end of the cross-cut yesterday. I have asked the opinion of several mining men, including Mr. Pinching, Mr. Tangye, and other gentlemen who have visited the mine, and all of them agree with me that this course of lead is one respecting which they cannot venture an opinion, but all that remains to do is to follow it out. We believe it must be some great upheaval, and at this point we have ribs of ore for 75 yds. and the main lode underlies south, and the south lode the opposite way. My opinion is that in depth the two lodes will come together—the main lode from the one side and the south lode from the other. I expect that in the result the two lodes will form a very great mine whoever lives to see it.

I HAVE NOT FOR THE LAST 10 OR 12 YEARS SEEN THE MINE LOOKING SO CHEERING.

(Cheers.) There are samples on the table, and one of them is 60 or 70 lbs. weight. There are also samples from the 120. A few fathoms back from where we now are the product was all blende, but as we approach the ore ground the blende is narrowing out and the lode is strengtheuing for lead. I have here a sample of it, and as I have been at the mine since it was opened more than 23 years since I can speak with some authority upon it. This is how the great deposits of lead have always come in Van—they appear gradually on the blende working out. The lode is proved to be 60 ft. wide, and we are only developing 5 ft. of it. What remains in the other 55 ft. we cannot say unless we cross-cut through it. (Cheers.)

VIEWS OF A SHAREHOLDER WHO HAS LATELY SEEN THE MINE.

Mr. CARTER, a shareholder who has recently visited the mine, said: I have been very pleased in listening to the able speech of the chairman, but am rather sorry that he did not say more of what he saw yesterday. About a fortnight or three weeks ago I went underground with Capt. Williams. At the last meeting I specially enquired about the grit, and we spoke of the underlie of the lode which at that time they had not got through. The point with me then was whether Capt. Williams had got below the grit. To my mind a favourable point in the mine is that underneath the grit comes up the ceiling, containing several ribs of ore, and all of them underlying in the same direction—quite the reverse of the old mine. It is

A REASONABLE EXPECTATION

that has been propounded that the south and main lodes will form a junction, and then there will be a vast mass of ore. I can support all that Capt. Williams has said from my own observations, and particularly his view that since I have been connected with Van Mine I do not think the prospects have been so favourable as they are now. The ore being found underneath this grit and underlying from the old underlie is a very cheering sign to me, and no man who has had anything at all to do with this mine will at all hesitate to follow it. The great point is to get hold of it by the neck and follow it down. It is underneath the grit that Capt. Williams has found this fine body of ore, 3 or 4 ft. of solid lead, and we must follow it further wherever the money comes from to do it.

VAN HILL.

In regard to Van Hill—we have 6 or 7 ins. of snow on it just now, and I did not go into that mine. It should be prosecuted to the extent, at all events, of an examination, but as regards the Van Mine there is reason to believe it will again turn out a very rich mine. The great width of the lode is one of the reasons the mine has to be worked at such a cost. We have to cut away a great deal of stuff which is not rich, and when removed, it has to be replaced as Capt. Williams has explained. The reserves are known to be very large, and though we do not like to go without dividends, yet we cannot help it for the moment. Since the re-construction we have paid about 3,000*l.* in royalties and have had only one little dividend of 10 per cent.

A POOR CONCESSION.

This is very hard, and shows that we are working for the benefit of the workpeople and of Lady Londonderry. I am pleased that you have been able to get some concession in the matter of royalties, but it is very small. Considering the enormous cost of working the mine, and the fact that this lady has no risk herself, I think we should be treated more generously. (Hear, hear). We have sold this year almost as much lead as is represented by the entire share capital of the company—15,000*l.* Our sales have beeu 14,000*l.* worth of ore, and we have nothing to show for it in the way of profit, but that is not the fault of anybody that I am aware of. If we had funds to employ as working capital there might have been a dividend, but the mine has literally had to pay its own way, and we have had nothing to fall back upon except what we have taken out of the mine. If we raise further capital I would suggest debentures rather than ordinary shares as being more likely to be taken up by the shareholders. To go on from hand to mouth is hardly giving the mine a chance, and it is certainly not giving Capt. Williams a chance. I believe, in conclusion, that Capt. Williams is quite right in saying that the mine has not looked so well for many years past as it does now. (Cheers.)

A SHAREHOLDER asked whether the mine could be explored in one of its parts, which he indicated, by sinking a winze?

Capt. WILLIAMS: It could be done, but we are 60 yds. from the main lode, and should have to provide mechanical ventilation.

MR. CLARK THANKED.

Mr. BLAGERSTON: May I, as a shareholder, thank our chairman for the very clear and lucid statement he has made this day. I think he has put the position of affairs clearly and fully before us, and, with the added remarks of Capt. Williams and Mr. Carter, we have now all the information we can possibly desire. I should like some test to be made on a fair scale of the ore from Van Hill, which has yielded 1¾ ozs. gold per ton.

A GREAT PROBLEM.

Capt. WILLIAMS: The Van Mine is a great problem. (Hear, hear.) The first great body of ore discovered resulted from three veins fore, I am of opinion that it will do again what the main load did coming together. There appears to be no connection between the south-west lode seen at surface, and the present discovery at the 135, but I am of opinion that the latter will serve the main lode in depth, in the same manner as the former has done in the past. There is another lode to the north-east, and I must point out that other mines have had these zones of unproductive ground. Sometimes it has been the shale (as in Roman Gravels), at others in granite, and in our case in grit. Every man who has seen this grit has predicted lead beyond it, and I hold that the specimens on the table, and the facts I have laid before you in my report and in my remarks, tend to prove that the two lodes are coming together, and I should not wonder that

VAN WILL YET BE AS GREAT A MINE BELOW AS IT WAS ABOVE.

(Cheers.) Van Hill is due north, and right over the hill on the other isde. The Van Hill sett embraces the whole mountain. The Van proper is on the south side, and the Van Hill embraces the top of the mountain and the whole of the north side.

A SHAREHOLDER: What is the extent of the property?

Capt. WILLIAMS: It is over 5 miles round. Here are some samples of the ore I sent to Mr. Lavington as taken from the very surface of Van Hill. On being assayed they gave a few dwts. to the ton. After what I had seen at Mr. Pritchard Morgan's Mine, I recommended the directors to take a tack note of Van Hill. Mr. Lavington suggested, when this assay had been made, that I should try the lode at a deeper point. I did so, and picked out of the hillock pieces of quartz and mundic, which were assayed, and they

YIELDED 1 OZ. 12 DWTS. 6 GRS.

This is from the inside of the mine 30 or 40 yds. deep. I have also here ore which was broken in the presence of the chairman. The directors will no doubt have the later samples assayed. I have a very good opinion of that lode for lead independent of the gold.

A SHAREHOLDER: Would it be possible to have a few tons crushed?

Capt. WILLIAMS: I think it would not be a bad plan, and then we could see whether it would be worth while to work it.

A SHAREHOLDER: Have you the right to take away quartz as well as lead, and if so, upon what terms?

Mr. LAVINGTON: We have the right to take all minerals though we should have to pay the Government royalty of 1-15th.

A SHAREHOLDER: From what date do we get the reduced royalty?

The CHAIRMAN: It is in the present accounts and makes a difference of about 70*l.* in the year. We shall spend very little money on the gold mine until we know fully what we are about. It will not be undesirable that an independent inspection of the mine should be made, and Capt. Williams will be glad to have his views corroborated. Thus far everything has gone to strengthen his view as to

THE GREAT PROBABILITY OF OUR FUTURE SUCCESS.

In fact, it is a good working hypothesis, and everything that has been done has gone to strengthen that hppothesis.

Mr. CARTER: The 5,000*l.* fresh capital would be entirely for exploration works, apart from working the quartz lode. (Hear, hear.)

The CHAIRMAN: I think we should be authorised to write off the small amount standing to capital account. It is not only desirable but necessary. (Hear, hear.)

The report was then unanimously adopted.

The CHAIRMAN then proposed the election of his colleague, Mr. Kitching, who had been elected in the room of the late lamented Mr. J. Y. Watson. Mr. Catling was ill in bed, and had desired him (the chairman) to make his excuses to the shareholders.

The motion was carried unanimously, and Mr. KITCHING briefly returned thanks.

Mr. WELSH proposed the re-election of the auditor, Mr. Catterson.

This was seconded, and carried; and with a cordial vote of thanks to Mr. Chas. Clark (the chairman) for the able manner in which he had presided over the meeting, the proceedings were brought to a close.

WHEAL AGAR.

THE RECENT ACCIDENT—THE MEETING ADJOURNED.

A MEETING was held on the mine yesterday—Cornelius Bawden presiding.

The accounts showed—tin sold, 74 tons; 4,230*l.* loss; 16 weeks, 2,784*l.*; balance against mine, 2,000*l.* The agents' report stated that they had considerable difficulties to contend with, which had altogether interfered with the working of the mine; these included subsidence between 245 and 225 levels, which cut off communication with most productive stopes; breaking of main beam and no damage done to pit work. They hoped soon to get water out and expected better results from improvement in mine.

Discussion was raised by Mr. TRONNSON, regarding the fall of prices in shares, who was replied to by Capt. WHITE, who answered several questions regardiug the conduct of the mine, and breaking of bob, and said he did not think the third balance-bob would be required.

Ultimately it was decided to hold the next meeting in three months, and then make a call covering all loss.

THE LIXA MINING CO., LIMITED.

A COMPLICATED ORE.

THE ordinary general meeting of the above company was held at Winchester House, Old Broad Street, on Friday, the 1st day of March—Mr. W. L. Bright, M.P., presided.

Mr. J. FOSTER (the secretary) read the notice calling the meeting, and the report of the directors was taken as read.

The CHAIRMAN, in moving its adoption, stated that they had thought it would be convenient to let their financial year terminate on December 31st last. The early history of that mine, the same as any other mine, was a history of preparation and development, and preparation for successful working in the future. The ores that they had to work were very peculiar and difficult. No doubt the shareholders would have liked to have received a dividend, but the board had felt that the policy that they had pursued was the right one, having regard to

the future prosperity of this company. He had alluded to the complicated nature of their antimony ore, which arose from the fact of

THE PRESENCE OF GOLD.

In some cases the gold was only a few dwts, and then it was of little value, except as a bye product. In other cases the value of the gold and the value of the antimony was about equal, while in other cases the gold was far in excess of the antimony. They had up to the present time done very little stoping. They had sold 71 tons of ore in London, which had realized the satisfactory average of 13*l.* per ton. When they first started they only had one lode, but they were now working on no less than four other lodes which they had discovered from surface indications, and which in some cases had up to the present time proved very valuable. They anticipated that the results that would be achieved in the future would be decidedly satisfactory, and that the shareholders would have no reason to regret the action that the board had taken in pursuing the policy they had at the start. He moved the adoption of the report, which, after a brief discussion, was agreed to.

Holders of bonds of the Argentine Six per Cent. Loans of 1871 and 1882, and of Buenos Ayres Six per Cent. Loans of 1870 and 1873 are reminded that Tuesday is the last day upon which bonds can be received by Messrs. Baring Brothers and Co., or Messrs. C. de Murrieta and Co., for conversion into Argentine Government Four-and-a-Half per Cent. Bonds.

Allotment letters in the Gravel Gold Mines of Colombia have been posted.

THE CAPE COPPER COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that at a MEETING of the Directors of this Company held to-day, it was resolved :—

"That a Dividend of 4s. per Share, free of Income Tax, be, and is hereby declared, payable on the 25th day of March, 1889, to the Shareholders on the Books of the Company on the 8th March, 1889, and that the Transfer Books be closed during the said 8th March."

No. 3 Coupons will be paid at the above rate of 4s. per Share, free of Income Tax, on presentation at the Company's Office. They can also be sent to the Comptoir d'Escompte de Paris, which will undertake their presentation.

By order of the Board,
J. C. LEAVER,
Secretary.

9, Queen Street Place, London, E.C.
February 27th, 1889.

THE OPHIR TERRITORY CONCESSION, LIMITED.

NOTICE IS HEREBY GIVEN that the FIRST ORDINARY GENERAL MEETING of the above-uamed Company will be held, in pursuance of the statute, at the Cannon Street Hotel, in the City of London, on MONDAY, the 11th day of March next, at half-past Two o'clock in the afternoon, for receiving and adopting the within Report of the Directors, and for fixing their remuneration for the current year.

Dated this 26th day of February, 1889.

By order of the Board,
HENRY B. GREENWOOD,
Secretary.

Registered Offices :
31, Lombard Street, E.C.

OPHIR TERRITORY CONCESSION, LIMITED,
31, Lombard Street.

NOTICE IS HEREBY GIVEN that the Transfer Books of this Company, will be closed on and after FRIDAY, March 8th, 1889, after which date the share certificates of this Company will be received for examination, and in due course exchanged for share certificates in "The Ophir Concessions, Limited," in the proportion of 10 shares of £1 each in the latter Company, for each 5s. share in the original Company.

HENRY B. GREENWOOD,
Secretary.

THE OPHIR TERRITORY CONCESSION, LIMITED.

Report of the Directors to be presented to the FIRST ORDINARY GENERAL MEETING of the Ophir Territory Concession, Limited, to be held, in pursuance of the Statute, on Monday, the 11th day of March, 1889, at half-past Two o'clock in the afternoon.

Your directors have to report that the extent of the Company's Concessions, being far greater than the Company could work, they have, by virtue of the powers conferred on them by the Memorandum and Articles of Association, signed contracts on behalf of the Company, to sell 50 claims of 100 metres by 100 metres for £25,000, and 50 similar claims for £50,000.

The purchaser in each case paid a cash deposit on signing the contracts.

Your directors have reserved the right of taking cash or shares for the purchase-money.

The right of acquiring shares in these sub-companies may prove more profitable to the Company than payment in cash.

Negotiations are pending for the sale of 150 further claims, which, with the proceeds of the sales already made, will, when concluded, realise in the aggregate a sum of £175,000 for the benefit of the Company.

The necessary measures to explore the concessions and claims acquired by the Company have been taken.

An experienced captain, thoroughly acquainted with mining, a former companion of the well-known explorer, Stanley, has been selected to take the command of a well-appointed force of engineers and miners. They sailed on the 13th instant, and were supplied with a small five-stamp battery and all conveniences for thoroughly prospecting the Company's claims. The purchaser under one of the contracts has likewise despatched another party, so that in a comparatively short period the receipt of further details of the claims located may be anticipated.

Your directors are negotiating with the Portuguese Government, through the Mozambique Company, for obtaining very extensive, and important additions to the Company's present concessions.

In view of the large interests involved your directors have deemed it advisable to merge the present undertaking in a new Company, with a capital commensurate with its increased importance.

The Ophir Concessions, Limited, with a capital of £250,000, divided into 250,000 shares of £1 each, has been formed to acquire all the property and assets of this Company, and an agreement has been executed, dated 18th February, 1889, to transfer the same to a trustee, on behalf of the new company, in consideration of its assuming all the liabilities of the present Company, and issuing to the shareholders therein 10 shares of £1 each, in exchange for every share at present held by them. This contract is open to the inspection of shareholders at the Company's office.

So soon as the necessary legal formalities are completed, the shares will be exchangeable.

By the contract under which the Company acquired its concessions, there were provisions reserving certain rights to the vendors involving a claim to one-fourth interest in every sub-company formed. The board have taken advantage of the opportunity afforded by the formation of the Ophir Concessions, Limited, to acquire and extinguish such rights by arranging a compromise whereby all claims are released, in consideration of £50,000 in fully paid shares iu the new Company, in lieu of the £62,500 to which the vendors would have been entitled in this Company alone. The vendors have agreed to execute a deed of compromise and release of all their rights whatsoever.

P. R. INNES,
Chairman.

31, Lombard Street, E.C.,
February, 1889.

ANDERTON TIN MINE, Whitchurch, near Tavistock, Devon.

Two miles from Tavistock Railway Station.

MESSRS. J. M. KLENCK and CO. will SELL BY AUCTION, at the Mart, Tokenhouse Yard, City of London, on MONDAY, March 11th, at one o'clock, the LEASE of the above important and valuable TIN MINE, together with the plant, machinery, erections, materials, stores, and appliances in one lot.

The Mine has been favourably reported upon in April last by Capt. William Rich, the manager of the South Condurrow Mine, and also in November last by Capt. John Williams, manager of the Phœnix United Mines.

The Mine is held on lease, of which about 25 years are unexpired, and may be inspected prior to the sale by appointment with the manager, Capt. John Goldsworthy, Tavistock.

The report and the lease can be seen at the Offices of the Solicitors, Messrs. Chave and Chave, Devonshire Chambers, Bishopsgate Street, London, E.C., and particulars, plans, and conditions of sale may be had of Messrs. Chave and Chave, at the above address; the Bedford Hotel, Tavistock; the Auction Mart; and of Messrs. J. M. Klenck and Co., Auctioneers, Surveyors, Valuers, and Fire Assessors, 42, Bishopsgate Street, Cornhill, London.

MINING MACHINERY

Of Latest Approved Designs as developed in American Practice.

The ultimate success of the African Goldfields must depend on large economical Mills, crushing the maximum quantity of ore with the minimum outlay for fuel and labour.

As an illustration of what can be done with superior machinery reference is made to the Montana Company's Mill. This consists of three rock-breakers, 60 stamps and 24 Frue Vanner concentrators. It crushes daily 120 tons of hard quartz, burning six cords wood (3 tons coal) per 24 hours, and employs 15 men in the 24 hours. The engine has been run four months at a stretch without once stopping.

The following extract from the "Engineering and Mining Journal" shows the difference between Fraser and Chalmers' Mills, and those of less experienced firms :—

"STAMPS AND STAMPS.—The El Callao Company has two mills of 60 stamps each; the new one supplied by Fraser and Chalmers representing the best modern designs and workmanship. Both mills are run under one management, and the old mill has been much improved on its original condition.

"Old Mill crushed 31,770 tons in 48½ weeks, cost 24.60 fcs. per ton.
"New Mill crushed 29,000 ,, 25 ,, ,, 8.60 fcs. per ton.
"New Mill will probably crush 60,000 tons in 51 weeks. The rock is a very hard quartz."

The cost of freight and erection is nearly as high for a poor mill as a good mill. The difference in first cost between ordinary mills and the best mills can be made up in the extra saving on a month's run. The large masses of low-grade ore in Africa cannot be worked to a profit with expensive fuel and labour except by improved mills. The days of small mills and rich rock are numbered, as proved by experience in all other goldfields.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, MARCH 2, 1889. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

RICHMOND CONSOLIDATED MINING CO., LIMITED.

THE WOOD QUESTION—EXTRAORDINARY ACTION OF THE UNITED STATES GOVERNMENT—UNIVERSAL CONDEMNATION BY AMERICAN PRESS—PROTEST OF NEVADA STATE—SPEECH OF SENATOR STEWART —MR. HOPKINS WILL PROTECT SHAREHOLDERS' INTERESTS.

THE half-yearly general meeting of the shareholders was held at the City Terminus Hotel, on Tuesday, to receive the report of the directors for the half-year. There was a crowded attendance—George Hopkins, Esq., chairman of the company, presided.

Mr. HUBERT AKERS (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

A FULL EXPLANATION.

The CHAIRMAN: You will, I presume, gentlemen, take the report as read? (A VOICE: Take it as read.) We have called this meeting a little later than usual, because our last annual meeting was rather late, and we thought it would equalise the time a little better, and that we should be enabled to give you the latest details of the important matters which it will be my business to bring before you to-day. Many of you will remember that at the last meeting, which was held on the 28th August, I alluded to certain rumours about suits in respect of timber lands, and I also ventured at that time to say that I did not thiuk the Government would take such steps as seemed to be in contemplation by those rumours. At that time, I believe, certain proceedings had been taken against some of the charcoal burners—a class of men who get their livelihood in that district by the burning of wood and the manufacture of charcoal—and those proceedings, which were of a criminal nature, came to nothing. But in December several suits were commenced at the same time against the Richmond Company, the Eureka Company, the Eureka and Palisade Railway Company, and many other mining corporations and individuals in the State of Nevada. Now, in order to understand this question, I think it will be useful, in the first instance, to explain that the mining timber properly so-called—that is, the timber used *in the mines* of Eureka and district—does not come from that district at all. It is timber of large dimensions, generally in pieces 12 ins. square, which is brought from other States, and used iu the timbering of the mines. The wood which is used for charcoal is a different class altogether; it is the stunted, scrubby growth of the district, which, I think, I shall be able to show you a little later on has no value whatever, or, at all events, but little value of itself, and would be of no use, except when the mines are in operation and at work.

OBJECT OF LAWS REGULATING THE CUTTING OF TIMBER.

The object of the laws regulating the cutting of timber is, of course, to prevent waste in cutting forest trees, and to protect the growth of young trees. For instance, one of the regulations is that no timber shall be cut down of less diameter than 8 ins., because a tree of less than that size has not completed its growth. Now, in Eastern Nevada it so happens that there are no timber lands properly so-called; that it is difficult to find a tree of so large a diameter as 8 ins.; that the timber growth of the whole of that district is of a dwarfed, scrubby, [illegible] stunted nature; and that, practically speaking, no matter how old the timber is, it never attains a sufficient size to be available for what is called in America lumber, but what we in this country understand more as timber proper.

THE CUSTOM FOR 30 OR 40 YEARS.

Now for 30 or 40 years it is said—and certainly for the whole of the time that the Richmond Company has been in operation—it has been the custom to cut down this stunted and scrubby timber on what are called the unsurveyed lands, constituting part of the public domains of the State; and that has created an industry in the way of making charcoal, which has been carried on by a class of men, many of whom are Italians, who bring their charcoal to the mining works and offer it for sale to whoever requires it. So that whilst the American Government are setting up a claim for the value of this wood, the mining companies have *already once actually paid its full value* in the shape of purchasing the charcoal produced from the wood. What the value of that wood in its uncut state is, it is hard to say. As I mentioned just now, if it were not for the existence of the mines it would practically have no value at all, because its only value is that it is suitable for fuel, which is a necessity in carrying on mining operations in that district.

NO PARTICULARS AS TO THE CLAIM.

Now, although we know that suits have been commenced against the several companies, we have no particulars of what the claim is, or how it is made out; and, therefore, I think, iustead of making any remarks to you on imperfect information, it will be better for me to read a document, which is very carefully drawn up, and will give you a great deal of information respecting this matter, and show you at the same time somewhat of the feeling in the district. The paper which I shall read is a petition to the President of the Republic, from the Legislature of the State of Nevada—an official document, and one which is entitled to great consideration. It is addressed to the President and Congress of the United States, and is as follows:—

A PETITION FROM THE LEGISLATURE OF THE STATE.

To the President and Congress of the United States:—

We, your memorialists, the Legislature of the State of Nevada, most respectfully represent that our State is now suffering great and perhaps irreparable injury from the prosecution in the United States Circuit Court for this District of a number of suits for alleged trespass in cutting timber from public lands situated therein, and with due and proper respect we take this method of appealing for relief in this behalf.

For many years prior to eighteen hundred and seventy-eight our people had exercised and enjoyed the privilege of cutting and using the timber growiug upon the mineral lands of this State for building, mining, agricultural and other domestic purposes. By the Act of Congress of June third, eighteen hundred and seventy-eight, this privilege was recognised and confirmed, subject to such rules as the Secretary of the Interior might prescribe for the protection of the timber and undergrowth. In establishing such rules the secretary has prescribed, among other things, that the brush shall be piled, or otherwise disposed of, so as to prevent forest fires; that no trees shall be cut that are less than eight inches in diameter, and that no person shall cut such wood or timber for the purpose of selling it to others. In other words, that every man, no matter what business he is engaged in, must cut his own wood, either in person or by agent. It is respectfully submitted that these rules are utterly inapplicable to the anomalous conditions existing in Nevada. The requirement that the brush shall be piled or disposed of is not an especial subject of complaint, except that it is unnecessary. The wood growing in these mineral districts is very sparse; it causes but little brush, and such a thing as a forest fire we believe has seldom been known in Eastern Nevada. But the other rules mentioned are peculiarly objectionable. Except in the Sierra Nevada Mountains, on the western border of the State, we are almost destitute of what is commonly known as timber. Our wood, which is thus designated, consists mainly of a dwarfed and scrubby growth of cedar, nut-pine and mountain mahogany. Owing to the drynesss of the climate and the paucity of the soil in the locations where this wood grows, it frequently takes an age for a tree to attain a diameter of eight inches, and much of it never reaches that size, hence a rule fixing such a minimum in many cases amounts to an inhibition against the cutting of any wood at all, and in a large measure deprives our people of the benefit the Statute was intended to confer. In this State timber of any kind is very scarce; it is inferior in size and quality, straggling in its growth, and is found only upon the mountain ranges in tracts widely separated from each other. Some idea of the insufficiency of our wood supply may be gathered from the fact that at Tuscarora, one of our most important mining towns, almost the only accessible fuel is sagebrush, so small that it is loaded and hauled the same as loose hay in the Eastern States, and thrown iuto the furnaces with pitchforks, and even such fuel as this is now being brought from a distance of over twenty miles. The rule requiring each person to cut his own wood himself, or by agent, has the effect of almost completely nullifyiug the statute. Mining is the chief industry of our State, the one upon which every other industry depends, and in the great majority of cases it is utterly impracticable for a miner to go into the mountains and cut his own wood or establish an agency for that purpose.

MINING A PRECARIOUS BUSINESS.

The mining itself is a precarious business, requiring all of his energy, thought and capital. The wood grows in regions difficult of access, and it has generally to be transported great distances on the backs of mules. it is obvious, therefore, that it is a tedious and expensive process, and to carry on the business at all demands a considerable investment of capital in a mule train and packing apparatus. No miners or agriculturalists, save a wealthy one, could comply with these rules, and it would be highly inconvenient for even him to do so. We submit, therefore, that any wood cut and used for the above specified purposes in the State of Nevada, is used for domestic purposes within the meaning of the Statute. That the decision of Secretary Teller, of date May twenty-fifth, one thousand eight hundred and eighty-two, in the case of Frank P. Harden, enunciates the correct doctrine upon this point; that it is the only doctrine which can give our people the full benefit of the law, and that the later rule, as established by circular of May seventh, one thousand eight hundred and eighty-six, from the Interior Department, should be modified accordingly. But even this rule,

uujust aud oppressive as it seems to us, is not at present our only grievance. There are now pending in the Circuit Court of the United States, for the District of Nevada, no less than eleven suits for alleged trespass upon these timber lands situated in the connties of Eureka and White Pine. These suits involve different corporations and many individuals, and the amount sought to be recovered reaches the enormous aggregate of over ten million of dollars.

AN EXTRAORDINARY CLAIM.

We are informed, aud believe, that the amount claimed from the Richmond Mining Company, in the town of Enreka, for wood used in reducing ores, is greater than the net value of all the ore that has been extracted from its mines. The timber for the cutting of which these actions have been brought, in our opinion has been used exclusively by actual residents of this State and in strict accord with both the letter and spirit of the Act of 1878. None of it has been transported from the State, and none of it is fit for such transportation. It is not-timber which can be profitably wrought into lumber, and its character may be inferred from the circumstances that, notwithstanding the great demand for lumber which has heretofore existed in the town of Eureka—the second in importance in the State—there has never been, since one thousand eight hundred and seventy, a sawmill located within seventy-five miles of that place. The timber is absolutely without value, except as an aid to the development of the mineral resources of the districts in which it is fouud. We are not aware that any of this wood has been cut or removed, even in violation of the rules established by the department of the Interior, nor is it so alleged in any of the complaints filed. It is a well-known fact that the land upon which it grows is mineral in character — clearly within the purview of the statute — and if it cannot be used under its provisions, it cannot be used at all, for there is no practical way by which it can be purchased or the title to the land acquired.

EFFECT OF THE INSTITUTION OF THESE SUITS.

The institution of these suits has had the effect of causing nearly every mine in the two counties to suspend operations ; business therein is paralyzed, and the people are menaced with absolute financial ruin. A continuation of the course foreshadowed by the proseeutions threatens the closing of every mine within the borders of our State, and the complete destruction of the Commonwealth. We believe that these suits are purely vexatious in character ; that they have been commenced upon the basis of misapprehension indueed by misrepresentatiou ; that the motive which induees them is a desire to create fees for officials and attorneys. We believe this, because of the enormous amounts sued for, which are beyond all reason, being the *market* value of the wood instead of its stumpage value, which is all that it is worth to the Government. We believe it, because the same unjust and rigorous rate of valuation has been established with regard to its redemption, the party from whom it was seized being compelled to give bond according to the full measure of the market value in order to procnre its release. As a result, the defendants dare not or caunot redeem ; the wood remains in the hands of the officer who made the seizure, and the entire business of that community is prostrate. Our belief that these suits are vexatious is strengthened by the fact that, although the business of cutting and disposing of this wood has been carried on openly and notoriously for years, and the right to do so unquestioned, these actions are brought now for the first time, and at the particular season of the year when the wood is most valuable, seeming to be designed for the express purpose of forcing the defendants into compromise and settlement ; and, further, by the fact that so many suits were brought at one and the same time, instead of first establishing the right and settling the legal principle through the mediuni of a single suit ; and, finally, by the still further fact that, according to our information aud understanding, these actions are similar in character, and involve the same principle, as those under which large quantities of wood were seized by the United States Authorities at Butte City, Montana, in the year one thousand eight hundred and seventy-eight, which action was strongly denounced at the time on the floor of the United States Senate, and led to the passage of the Act of 1878 above referred to.

A GREAT HARDSHIP.

If this wood has been unlawfully cut and removed, we believe that it has been iunocently done, in the exercise of what was thought to be a well-established legal right ; and as a minor, although still important consideration, we beg to suggest that the maintenance of these suits is a great hardship upon the defendants, they being compelled to entirely cease operations, abandon their business, and travel nearly or quite 500 miles to the place of trial.

In view of the foregoing, we, therefore, most respectfully, but urgently, ask that all proceedings in these actions be suspended and held in abeyance until a full investigation of the facts may be had ; and upon the completion of such investigation, if it be found that any of this wood has been cut in violation of preseribed rules, we ask that these rules may be so modified as to accord with the character of our so-called timber, and the particular conditions existing in Nevada. But if it be impracticable to so modify such rules, we ask for some adequate measure of legislative relief at the hands of Congress.

Resolved by the Assembly, the Senate concurring, That copies of the foregoing memorial and these resolutions be transmitted by the Governor of this State to the President of the United States, and to each of our Senators and to our Represeutative in Congress.

Resolved, That we cordially endorse the action of our Senators and Representative in Congress in their efforts to procure for us relief from the vexatious suits complained of in the foregoing memorial.

Mr. J. G. Weir : What is the date of that ?

The Chairman : January 15th. That is a memorial from the Legislature of Nevada, and it gives you more detailed information, and in a better manner than I think I could give you, because, as I said before, we are only in possession of some of the facts. Now we have

A LARGE MASS OF INFORMATION

cut from different newspapers and printed matter of various descriptions, and I am obliged to make a selection of some of them. Here is a paragraph which I should like to read you from the *Engineering and Mining Journal* of New York, dated February 9th, 1889—a journal of a very high-class character, and one that has a large circulation. Under the head of Eureka County it states :—

"Mr. Wm. Fries, the President of the Eureka Consolidated Mining Company, has arrived in New York. In conversation with an *Engineering and Mining Journal* reporter this week Mr. Fries said "the Enreka stockholders have little to fear from either the Government timber suit or the elaims of Kleupfer Brothers. Both suits," continued Mr. Fries, "will probably die an easy and natural death. The Government suit was inspired by Eureka lawyers, whose object is to obtain fees from Uncle Sam, and not a verdict against the Eureka Consolidated Mining Company. Upon the change of administration at Washington, a hearing will be granted us, aud we will obtain immediate relief. The situation in Eureka at present is a painful one. Several thousand men are thrown out of employment by the closing of the miues and smelters, and they and their families are threatened with starvation in addition to the terrors of a severe Nevada winter." I read these to you, gentlemen, because you will see that they are the opinions of other persons who are greatly interested in this question, and not so much the opinion of ourselves.

THE WHOLE THING DISCREDITABLE.

The *Eureka Sentinel*, of December 8th, says :—"The whole thing is discreditable in the eyes of all men who have any regard for the welfare of the people, and the mining and smelting interests in this section of the State." It does seem extraordinary, gentlemen, that after 30 or 40 years this particular Government of the United States should wake up and find that these serious crimes—because they take criminal proceediugs—have been committed for this number of years, and they have never found it out before. Some of the American papers attribute motives for these proceedings which I am not going to attribute, because I do not know anything of the motives which have induced them. My wish to-day is to deal with the facts, and lay them before you as clearly as I can. Now, just consider for a moment what has been the advantage of the Richmond Compauy itself to Eureka and its district.

THE RICHMOND COMPANY HAS SPENT IN WAGES AND MATERIAL 4,500,000*l*. IN THE DISTRICT.

I will not speak of other companies and corporations who are all smarting under the same sense of injustice as we are ourselves ; but to say nothing of the 200,000*l*. with which we purchased the property—a good deal of which I know went over to the other side—we have expended during the 17 years that we have been operating there no less a sum than four million and a half pounds sterling in wages and materials in that district ! That is an average expenditure during the whole of the 17 years, of a quarter of a million pounds sterling annually. You may realise what must be the effect to a town of this sort of an expenditure like that being stopped. In addition to the amount expended on wages and materials, we have, as you know, spent a very large amount of our profit on surface works and improvements ; the ereetion of furnaces and foundries, of very extensive reduction works and works of all descriptions, which have cost us something more than 100,000*l*., the whole of which has gone to the benefit of that partieular district. Now, I have here the official reports of the proceedings in Congress at Washington, and I must read one or two extracts from it.

A SENATOR DESCRIBES THE RAID ON THE MINING COMPANIES AS ABSURD.

Senator Stewart, speaking in Congress in August last, makes these remarks amongst others :—

"The pretence that rich railroad corporations are engaged in this business is preposterously false. Any man who has crossed the contiuent from Utah to the Sierra Nevada Mountains, and looked on either side, will know himself that the Central Pacific Railroad could get very little timber from the surrounding country. He will not see any timber at all back in the mountains, except a little scrub timber. The railroad uses timber from the Sierra Nevada Mountains or coal for fuel. It is absurd that all this raid is now made upon these two mining companies, and that the force of the Government is to be sent against them. They have paid out vast sums of money in Nevada. Their dividends are small, compared with the vast amouut of money they have paid out to labouring men.

BUILT UP THE COUNTRY.

"They have built up that country, and made it possible for settlers to go there, and have farms. There is no news so joyful in that region as a new discovery in the mines. Every farmer, every settler, is delighted with it, because it makes a market, and it would be utterly impossible for them to miue at all without cutting this timber.

"Mr. Stockslager (who, I believe, is the commissioner of the Land Department at Washington) says they can get coal and coke. That might be possible now, but it was not possible in early days when most of this timber was cut. Those two companies have been cutting the timber for about 25 years—for over 20 years at all events. There were no railroads. They had to pay enormously for this timber, which the poor labourers went out on the hills and collected together and threw down from the crags of the mountains, and they have been pouring a constant stream of gold and silver into your Treasury. This foreign company (that refers to us) has spent $10 in that conntry, where they have had $1 iu England. It is wonderful that they have made dividends at all.

"I submit that there are not 10 men in Nevada who would not feel outraged by this prosecution ; and if any man has written here for the purpose of advocating it, it is because he is either an enemy of mankind or expects to be employed as a lawyer or as a spy to proseente these people. (It is evident that there is a deep feeling abroad that this proseeution is intended to put money into some persons' pockets). The statute never contemplated that those people should not cut this timber. In Arizona, New Mexico, Idaho, and Montana, and throughout the mining region they are situated in the same way.

PROSECUTED FOR DOING WHAT HAS BEEN SANCTIONED FOR A GENERATION.

"If you prosecute all who have been guilty you will have to prosecute in the different States and Territories more than half a million men, and you will prosecute them for what has been practised with the sanction of the Governmeut for a generation. You would prosecute them for doing what was necessary in order to live in that country and build up the territories."

Now, gentlemen, Senator Stewart has taken a very active part in this matter in the Senate, and he has protested from the commencement against the whole of these proceedings. His speeches are generally

VERY PUNGENT AND DRASTIC,

but they are very much to the point. In a speech delivered by him on the 21st September, 1888, I find the following. He says :—

"It is not pretended that the timber used by these companies was transported out of the State (that is one of the conditions—that the timber may be cut but not transported or sold into another State), or that they dealt in it as a matter of commerce; on the contrary, it is admitted that it was used in mining operations in reducing the galena ores which that camp produces, and without it no mining could have been done in that part of the State. It is conceded that the companies have done with the wood just what the Court decided they might do, and just what the statute declared they might do.

"The gratuitous attack of the Commissioner on Mr. Probert, the manager of the Richmond Mining Company, because he is an Englishman, is equally reprehensible with the attack of the district attorney on the Italians who cut the wood. The Richmond Company is a Nevada corporation, not an English corporation. The fact that a larger portion of the stock is owned by Englishmen does not deprive it of the right to work mines in Nevada. The Richmond and Eureka Companies have paid for their coal and wood very large sums of money to thousands of poor men who have gathered it from the cliffs and canons of the mountains and sold it to these companies for mining purposes. The value of the wood that they have cut was created by the companies themselves. If the mines had not been worked, the wood would have had no value."

"We are told by the district attorney that Austin, White Pine, Belmont, Pioche, and every other large mining camp in Nevada and throughout all the mountainous timbered regions of California are in the same situation and subject to the same prosecution that is proposed for the people of Eureka."

"To stop cutting scrubby timber on the public mineral lands for our mining companies would ruin this community. The companies would not suffer materially, as they can shut down and await the result of the litigation without material loss, but hundreds of poor men, many of them with families, are dependent upon the companies for their daily bread. They would be thrown out of employment without the possibility of obtaining it in any other business here, and universal distress and destitution would follow amongst them, and general financial distress amongst our business men."

CONSTERNATION IN NEVADA.

Gentlemen, I think I have read enough to show you, as we have stated in our report, that these proceedings have caused consternation in the State of Nevada.

A HINT TO THE UNITED STATES GOVERNMENT.

If the United States Government wish to destroy the mining interests of Nevada and all the other States, and to drive English capital from the United States, in my opinion they could not have adopted a more successful plan than they have adopted on this occasion—(cheers)—and I think, having said that much, as the whole matter is sub judice and in its infancy, I will say no more about it at present. Although some are inclined to treat these suits very lightly, and to say "It is only a political matter, because Nevada has voted for Genl. Harrison as President of the United States"—that is not the view I take. I shall not invite you to join in any discussion on the subject to-day, as I think the less said at present would be better in the interests of the company. (Cheers.) I have endeavoured to put before you the principal facts of the case. It is a very difficult and complicated one, and we really do not know yet what is claimed. We know that this state of things has existed for years—Senator Stewart says for a generation—and it has never been called in question. Therefore,

ONE CAN SCARCELY CONCEIVE THE MOTIVES

for swooping down wholesale on all the mining corporations and individuals in the district. The charcoal burners, who are principally Italians, but I suppose they are American citizens, have created an industry for themselves, burnt the wood and made the charcoal, and brought it into the mining camps for sale. The mining companies have bought it openly and paid the full value for it, and it seems to me a most monstrous proceeding that the United States Government, or their agents—for I cannot conceive that the heads of the Government would countenance such a proceeding—should allow this matter to go on for 30 or 40 years, and then try to recover the full value for something, which has no value of itself without the mines, but when converted into charcoal the companies have paid a large price for. (Loud cheers.)

A SHAREHOLDER: Has a prosecution been commenced in the United States Courts against Mr. Probert?

The CHAIRMAN: They have made him a party to the suit. The suit, I believe, is technically for trespass; but we have committed no trespass. We have simply bought charcoal from other people. It has been suggested to me that I should read a paragraph from the *San Francisco News Letter*. I should say the whole of the Western States are unanimous about this—in fact, they are indignant about it. I have purposely refrained from expressing any strong opinion upon this matter, but those who are deeply interested in this question feel and write very strongly about it, and their feeling is unanimous. The paper to which I have referred says on February 9th:—

THE GOVERNMENT MUST BE IMPOSED UPON BY DESIGNING PERSONS.

"The Press of Nevada is unanimous in its condemnation of the action lately taken by the United States Government against the mining companies of Eureka. The suits brought against them for heavy pecuniary damages for alleged offences against the law, which have only been discovered at this very late date in the history of both properties, are viewed on all sides as a direct attack on the mining industry of the State, and treated as such. We do not know who can have instigated these peculiar proceedings, while inclined to the belief that the Government has been imposed upon and used as a tool in the hands of some designing person or persons. It seems scarcely credible that for a period of 20 years the misdeeds alleged in the complaint should have been permitted to go on under the eyes of National officials, without even a protest of any kind being entered. Now, however, that the matter has been placed by the United States Senate, on resolution of Senator Stewart, before the Committee on Mines and Mining for investigation, it is likely that justice will be done to the owners of the properties, and the onus of the strange proceedings placed on proper shoulders. No time should be lost in bringing the matter to an issue, as the people of the district are absolutely suffering. No work in the mines located in this district of Nevada means get out or starve, and few are in the condition to face either contingency."

MR. HOPKINS BELIEVES IN THE VOICE OF THE PEOPLE.

Well, gentlemen, whatever interested officials and lawyers may have induced the American Land Office to do this—I, for one, do not believe that the common sense and hard-headedness of the people of America will ever submit to this—(cheers)—and allow the mining industries to be ruined, as they most certainly will be if those proceedings are carried on. (Loud cheers.) Just before I entered this room I had a letter put into my hand from a gentleman who held a high office in President Lincoln's Government. The letter is dated to-day, and is as follows:—

"Dear Mr. Hopkins,—So far as I can learn by the United States Statutes, the law was passed 3rd June, 1878, granting the right to cut and remove timber for mining purposes from the public domain. That right was not granted to Nevada, California, Oregon, and Washington Territory. The principal reason being the fact that timbered lands in those States and Territories were open for purchase by special Act of Congress in all States and Territories, except those where mineral reservations exist, and where the land has not been surveyed and offered for sale, the timber is free to all settlers for mining and domestic purposes."

Now, I believe that the timber in question has been cut from unsurveyed lands, and if this statement is correct, it seems to be admitted that anyone is free to cut timber from those lands. Of course, that goes rather to the merits of the case, which I am not in a position to deal with to-day. You have before you the broad and startling fact of these proceedings having been taken, and the consternation and dismay with which the whole population of those States view them—because it is not a question affecting us only—it affects thousands of others.

A SATISFACTORY ASSURANCE.

We must watch and wait quietly, and whilst I ask you, gentlemen, not to enter into any discussion, or raise any side issues, on this matter to-day, I give you the assurance of the directors that we will take care to keep you posted with whatever happens—(cheers)—and we will also take care that every shareholder is provided with a full report of these proceedings to-day, so that they may understand the matter to the same extent as we do ourselves. With these remarks I will move the reception and adoption of the report. (Applause.)

Mr. BENJAMIN BROUGHTON seconded the motion.

REAPING THE CONSEQUENCES.

A SHAREHOLDER: You are not doing anything whatever at the mines, I understand?

The CHAIRMAN: We were obliged to shut down the mine. The United States Marshal came on to the property, seized all the charcoal we had, and we only could use it by giving security to him for its full price—in other words, buy it a second time in order to use it. We shut down the mines, and they are now reaping the consequences of their own acts. The mines are shut down, and will have to be shut down until this question is settled.

Mr. WEIR: Can you give us any idea when the case will come before the Courts? As I listened to your speech, which so well pointed out the high-handed conduct of the United States Government in the attempt to rob us of our capital, and what is worse, to stop a great industry, and put thousands on the verge of starvation, I mentally framed the resolution which I intended to submit to this meeting, but, expressly in deference to your wish, I shall not move that resolution at all, or attempt to tie your hands in any way. (Hear, hear.)

The CHAIRMAN: I cannot tell the hon. proprietor when it is likely to come on. All that I think has been done has been to serve the writ, and application has been made to the Court to give time for particulars or something of that sort, but the proceedings have been so recent that we do not know exactly what has been done, except that we are taking the necessary steps to protect the interests of the company. As I said before, many persons view these proceedings very lightly, and go so far as to say that when the new Government of Genl. Harrison is installed you will hear no more of it. That may or may not be the case—I cannot say—but, meanwhile, it is our duty to protect your interests as far as we can, and that we are doing.

A SHAREHOLDER: Do you happen to know anything about the Statute of Limitation?

MINES CLOSED.

The CHAIRMAN: I do not know that they even have one in America.

A SHAREHOLDER: Are you still exploring the mine?

The CHAIRMAN: No, we are stopped—shut down everything.

A VOICE: And the best thing to. (Hear, hear.)

The CHAIRMAN: Not only so, but every mining corporation has done the same.

Mr. WEIR: How many did we employ before we shut down?

The CHAIRMAN: We have not had the same number of men lately that we used to have in years gone by, but we have a considerable number. We have a good many tributers at work. I take it at the present moment we are just keeping our foremen and principal men to look after the property.

A SHAREHOLDER: Then the United States Government will get no taxes in the meantime, as you are not spending any money?

The CHAIRMAN: I suppose not. (Laughter.) As I have asked you—thinking it in the interests of the company—not to get into any discursive discussion about this matter (we shall hear more about it by and by), I think it better for us to be content with our report, which speaks pretty plainly as to the facts, along with the other documents which I have read to you, and the statements I have made, and now with your consent we will let the matter rest for the present. (Hear, hear.)

MERITED THANKS.

Mr. BLADON: I think I am fully justified in moving a very cordial vote of thanks to and confidence in the directors, and in expressing the satisfaction of the entire body of shareholders with the way in which they are dealing with the matter which has been uppermost before us to-day. I am certain they will keep us advised from time to time, and do what is necessary to protect our interests in every possible way. (Cheers.)

Mr. WEIR: I have very great pleasure in seconding the motion.

The resolution was put to the meeting by Mr. BLADON, and carried by acclamation.

The Chairman: On behalf of myself and colleagues I beg to return you thanks. This matter has come upon us rather by surprise. Of course we are very sorry that it has come, but you may rest assured that there are those at the helm who will protect your interests to the utmost of their power. (Cheers.)

The meeting then ended.

THE OCEANA TRANSVAAL LAND CO., LIMITED.

IMPORTANT STATEMENT BY MR. HENDERSON—FULL DESCRIPTION OF THE PROPERTY—ITS GREAT MAGNITUDE AND VALUE—ARTICLES ALTERED TO GET A QUOTATION.

An extraordinary meeting of the company was held at the Cannon Street Hotel, on Monday, when a resolution was proposed to alter certain articles of association—Mr. Henry Pasteur (chairman of the company) presided.

Mr. Samuel C. Fox (secretary) read the notice calling the meeting.

After the conclusion of the above business, the notice stated, Mr. Henderson, "the company's local director, proposes to address the meeting, and shareholders will be afforded an opportunity of putting questions to that gentleman relative to the company's properties."

SUB-DIVISION OF SHARES.

The Chairman said: Gentlemen, the greater part of the amendments to the articles of association which we ask you to sanction are merely slight amendments, introduced at the request of Mr. Burdett, in view of enabling us to obtain the quotation which we have asked the committee of the Stock Exchange to grant to our company. Two only, I think, require some explanation. The new clause 11A is to give power, with your consent, to comply with a wish very generally expressed by the shareholders, that the shares should be sub-divided from their present nominal value of 5*l.* to shares of 1*l.* fully-paid. This would assimilate them to the shares of most other companies dealing with interests in South Africa, and place them more within reach of investors of all classes. We have first to take power to sub-divide the shares, and, if the resolution is accepted and confirmed at a second meeting, in compliance with the Act, we then propose to immediately exchange the existing certificates of 5*l.* shares into 1*l.* share certificates. As soon as this change has been carried out we shall no doubt obtain our Stock Exchange quotation.

DIRECTORS' REMUNERATION.

The next clause to which I should like to draw your attention is clause 78. You will remember that the remuneration of the directors was fixed at the sum of 250*l.* in November, 1886, at the time of the formation of the first Oceana Company, with a capital of 50,000*l.* to work out the first options for the purchase of land, which had been then secured. When, in January, 1887, further options were secured, and the capital of the company increased to 150,000*l.*, the directors' remuneration was left at 250*l.*, with the addition of such sum as might be voted by the shareholders. At the second ordinary general meeting, held on the 29th December, 1887, a proposal was made by one of our shareholders to increase that sum to a figure which would be more in keeping with the importance of the interests which had been entrusted to the directors, and to the time, care, and anxiety which they had to devote to the affairs of the company. We, however, deprecated the vote of a considerable addition to our emoluments, at a time when we were still occupied mainly in getting into our hands the vast amount of land which the company had acquired, and before any development of our properties, or discovery of gold, could give us promise of an early return on the capital invested. Now, however, I think you will agree with us that we can fairly ask you to vote for the resolution which is submitted for your approval. The value of your property has for some time past been recognised by the public as one susceptible of very large expansion, whilst the discovery of the Black reef on our farm of Koppieskraal, near Heidelberg, leads us to believe that we are rapidly approaching the time when you may look for some return on your shares. The reports of our prospectors also indicate the presence of gold on several of our other properties, so that we can fairly say that we are now entering upon the period of dividend-earning from the discovery of gold solely, let alone the increasing value of the land. That being the case we trust that the scale at which it is proposed to fix the remuneration of directors is one which you will consider to be fair and reasonable. The company has been in existence for upwards of two years. During that time your five directors have divided 250*l.* annually between them; at the present moment the value of your shares has nearly quinrupled, and I can assure you that the time, care and anxiety which we have to devote to the affairs of the company are certainly not less than they have been. I shall be glad if someone amongst you is willing to second the resolution. We are advised by our solicitors that it is desirable that the resolution should be passed as a whole.

THE CHAIRMAN'S STATEMENT.

I do not intend to detain you more than a few minutes, as you are no doubt anxious to hear some of our Transvaal friends here present—Mr. Henderson, our local director, whom we are happy to see among us, after the arduous work which he has carried out with indefatigable zeal and energy, as well as great ability; and Mr. Cooper, our solicitor at Pretoria. His position as advocate of the Supreme Court of the Transvaal, his long residence there, and his intimate acquaintance with the country and the people, will give great weight to any observations he may be willing to make. I will only remind you that, at our last meeting in October, we held out hopes to you that before the end of the year we should hear of the finding of a payable gold reef on Koppieskraal. That hope has been fully realised, as we were able to inform you by circular on the 20th of December. Since then, the prospecting and opening up of the Black reef has been proceeding actively, and according to latest advices the reef had been uncovered for a distance of nearly a mile, and ascertained to exist in a continuous line for 2 miles at least, probably as much as 3 or 4 miles. The assays of samples from the reef brought by Mr. Henderson averaged 19 dwts., or nearly 1 oz. per ton for surface stuff, of easy and cheap extraction. (I may here mention that the Black reef runs generally from ½ to 1 oz. of gold per ton.) The estimate of the value of the reef by our own officers far exceeds the whole capital of the company, and I may tell you that proposals have been made recently to our mining engineer on the spot for the purchase of a small portion of the reef which fully justify those estimates. Negotiations are now in progress, which lead us to hope that before long we shall be able to dispose of a portion of the reef on very satisfactory terms. The Heidelberg district is fast coming to the front, and according to the most accredited opinion amongst mining experts on the spot, the formation and dip of the reefs would appear to justify the belief that most of the rich Witwatersrandt reefs will be found to exist also along the Heidelberg Hills, in which case our adjoining farm of Eendragt will also turn out to be a property of great value. Considerable progress has been made during the last six mouths in the re-survey of the Waterberg and Rustenberg by the Government Commissions, and we have received, within the last few days, several maps of the re-surveyed portions, which will enable us, we hope before long, to obtain a comprehensive map of the districts where the bulk of our properties are situated. Many of those maps are in the room, and we invite your inspection of them after the meeting. One word more: The country north of the Olifant river, in which we possess six farms in the so-called mineral valley, has been visited by prospectors, during the past season, and the Murchison Range, near the western end of it in the Hout Busch district, where our farms are located, has been found to be extremely rich in auriferous reefs. The Hout Busch extends in a westerly direction to Eersteling, where the richest gold reefs of the Transvaal are believed to exist. Our farms will probably be re-inspected in two or three months, and we hope that we shall have good accounts to place before you as soon as we can set to work to prospect in that quarter. Gentlemen, I have now much pleasure in introducing to you Mr. Henderson. (Cheers.)

Mr. Henderson said: It is with some trepidation that I venture to address a few words to you, very much for the time-worn reason that I am unaccustomed to public speaking; therefore, I have ventured to commit to paper some of the thoughts I desire to express.

TITLES.

I presume the first questions arising in your minds will be, Have we secured the title of the lands we have bought? And are they in perfect order? Inasmuch as it has often been suggested to us that we bought paper titles only, that there is no land in the Transvaal, and even if so, it might as well be in the moon. That the Transvaal Government is a sort of cross between the Kaffirs and degraded white men, slave-owners and capable only of guerilla warfare and the expert use of the rifle. I am able to assure you of the validity of the titles, and that they are duly registered in the archives of the Republic, and your status as purchasers fully recognised. In the second place, in addition to your titles being secure, the position of many of the properties is determined, and they comprise some of the finest lands in the Republic.

ORIGIN.

As many new shareholders are present, perhaps the better way will be to commence with the origin of this company. Originally a number of friends joined me in the additional purchase of certain lands in the Transvaal, and the syndicate thus formed registered itself as the Oceana Transvaal Land Company, of 50,000*l.* capital.

INCREASED CAPITAL.

It was further determined to increase the holding of lands, and the capital of the same syndicate or company was increased to 150,000*l.*, so that, gentlemen, you stand in the unique position to-day of being practically the original syndicate. To use a miner's expression, you are "on the bottom level"; there is no watering of capital or charges; not a farthing was paid for promotion, the whole expenses being borne by the speaker; neither have you founders' shares to consume part of your profits.

HEIDELBERG.

Our properties in the central districts, such as Heidelburg, were substantiated in the first instance. Those lying further from the centre, as in portions of Waterberg and Zoutspansberg districts, were, and are, more difficult in consequence of the Government passing a law requiring a re-inspection of said districts before any more survey would be permitted, for this reason:—In the past a few inspections had been carelessly carried out, and those careless inspections interfered with the whole. And the position stood thus, that in some of the highly favoured parts of those districts men had crowded in to obtain farms there, and the Government found that in some inspections the number of farms claimed were probably in excess of what would give a farm of 6,000 acres to each claimant, and if they gave large farms to the first claimants, or those on the spot, they might probably crowd out a number of other proprietors.

RE-INSPECTION.

Therefore, the Government said we will cause a re-inspection, ascertain the area of the old inspections, find out the number of farms that should be located in each, and we will apportion to each proprietor acreage that the land will allow—if full-sized farms, all right; if not, then each owner will get his proportion of land, and where it should be. I may mention, in passing, that one of the members of the commission told me that the Boers have felt very keenly the reduction of their farms—for they share in any reduction; there is no difference—and the President has been applied to, who assured them that the acreage they were short in that precise spot would be apportioned to them in other parts of the Waterberg; so that, whilst you may have smaller farms in some parts (please remember distinctly, only in some parts), there is a possibility of such decrease being made good elsewhere. But supposing it is not made good, please remember that, should a few of your farms be a little smaller, it may only be in consequence of their excellence. On the other hand, you have also to bear in mind that you have also had increase of acreage, and singular to say, one of the greatest increases has been on one of the most valuable properties in the district. I allude to Koppieskraal—an increase of nearly 5,000 acres, or as far we can at present judge from the estimates of our contemporaries—an increase equal to the whole capital, which far more than counterbalances the other. Whilst speaking of acreage of land, it may interest you to know that we are reckoned to have more than a million acres in contiguity to, or in, actual gold districts, in addition to the other large acreage, and the future value of these properties,

in consequence, cannot now be estimated. Perhaps you would like to take a meutal journey with me round some of our properties.

DESCRIPTION OF PROPERTIES.

We will commence as though we had journeyed to Kimberley. From Kimberley the nearest property en route is that of our farm in the Bloemhoff district, now awaiting survey by the Government surveyor, before which time we cannot have it prospected. Going northwards, we have large properties in the district of Rustenberg, generally called the garden of the Transvaal, possessing everything in its soil to make a man's heart glad; for plantation work and for stock-breeding it is not excelled elsewhere in the Transvaal. I have seen the coffee and sugar-cane growing beside the town of Rustenberg; and all that is wanting is the hand of enterprise to develop the rich resources of bounteous nature. Further north we have farms in different localities now in course of re-inspection, and still further north we have lands re-inspected between the Limpopo and Mattlabas rivers. These are admirable winter farms, but the probability is that they will also make excellent summer farms, though very warm; but in consequence of that warmth all the more adapted to sub-tropical products. Cotton grows wild along the water-courses throughout this district, and there are reasonable prospects of alluvial gold being found there, and precious stones. In fact, from this district some time ago a Boer went to the Government with alluvial gold. This district is known to be rich in metals. There is every reason to believe that the Magallies range of parallel mountains, running from Pretoria, will also prove very rich, for at the present moment on that same range, only nearer Pretoria, there are few better prospects to be found in the whole Transvaal. Our property on Cyferfontein is close to the celebrated Blauwbank Goldfields, and only awaiting the Government Surveyor's determining its beacous by a special commission, and will then be thoroughly prospected.

WATERBERG.

Still further north takes us into Waterberg, a district that some time ago was somewhat neglected, but there are fair indications that that part will yet become one of the gems of the Transvaal; and to-day there are not wanting men who are more anxious to obtain land in the Waterberg than any other district, excepting, of course, actual gold property itself. It may be interesting to you, and not generally known, that the Waterberg and upper parts of the Zoutspansberg were amoug the first-peopled districts in the Transvaal, so that when the whole country lay open to the early pioueers, depend upon it they did not select the worst land to settle in, and in the midst of natives averse to their presence. But, eventually, the natives became hostile, and the Boers, who had generally been successful in all engagements with them, somewhat underrated the courage and the strength of the chiefs, and scrimmages ensued, whereby the Boers were driven from their farmsteads in the north of the Zoutspansberg district, where the town of Schomenstadt was situated—the next established township, I understand, after Pochefstroom, in the Republic. And lately, when in that part, I assure you it was a sad sight to see desolate homesteads and magnificent lands, formerly farmed by the Boers, peopled by Kaffirs. Now, with regard to minerals, at the present moment a copper lode is being opened adjacent to one of our properties, and for some time it was a moot point whether it was not actually on our property. The lode, however, is ascertained to run into our property. In this district you possess the largest block of ground in the whole of the Transvaal, between 300,000 and 400,000 acres in exteut—viz., New Belgium. and in this bloek is the Gold River, where Mauch, the celebrated discoverer of the goldfields, found his first uugget of gold, and is called Gold River to this day. I have seen for myself colour washed from the surface of the ground itself there, and there are immense conglomerate deposits in situ, facsimiles of the Randt in appearauce, so that if these are proved to be gold-bearing to any extent, a very small percentage will pay handsomely. Therefore, the assays of 5 dwts. and 6 dwts. from that block, if found in quantity, gives you another valuable goldfield.

PALALA.

It is well known that the Palala is a gold-bearing river, and through the block we have approximately 27 miles, and with a mileage on other parts of our property, we must command an extent of something over 30 miles of the river, and out of the river on one of our lands when in that district I washed coarse nuggetty gold, and it is a fair deduction that the reefs are near by from which that gold came, and which could not have travelled far, as this was near the source of the Palala.

CATTLE AND PRODUCTS.

Our lands in the high districts here will carry cattle and sheep, and also horses, all the year round. In the lower and warmer parts of it all sub-tropical products may be grown, and I saw no finer coffee in the whole of the Transvaal than in the vicinity of our own farms at Moddersfontein, near the town of Nylstroom.

MAIN ROADS AND TOWNSHIPS.

We have main roads passing over some of our properties and townships, and may at any moment spring into existence on these same properties from the influence of surrounding circumstances. In fact. Rietfontein, half-way between Nylstroom and Marabastadt, we have refused to lease for a term, because, with an increasing traffic to the goldfields in the Zoutspansberg district, within a very short time we may find an opportunity to locate a township there. Members of the commissions state that we own the cream of the land in the Waterberg district, and certainly, from my recent visit there, it would be hard to imagine a more beautiful spot on the earth's surface, the only drawback at the present being distance from the capital, but every month this will be of less accouut as population increases.

BLAUWBERG.

From Waterberg we now go to Zoutspansberg, and proceed immediately north. At Blauwberg the properties are deemed very valuable; and on this table you have the report, made by an expert (Mr. Hamilton) of lands, situated close to one of our blocks of farms, and his opinion, that immense conglomerate deposits lying in situ, of nearly 1,000 ft. thick, showing gold wherever he panned it, warrants the outlay of considerable capital in thoroughly prospecting same. Moreover, not far from there, and also near one of our properties, I am given to understand, although I have not seen it, that coal exists. Near to some of our lands there are reports of diamondiferous soil, which were causing considerable excitement when I was in that district, and which, if confirmed, will enhance those lands very much. We have near Schoemensdall a large deposit called "soapstone," highly esteemed by the Boers for making their pipes and turned ornaments from, and for a lump of which they will pay as much as 1*l*., and within that soapstone there is a reef of a dense green stone, in appearance very much like "jade," very highly prized by the Boers, out of which they carve rings, seals, and small ornaments. And, in the future, this deposit may turn out of value.

LETABI.

On the Letabi River eastward, we have a very valuable block of farms, a block and numerous reefs requiring developing. This block at the present time I am afraid to say what I think the value of; but for plantation work admirably suited, well sheltered, and magnificently timbered; and when the Government makes its power felt with the natives a large revenue should accrue from those now statioued on those farms. I may mention that the fact of natives being on properties is the strongest proof you can have of their value, they having an instinct for the choicest lands, and if they only destroy timber for firing they are better on than off, as the land is in consequence partially prepared for future tenants. We have land adjoining the township of Marabastadt waiting survey. It stands in a good position, but under any circumstances it is valuable from an agricultural point of view, as you may readily see from its position. Even though no minerals be found, they are very probable from its position. The next point of land in Zoutspansberg that I draw your attention to, would be our lands on the Silati River, in the vicinity of of which those wonderful "finds" are now taking place. Before leaving Pretoria, I went to the Government offices and they told me that a re-inspection will shortly take place, and will embrace our farms in it, but that under any circumstances they are within the proclaimed gold area—a fact alone, even if you had no other property in the Transvaal, sufficient to make you sanguine as to the future of the Oceana Company. Not far from there, on the Hout-bush fields, two or three private individuals worked a mill, the output of which averaged 5 ozs. per ton. We have several other farms in that district, which time will not permit my alluding to. From there we come to lands in the Lydenburg district and in Sekukunis land, where we have two excellent agricultural farms, and re-inspected.. One of them, in all likelihood, will be purchased at a good price by the Government for a native location, as it abuts on one of the locations. The land on the Origstadt River, and east of the Blyde, awaits further developments, but is well situated. The lands at juncture of the Sabie River and Portuguese territory are estimated to be of great value. For a long time I have desired to send prospectors there, but inasmuch as the exact Portuguese boundary line has not been determined, and also the Transvaal Government would not allow a survey of the farms until the same was determined by re-inspection late last year, I obtained consent from the Government office to send a prospector to a portion of grouud that should, under any circumstances, be within our area, which you will best understand thus. One of the boundaries of our ground is the Sabie River, and another on the western slope of the Lebomba mountains, so that when a re-inspection takes place, it may move the block, as a whole, eastward or westward, but so long as we remain on the western slope of the Lebomba we are within our area. Our men were there only a short time, and owing to the lateness of the season, a white man accompaning them, and a Kaffir, died of fever, and two of our men were very bad with it also, so that our men were able to do but little, but the reports of our prospectors were such as to give us the greatest hopes and encouragement to send them down again at the commencement of the next winter season, probably in the month of May. In the event of minerals being found payable on this block, this land is beyond any value that can now be placed upou it, beiug the nearest private land in the Transvaal to Delagoa Bay, 40 or 50 miles distaut, and 20 to 25 miles from the present railway.

HEIDELBERG PROPERTIES.

We come now to the Heidelberg properties, of which you have no doubt heard so much. On the farm Elandsfontein for some time we have been sinking for coal. Prospecting is now going on, and a 4-ft. seam of fair steam quality has been cut, so that you can judge we have fair grounds for believing coal exists underneath our land, and this is the firm conviction of our miniug engiueer at Heidelberg, and we may hear of coal being cut at any moment. Iu addition to coal we have also found some very excellent prospects of gold. and there is nothing to preveut this being also a gold farm, as Malanskraal, a proclaimed gold farm, is only a few miles south-east.

ENDRACHT.

With regard to Endracht, that is literally a farm of reefs, not by the dozen, but by the score. It abundantly assays 5 dwts. aud 6 dwts., and on one occasion to 17 dwts. to the ton, but as yet not of sufficiently definite character to warrant the formation of a company thereon. There can be little doubt that some very rich reef or reefs exist on this property. The main point that I would adduce, however, at the present moment is this, that this alluvial nuggetty gold up to the size of a small pea, and as sharp edged as in the matrix. surely indicates that it has been abraded from a reef or reefs that up to the present we have not been able to find—perhaps from this reason, that the mountain range is thickly covered with broken blocks of reef, presumably the upper portions of other reefs thrown down, so that there can be no possible doubt that this farm is very valuable indeed, and, in fact, is worth floating into a company as it stands, but deferred action is preferable, because by the expenditure of more money in further developing we may form several instead of one company, with proportionate profit to you as shareholders.

KOPPIESKRAAL.

We now come to Koppieskraal Farm, 11,000 acres and more in extent, where we have substantiated the finding of one of the most valuable Randt reefs—the Black reef to the west, and also to the east of the property, and, following out well-known laws, we have every reason to suppose that it continues unbroken across the farm, a distance roughly of 4 miles. As a matter of fac , we have an outcrop of 2 miles of the reef visible, and from the mining of that outcrop you have the assays laid before you, as by certificate of Johnson and Matthey, assaying 6 dwts. to 30 dwts., or an average of 1 oz., but I would reckon it an ½ oz. reef to be safe. This property has been valued in

Heidelberg, as per a recent letter, at 300,000*l.*—double your capital; and that this estimate is not too high may be inferred from the fact that we have 2 miles of the Black reef known, although we believe we shall have 4. Therefore, this estimate may prove considerably under the mark, and this farm alone may be worth several times the capital of the company. If this be an ½-oz. reef, owing to the nearness of it on to the surface, and practically for some distance ground quarrying, it should prove a very paying property. You have a vast amount of timber scattered over the properties, and inasmuch as one of the two last-named farms adjoin Heidelberg, out there is a fair presumption that in the near future very substantial sums may yet be paid for suburban residences therein, and in additiou Koppieskraal itself, if a mining camp is formed there, should return a very large and handsome profit from the sale of plots of ground on which stores or houses may be built. Marshall's township, for instance, returns 2,000*l.* per year. Thus you see that you have a most valuable property, the potential value of which is beyond, at the present momeut, all calculation. It has been said by adverse criticism that we have no maps. Gentlemeu, look at the table; that is my answer to such. We have dozens! The speaker went on to speak of the people, the Government, and the land. Mr. Henderson concluded as follows:—I have much more to tell you, but already I have transgressed the bounds of moderation, and trust that sufficient has been said to enable you to form an opinion as to the value of your property, so that whether shares go up or shares go down, whether the pendulum of prosperity in the Transvaal swings from one extreme to the other, yet it is a certain and assured fact that your property, without labour on your part, each morning you rise is of greater value than when you laid down to sleep. Under such circumstances you must concede that you stand in an unique position—bearing in uind you are a company, and yet not a company iu the accepted sense. You are, as a matter of fact, the original syndicate, and, as I before said, you are on the bottom floor. You have not paid a farthing for the minerals on the property, and every gold property is a clear gain without cost. You have also a property from which the prospector sent samples assaying 28 ozs. to the ton. To sum up: Then you possess 299 properties of marketable value considerably in excess of what you paid for them. They comprise some of the finest lands in that country, adapted to agriculture, stock farming, and plantation; and a population is pouring into that country requiring such lands. You have rich mineral properties, for which you have paid nothing as miuerals. You are uow ready to deal with compauies with regard to some of the properties. We have properties that could have been floated by others as companies, but not by the Oceana, as it must not form a company unless its success is assured, otherwise the whole future of the company will suffer. Therefore I have every reason to say that those who hold shares ought to reekon them as rough jewels, and not to reckon them at to-day's Stock Exchange value, because when they are at several times their present price they will then be presumably one of the safest investments in South Africa, not only for yourselves but for your children. If you ask me, without bias, to tell you the best and cheapest property to-day in South Africa, without a moment's hesitation—gold companies included, I believe, hand over fist, several times—the Oceana. Mr. Henderson closed his most interesting speech amidst applause.

The Chairman: I think you will now hear Mr. Cooper with pleasure, and we shall be obliged to him if he will address us.

VIEWS OF MR. COOPER.

Mr. Cooper: After what we have heard I do not think it necessary for me to do more than confirm generally what Mr. Henderson has said. and I can do so. (Cheers.) I have been in the Transvaal since 1873, and am in a position to confirm what he has stated. It was my privilege and pleasure to tell the directors, wheu I came to England a few months ago, the intrinsic value of the land held by this company, and I had the opinion which I then expressed that the Oceana was the very best investment that I know of as yet in connectiou with the Transvaal. I do not think there can be any doubt that the farms, for which the company gave at the rate of about 500*l.* each, are worth less thau 5,000*l.*, and that without respect to the ascertained mineral value of soue of them. I am not in the fortunate position of being a shareholder, but I can congratulate those who are. I know that as the development of the country goes on, and without any effort or labour on your part, your properties will increase.

TRUE OCEANA POLICY.

But with a little energy and capital thrown into them you ought to be parent to a vast number of gold mining companies, and that is what the Oceana should keep in view. Deal with your property piecemeal, and your success is assured. But never float a company until you are quite sure it will be favourably received. It is undoubtedly true that the riches of the Transvaal lie further to the uorth than Witwatersrand.

The Chairman: I am sure you have had great pleasure in hearing what these gentlemen have had to tell you about the properties, and you will easily understand how anxious we, as your directors, are to make the most of them without rushing them too much, but yet to develop them as rapidly as possible. I do not wish to detain you longer, but at the same time would like to move a very cordial vote of thanks to Mr. Henderson aud Mr. Cooper. (Cheers.)

SEVEN MILLIONS!

Mr. Parks seconded the motion, and said that the iuterest with which he had listened to Mr. Henderson's address was enhanced by the visit he paid to the Transvaal, and to this particular property. He was received most hospitably by the people, and as to the mines—he went down several of them, and there could be no question as to their value. He was very much struck with the modesty of the chairman when he said that Koppieskraal farm was about the value of a subscribed capital of the company. That was a very big mistake, because he forgot to tell one-tenth part of its value. Mr. Henderson would no doubt tell them that the reef extended about 200 yds. (Mr. Henderson: Horizontally.) If that were so, and it gave an ounce to the ton, or any approximation to it, instead of the value being 150,000*l.* or 200,000*l.*, it was about 7,000,000*l.*! (Laughter.) That was a very easy sum indeed. The yard of reef contained an ounce—that gave 300 yds.—multipled by 3½ and 4 miles, and they had the result as nearly as possible. (Great laughter.) Of course they had a considerable amount to deduct for expenses. (Laughter.) If the chairman would put it at 2,000,000*l.* he would still have been moderate. (Laughter.)

Mr. Pope supported the motion, and said that very few of them had an adequate idea of the labour and hardship Mr. Henderson must have endured to have collected the information put before them that day. He understood that he had been over most of their property, and was away from Pretoria for months enduring hardships, whilst the shareholders were comfortably waiting at home expecting those dividends which were coming in the near future.

The motion was carried by acclamation, as was also a vote of thanks to Mr. Pasteur for presiding.

THE DICKENS CUSTER MINING CO., LIMITED.

FURTHER CAPITAL REQUIRED TO CARRY OUT THE WORKS RECOMMENDED BY THE COMMITTEE—ANOTHER RE-CONSTRUCTION SCHEME APPROVED—THE MANAGEMENT ON THE OTHER SIDE STRONGLY CONDEMNED.

An extraordinary general meeting of the Dickens Custer Company, Limited, was held at Winchester House, Old Broad Street, E.C., on Monday, for the purpose of submitting the following resolutions as special resolutions:—

(1.) "That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its present position, continue its busiuess, and that, therefore, the company be wound-up voluntarily under the provisions of the Companies' Acts, 1862, to the present time." (2.) "That Mr. Cecil Thomas Gladstone (the secretary) be, and he is hereby appointed liquidator, at an agreed remuneration of 10*l.*"

SCHEME.

The proposed scheme for re-organising the company is as follows:—The Dickeus Custer Company, Limited, to be wound-up voluntarily. Mr. Gladstone (the secretary) to be appointed liquidator, at a fixed remuneration of 10*l.* The liquidator to cause a new company to be registered under the title of "The Dickens Custer Mines, Limited," with a capital of 420,000*l.*, in 1*l.* shares. The Dickens Custer Mines, Limited (hereinafter called the new company), to purchase from the liquidator of the Dickens Custer Company, Limited (hereinafter called the present compauy), the whole of the real and personal property, stores, and assets including the cash in hand, for shares credited with 16s. 6d. paid thereon, and to defray all the present company's liabilities and debts (including 12,000*l.* paid by the syndicate for the redemption of the debenture debt of 18,000*l.* and interest amounting to upwards of 2,000*l.*) Each shareholder on the register of the present compauy, after the confirmatory meetiug to be held for the purpose, to be entitled to one new company's share for every present company's share he may hold, on surrendering the same to the liquidator, accompanied with an application form in the new company duly signed, and a cheque for 1s. per share (being the amount of the application and allotment moneys). The remaining 2s. 6d. per share will be called as required, in amounts not exceeding 6d. at auy time, and at intervals of not less than one month. The liquidator of the present company is to cause the outstandiug debentures to be delivered up to the directors of the new company upon payment of 12,000*l.*, aud bonus of 10 per cent. thereon. The new company to purchase, in addition to the property, stores and assets of the present company, two patented mining claims, as arranged for by the board over properties known as the Pilot and Ward Beecher respectively. The state of the present company is that 400,118 shares have been issued out of a total capital of 420,000*l.*, and debentures for 18,000*l.*, beariug interest at 8 per cent., remain out of the original issue of 38,000*l.* These debentures for 18,000*l.* have been purchased by a syndicate of the shareholders for 12,000*l.*, aud they have agreed to deliver them up for cancellation to the uew company on payment of 12,000*l.*, the cost price, together with the before-mentioned bonus. Each shareholder to be entitled, as before uentioned, to an allotment of the same number of shares in the new company as he holds in the preseut company, and also have the right to apply for any uumber of shares in excess of his present holding either at par or at a premium, and in the event of there being any shares not taken up, such shares to be allotted to the highest tender. Should there, however, be any shares not so allotted amongst the shareholders themselves within 21 days from the date of the confirmatory meeting, a syndicate which has been formed will subscribe aud pay in full for all such new company's shares (16s. 6d. paid); and they have deposited with the company as security for the due fulfiimeut of their agreement, 2,000*l.*, the amount of which is to be credited towards calls. The amount received under this scheme will therefore be 73,500*l.*, which, with the cash now in the hands of the present company (taken over as au asset), will leave the new company ample capital to carry out the works recommeuded by the directors' committee in the report already issued to the shareholders.

Mr. Wolseley presided.

Mr. C. T. Gladstone (secretary) read the notice convening the meeting.

PECULIAR CIRCUMSTANCES.

The Chairman: Gentlemeu, we are met here again to-day under somewhat peculiar circumstances. The directors allowed the shareholders themselves to formulate a scheme to provide working capital, which scheme they undertook to place before a general meeting. These resolutions were put before you, and carried by a very large majority, but on the day following the meeting the shares fell to 2s., and the committee of shareholders therefore felt that it was utterly impossible to carry through their scheme, as it could not be expected that shareholders would come forward aud subscribe for shares with a liability of 5s. when they could buy them in the open market for less thau half that amount. The committee thereupon met, and requested the board to withdraw the scheme, and to continue with the only alternative course—namely, re-construction. Now, it is of the utmost importance, as we have to proceed with this course of re-construction, that we should put the company on so sound a basis that it will be utterly impossible that there should ever be a repetition of it—

(cheers)—and in order to do this, it has been thought advisable that we should make a call of 3s. 6d. per share, which, when fully paid up, will provide a capital of a little over 73,000*l*., or ample money to build a second mill, should such a eourse ever become neeessary by making a big find on our properties.

ADVISABILITY OF PURCHASING TWO NEW CLAIMS.

With regard to the purchase of the Pilot and Ward Beecher claims—I wish it to be clearly understood that I should consider the purchase advisable, even were there no ore upon the property, although in my opinion we shall strike ore at a very early stage in the proposed deep sinking. My reasons for saying that are, first, that we should thereby save at least 4,000*l*. by not having to construct the tramroad ; in the next place, we should be able to work the mine in the deep at a greatly reduced price, both as regards labour and machinery ; and further, it is most probable, as in the case of the adjoining mine, that the ore at the deep will prove far richer than at the surface. By the arrangement proposed we sink all litigation on the Charles Dickens with our neighbours for having to cross their property. We intend at the earliest opportunity to send out a competent mining engineer to report fully upon our properties, and make a very careful examination of our Custer claims, and we shall await this report before spending any money whatever on the different items suggested in the committee's report.

HOW THE 73,000*l*. IS TO BE APPLIED.

The 73,000*l*. now proposed to be raised will be required for the following objects :—First of all the redemption of the Charles Dickens debentures, with a bonus, 13,200*l*. ; then for stores and opeuing up the Charles Dickens Mine, 10,000*l*. ; upou the purchase of the two claims, the Pilot. and the Ward Beecher, 8,000*l*. ; the water-ditch to the mill, 4,000*l*. ; the new road to Ketchem, 2,000*l*. ; the telegraph liue to ditto, 1,000*l*. ; the Cupola furnace (for reducing our old iron), 1,000*l*. ; and 1 per cent. commission for guaranteeing the new issue of shares, 4,200*l*. ; leaving a balance for the new mill of 30,000*l*., making a total of 73,400*l*. It is not, of course, proposed to call up any sums for the latter items for some time to come.

A BALANCE-SHEET.

Many shareholders have asked to have a balance-sheet submitted to them. We shall be very happy to meet you as far as it is possible to do so. The accounts cannot be made up for the full year, but we have given instructions to have them made up to the 31st December last. (Cheers.) I shall now call upon the solicitor to read you the different contracts which have been entered into.

A CLEAR EXPLANATION FROM THE SOLICITOR.

Mr. Francis (solicitor) : It appears from the scheme before you, which has been circulated, that the first thing we have got to do is to put the company into liquidation by passing these resolutions, and that hanging upon those resolutions is the contract which is proposed to be entered into with the contractors, guaranteeing the amount of the total subscription of the capital of the new company. That contract is entered into between the company of the one part, and Messrs. Kennedy and Fisher of the other part, who are described as the "contractors." I may tell you that the contract, on being entered into, was sealed by a resolution which operated to make it absolutely dependent upon the will of the shareholders here present to-day ; so that no one can say, as has been hinted elsewhere, that anything has been done by this board of directors, who are your direct representatives selected by you in this identical room from amongst your own body at the time of the last re-construction—that nothing has been done by them which does not meet with your cordial approval. If you do not see fit to pass it you have only to say so ; if you do it is inter-dependent upon the resolutions which are being submitted to you, aud which have beeu read by the secretary.

THE NEW CAPITAL GUARANTEED.

Mr. Francis then read the proposed contract, one of the provisions of which was that, in the event of the shareholders failing to subscribe for the new shares the contractors guarantee to place them, the consideration for such guarantee being the sum of 4,200*l*., or 1 per cent. upon the nominal capital of the new company. Every shareholder in the present company, said Mr. Francis, has a right, within a certain period, to apply for his proportion of the new shares pro rata. Wheu the whole of the new issue is placed, a meeting will be called for the purpose of arranging the sale between the liquidator of the company, who will be Mr. C. T. Gladstone, of the one part, and the new company, which will have been registered in the interim, of the other part.

THE REDEMPTION OF THE DEBENTURES.

Referring to the original scheme to redeem the debentures propounded by the committee, Mr. Francis said : By that scheme the debentures, amounting to 18,000*l*., were brought up and held by this committee of shareholders, who subscribed for them in the names of two trustees, Mr. Bull and Mr. Campbell, who deposited those debentures, and they are now in the safe custody of the representatives of the committee. By this scheme as it now stands the new company will ouly pay 13,200*l*. for redeeming those 18,000*l*. worth of debentures, being the actual figure paid in cash for the purchase of them, plus the bonus of 10 per cent. (Cheers.) The new company also takes over the debts, liabilities, and obligations of the Dickens Company, and it undertakes to buy the Pilot and Ward Beecher claims, which, as the chairman has explained to us, he would advocate the purchase of under any circumstances. I wish to impress upon you again that the agreement will only be entered into after the necessary meetings have been held, to place the company in liquidation, as is proposed to-day, to appoint a liquidator, to pass and confirm the agreement entered into with the contractors, to ensure the placing of the whole of the capital of the company ; and then the next meeting will be for the purpose of giving the liquidator your sanction as to the mode of carrying out the sale and as to the purchase of the new company. If there are any other points upon which you desire further information I shall be happy to afford it. (Cheers.)

PRACTICAL AND BUSINESS-LIKE.

Mr. Lott : Mr. Chairman and Gentlemen, most of those to whom I have spoken have agreed with me, and I think all gentlemeu present will also, that the scheme we have before us is at least a practical and business-like one. (Hear, hear.) We are all, I am sure, interested in the welfare of this company—not, I hope, interested in the way that a gentleman was who attended a meetiug of shareholders last week. He was asked when going in at the door if he was interested in the company. "Oh, yes I am," he replied, "I am a 'bear' of a thousand shares." (Laughter.) I trust if there is an interest of that sort here to-day, it will be kept quiet. (Cheers.) We, as shareholders, are determined to do the best we can for our property, and so far as I am concerned, and my friends, we will allow no interference such as there has beeu on one or two occasions in the past. As we are willing to find the money we intend to spend it in a proper and economical manner. With regard to the debenture-holders, the last scheme was unfortunately not practicable ; but under that scheme, as I pointed out at the time, they would receive shares which have more or less depreciated in value. Now, however, they receive their money back in sovereigns, with 10 per cent. added to it. But it was not so much that that I wanted to speak about ; I wanted to say a few words with regard to the properties that we own.

A PROPERTY SECOND TO NONE IN AMERICA.

After looking carefully at the plans and going thoroughly into the question, I am of opinion that our property is second to none in America ; that it has never beeu fairly treated ; and that it has been but little developed. I was looking to-day at one of the reports Mr. Craft, our former manager, sent over in May, 1881. Referring to the Contiuental claim, the one claim that was being worked at the time, he says : "The mine is improving in width, aud ore grade is nearly $30. We have a large quantity of ore in sight, as we do but little stopiug. Driving on drifts gives us nearly enough ore to keep the mill in operation." That is to say, he was driving a tunnel straight through ore which gave in May enough to keep the mill working. Above and beneath was not being touched. On the 21st Juue he says, "No. 3 level advanced 15 ft., all in good ore, of an average width of 7 ft." Now, gentlemen, I want to know where all that ore has got to ? It seems to me that all this developing and prospecting work has been goiug on, and has left the shareholders with the Dickens claim untouched, and the Custer claim scarcely worked at all. Now, I think we should supply the money proposed to be raised in developing this property. In a large area such as we have, we are

BOUND TO GET A STROKE OF LUCK

sooner or later, if it is gone about in a business-like way. For instance, enormous quantities of ore have been taken out on the other side, and I do not see why we should not have the same lodes on the Dickens property. I should like shareholders present to inspect the plan on the wall for themselves. A shareholder, whom I saw this week, raised the question—What about dissentient shareholders ? He said, "A lot of people no doubt will refuse to come in." Well, in these matters I think there is only one thing that can guide us, and that is

SELF-INTEREST,

and it certainly is not to the interest of anyone to dissent. I looked carefully at the record of the last re-constructiou, and I calculate that every dissentient shareholder who then refused to come in lost something like 10s. a share in hard cash. Therefore, I do not think that from a monetary point of view there is much motive for any shareholder refusing to put down about 1s. or 1s. 6d.—which, I believe, is what the directors propose to call up—in order to develop these large properties that we have. A great deal has been said in the past about the Lucky Boy claim, and people have come to me, and said, "Oh, we must buy the Lucky Boy claim ; we ought to call up 5s. a share, and give 50,000*l*. for it." I do not think we ought to allow anyone to hold a pistol to our head in that way, aud tell us that we must buy this Lucky Boy claim ; nor do I think that we ought to pay up 5s. a share. The small shareholder should consider the large one ; and I say that the man who holds 10,000 or 20,000 shares is not prepared to put down 25 per cent. of the nominal value of his holding, and we ought not to ask him. If you were asking for 4s., I think I would be prepared to agree to it ; but I think 3s. 6d. will be ample for our purposes if we use the money economically. With regard to the indemnity of the capital—I regard that as an amount paid to ensure the success of the scheme. It is

ESSENTIAL THAT THERE SHOULD BE NO FAILURE,

and that we should get the whole amount of money we require ; otherwise we shall be met, six or nine months hence, with the same trouble —not sufficient capital to develop the mine and work it properly. The present scheme ensures the whole amount being paid now, and, therefore, gentlemen, I think we shall do very well to pass it in that form, and carry the thing through. I think I shall be in order, Mr. Chairman, if I second the resolution ?

The Chairman : It has not been moved yet.

Col. Jackson : I should like to know what position Mr. Treweek will be under the newly organised scheme ?

A SHAREHOLDER IN THE ORIGINAL CHARLES DICKENS.

Mr. Griffin : I do not want to find fault with the scheme before us, and I can assure gentlemen present that I am not one of the "bears" that Mr. Lott spoke of. Unfortunately for me I was a shareholder in the original Charles Dickens, and I have passed through one re-construction already. I do not, however, complain much of that, but I think figures and facts should be placed before us—(hear, hear)—so that we might know what has been done with the money in the past. It is true that our chairman has given instructions for a balance-sheet to be prepared up to December last, but we ought to have had that in our hands before we met here to-day, and we could then have seen what had been done with the money in the past, what was realised from the mine, and upon what it had been expended. At the present time we have only an occasional report in the financial and mining papers, stating that so many bars have been sold, and what has been the royalty to the owners. It is only 12 months since we met in this room to go into a similar scheme to this, and we are not a bit wiser than we were then. We were told that the money raised would put us in a sound condition. We are told the same thing to-day, but still I should feel far more easy about it if I could see that the money raised in the past had been properly and fairly expended. We do not know either who the directors of the new company are to be, and that is a matter upon which we ought to have

information, because there is not the slightest doubt that the board of directors ought to be very considerably strengthened.

A GOOD PROPERTY THAT WANTS PROPER HANDLING.

As to what Mr. Lott said in reference to the property, from information I have received I think there is a great deal of truth in it. I believe this is a good property, and it only wants working fairly. It has been improperly worked in the past, and we, as shareholders, have not derived from it the benefit we should have done. I do not make these remarks with the slightest idea of condemning the scheme, because I have been told that this is the only course we can adopt. It is a very serious thing to ask shareholders to come forward twice in 12 months to sanction a re-construction of this kind. I only hope, if the shareholders make up their minds to it, that they will add to the board some stronger and better men to assist in carrying on the concern. (Cheers.)

A SHAREHOLDER OBJECTS, BUT MEETS WITH LITTLE SUPPORT.

Mr. Dennison: I consider it my duty to condemn the provisional agreement which has been made with certain parties named, Fisher and Kennedy. Shareholders are often placed at a very serious disadvantage at meetings of this kind by being presented with agreements and documents of great length—documents which have perhaps occasioned the directors and solicitor and the proposed syndicate very great care, and trouble, and time in their preparation—and they ask us to accept these agreements upon the consideration that we can give to them in the few minutes that we have at our disposal amidst the observations made by one and another. It is really impossible to judge of the intrinsic merits of the scheme, or the real import of those agreements, without having a fair opportunity of looking at them. I think my remarks very properly follow those of the gentleman who has just sat down. He said we should have been presented with a statement of accounts, and without endeavouring to criticise at length the agreement to which I have adverted, I would suggest that the most proper course would be to adjourn for a week or a fortnight, as may be convenient. ("No.") Well, what do you propose to do? (A Voice: Go on and pass it.) Then I take it you are quite willing to constitute yourselves judges of these agreements. I do not feel that I am a competent judge, for it was with difficulty I could follow paragraph after paragraph.

4,000*l.* FOR UNDERWRITING THE NEW CAPITAL.

There is a paragraph which entitles Messrs. Kennedy and somebody else to 4,000*l.*, and I should like to know what they are to do for it?

A Shareholder: Guarantee to take up the shares.

Mr. Dennison: Will you tell me whether there will be a share that is not taken up by the shareholders? Gentlemen, don't you know that you are the owners of 400,000 shares, which are worth at the present time 3s. or 4s. in the market? (A Voice: No; half-a-crown.) Well, I am not particular to a shilling or eighteenpence. (Laughter.) I will simply tell you this, you have got a property in those shares which is worth 2s. 6d., and you are asked to subscribe 3s. 6d. per share in addition. (A Voice: Quite right.) The consequence is we give upon each share that is worth half-a-crown 3s. 6d. out of our pockets, which makes 6s.

A Shareholder (interrupting): May I ask whether this 1 per cent. is an extortionate price to pay either in the City of London, or anywhere else?

AN OFFER.

Mr. Dennison: If they give the shareholders the opportunity of coming in to guarantee these shares, I shall be most happy to do so myself. (Cheers.) The company's capital is 420,000*l.* You hold among you more than 400,000*l.*, and your 1*l.* shares are worth half-a crown. You give 3s. 6d. out of your own pockets, which, practically, means that the shares in the new company will cost you 6s. These gentlemen are asked to guarantee the balance of 20,000 shares—because the present holders will, no doubt, take up their 400,000 shares. Those 20,000 shares the present members are entitled to have at par—at half-a-crown each. Of course, we shall get them for less than 6s. And these gentlemen get 4,000*l.* for guaranteeing an issue under circumstances of that kind.

A Shareholder: Supposing only 200,000 shares are taken up—What then?

Mr. Dennison: Will the shareholders themselves give up their present property?

The Shareholder: The guarantors will have to take them.

Mr. Dennison: I myself will take them. I should be only too pleased to get the balance of the shares at par. If I can get the shares at 2s. 6d. each, surely I am in a better position than you who pays 6s. I am a shareholder as well as you, and want to do the best I can for this company, but it is

A MOST SCANDALOUS THING

that an agreement of this kind should have been proposed, giving 4,000*l.* to gentlemen who practically guarantee nothing at all; because the 400,000 shares are bound to be taken up.

Mr. Hamilton: I was one of the large shareholders who were first invited to confer with the directors with respect to the best means of getting the company out of the position in which it is. I attended two of the meetings, and certainly did not care to take upon myself the responsibility of subscribing for the debentures which other members of the committee did. I presume it is this same committee practically that are guaranteeing the taking of all the shares that are not applied for by shareholders?

The Chairman: No, sir, it is not.

Mr. Hamilton: Well, I think the gentlemen who took the risk of buying those debentures in the way that they did—if they care to undertake the placing of the capital, they should have the first choice. But

HERE IS THE POSITION

we are in to-day. Our directors come before us, and say that, having looked carefully into the matter, they recommend that we should enter into this agreement with these guarantors to pay them this amount, in consideration of their being responsible for the whole of the shares that are not taken up. Now, as the gentleman has just said, with this guarantee the shares are sure to be placed. Had the success of the scheme not been arranged in this way, I feel sure that we should never get the shareholders to come into it. I am a stockbroker, and my clients have a large interest in the company; and I have heard it said, "If success is assured, we will apply for shares." As shareholders, I think we have been considerably sold over this matter; but our position to-day is this: Is the scheme put before us of a sufficiently promising character, with regard to the cash that will be placed at our disposal, to warrant us in sanctioning it? Twelve months ago we raised a sum that was really only sufficient to enable us to get the stores, and so forth, and if that is to be repeated, I say no. But if the scheme will provide working capital to put the Charles Dickens in a dividend-paying state, then I think we are warranted in passing these resolutions. Unfortunately, we have such a vivid idea of what was before the Custer Mine, according to Mr. Treweek in this room, that some of us are rather sceptical. The management may be perfectly honest on this side, but you

MUST HAVE THOROUGHLY GOOD MANAGEMENT ON THE OTHER SIDE,

or else your money is wasted. I am not disposed to charge Mr. Treeweek with dishonesty—he has been charged with it—but I say when a manager lives some hundreds of miles away from the mine, he does not discharge his duty by going out there once in three months. We have not had the information given to us, as shareholders, which we should have had; but, nevertheless, I will support the directors in their resolutions this afternoon. I say, however, that the directors ought to have amongst them a practical mining man, and that we ought to be perfectly certain that the management on the mine is thoroughly honest.

Mr. Dennison: I wish you distinctly to understand that all I take exception to is the amount paid under the agreement for underwriting. I ask the directors, as a matter of common fairness to the shareholders, to give us the opportunity of coming in and guaranteeing some of the shares.

THE SCHEME SUPPORTED.

Mr. Campbell: I am one of the trustees for the debenture-holders, and spoke at the last meeting in favour of the other scheme, because I thought it was the lightest for the shareholders, and we were in duty bound to do the best we could for the shareholders. But as that scheme has fallen through the directors have got up this other scheme, which has my hearty support, because I think it is the best thing that can happen for the company. It is all very well for gentlemen to get up and say that the shares are sure to be taken up. Of course they will be when the shareholders know that if they do not take them others will, and the thing will be a success. At the last re-construction they were taken up—why? Because we were buying a mill, and, we were told, "a dividend-paying property on the spot;" we were going to get dividends. It seems to me, however, that some of the shareholders did not take up their shares, because after receiving my pro rata allotment I applied for more, and got more by a thousand or two. I paid 1s. 6d. or so premium for them. At present we are only going to find working capital; we are not going to buy a mill or "a dividend-paying property on the spot;" and if shareholders think that our object in re-constructing is simply and solely to find working capital, they will not come in. I must candidly say, after having heard the agreement, and gone into the question fully, that I do not think it is excessive. (Cheers.)

MR. DENNISON WAXES WARM.

Mr. Dennison (excitedly): I will do it for nothing. I will undertake myself to apply for the 20,000 shares. (Cheers.)

Mr. Campbell: The issue is 420,000 shares, not 20,000, and I think if it goes forward that a syndicate has been formed to take the whole, the shareholders will subscribe for at least their pro rata allotment. If the shareholders take up those shares they will be benefitted by those shares keeping at a premium. They are benefitted in this way, that by paying 4,000*l.* they know that all the shares are taken. If they do not enter into this arrangement there will, no doubt, be some dissentient shareholders whom they may have to buy out. I think it is the wisest scheme that could have been put forward, and I shall certainly support it. I have been a shareholder from the first, and have followed the history of the property from the beginning, and it would be a great mistake to let it slip out of our hands now. I do not know if Mr. Dennison is connected in any way with Mr. Hartmont, because it seems to me that I have heard something similar from that quarter.

Mr. Dennison: There is nothing in the query.

VIEWS OF A DIRECTOR.

Mr. Bolton (director): At the last meeting, at the request of the chairman, I gave you an account of what had been received and expended by us since we came into office, and I thought that everyone in the room clearly understood that every penny had been accounted for. The money that we propose now to raise will be expended for the very objects that you have in view. We intend to send out proper people to see whether the mine can be better managed than it has been in the past, and we intend to open up the Charles Dickens and Custer Mines, so as to make these mines pay at the very earliest moment. I want to impress these facts upon you, and also to say that the agreement we have entered into for the secure taking of the whole of the capital of the company was not done in a hurry, and was done as economically as we could possibly work it. After the last meeting, when the shareholders believed they would have to pay 5s. a share, the shares rapidly went down from 3s. 9d. to 1s. 9d., and there was no hope of one-half of the shares being taken if we trusted to the shareholders alone; but when they know that there is a powerful syndicate behind their backs, who will take up all the shares they do not subscribe for, we can thoroughly understand Mr. Dennison's offer. It is after the egg has been made to stand that Mr. Dennison is willing to show you how it is done. We ourselves are large shareholders, and we are not asking you to spend one single sixpence more than we intend to do. (Cheers.)

THE LOCAL MANAGEMENT.

Mr. Mallory, who said he had been on the property several times, gave it as his opinion that they had no management out there at all.

A Shareholder asked if anyone ever heard of such a preposterous arrangement as having a manager resident some hundreds of miles away from the property, who visited it once in the course of two or three months? How could they wonder that the mine did not pay?

The Chairman pointed out that it was absolutely necessary for the manager to reside at Salt Lake. The whole of the stores were

purchased at Salt Lake, and their great object was to curtai the expenses. The sub-manager on the spot could be directed by the manager going to the spot every now and then. (No.)

A Shareholder: Is Mr. Treweek the finance manager or the mine manager?

The Chairman: Mr. John Treweek, who is a practical mining man, resides on the property, and goes into the mine every day. Mr. Nicholas Treweek acts as finance manager at Salt Lake.

A Shareholder: Which of the two is respousible for the misunderstanding about the Lucky Boy Mine?

The Chairman: Mr. Crafts was.

The Shareholder: Who is he, pray?

The Chairman: He was discharged by Mr. Nicholas Treweek for his action.

The Shareholder: What is the salary of the financial manager?

The Chairman: 600*l*. a year, and his brother gets 400*l*. a year.

CONFIDENCE IN THE BOARD.

Mr. Sisterton: I would suggest that we now come to a decision upon the resolutions before us. Although I agree with much that has been said to-day, we are obliged to look at things as they are, and do what is best under the circumstances. However much shareholders may have deprecated the attitude which has been taken up by the board in the past, I do not think any of us douht the sincerity or honesty of the present board. They are gentlemen of the highest integrity whom we can trust, and they uudoubtedly know more about the mine than we do, and also about the delicate circumstances which must attach to any policy that is pursued in America. The Dickens Custer property is not under the British flag. Human life is very uncertaiu there. It is quite possible if you quarrel with anyone

YOU MAY FIND YOURSELF POPPED OFF

with the click of one of those little things that are so common there—(laughter)—and therefore we should leave as much as possible the policy to be pursued with respect to our property out there to the present board. The directors are aware that we have not much confidence in Mr. Treweek, and we had better leave it to them to arrange by whoin he is to be replaced, and when. (Hear, hear.)

A Shareholder: When and how is the new board to be constituted?

The Solicitor: That is part of the scheme that will have to be brought up at the next meeting. The best thing we can do now, if it meets with the approval of the meeting, is to pass a resolution stating that this agreement with the contractors is approved, because at present it is only held by Mr. Gladstone as in escrow. We can then deal with the two resolutions that are before the meeting—placing the company in liquidation and appointing a liquidator. Perhaps so ne gentleman in the body of the hall will move the following resolution:—"That the agreement executed by Messrs. Kennedy and Fisher, to guarantee the capital of the company, now held by the secretary subject to the consent of this meeting, be and it is hereby passed."

Mr. Dennison, amidst considerable opposition, objected to the resolution on the ground that notice of it had not been given.

The Solicitor explained that as the resolutions embodied in the notice were built up, as it were, upon this contract, and as the contract was now held by the secretary simply subject to the sense of this meeting, it was perfectly legitimate to take the sense of the meeting in the manner proposed.

Mr. Hamilton: I propose that.

Mr. Sisterton seconded.

A LIVELY SCENE.

Mr. Dennison: Will you allow me to move an amendment? (Loud cries of "No," and interruption, which lasted several minutes, Mr. Dennison in vain trying to obtain a hearing.)

The Chairman: Do you wish this gentleman heard? (No, no, and Yes.) I cannot quite make out what is your wish. (Laughter.) I think it would be better to allow him to address a few words to you.

Mr. Dennison: I do not think you ought to pass that resolutiou, and for this reason. The solicitor suggests that soue of you should pass the resolution, not because you are entitled to pass it, but simply to give some kind of authority to what the directors have chosen to take upon themselves to do without consulting you. Now, I submit to you that you do not understand the terms of the agreement.

At this point it was impossible to follow the speaker, who, though shouting in an excited manner at the top of his voice, could not be heard amidst the din and uproar, loud cries being raised for the amendment.

A Shareholder moved

THAT MR. DENNISON BE NOT HEARD.

(Loud cheers.)

The motion was seconded and carried.

The Chairman, however, interposing, said that if Mr. Dennison wished to move an amendment he might do so, but not take up the time of the meeting any more.

Mr. Dennison then proposed, "That the shareholders be entitled, on payment of the relative amount as paid by the syndicate, to come in under the terms of the agreement."

Mr. Ritchie seconded the amendment, which, on being put to the meeting, was negatived by a large majority.

The resolution as proposed by Mr. Hamilton was then carried.

The Chairman proposed the first special resolutiou as above.

Mr. Campbell seconded, and it was carried.

The Chairman moved the second resolution, which was also carried.

As the meeting was dispersing, Mr. Dennison excitedly shouted, "You are a wise lot, upon my word you are. You don't know what you are voting"—remarks which were received with derisive laughter.

THE TRANSVAAL LANDS CO., LIMITED.

AMENDING THE ARTICLES OF ASSOCIATION — DIVISION OF FOUNDERS' SHARES.

An extraordinary general meeting of the Transvaal Lands Co., Limited, was held at the City Terminus Hotel, Cannon Street, E.C., on Tuesday, under the presidency of Wm. Jas. Thompson, Esq., (chairman of the company), when the following resolution, which was passed at the extraordinary general meeting held on the 12th February last, was submitted for confirmation as a special resolution:—

RESOLUTION.

"That the articles of association of the company be amended as follows, namely:—By the addition of a further clause, between clauses 8 and 9, to be numbered 8A. Clause 8A.—The company may at any time, by special resolution, sub-divide the shares in the capital of the company, or any of them, in such manner as may seem expedient. Clause 23.—By inserting the words, 'in the usual common form,' after the word 'deed.' Clause 24.—By omittiug the word 'or' in the sixth line, and also the last phrase in the clause from the words, 'in their absolute discretion,' down to the end of the clause. Clause 49.—By inserting the words 'not fully paid' after the word 'shares,' in the first line of the clause."

Mr. A. W. Heron Maxwell (secretary) read the notice convening the meeting.

The Chairman: Gentlemen, this meeting has been called in order to confirm this resolution, which was passed at the last general meeting. It being your pleasure, I beg leave to move that this resolution be confirmed. If one of you will second that, I will put it to the meeting.

Mr. W. W. Read seconded the motion, which was then formally carried.

A second extraordinary general meeting was then held, for the purpose of considering, and if thought fit, passing, the resolution following:—

RESOLUTION.

"That each of the 85 founders' shares in the capital of the company be divided into eight shares of the nominal value of 2s. 6d. each, and that the following words be added to clause 81 of the articles of association of the company, namely:—'For the purposes of this clause, eight founders' shares of 2s. 6d. each shall be deemed to be equivalent to one ordinary share of 1*l*. each, and the holders of founders' shares shall be entitled to vote accordingly, and a member who holds less than eight founders' shares of 2s. 6d. each shall not in respect thereof be entitled to any vote.'"

The Secretary having read the notice,

The Chairman said: Gentlemen, the resolution that I put before you now is to make matters perfectly clear with regard to the founders' shares. These shares are now, and have for some time past been, dealt in eighths; and of course without this resolution, which you passed in effect at the last meetiug, there will be a difficulty in giving the necessary security to those who purchase an eighth of a share, and therefore, in order to make that clear, this resolution is now submitted to you.

VOTING POWER OF THE NEW SHARES.

You will notice that the voting power has been preserved, and nobody obtains a vote who has not eight founders' shares. He must have the equivalent of an ordinary share. So that there is nothing in this arrangement to interfere with your voting powers as ordinary shareholders. I think the resolution is clear and speaks for itself, and I will therefore move that it be passed. Perhaps somebody will second it.

Mr. Skeel seconded the motion, which was carried unanimously.

The Chairman: We will call, in legal form, a meeting subsequently to coufirm this. I have the pleasure to tell you that Mr. Boult, our manager, who was over here quite recently, has sailed, and I hope in the course of about two months we shall hear of his safe arrival, and that he has been able to begin work. (Hear, hear.) I think that is all I have to say, except to thank you for your attendance to-day, which I do very warmly.

The proceediugs then terminated.

THE JULIA NITRATE CO.

TRIFLING ALTERATIONS IN THE ARTICLES—NO DOUBT AS TO TITLE—EXCELLENT POSITION AND PROSPECTS.

An extraordinary general meeting of the shareholders was held at the City Terminus Hotel, Cannon Street, on Tuesday—Mr. Henry William Carter in the chair.

Mr. F. Stobbs (secretary) read the notice convening the meeting.

OBJECT OF THE MEETING.

The Chairman: The first resolutiou, gentlemen, which I have the honour to propose, is "That article 38 of the said articles be amended by striking out the word 'fifth' in the third line thereof, and substituting therefor the word 'tenth.'" You are probably aware that these two little alterations are required by the committee of the Stock Exchange. There is no objection to them that we can see, and we have to comply with their rules in order to get a settlement.

Mr. John T. C. Winkfield seconded the resolution.

A Shareholder: What does it refer to? What difference does it make to us?

The Chairman read the article which, as it stood, provided for the calling of an extraordinary meeting if requested in writiug by the holders of not less than one-fifth of the capital of the company. The alteration will have the effect of reducing the number to one-tenth, so that, as the chairman has said, the alteration is in favour of the general body of the shareholders.

The resolution was then put and carried.

THE SECOND ALTERATION.

The Chairman: The next resolution is:—"That article 61 of the said articles be amended by striking out the words 'six months' in the second line thereof, and substituting therefor the words 'one calendar month.'

Mr. J. W. Anderson seconded the resolution.

The Chairman read article 61, which provides that directors appointed by article 60 shall within six months after his appointment hold at least 40 shares. The alteration proposed reduces the time to one month.

The resolution was carried.

THE TITLES AND THE POSITION OF THE PROPERTY.

The Chairman: I do not want to forestall the pleasure of meeting

you at the statutory meeting, which must be held within four months of the formation of the company, and, therefore, I propose not to make any remarks; but if any gentleman has any question to put to me, I shall be delighted to answer it. If not, I will tell my little story at the statutory meeting.

Mr. Sampson: There was a report current about the titles to the property, and it would probably be of service if the report were contradicted here.

Mr. Findlay: There is one subject upon which you might give the shareholders some notion, that is, as to the situation of the property and the opportunities you have of conveying the stuff down to the coast. That is a great consideration. And it would be interesting to know how the position compares with that of other nitrate fields?

The Chairman: It is a very funny thing that a rumour should have reached anybody in this room which has not reached any of us on the subject of the title. I have not heard the slightest question or suspicion or suggestion of an idea that the title was not all right. I am able to say that the purchase has been carried out according to the terms of the contract, and that the property has been properly transferred to the company. We have had an advice by cable from J. H. Thomas, Esq., Her Majesty's Consulat, Santiago, which we received on the 11th inst. to that effect. Mr. Thomas is acting as the company's trustee for the transfer. We have paid all the money and we have got the property. (Cheers.) Then as to the situation and access to the coast, I really cannot do better than refer you to the prospectus. I think the property is there described as being in the department of Taltal, province of Alacama, in the Repuhlic of Chile. The property is in one block, contaiuiug nearly 5,000 English acres, and we have the right to a further 1,500 acres, and we hope as early as possible to get possession of that also. The property is situated near the line of the Taltal Railway, and within a moderate distance of the Port of Taltal, where there are excellent shipping facilities. It is about 5 miles from the railway, and that is about 60 miles from the Port of Taltal; that is a very good place for shipping. I have have had ships of my own there, and they have been loaded there as well as at any other of the West Coast ports.

A Shareholder: Eventually, would you be

AS FAVOURABLY SITUATED AS THE OTHER NITRATE COMPANIES?

The Chairman: We are of opinion that we are more favourably situated than most of the compauies. (Hear, hear.) I am not one of those who went into this with the idea of making a very big premium upon it. I think when you see the shares of a company jump up to about five times their nominal value, it is a very unhealthy sign. I like to see the thing holding its own, making fair profits, and carrying a small premium. (Cheers.)

The meeting then closed with a vote of thanks to the chairman and directors.

THE BRATSBERG COPPER CO., LIMITED.

THE SMELTING COMPANY FORMED—ALL THE CAPITAL TAKEN—SIX PER CENT. ADDED TO THE EARNING DIVIDEND POWER OF THE COMPANY WITHOUT ANY RISK—SMELTING COMPANY TAKES ALL THE RISK.

An extraordinary general meeting of this company was held at the Guildhall Tavern, Gresham Street, on Wednesday, to consider, and if approved, to pass the following resolutions:—(I.) "That the directors be, and they are, hereby authorised to enter into an agreement in the form of the draft, a print whereof has been produced to this meeting, and identified by the signature of the secretary of the company, and to carry the same into effect." (2.) "That the articles of association of the company be altered in accordance with the notice." (3.) "That the capital of the company be increased to 200,000*l.* by the creation of 80,000 new shares of 1*l.* each."

J. B. Ball, Esq. (chairman of the company), presided.

OBJECT OF THE MEETING.

The Chairman: I will not call upon Mr. Riddell, our secretary, to read the notice calling the meeting, because I shall have to read it in proposing the resolutions, so that at this stage it may be taken as read. We may take the three resolutions as a whole, unless you see any objection to that course. The first resolution is with regard to the agreement; the second embodies some trifling alterations which are required by the Stock Exchange, to enable us to get a quotation; and the third relates to the increase of capital in the event of the first resolution being carried into effect. The chairman then read the notice in full, and proceeded:

FUNDS AMPLE.

At the last general meeting we found that our proposition, that the profits should be kept iu hand and applied to the erection of smelting works, did not meet with general approval, and subsequently we found, upon going into the figures, that, to put them up properly, these works would cost more mouey than could be provided out of profits for some time to come, and in accordanee with the promise given at that meeting, we have called you together to-day. No capital is wanted for the carrying on of the mine, as we have 7,000*l.* cash in hand and 4,500*l.* worth of ore at the mines and elsewhere. To go back a little in point of time. When the company was re-constructed in the early part of last year, although we had in our hands the report of Bergmeister Dahl, the Government Inspector of the Telemarken district, in which he recommended us to apply the electrolytic process for the reduction of our ores, we had not been able to obtain sufficient information as to the practical workiug of the process, to justify us in asking the shareholders for money to put up the necessary plant. Since that time we have been continually prosecuting enquiries in various directions, and have only lately succeeded in getting the information we have been in search of. The objects for which we proposed to raise the money on the re-construction were three in nuuber, viz.:—(1.) To commence working the Naesmark Mine. (2.) To iucrease the output of the Hoffnung Mine, thereby lessening the cost of production, as many of the expenses are the same whether 2,000 or 4,000 tons per annum are worked. (3.) To pay off the mortgage out of capital instead of out of profits, thus enabling the directors to distribute the latter iu the form of dividends. And I will now report shortly to you what we have done under each head. No. 1, Naesmark: A shaft has been sunk, which has now reached the depth of about 32 metres. No. 2:

IMPROVEMENT IN HOFFNUNG.

The output of the Hoffnung Mine has been increased from an average of 85 tons to an average of 140 tons per month, and the returns from the mine show that the output for January was 160 tons, and we have just had a telegram from Mr. Holman, in which he estimates the output for February at 165 tons. In addition to this increase in the productiou of the Hoffnung lode, we have been proceeding with the opening up of the Johannes lode, which is a parallel lode to the Hoffnung, by the driving of a cross-cut, which has now been driven about 60 metres, and the sinking of a shaft which has reached a depth of about 20 metres. No. 3: As soon as we were able to come to terms with the mortgagees we paid off the mortgage, and this was done in August last. In preparing a scheme for obtaining the money for the smelting works, our aim has been to put forward one which would he sufficiently tempting to make sure of the money being subscribed from outside sources, if the present shareholders in the Bratsberg Company did not take up all the shares, and at the same time not to give the subscribers to the Smelting Company an undue advantage over the Copper Company. (Hear, hear.) (The chairman here read the agreement.) That is the agreement we have entered into, and it has been with a view to hold the scales evenly between the two companies. The amalgamation clause is one which makes it neccssary for us to create the 80,000 new shares in the Copper Company. It is not proposed to issue these except for the purposes specified in the amalgamation clause, whieh may not take effect for some considerable time. The solicitor points out that it is better that these resolutions should be taken oue by one, and I will now move No. 1 as above.

THE POSITION FULLY EXPLAINED.

Mr. F. C. Barker (director), who was received with cheers, said: Gentlemen, please understand that we have not invited you to meet us here to-day for the purpose of asking you to put a single penny into the smelting works, which we propose to erect. We already have sufficient money promised, and we merely ask your consent to carry out the arrangements, of which you have had notice. If you think we are giving too liberal terms to the smelting company, every shareholder has the remedy in his owu hands. He has the option of taking shares in the smeltiug company, and of thus participating in this liberality. Therefore, I do not intend to discuss whether the smelting company or the Bratsberg Company has the best of the bargaiu. On that point every shareholder is as well able to judge as I am. All we have to consider at this stage is whether the arrangement is one that will benefit the shareholders of the Bratsberg Copper Company. There is no alternative scheme. We are offered the money on these terms. Shall we take it or leave it?

BRATSBERG AND THE NEW SMELTING COMPANY.

Now what will be the position of the Bratsberg Copper Company if the smelting works are erected, and the capital of the Bratsberg Company devoted to developing their three miues, which I have always maintained are capable of producing 6,000 tons of 20 per eent. ore per annum. Presuming that the smelting works are a success our share of the profits would be 7,000*l.* a year, or nearly 6 per cent. on our nominal capital. A schome by which the shareholders are not called upon for more capital, and by which the present earning powers of the company are to be augmented by 6 per cent. on the capital, is not to be lightly refused. It is true that while the Bratsberg Company gets 6 per cent., the subscribers to the smelting works will be getting over 40 per cent.; but the Bratsberg Company get their 6 per ceut. for doing nothing; whereas the shareholders in the smelting company put up the money. Irrespective of anything else, it should certainly increase the value of our shares by 10s. each. You will, however, like to hear what grounds I have for feeling confident of the success of the smelting works. The works will depend upon three things:—Firstly, can we rely upon a regular supply of ore? Secondly, is the process we intend to adopt a reliable one? Thirdly, can any fluctuations of the copper market in anyway interfere with us?

BUT ONE OPINION AS TO THE MINES.

Some people who do not know our mines may have some doubt as to whether they will continue to yield sufficient ore to keep the works going. Well, I have seen the mines. Our chairuan, in company with an independent engineer, has seen the mines, aud the son of one of our directors has visited them. Our former secretary has stayed on the mines, and our engineer and manager out there have had 12 months experience of the mines. and we are one and all willing to stake our money upon the absolute certainty we feel on this point, and upon the success of the smelting generally. You will remember that the output of one of our mines (the Hoffnung) had in 1887 fallen to only 60 tons per month. We explaiued to you at the time that this was not from want of ore. Some thought that the mine was played out, but we who knew the Hoffnung assured you that this output would be increased to 160 tons. Well, we have been as good as our word, and I do uot think we have reaehed the limit yet. Our engineer telegraphed us on Monday that he estimated the output for February at 165 tons. This is equal to 175 tons for a month of 30 days. This mine has been worked for generations, and is to-day turning out more than it ever did at any time in the past. It has, of course, had fluctuations month by month, but, taking the average of the years, the richness of the lode has been almost invariable, and everyone who has seen the mine is of opinion that no shareholder of the company will see the end of it during his lifetime. Now, this mine alone yields sufficient ore to pay 30 per cent. on the smelting works.

OTHER MINES.

But besides the Hoffnung Mine we have the Næsmark, from which we shall be getting ore in May. This mine, to which I shall refer later on, will certainly yield as much as the Hoffnung. We also have the Johannes Mine, which we may safely rely upon to give 2,000 tons of ore per annum. Down to the depth to which it was worked this mine was in former years even more productive than the Hoffnuug, and the lode twice the width. The exploration was suspended owing to the necessity of making a cross-cut at a depth of 330 ft., thus tapping the lode at the bottom and connecting it with the Hoffnung works. This cross-cut, which is necessary for the economical working of the mine, will be finished in two or three months, and if the lode is the same at that depth as at the old workings we shall have an

enormous body of ore laid open that will last for many, many years. It is, of course, difficnlt to estimate the number of tons, but squaring the depth and length of the lodc. so far as at present ascertained. it cannot be less than 25,000 tons. The reasons why wc rely upon fiuding the ore at the depth of the cross-cnt are that the Johannes lode is almost identical in form and character with the Hoffnung, which runs parallel, and at the depth at which we shall tap the Johannes, the Hoffnung has been as rich as in any part of the mine. We are also sinking on the lode at the same time as we are driving the cross-cut, and we received a telegram on Monday, saying: "Johannes winze much improved," which proves that so far as we have gone the lode is intact, and that, at any rate, our work will not be thrown away. Furthermore, between the Hoffnung and Johannes lodes the cross-cut has passed through several veins of ore. one especially rich, which proves that copper exists at the depth we are working. All these indications make it pretty certain that when thc cross-cut is finished we shall have a second mine as good or better than the Hoffnung. Therefore, upon the score of a supply of ore you need have no fear whatever.

A CAREFULLY CHOSEN PROCESS.

Secondly, will the process we are pntting up work successfully, and at the cost we estimate? Well, it has worked successfnlly for some years at several important copper works, at one of which it has been so successfnl that the electro deposition plant is being doubled. It is no new idea, and the cost is based npon actnal experience in one of the largest English copper works. The labour is calculated on the basis of Swansea rates, which are in reality 50 per cent. higher than we shall have to pay, and, with our water power, we ought to do better than the refiners in this country. It is quitc certain that the refiners do not buy ore to convert into copper without makiug some profit, and this profit, at any rate, we shall make, plus the 6*l*. per ton we shall save in freight by not having to bring the ore over here. And if we make no other profit than this saving in freight, the works will pay handsomely.

POSITION IN REGARD TO PRICE OF COPPER.

Thirdly, although the profit on the smelting does not fluetuate with the price of copper, nevertheless, if copper were to go down to some nnheard of price, of course, this aud all other copper indnstries might be seriously affected. The qnestion is, at what price should we fail to secure a dividend? With the smelting works, and after taking credit for the gold and silver, we shall be able to pnt the copper on this market at under 25*l*. per ton. But a profit of 5*l*. per ton still leave us 20 or 30 per cent. on the capital snbscribed for the smelting works. Does any sane person think that copper can permaneutly fall below, say 30*l*.? At 25*l*. nearly every mine in the the world would have to shut down. This is an absolute and well-known fact that would qnickly react upon the price of copper by cutting off the snpplies. But the Bratsberg Company is not relying upon the smelting works ont of which to pay a dividend. In addition to the Hoffnung and Johannes, to which I have already referred, we have the Næsmark Mine, which seems to be opening up quite beyond all expectations, and which is rather a silver than a copper mine. To form an idea of the value of the Næsmark we mnst compare it with other silver mines.

THE VALUABLE NÆSMARK MINE.

Now, the other day I noticed that the Consolidated Broken Hill Silver Mine was sold for 275,000*l*. cash, and the capital was over-subscribed. The report said that in the main shaft, at a depth of only 80 ft., the ore assayed 28 ozs. silver and abont 64 per cent., or 9*l*. worth of lead. Well, the Næsmark shaft at a third of the depth yields ore which assays 55 ozs. of silver, and ¾ oz. of gold, and 35 per cent., or 24*l*. worth of copper. It is true they said that one of their veins was 3 ft. wide, whereas we can only boast of 1 ft.. but, on the other hand, onr ore is nearly three times as rich. In the Næsmark I think we may now safely say we have a splendid rich miue, which will probably pay handsomely, even though copper should go down to 40*l*. Without reckoning the profits in the smelting, this ore is worth, with copper at 40*l*., over 20*l*. per tou. including such proportion of thc silver and gold as ordinary smelters would pay for.

ESTIMATED OUTPUT.

The lode can be much more cheaply worked than the Hoffnung, and I think I am well within the mark when I say that this ore will not cost us over 8*l*. per ton. On 1,200 tons per annnm, which our engineer, as yon see by the report, judges this mine capable of yielding, this would bring ns in about 14,000*l*. per annum profit. Add this profit to our share in smelting, 7,000*l*., already referred to, and you have a total of 21,000*l*. per annnm, which I think there is a reasonable prospect of our making. This is eqnal to a return of over 17 per cent. on the nominal value of our shares, or of 60 per cent. on their present market valne. And this, irrespective of the success of the copper syndicate, as I only reckon on 40*l*. or the lowest price of copper. For my own part I believe the smelting will give much better resnlts than those estimated in the prospectus. In the first place, two-thirds of the cost of the process consist in wages reckoned at English rates, which are 50 per cent. higher than Norwegian. The cost is also reckoned out on the basis of a small output of 2,000 tons, whereas it will be reduced as the output is increased, as it most assuredly will be. The cost of smelting the richer ores from the Næsmark Mine will also naturally be less, while the profit from the gold and silver, instead of being 10*l*. odd, will be abont 18*l*. per ton. There are also many minor bnt important items, of which no account has been taken. For instance, iu smelting onr own ores the dressing need not be so elaborate, and both the cost and waste will thereby be diminished.

TREATMENT OF THE POORER ORES.

Moreover, we shall be able to utilise the poorer ores, which, under the present system, do not pay to ship to England. And we shall not have to put up with the iniqnitons system of Cornish assaying, which is the custom of the copper ore trade, and which practically robs the mine owner of about 6 per cent. of the value of his ore. Therefore, I fnlly anticipate that our estimate of profits will be more than realised. (Cheers.)

ABSURD PRICE OF THE SHARES.

With such good prospects shareholders may ask how it is the shares are now so low, and why, since onr last meeting, the price has gone down from 10s. to about 5s. As a matter of fact very few sharcholders indeed have parted with their shares at these low prices, and in this they have acted wisely. I believe that nearly all the shareholders have the same faith as we have in the mines, and feel that they only require time to develop in order to yield good returns whatever be the price of copper. Bnt the ways of the Stock Exchange are inscrutable. So far as I am informed the reason for the fall was this. It is undonbtedly a fact that some few months back large specnlative accounts were opened on the Stock Exchange in Bratsberg shares. And when those who had bought for a rise saw that we did not mean to distribute a dividend ont of the profits earned, they promptly closed their accounts, especially as in most cases they showed a profit.

FACTS FOR INVESTORS.

This caused the tide to turn, and down the shares went until the price now does not represent much more than the cash, and stocks we we have in hand; or to put it in another way, more than half the present market value of the shares is represented by the snrplus of our assets over liabilities, i.e., actual cash in hand, or what we shall turu into cash. On the other hand, we do not owe a penny to anyone, have no mortgage, debentures, or prefcrencc stock, and we have a mine fully equipped, and earning profit. I doubt whether as much can be said of any mining share in the market. As soon as the shares in the Smelting Company are allotted, and our accounts to the end of December made up, we shall be in a position to declare a dividend, and I shonld not then be snrprised to see the tide turn the other way. With regard to the increase of capital, you need not fear that this will be a drag npon the Bratsberg Company. It will not be issued nntil the Smelting Company shareholders determine to amalgamate, and they are not likely to amalgamate nntil the Bratsberg shares go to par, which I believe they will do when onr property is in full work. Upon any worse terms than these I do not think the shareholders will be willing to part with their smelting shares, and I fail to see how in such an event the Bratsberg shareholders will be damaged by amalgamating with the smelting works, the profits of which are independent of any fluctuations, either in the market price of copper or the richness of the mines. In conclusion, gentlemen, I can only say that I think we have laid before you a proposal which cannot fail to greatly enhance the value of your property. Personally, I have taken an enormous amount of trouble about it. Many of my friends are taking a large interest iu the smeltiug works. I have a large stake in it myself, and so have my co-directors, and if I did not feel confident of its success, I shonld not put my own money into it or recommend it to you. (Loud cheers.)

THE PROCESS ADOPTED.

Mr. Everitt: During the last 17 or 18 years I have been at the head of one of the largest metal concerns in the kingdom—Everitt and Sons, of Birmingham. When thc syndicate was started I paid a visit to London and made inquiries as to what copper shares were worth buying. I gave the preference to Copiapo, Pannlcillo, and Bratsberg shares. I have been not far from these mines, and was told that Bratsberg was a good concern, bnt that at that time it was weak in its directorate. I am, however, very much pleased with the remarks of Mr. Barker to-day, becanse they show me that one, at least, of the directors knows a good deal abont copper mining. (Chcers.) I have read most carefnlly the prospectns you have sent out with regard to the smelting works, and was very much astonished, knowing what I do of the ores you raise, that you have taken up the electro process, because I am sure yon are wrong. When I heard it, I wrote immediately to a most intimate friend of mine in the Swansea district connected with one of the largest houses in the copper trade, and I will read you what he says. In the first place, I should say that the report you have had given you is by Mr. ——

The Chairman: I do not think it is desirable you should mention names?

Mr. Everitt: That gentleman is a chemist, and not a copper smelter. I think you have not gone to the right man. My correspondent, speaking of Bratsberg ore, says, "I find it has been nsed at these works many times, and Mr. So-and-So speaks very favonrably of it, and thinks it was specially made for the blast fnrnace. No ore could be better than this onc for that purpose. This and Cape Copper ores are the best for the electro process—it would not pay them anything like a blast furnace. This ore contains no impurities, and would be first-class when treated with the Manhes process. It wonld not pay to concentrate as matte. althongh there is a sufficiency of snlphides to do so. The manager recommends the forcing of these mines while the price of copper is as high as it is. This ore will no doubt be used for conductivity purposes." That is the great future for the copper trade. (Hear, hear.)

A Shareholder: Have they had any of the Nœsmark ore?

Mr. Everitt: No, Bratsberg ore. This I consider to be a very important communication. You talk of water-power being so cheap and being available at the mines, but if you go into the roasting process you will want coal.

Mr. Barker: We have calculated upon that.

Mr. Everitt: You will find that thc roasting process will be the best. Yon have told us about the new capital, and that you are not going to raise it at present. The report I have read of Mr. Barker's visit to the mines is most satisfactory. I have no doubt there is a great future for this property if looked after and well maintained.

THE NEW COMPANY.

A Shareholder: I suppose the sharcholders will have proper notice of the new company, and application forms sent to them.

The Chairman: Certainly.

Mr. Bergtheil (director): It is really the sharcholders who will have the property.

A Shareholder: Will the shares be allotted pro ratâ?

Mr. Bergtheil: At first they will be.

The Chairman: If no other gentleman has questions to ask I will ask Mr. Barker, who has specially posted himself in the processes, (although we all know something about them) to reply to the remarks of Mr. Everitt.

Mr. Barker: I very much regret that Mr. Everitt, who has had long notice of our intention to employ the electro-process, did not consult the directors privately before coming here, becanse we should have been able to reassure him ou thc matter privately, very much better than we cau hope to do in a public meeting. (Hear, hear.) But still, as far as possible I will endeavour to reply to what he has

sail. I was very glad to hear that he thinks our proper plan is to roast the ore and then employ the Manhes Bessemer process, because, although he has not been told so, that is exactly the process that we are going to adopt. If that is (as he says it will be) a success, we shall be quite satisfied. We must bear this in mind, that the electro-deposition process is not a thoroughly known process. It is what is commonly called a "close borough," and if you ask any of the smelters whether they are making money by it, they will probably reply in the negative. Even a gentlemen, who is doubling his plant to my knowledge, might be disposed to say so, for the reason that he, like his contemporaries, does not want other people to step in. They want to buy our ores, get the gold and silver for nothing, and do us out of about 6 per cent. in weight, and another 6 per cent. in assay, but they do not want us to smelt, and, therefore, I can quite understand that there are some people who have an interest in our not using this process. We are not absolutely bound to any process. This is the process which we think is best, and I shall be only too pleased if, before we finally decide on ordering the plant, Mr. Everitt will have a talk with me, when I shall be happy to go most thoroughly into the matter with him. He has said he thinks there is a field open for smelting in Norway, and I shall only be too glad to adopt any better process if anyone will show it to me. (Cheers.)

The first resolution was then carried unanimously.

The Chairman moved the second resolution, which Mr. Barker seconded, and it was carried unanimously.

The Chairman moved the third resolution, which was seconded by Mr. Bergtheil, and carried unanimously.

The fourth resolution was a vote of thanks to the chairman and directors for the ability which they have served the company.

LATEST REPORT FROM THE MINES.

16th February.—Hoffnung Mine: No. 2 adit level is worth ½ ton per fm., and the winze in the bottom of this level 1½ tons per fm. No. 3 adit level is yielding ¾ ton per fm.; the rise in the back of this level has improved recently, now worth ½ ton per fm. The mid-level at Ball's shaft is poor for the present. No. 4 level is improving, now producing ¾ ton per fm. No. 5 level west is worth ½ ton per fm., whilst the same level east is looking very encouraging indeed, and yielding about ½ per fm. No change to report, either at the mid-level, Murchison's, or the shallow workings since last report. Johannes Mine: The usual progress is being made at the cross-cut. Some spots of ore have been met with in the winze lately, and we hope this is the beginning of striking the run of ore ground. Næsmark Mine: Nothing new to report here. Surface work and remarks: The picking and sorting of the ore ready for the dressing machine is being done satisfactorily, and, all considered, the work about the machinery is progressing very well.—J. D. Holman.

THE VANCOUVER COAL MINING AND LAND CO., LIMITED.

CONFIRMATORY MEETING.

An extraordinary general meeting of the above-named company was held at No. 12, Old Jewry Chambers, on Thursday, 28th February, for the purpose of considering, and if thought fit, confirming as special resolutions the following resolutions, which were passed unanimously at the extraordinary general meeting, held on the 5th February:—

(1.) "That it is desirable to re-construct the company, and to transfer the undertaking thereof to the New Vancouver Coal Mining and Land Company, Limited, and that with a view thereto the company be wound up voluntarily, and that Mr. Joseph Ramsden be and he is hereby appointed liquidator for the purposes of such winding up." (2.) "That the draft agreement submitted to this meeting, and expressed to be made between this company and its liquidator of the one part, and the New Vancouver Coal Mining and Land Company, Limited, of the other part, be and the same is hereby approved, and that the said liquidator be and he is hereby authorised, pursuant to Section 161 of the Companies' Act, 1862, to enter into an agreement with such new company in the terms of the said draft, and to carry the same into effect with such, if any, modifications as he may deem expedient."

Mr. John Galsworthy presided.

Mr. J. Ramsden (secretary) read the notice calling the meeting.

A DIVIDEND.

The Chairman: Gentlemen, the first thing I have to submit to you is a resolution with regard to the dividend. The board declared the dividend, but in the hurry of the moment we omitted to notice that it should really have been declared by a meeting of the shareholders, the directors having merely the power of recommending the dividend. I do not suppose anybody would have objected to receive that very excellent dividend of 1*l.* per share. At the same time, in order to be perfectly regular, we thought we would at this meeting rectify the little irregularity. I therefore beg to move the following resolution:—"That a dividend, or bonus, of 20s. per share on all the shares of the company be, and the same is, hereby declared payable on the 30th day of April, 1889 (viz., the same day as that on which the call of 20s. per share will become payable), to the registered holders on the books of the company on the 28th day of February, 1889."

Mr. Joseph Fry seconded the motion, which was carried.

The Chairman: The next business, gentlemen, is the consideration and confirmation of the resolutions which were passed on the 5th of February. I suppose you will not require me to read them again, as you have just heard them read. I, therefore, move that these resolutions passed on the 5th February be and they are hereby confirmed.

Mr. Joseph Fry (director) seconded the motion, which was carried unanimously.

The proceedings closed with a vote of thanks to the chairman.

THE D'ERESBY MINING CO., LIMITED.

SHAREHOLDERS DISCUSS THE MANAGEMENT OF THE EXPENDITURE, AND DECIDE TO REPOSE CONFIDENCE IN CAPT. ROBERTS—GREAT IMPROVEMENT AT GORS SHAFT—A GOOD BODY OF LEAD.

The ordinary annual general meeting was held at the Offices of the company, Gracechurch Buildings, Gracechurch Street, in the City of London, on Tuesday, "for the purpose of receiving the directors' report and audited balance-sheet to 31st December, 1888, and for the transaction of the general business of the company."—John Brittain, Esq. (chairman of the company), presided.

Mr. C. B. Parry (secretary) read the notice calling the meeting.

The report of Capt. Williams was read.

February 25th.—I visited and inspected the D'Eresby Mine on Saturday last, and now beg to hand you my report. At the No. 9 level north of Gors shaft the lode is being taken down between the east and west levels, or, in other words, between the level driven on the hanging and the footwall of the lode, and is worth 2 tons per cubic fm. for about 9 ft. wide. I am glad to be able to say that the productive part of the lode is going down strong on the bottom of the level, and looks very cheering for a No. 10 level. The pare of men formerly employed in No. 1 winze are now employed taking down the lode in the sides of the winze, and producing good paying work. The No. 9 level south has been driven opposite No. 2 winze, and a cross-cut put forth west, in order to get under the winze, which has intersected a lode worth about 15 ewt. per cubic fm., and very similar in character and produce to the lode in the present bottom of No. 2 winze (sinking below the No. 8 level) with which we are now expecting to communicate. The driving south of new shaft upon the heading part of the lode has much improved since my last visit, and is now producing paying work. I should not be surprised, and indeed expect to see a much greater improvement here shortly. From what I see and can learn of D'Eresby, this is the lode which in the past has shown the best results; but if it only improves so much as to equal No. 9 north in productiveness, I think everybody to be satisfied. The lode in the present end of the driving is worth about 12 ewt. per cubic fm. for lead ore. These are the principal points of operation at present; and if the recommendations and advice which I have already tendered to you in my former communications are attended to, I have no doubt in my mind that D'Eresby will very soon enter the dividend list. Please bear in mind that I have already condemned the past system of mining carried on here, and have also indicated to you what ought to be done, and I repeat that, in my opinion, if you will allow me to manage D'Eresby in the same way as for the past 23 years we have managed the Van Mines, I have no hesitation in saying that, as the mine now looks, we shall very soon be paying a respectable dividend. I am sorry that I am not able to be present at your meeting; had I been there, I could have explained my views more extensively.—W. H. Williams, Consulting Engineer.

The Chairman: In rising to move:—"That the report and statement of accounts, as placed in your hands, be received and adopted," I can only say that I do not know that there is anything to add, seeing that this report is made up to the most recent possible period. We only made up this report on Thursday last, but in consequence of an expression of dissatisfaction on the part of the shareholders who had not received it with the notice convening the meeting (although in accordance with our articles of association we are not compelled to issue this report only seven days after the meeting), we thought it the wisest and best course, in order that you might make yourselves thoroughly acquainted with the workings of the mine, that it should be issued at the earliest possible date; and I think you will agree with us that from Thursday to Monday has afforded sufficient time. As regards the development of the mine, I think we all are pretty well aware that the No. 9 level, of which we all think so much, has proved itself to be quite what we anticipated. I think I may safely say that it has not only proved itself to be what we thought it to be, but it has still further enabled us to develop the mines, and to prove that the lode which we lost some time ago has now been found again. Furthermore, it shows that we have the lode, according to the agent's report, coming in at almost all parts of the mine now being worked. I consider that the D'Eresby Mine is in a very interesting position as regards its future. It has enabled us to prove all that has been thought of it, and I think you will agree with me that we have a great interest in continuing to try and develop it. You are all no doubt aware that we have had very serious difficulties to contend with as regards our financial position. You see from the report that we have come to the end of our funds, and of course the directors had to consider the best means to adopt as to the future. We have a good mine, but it has not come forward as we hoped it would do. We had two courses open, but the one we adopted was to try and induce the shareholders to assist us by taking shares which remained unissued. Our efforts in that respect have been so far crowned with success, thanks to the indefatigable efforts of our secretary. (Cheers.) I can only say that the directors have used their best endeavours to carry on the mine, and I think you may feel that we shall continue to do so, and seeing that we wish to bring this to a dividend-paying position, you will support us all you can by not saying anything detrimental to the mine, although you will not take up the shares.

ADVANTAGES.

The financial part of the concern is clear. I consider at the present moment we have in D'Eresby a very good man, a splendid captain, and an energetic secretary, and I think that if you will only give us fair play, and use a little forbearance and patience, we shall in a short time be able to report to you a better result than we have done in the past. If you will only look at the present condition of the shares in the market you will find that owing to the action we have taken they have improved in price. Looking at the position and prospects held forth to us, the shares are much more worth 2*l.* now than when they were formerly at that price.

MR. PARRY FINDS CAPITAL.

The exertions of placing these shares have involved a vast amount of

labour and indefatigable exertions on the part of our secretary, but you see his efforts have been so far rewarded that he has been able to place them. I wish we had been able to place them all, because by receiving the money for the 3,000 we might probably have been in a position to do what Capt. Williams tells us in his report we should do, but, unfortunately, we cannot work without capital. An important point to my mind is that we should continue to sink Gors shaft; but that will cost money, and at the present time we cannot see our way to give orders for that to be done. If the shareholders would only support us (I refer only to those who have not done so) to the extent we have a right to expect, we might perhaps be in a position to at once commence sinking the Gors shaft. When Capt. Roberts says we shall be at once sinking in the lode, and have enough ore to pay our expenses, and assist us in coming to a dividend paying concern. The agent is present, and will be able to answer any question that may be put to him as regards the present position and prospects. (Cheers.)

THE ENGAGEMENT OF CAPT. WILLIAMS.

Mr. BARGE: What is Capt. Williams paid for attending to this property as he agreed to do?

The CHAIRMAN: Six guineas per month.

Mr. BARGE: How often does he go there?

The CHAIRMAN: He is somewhat erratic in his visits, but I do not think he attends so frequently as he should do.

Mr. BARGE: He seems to give us no further information than what Capt. Roberts has given us; therefore, it seems to me a waste of money to employ two men to do one man's work.

Mr. WAGSTAFF: Perhaps Capt. Williams can tell us the number of times he has been to the mine since he has been engaged.

The CHAIRMAN: Capt. Williams lives a long way off, and it is not convenient for him to visit the mine as often as he would wish. When Capt. Williams entered into this engagement he led us to expect that he would have other properties in the immediate neighbourhood which he was going to look after, and would be able to visit D'Eresby more frequently than he has done. The contemplated arrangements did not come off, and consequently he does not go so often as he inteuded.

Mr. BARGE: Then I should think the engagement is broken.

The Rev. J. B. FENWICK (director): Has he not been the number of times he proposed—once a month.

Capt. ROBERTS: I can scarcely say that. I have not kept a memorandum of the times he has been, but speaking from memory I should say scarcely once in four or six weeks.

Mr. WAGSTAFF: Does he always go underground?

Capt. ROBERTS: Not always.

Mr. BARGE: It seems to me that we gain nothing by his visits there.

DISSATISFIED SHAREHOLDERS CALL IN CAPT. WILLIAMS.

The Rev. J. B. FENWICK: The reason Capt. Williams was engaged was that several of the shareholders felt dissatisfied at the lead being taken away as fast as it was discovered. It was chiefly to consider whether this was a wise course that Capt. Williams was proposed, and if that course has not been continued the presence of Capt. Williams is not so much required. When Mr. Watson was alive, the mine was in a pinched condition, and all the lead was taken away that could be got.

Mr. NANCE went on to say that reports sent by Capt. Williams were never withheld from the shareholders.

A CHARGE REFUTED.

The CHAIRMAN: I am satisfied there is no information withheld. (Cheers.) Every week the report from the mine is sent to every shareholder. (Cheers.) There is not a single member of the company who can truly say that he is not posted up in every particular, and therefore I state, without fear of contradiction, that the remarks of Capt. Nance will not hold water. (Cheers.) Every telegram is exhibited in the office, and there is the greatest desire to give every information. I leave the appointment of Capt. Williams in the hands of the shareholders. He has recently become a County Councillor, which must absorb still more of its time. Shareholders must decide whether they will have two managers or only one.

Mr. BARGE: I am of opinion that "too many cooks spoil the broth," and that two managers never work well together—therefore I propose:—'That the appointment of Capt. Williams be cancelled." I am satisfied with the reports we get, and I think we ought to save as much as we can in our expenditure.

JUSTICE TO CAPT. WILLIAMS.

Mr. FENWICK: The expenses have certainly been reduced since Capt. Williams was engaged, and perhaps that has more than made up for the fee we pay him.

Mr. WAGSTAFF: How have you, Capt. Roberts, so enormously increased the expenses? What number of men have you now on the mine?

Capt. ROBERTS: About 50.

MR. WAGSTAFF WANTS TO KNOW HOW THE MONEY GOES.

Mr. WAGSTAFF: That is about the same number as in 1886, when I find the mine costs were 2,068*l*., and the merchants' bills 351*l*. The sales of lead were 145¼ tons. In 1887 the mine costs were over 2,300*l*., and the merchants' bills 353*l*., but the sales of lead in that year were 244 tons, and you have still about the same number of men, but in 1887 you did a large amount of extra work. 1888 has been a year of enormous expense—the mine costs 3,224*l*., and the merchants' bills 582*l*., whilst the sales of lead were 196 tons, or about 16 tons a month. The expenditure has thus been about 275*l*. a month, without including the merchants' bills or office expenses, which would amount to another 100*l*. I think this expenditure very extravagant, and I hope you will now give me some explanation.

Capt. ROBERTS: There has been a cause for it. Last year we had about 10 men underground exploring more than in the previous year. It is not fair to ask me questions of account without giving notice, for I cannot carry everything in my head. I will give you every explanation by the consent of the directors, but would like to have my books near me. There are petty bills which would run up to 8*l*. or 10*l*. a month, and other extras which I cannot think of.

Mr. WAGSTAFF: You ought to be able to tell me how much money has been expended?

Capt. ROBERTS: I am quite prepared to yield up my place if you are not satisfied with my management.

Mr. WAGSTAFF: That has nothing to do with the question. You have expended our money, and we want to know how you have done it.

The CHAIRMAN: It is scarcely a fair question. The accounts for 1886 and 1887 have been passed.

Mr. WAGSTAFF: I know that, but I am only pointing out our increased expenditure, and asking for the cause.

EXPLANATION.

Capt. ROBERTS: We have sunk the Gors shaft 15 fms. (10 ft. by 5 ft.) in hard rock; then we have driven the No. 9 another 30 fms. south, and sunk through the hard rock on No. 1 sump 15 fms.; we have done a good deal of work on No. 2 sump, and have driven nearly 20 fms. on the Hafna lode. (Hear, hear.) We certainly did not do so much work in 1887 as we did in 1888.

The CHAIRMAN: Our late chairman was anxious that the Hafna and Fucias lodes should be explored. A cost-sheet is submitted to the directors each month, and they know exactly what has been expended. These cost-sheets are open to the inspection of shareholders.

Mr. ASHMEAD: As the auditor of the company, all these cost-sheets come before me as representing the shareholders, and they have previously been examined by the directors who, before paying for them I suppose, are satisfied with the work done.

Mr. HODGKINSON: I think the captain has answered your questions by saying there was a good deal more work done in 1888 than in 1887, and the chairman has added that a good deal of unremunerative exploration work was also done.

The CHAIRMAN: During the last nine months we have done more work in the mine than during all 1887.

RESULTS.

Capt. ROBERTS: Mr. Wagstaff has said that this work has been done without result, but in that he made a great mistake. At the north of Gors shaft, at the No. 9, we have one of the finest lodes ever seen in that or any other neighbourhood. Whatever the future may be, I think Capt. Nance will bear me out that this is a fine lode, and that my estimate is rather under the mark than over it. We shall sink the Gors shaft on the course of the lode, and have a run of lead in the shaft. I anticipate we shall get enough lead there to pay the cost twice over of sinking that shaft, so that our work after all is not without result.

Mr. FENWICK: I might add that we have also another level. Above the No. 8 the mine has not answered our expectations. What expectations we have now are under the No. 8, in a level we found in this year's working.

VIEWS OF AN INDEPENDENT SHAREHOLDER.

Mr. HODGKINSON: I beg to second the motion of the chairman. I think if we have an agent we should support him to the full, or else appoint someone else. I think it well that a consultative engineer should go down occasionally, but I should strongly advise that Capt. Roberts be put in complete charge of the mine, and that the consulting engineer should simply report what he sees.

Mr. BARGE: With that proposal I should be perfectly satisfied, and withdraw my amendment.

Mr. HODGKINSON: Two heads are better than one, but not two masters. If you have an agent you must put confidence in him, and I think we ought to have confidence in Capt. Roberts. He disapproved of the former working of the mine, and I think his idea is to take a more comprehensive view of the situation, and get underneath the metal.

PRICE OF NON-SUCCESS.

Capt. ROBERTS: I have been connected with this mine for 10 years, during which time our success has not been very great, but non-success has taught me a great deal of the nature of the lode and district, which success would not have done. When difficulties present themselves, it makes one study more, and find out causes and effects better than if one has merely to take away the lead. Misfortunes often teach us wisdom.

A SHAREHOLDER suggested that Capt. Williams might not have visited the mine so often because his views had been rejected.

Mr. FENWICK observed that he did not point out this in his report.

MATTERS OF OPINION MERELY.

Capt. NANCE said he had just visited the mine, and condemned the working, asserting that money had been wasted. He was astonished to find two cross-cuts had been put in not more than 15 fms. apart, and not an inch driven on the course of the lode to test it.

Capt. ROBERTS, advancing to the map, showed, by accurate measurements, that the cross-cuts in question were 20 fms. apart, and that they would have been continued had not capital run short. Cheers.) What could he do when he was told from London that the funds were running out? Why, remove the men employed in those cross-cuts to places where prospects of good results were before them, namely, in the No. 9 level, north of Gors shaft. Could they go on driving on a vein of spar 18 ins. wide, in hard rock, and with funds giving out? (Hear, hear.) He had to dismiss the men in No. 7 cross-cut in order to save costs. He believed as much as anybody in the use of rock-drills, but an installation of that kind would cost as much as 500*l*. or 600*l*.

CAPT. NANCE'S SPEECH CONDEMNED.

The CHAIRMAN condemned the speech of Cant. Nance's as unfair. The present prospects did not bear out the statements that Capt. Nance had made.

Mr. HODGKINSON asked Capt. Nance to point out what he would do to improve the management.

The reply of Capt. NANCE was simply to the effect that he would do what Capt. Roberts was actually now doing—he would sink Gors shaft. (Laughter.)

The retiring directors and auditor were re-elected, and the proceedings closed with a vote of thanks to Mr. Brittain for presiding.

THE BARANCANNES COPPER MINING CO., LIMITED.

STATUTORY MEETING—MACHINERY ON THE POINT OF COMPLETION—MINE TO BE RAPIDLY DEVELOPED.

The first ordinary general meeting of the Barancannes Copper Mining Company, Limited, was held at the Offices of the company, Blomfield House, London Wall, E.C., on Thursday, under the presidency of Edmund A. Pontifex, Esq.

Mr. Daniel Willink (secretary) read the notice convening the meeting.

REASONS FOR RE-CONSTITUTING THE COMPANY.

The Chairman: Gentlemen, this is, as you are aware, the first, or statutory meeting of the re-constituted Baraucannes Copper Mining Company. The reasons that induced us to re-constitute are known to the original shareholders of the company. They were partly to set at rest that question which has been exercising the law courts very much lately, about shares issued at a discount, and partly also to provide us with a small amount of working capital which we required. The previous company had provided enough working capital to open out the mine to a very large extent, and they had also ordered, and possessed the funds, to pay for the additional steam engine and boilers that they were erecting for the purpose of working the mine at a greater depth than they have yet done. I may explain to the new shareholders that appearances at the mine were very satisfactory; with every fathom we sank we got improved appearances; and therefore the object we had in view was to get to a greater depth as quickly as possible, so that we might verify the statements which have been made, and the prognostications which have been given by every one of the mining experts who have examined the mine—that the mine will become more and more valuable as it is increased in depth.

CAPITAL OF THE NEW COMPANY.

The new company was formed with a nominal capital of 120,000*l.*, in 1*l.* shares, of which we proposed to issue, and did issue, 110,000 shares, leaving 10,000 shares in the treasury as reserve. Of these shares in the old company 7,540 existed as preference shares, and the holders of those preference shares to the extent of 5,150 elected to take ordinary shares in exchange for their preference shares on the basis which was then offered to them—of taking two ordinary shares for one preference. The holders of 2,390 of the preference shares elected to remain as preference, and therefore they hold to that extent in the new company. Consequently there is a preference capital consisting of 2,390 shares, which, of course, constitutes but a small portion of the whole. Of the amount of capital offered, the whole of it was subscribed—indeed, somewhat more; and we have now sufficient, we conceive, to carry out our programme, and to develop the mine rapidly. We are already sinking to a greater depth, and have got down now to about 55 fms., our existing deepest level being at the 44-fm. level, and we have driven in various directions at 13, 24, 44 fms., and so forth, extending in the lower levels to about 100 fms. I am pleased to say that wherever we have driven we have met with satisfactory indications, and we find

GOOD ORE,

which averages 22 or 23 per cent. It requires very little dressing indeed to arrive at that percentage, and there is, therefore, very little loss in the process. The new engine will be completed in about a week from the present time, and we shall then begin at once to raise ore from the lower levels. Our operations have been very much impeded by the erection of this engine. Necessary though this work was, we were prevented from raising stuff from the lower levels, while the engine was being put down and all the arrangements being made for fixing pumping gear and so forth. In about another week, however, we expect to start. Indeed we thought at first that we would transgress the obligations of the Act of Parliament, and would hold this meeting a little later (which would have exceeded the four months) in order that we might give you the information that the engine and boiler had been started, and that the work of raising ore from the deeper levels had been actually put in operation, but it was thought better that we should comply strictly with the Act, and we have called you together to-day, which is about the latest day we could have done so, having reference to the obligations under the Act.

POSITION OF THE OLD AND NEW SHAREHOLDERS.

In regard to the re-arrangement of the company, I think the old shareholders are aware that they stand in exactly the same position with reference to the new company as they did to the old company. Although the capital has been somewhat enlarged, yet they have received a bonus of a larger number of shares in the new company than they had in the old, and they have exactly the same proportion of holding in the new company as in the old. On the other hand the new shareholders come into a going concern, the whole outlay of which has been expended, the machinery of which is on the point of completion, and from this time forward we shall be enabled to work the mine as a mine ought to be worked. (Cheers.) Development has been carried on to a great extent—we have developed more in proportion than we have extracted, so that the new shareholders come in at once to the benefit of a going concern, the value of which has been already proved, and from which we may anticipate good success in the future. I think, therefore, the arrangement which has been made is satisfactory to the old shareholders. It has given them the working capital required; they retain the same interest in the new company as in the old; and, on the other hand, the new shareholders receive the benefits of the old company's expenditure. As this is strictly a statutory meeting, I have only a right to talk of so much of the affairs as relates to the new company; there are no resolutions to lay before you, nor any formal report to make; but if any shareholder desires further information we shall be very pleased indeed to give it to the utmost of our power. (Applause.)

STOCK EXCHANGE QUOTATION.

Mr. Stott: When are you likely to get a quotation?

The Chairman: Getting a quotation on the Stock Exchange entails doing certain things which we are not in a position to do at present. We must have a certain sum of money paid into the exchequer, and we can only have a certain proportion of shares allotted to the vendors. I do not think we shall be in a position to obtain an official quotation, but there are more outside quotations now than official ones. Very few of the companies now formed, except the larger ones, require an official quotation, and as soon as we begin to pay dividends, which I hope will be before long, we shall get a quotation as a matter of course.

Mr. Stott: That will not be this year.

The Chairman: I cannot tell you. We will get it as soon as we can.

Mr. Stott: I thought that when half the capital was paid up, you were entitled to a quotation?

The Chairman: No, you must comply with other requirements; one of which is that you must have had 50,000*l.* paid into your coffers. But you will get the shares quoted as soon as you begin to pay dividends.

Lord Richard H. Browne: You will get a market for them, that is the main thing.

DIRECTORS RETIRE AND ARE RE-APPOINTED.

The Chiarman: We did a somewhat unusual thing in framing the articles of association, and we did it to enable you to exercise your discretion. Should you not think that we are the most suitable persons to carry on your affairs, we left it to the statutory meeting to elect directors. We therefore all resign our trust in your hands, and leave you to act as you think fit. If you wish it, we are willing to conduct your affairs; but if there are any other gentlemen whom you prefer we are willing to retire.

Mr. Burt: Have any shipments of ore been made since this prospectus was issued? It says that 300 tons have been sent to Swansea, and it also speaks of 300 tons a month as being the quantity likely to be sent.

The Chairman: We have sold 40 tons since the prospectus was issued, and there is in addition to that 40 tons now only awaiting a vessel to come over.

PUTTING THE DIRECTORS ON THEIR METTLE.

Lord Richard Browne: I have been connected with this undertaking from the beginning, and have always taken a great deal of interest in its affairs. I also hold a considerable stake in the company; and as you state that there is to be an election of directors to-day, I shall be very glad to propose the election of the present board. I think for two reasons it is very desirable that that should be done. In the first place everybody knows the great experience that you, personally, Mr. Chairman, have had in connection with copper mining; and you have combined with you a set of gentlemen who are all thoroughly well up to their work, and who are well deserving of the confidence of the shareholders. Another reason is that I think it would not be at all a good thing in the interest of the shareholders to "swop horses" while we are crossing the stream. I think we ought to put you gentlemen on your mettle. You have told us you hope to make a good thing of this; and I have every confidence in its turning out a success, and so also have most of the shareholders. But it is only fair for the shareholders to say "Now is your time to carry out what you have led us to hope for in the prospectus." Of course we know that in mining matters you cannot frame your estimates with that degree of certainty that you can in other concerns. You are dependent upon what is hidden in the bowels of the earth; but at the same time I think—and I am sure you will not object to it—you ought to be put upon your mettle. Therefore I have great pleasure in proposing that the present board of directors be re-elected.

Mr. Cotterell seconded the motion, which was carried unanimously.

THE CHAIRMAN ACCEPTS THE RESPONSIBILITY.

The Chairman: Gentlemen, on behalf of my colleagues and myself, I return you our best thanks for this mark of your confidence in us, and I feel it all the greater because we have been working for some years, and up to the present the results have not been very conspicuous. I quite accept the responsibility which Lord Richard Browne has imposed upon us, to continue to do our very best in your interests. I assure you we have been in the habit of devoting a great deal of time and attention to this affair. We are not like some directors, who do not understand the business they have to manage; we have the full knowledge of it intimately at our fingers' ends. We have, all of us, a very large stake in the concern, and for your sakes, as well as our own, we shall do our best to make this a paying concern. (Cheers.)

On the motion of Lord Richard Browne, seconded by Mr. Stott, a vote of thanks was accorded the chairman and directors, and the proceedings then terminated.

MID-DEVON COPPER.

INCREASE IN THE YIELD OF ORE.

A meeting of this company was held at the Offices, No. 72, Finsbury Pavement, on Monday.—Mr. Thomas Nicholl Roberts in the chair.

AGENT'S REPORT.

Surface: The pumping machinery is doing good duty at five revolutions per minute. A shaft: The water is drained 9 ft. below the 80-fm. level. There does not yet appear to be any abatement in the influx. Everything is being done that will in any way tend to drain the water quickly. C shaft: The 60 east has been driven by nine men 1 fm. 2 ft.; total distance from shaft, 29 fms. 3 ft. 6 ins. The strata is composed chiefly of friable garnet, quartz, chlorite, and axinite, with arsenical mundic and copper ore in saving quantities. The 50 east: Stopes Nos. 2 and 3 and extreme point of drivage worked on by six, six, and two men, are worth respectively 10*l.* 10s., 14*l.*, and 9*l.* 10s. per cubic fm. for copper ore. We have 12 tons of copper ore dressed for the next sale.

A BETTER STATEMENT.

The Chairman: We have the pleasure of coming before you with a much more satisfactory statement as to the yield of ore at the mine, and the sale of ore at the ticketings, than it has been in our power to furnish on any previous occasion since we took office in 1882. We have raised 40 per cent. more ore in quantity, and have realised upwards of 100 per cent. more in value than in any previous year, and

this improvement would have been still greater if the shareholders had afforded us the support that we have so often asked for—support to which we were fairly entitled. However, the loss is theirs, and they have only themselves to blame. Practically we have raised all this ore from the 50-fm. level, as there have been only 2 or 3 tons saved from the drivage, whereas if we had received the support to which I have referred we might at this time have been raising four times the quantity of ore than can be raised from the 50-fm. level, and the mine would have been in a paying condition. You will find by the balance-sheet that we have sold ore to the value of 1,429*l*. 6s. 8d. Now, the entire cost at the mine, including wages, materials, repairs, cartage, carriage, rents, royalties, and expenses on ores, in fact everything except dead work, was 1,806*l*. 4s. 8d., you will, therefore, see that the ore from this one level has covered more than 78 per cent. of the expenditure at the mine, with the exception just named, and if you add to that expenditure the charges for the management in London, amounting to 189*l*. 1s. 7d., exclusive of directors' fees and interest on debentures, the total will be 1,995*l*. 6s. 3d., so that the proceeds of the ore sold have defrayed more than 74 per cent. of the working expenditure of the mine and in London, a result which I believe cannot be shown by any other copper mine in the kingdom. Notwithstanding the indifference of the shareholders to their true interests we have extended the drivage at the 98-fm. level nearly 89 fms. from the cross-cut south, and at the point now reached a cross-cut has been commenced with the object of proving the width and value of the lode, when it was abruptly stopped by the breaking of the axle of the pumping wheel, to which I will advert presently, and the influx of water drove the men out of the level.

IMPORTANT DISCOVERIES EXPECTED.

Capt. Neill, however, believes that when work can be resumed there, important discoveries of ore will shortly thereafter be made, an opinion in which he feels justified by the highly mineralised character of the strata through which he has passed. Since the men were thus compulsorily driven out of the 98-fm. level they have been driving the 60-fm. level, which was extended to a total distance at the date of the report of 27 fms. 5 ft. Here, too, the strata is of a favourable character, and ore has been found in saving quantities, but this drivage has now reached a point when some additional expense is necessary, so that the work may be expedited. The incline shaft requires to be sunk 9 ft., trip plat must be excavated, and a tramway laid down in order that the attle may be quickly removed. When these indispensable works shall have been effected the ore ground can be reached in four months, after which we may reasonably expect to soon make returns from this level. It would be very desirable also to extend the 50-fm. level from the extreme eastern point you will observe on the plan. This drivage was extended last summer, but we were compelled by our financial necessities to stop it, and open No. 3 stope, for although it was in excellent ground when suspended we could not afford to go on; if we could have afforded it we would have driven right on so long as the ground held good, but as the shareholders would not help us we were obliged, in defiance of the true principles of mining, to make the mine help us, and to open a stope when we ought to have driven. We ought not to have taken an ounce of ore away until we had opened the level in a miner-like manner. The stope has yielded admirably, continues to do so, and shows no sign of abatement. The quality of the ore raised from this mine is excellent. During the past year we sold 283 tons, at an average price of 5*l*. 1s. which is more than 30 per cent. above the average price of all the copper ore sold at the Redruth ticketings, of course including our own, and we maintained the same ratio at last Thursday's ticketing, when the ores from 14 mines were sold, of which five were above and eight below ours in value. The average price of all the ore sold was 3*l*. 4s. 6d., ours realising 4*l*. 13s. per ton.

THE ACCIDENT TO THE PUMPING WHEEL.

I now revert to the breaking of the axle of the pumping wheel, but I first desire to say how much we, and all the shareholders, are indebted to Capt. Neill for the prompt manner in which he dealt with the mishap, and for his unceasing exertions until the repair of the fractured axle was accomplished. You are aware that where a mine is worked by water power only, the axle of the pumping wheel is the linchpin of the whole concern, because when that fails the pumping is stopped, and water rushes into the workings. When the breakage occurred, Capt. Neill at once thought out his plan for its repair, went 21 miles to Pearce's foundry at Tavistock, laid his plan before them, they sent a man to take a pattern for the casting, he had to return to the foundry, the castings had to be made and taken to the mine, so there were four journeys of 21 miles each, and yet the casting was got into position, a work of enormous labour, as you would realise if you saw the wheel, and the wheel was started in five days from the time of the breakage. As this axle had only been in use a few days short of nine years and eight months, I wrote on the 19th ultimo to Mr. George Green, of Aberystwith, the constructor of the wheel, informing him of the breakage, and telling him that, for the sake of his reputation as a mining engineer, he ought to at once proceed to the mine to see why his work had so signally failed. Not receiving any reply, I wrote again on the 5th instant, and received a reply from Mr. Green's foreman saying that at the time my first letter arrived Mr. Green met with an accident, but no intimation was given of what he intended to do. I wrote in reply that the axle ought to have lasted 20 years or more, and I quoted from a report made by Captain Neill and William Millman, under date January 3rd, 1879, before the wheel was erected, but when it was on the mine, in which they said "we are afraid the design is altogether too light, more especially the axle, arms, and segments for the power required to cope with the large quantity of water we have in the mine during the winter months." That opinion has unfortunately been verified. As Mr. Green took no notice of this letter I wrote to him on the 19th inst., and told him that as the directors did not feel it safe to rely upon the repaired axle they had decided to have a new one, and I said, they are strongly of opinion, that you ought to contribute 50*l*. towards it, not that such sum will be anything like an adequate compensation for the expense they must incur, and the loss of time they must suffer, through the insufficiency of the axle you supplied." To this Mr. Green replied: "I cannot agree to pay anything towards a new axle as you propose; the matter was settled by arbitration long ago." I have the award under that arbitration here, and it referred only to numerous breakages of rods, and no reference was made to the axle whatever. The award is dated 16th February, 1882. Now, Mr. Green wrote to the board, as it existed in 1878, that he had visited the mine for the purpose of "advising what course to adopt to render your pumping arrangement efficient and free from liability to breakage," and he proceeded to say "that the whole of the present machinery, which is of bad design and workmanship, and made of inferior material, should be removed and replaced by a wheel of 60 ft. in diameter." The former board contracted with Mr. Green to supply such a wheel, with rods and other necessary adjuncts, and there were more breakages in two years and a half from the time the wheel was started, in May, 1879, than there had been within a similar period before, and these were the matters that were settled by the award. But, independently of this, we have had to expend more than 300*l*. in a previous year in having certain adjustments made so as to reduce the liability to breakages. The wheel as constructed by Mr. Green had only one crank, therefore we had to employ an engineer to remedy that defect, and to devise certain connections by which the strain should be more equally distributed, and it is satisfactory to be able to say that they have answered very well, but now the crowning misfortune has overtaken us in the breaking of an axle which was never strong enough for such a ponderous wheel, and we shall be fortunate if we surmount the difficulty for another 300*l*., so that altogether our experiences of Mr. Green and his works are not of the most pleasant nature. I felt that I could not, in justice to the shareholders, slur this matter over, as the very life of the mine depends upon the sufficiency of the axle of the pumping wheel.

AN APPEAL TO THE SHAREHOLDERS.

I trust that the shareholders, seeing the many difficulties we have to encounter in prosecuting this enterprise, which has within it all the elements of success, will come forward when we apply to them shortly to take up the remaining second mortgage debentures, so that we may be enabled to soon bring it to a prosperous issue. I now beg to move the adoption of the report and balance-sheet.

The motion was seconded, and the ordinary routine business having been transacted, the meeting closed.

HUMBOLDT ELECTRIC POWER AND MINING CO., LIMITED.

IMPORTANT AND ENCOURAGING DEVELOPMENTS—THE PROSPECTUS MUCH WITHIN THE MARK—MR. ANN DESCRIBES THE POSITION—SHARES TO BE ISSUED AT 7s. 6d. PREMIUM—WORKING BY ELECTRICITY.

THE statutory meeting of this company was held at the Offices, 63 and 64, New Broad Street—Sir W. Guyer Hunter, K.C.M.G., M.P., in the chair.

The SECRETARY (Mr. W. F. Gardiner) read the notice calling the meeting.

PROCEEDINGS OF THE BOARD.

The CHAIRMAN: Gentlemen, you have heard read the notice convening this meeting. As you are aware, this is merely the first general meeting, called in the vulgate, the first Statutory meeting, and we have no accounts to render, or any figures to lay before you, but it seems to me you might like to know what the directors have been doing during the four months since the registration of the company. (Hear, hear.) The company was duly registered, as you are aware, on the 1st of November. On the 12th November the board proceeded with the allotment of 25,000 shares. On the 18th December a circular was issued to the shareholders, informing them that out of the first allotment 20,000*l*. would be set aside for working expenses, which the directors considered would be amply sufficient to meet present requirements, and that they would not accept any further applications for shares, except at a premium. On the 15th November—three days after allotment—the managing director, under the instructions of the board, and with the sanction of the board of directors of the Consolidated Esmeralda, wrote to Mr. Colcord, the superintendent of the Consolidated Esmeralda Limited, offering him the position of engineer for the Humboldt Company, and instructions were also sent to Mr. Colcord for commencing preliminary operations, so that you see

NO TIME WAS LOST IN COMMENCING WORK.

This is in consequence of the intimate connections which the company has with the Esmeralda Company, enabling it at once to commence proceedings—a most favourable position such as could not have been enjoyed by this concern had it stood alone. To this offer, Mr. Colcord replied by telegram, stating, "I have received instructions. I agree to the conditions named with regard to the Humboldt and shall commence to-morrow. I have made contracts to deliver wood." On the 12th December another cablegram was received in which he stated, "Started Humboldt hoisting works to-day: surveys have been made and volume of water ascertained with the power to be derived therefrom." On the 11th January the managing director wrote to several firms for full details of requirements, asking them to submit tenders for the supply of an electric plant. Most of the replies have been received, but one is yet wanting, and until that has been received the directors have deferred the consideration of this matter. I may state, however, that from one firm a tender has been received which is well within the estimate. The question of the further allotment of shares was considered by the board, and after giving it due consideration they came to the conclusion that a further issue to the extent of

10,000 SHARES AT 7S. 6D. PREMIUM PER SHARE

should be made. This, gentlemen, concludes the operation of the directors and the general protest so far made. If any shareholder would like to hear what has been done with reference to mining details, Mr. Ann, our managing director, will be glad to supply that information to any shareholder. (Cheers.)

Mr. WHYTT: I think it would be desirable to know a little about the operations that are intended to be carried on. I do not know how it may be with other shareholders, but I am rather in the dark on this subject.

A SHAREHOLDER: Have you invited tenders from America as well as England?

A LARGE AMOUNT OF WORK IN A SHORT TIME.

Mr. ALFRED E. ANN: When operations were commenced on the Humboldt, as we said in the prospectus, the shaft was down about 300 ft. Certain work had been done, and the mine is now partially prospected at that depth to a distance of 400 ft. Since we commenced operations we have driven a level from the shaft to the west 173 ft., and to the east 75 ft. We then discovered that we were through the ledge on both sides, but also discovered that the ledge of solid quartz was 150 ft. thick. (Cheers.) All the rock is auriferous. It will not all pay, but it is impossible to get rock in the whole of this ledge that will not give some value to the ton. Having found that we possessed a ledge 150 ft. thick we instructed Mr. Colcord to turn his attention to opening up the ledge in length. He started a drift to the north, and has already run a distance of 108-ft. We wanted also to be prepared so that when the rock was taken out to the 300-ft. level we might have our shaft in advance of the levels above. We have been sinking the shaft, which is now down 365 ft., or 58 ft below the depth it was when taken over from Consolidated Esmeralda.

10 WEEKS' WORK.

The work of the 10 weeks in sinking shafts and driving levels is represented by 414 ft. (Cheers). I think that is marvellous for any company to do considering the small number of men we employ. We have 1,100 ft. of virgin ground which a pick has never yet been placed in, and if the ledge continues 150 ft. thick for the whole of that distance, and there are only 4 or 5 ft. that will pay (as I feel sure will be the fact), we have plenty of rock for our mill when we commence operations. Since we heard by letter from Mr. Colcord we have had two telegrams, and whereas in his letter he says that the average of the rock will give between $8 to $9—in his telegrams he states that the rock is looking still better. In our prospectus we stated we hoped the rock would realise $9 per ton. If it does so and we crush as much as we expect, the moderate estimate in the prospectus on which we based the dividends will be exceeded, for the reason that we have not issued the whole of our shares. (Cheers.)

NO DANGER FROM THE WOOD QUESTION.

There is one question which I see is creating a good deal of attention at the present time in reference to a very large company, and that is the wood question. I have heard it stated that as we are in Nevada we may be affected by the Government asking us to pay for the wood we have burned. Fortunately in our case we are not affected at all, and I may also say that the parent company—the Esmeralda—is not and cannot be affected. We have never cut a stick of wood. If we do cut it it is from our own freehold, for which we have a deed from the Government. We have been buying the wood, and in all times we are careful to see that the people who sell it own the deeds of the land from which they take it, or that the Government has given them the privilege, so that neither Esmeralda nor Humboldt can be effected. We are hoping that at an early day wood will be no longer used, except the little that may be required for charcoal.

ELECTRICITY.

The matter of electricity is creating a good deal of interest both in America and England, and I believe also in Africa. The last tender we have received is from a firm who have already supplied the Comstock, the great mine in Virginia City near to ours, which has yielded so many millions sterling. It had adopted a system which is working most successfully. The firm who supplied that mine have written to us and tendered—their tender being thousands of pounds less than the first tender we received. Although we have not yet given the contract, I may say we have saved considerably by waiting. In about four or five days we shall cable out ordering the installation to be commenced. We have not been wasting time. We have had all the surveys made, and find that we have not over-stated the distance from the river to the superintendent's house, which is just under 12 miles.

VALUABLE WATER-POWER.

We have found also that we have more water power than we at first expected, and that the volume of water secured to the Humboldt Company in the dry season of the year will give a gross h.-p. of 465, so that if we only take half, or quarter of that, we have plenty for our first operations. As regards the mill—we have not yet commenced to erect a mill on the Humboldt, the installation of electricity is first to be made to the 20-stamp mill owned by Consolidated Esmeralda, this will be a very great advantage to the latter as well as to the former company. Both companies will be able to crush rock that does not pay to crush at the present time with steam power. I do not know that there is anything else I have to say. The developments which have taken place, so far as my own opinion goes, are up to what I expected, and if anything, better. (Cheers.) I did not expect when I was in the Humboldt Mine that we should have come to

A THICKNESS OF 150 FT. OF SOLID QUARTZ.

(Cheers.) What it is going to be I do not know, but Mr. Colcord feels quite certain that we shall have very great success. Now running parallel with the Humboldt ledge on which we are working, there is another ledge, called the Humboldt West. The developments which have taken place there lead us to believe that the two ledges will form a junction, and at present they have the appearance of a shape "v," and promise at the depth of another 100 ft. to form one ledge.

JUNCTION OF LODES.

In mining we all know that if two ledges come together at the point of contact we generally get very rich rock. All we can do is to hope that we shall get it as quickly as possible, and that it will not be long before we are able to announce that operations have been commenced at the mill, and that we shall be returning bullion. I do not think it will be policy to crush more than 500 tons before electricity is applied to the mill, because it is no use throwing money away when we know we have ore in the mine that will pay, and that can be treated by the electric plant to great advantage when erected. (Cheers.)

VIEWS OF SHAREHOLDERS.

Mr. BENSTED: I think we all ought to be very pleased with what we have just heard, and that everyone will go away with the feeling that the prospectus has not been over estimated in any shape or form. All the tendencies seem to be for good in the future, and I feel perfectly satisfied to wait for results after the very able speech which Mr. Ann has just made. (Hear, hear.)

Mr. THOMSON: I think after the satisfactory statements we have heard the least we can do is to propose a vote of thanks to the worthy chairman and directors.

A SHAREHOLDER, in seconding the motion, said: Mr. Ann is most indefatigable and energetic, and I am sure if he takes any matter in hand he will carry it through to success.

The CHAIRMAN, in replying, said: On behalf of my colleagues and myself we return you our hearty thanks for the resolution you have just now carried, and I assure you that the directors have all taken an interest—a direct interest—in seeing that this mine is properly worked, and that no unnecessary delays occur before we are able to announce that we have not only come upon quartz, but that the quartz has been crushed with such results as will be satisfactory to everybody.

The proceedings then closed.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

INDIAN GOLD MINING.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—Shareholders in Mysore Mines are apparently not far off their reward. Capt. Plummer is one of the most reliable men in the Mysore Goldfields—always better than his promises; and I say this after having watched promises and performances on his part from the beginning of operations at his mine. In Capt. Plummer's report from Mysore, dated early in December last, and published by the directors a week before the meeting on the 15th January, Capt. Plummer writes as follows:—"Large reserves of ore are now being opened out, and I think in from six weeks to two months more, we shall return to a greatly increased output."

Nothing has occurred either at the meeting, or in Plummer's subsequent advices to modify this, so that a pleasant surprise may be in store for us, when the February and March crushings are published.

One thing must not be overlooked, which is, that all the Mysore Mines are in territory under the control of the British Government, and every facility for their safe development, railway communication, &c., is available as far as "the powers that be" are concerned. The Ruby Mines of Burmah are likewise under British control, but *Burmah* is not so settled as Madras. Regarding the Wynaad, which may come to the fore in time, it will be interesting to all shareholders in that district to watch what are the *actual results* obtained by the treatment in England of the 10 tons of ore that the Devala-Moyar Company has recently sent home to this country; but possibly as the company have taken time to do this, they may be in no hurry to publish results.

When buying of the shares of the Mysore Mines does begin, I believe every little town in Great Britain will contribute its quota of buyers. Wherever one goes one is pretty sure to come across people interested in Indian Mines, and such folks are more likely to be buyers than sellers, when they are satisfied with the results. The other Mysore Mines will probably follow suit with the Mysore itself, so, as a Mysore shareholder of some years standing, I am sanguine as to the immediate results, and I believe not without good cause. Your readers, however, must judge for themselves.—I am, &c.,

SCOTUS.

London,
February 25th, 1889.

["Scotus" will be pleased to see the communication of "W. H. B." in another part of our present issue.—ED. *M. W.*]

MINES OF TASMANIA.

SIR,—I send you a clipping from a Tasmanian paper, just to hand, as it may be of interest to those who invest in mines, to show what Tasmania can do in the way of gold mines. Few mines before the public can show so good a record, I think, and as the mine never looked better than at present (at one place the last report says, "The stone has a very good show of gold, *10 ft.* wide"), and the battery has just been largely increased, I think good times are in store for Tasmania shareholders.—I am, &c.,

THOMAS DE HOGHTON,
Commander, R.N.

Castlebridge, Wexford,
February 27th, 1889.

The amalgam from the Tasmania claim, Beaconsfield, yielded 3,599½ ozs. retorted gold, being an average of a fraction under 1 oz. 11 dwts. 8 grs. from 2,170 tons of quartz crushed; value, 12,576*l.* 6*s.*

The *Examiner* says:—"Several directors of the Tasmania Company proceeded to Beaconsfield on Friday to witness the *usual monthly* cleaning-up at that mine. The directors have declared a dividend (the 120th) of 3*s.* per 45,000th share, free of dividend tax, payable on Monday next, amounting to 6,750*l.* The amount of dividend tax is 253*l.* 2*s.* 6*d.* The company have now declared in 120 dividends a total of 510,375*l.*, and from the increase of the capital from 30,000 to 45,000 shares with three adjoining claims, 1*l.* 1*s.* 6*d.* per share has been paid. The total amount paid in dividend tax is 16,827*l.* 1*s.* 3*d.*"

The recent crushing of Jubilee stone—60 tons yielding 33½ ozs. retorted gold—was disappointing, following the very excellent prospects previously obtained. The cause of the small returns was assigned to the imperfect working of the new machinery, and it was resolved by the directors to test the blanketings and tailings to see whether such was the case or not. The surmise has proved correct, an assay by Mr. Ward, the Government analyst, gave the following results:—Blanketings, 3 dwts. 6 grs. to the ton; tailings, 19 dwts. 14 grs. to the ton. This, with the amount actually saved, shows that first-class stone was put through.—*Tasmanian Mail*, 5th January.

The number of Policies issued during the year was **42,475**, assuring the sum of **£4,399,769**, and producing a New Annual Premium Income of **£235,487**.

The Premiums received during the year were **£718,848**, being an increase of **£183,717** over the year 1887.

The Claims of the year amounted to **£210,056**. The number of Policies in force was **146,966**.

INDUSTRIAL BRANCH.

The Premiums received during the year were **£3,256,346**, being an increase of **£197,845**.

The Claims of the year amounted to **£1,231,186**. The number of Deaths was **142,751**.

The expenses are one-and-a-quarter per cent. lower than those of the previous year.

It is a source of much satisfaction to the Directors to be able to state that their efforts to promote the stability of Industrial Policies continue to be most successful, for, notwithstanding the enormous increase in this Branch during the past two years, the average duration of the **8,063,293** Policies in force on 31st December last is now no less than six years.

Upwards of **40,000** Free Policies have been granted during the year to those Policy-holders of five years' standing who have desired to discontinue their payments.

The total assets of the Company have been raised during the year from **£7,867,103** to **£9,302,007** being an increase of **£1,434,904**.

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

MARKETS DEPRESSED—THE SYNDICATE UNSTEADY AND COPPER SHARES DOWN—AFRICANS LOWER—INDIANS NEGLECTED NOTWITHSTANDING THE BIG MYSORE RETURN — FOREIGN, QUEENSLAND, AND BRITISH SHARES DULL.

The news from Paris, which is dealt with fully in our leader columns, has caused an all-round depression of the share market. The markets generally have been shaky, and the buying spirit for the time has departed. Everybody has been one way—the selling way. Adverse rumours have been listened to with the ears of belief, but those organs have been hermetically sealed to news that is good. Big returns have gone for little, and no returns at all, which used to awaken speculation, have alike found that feeling dormant. The lethargy, not of despair but of a sort of numbness, has come upon the market, and brokers refuse to be comforted because they are not. The run upon the Comptoir d'Escompte has not ceased, but the general feeling is that the syndicate will weather this storm also, and that the assistance already rendered to it will be supplemented should its needs become more pressing. General relief will be felt if the syndicate fix the price of copper at, say, 10*l.* lower than it has ruled for the last 15 months, and possibly with a little further aid it might maintain its position for a period yet remote.

South Africans have begun to tumble under the blows administered by writers in the Press. Articles and letters have appeared indicating the absurdity of present quotations, and these have not aided a market that at no time within the last three weeks has been characterised by much stability.

Indian shares have been neglected, notwithstanding the big return from the Mysore, and, in fact, it seemed as if the market only waited for a brilliant announcement like this to let the shares go.

The Queensland Market, with the exception of Gympie Great Easterns, which have advanced, has been inactive, and there is very little of importance to record either in the General, Foreign, or Home Share Markets.

The first effect of the change in the public mind is seen in the non-appearance of many new companies, which otherwise would this week have been floated upon the joint-stock sea. The outlook for the moment is not cheering, but, as a rule, it is thought that a too gloomy view is taken of the situation.

Africans.

A large amount of business has been done in these shares during the week and our advice of the 2nd inst. has proved correct, viz., *to sell all high-priced shares.* All shares are down. Jubilees have passed their dividends, and in every case, with the exception of De Villiers (Robinson), prices have fallen. Without further comment we give the alterations :—Orientals have fallen $\frac{1}{8}$; Shebas, $\frac{1}{8}$; Thomas, $\frac{1}{4}$; Ditto Preference, $\frac{1}{4}$; Horo Exploration, $\frac{1}{4}$; Johannesburg Waterworks, $\frac{3}{16}$; Moodies, 10s. paid, and fully-paid, $\frac{1}{16}$; Aurora, $\frac{3}{8}$: Bankets, $\frac{1}{8}$; Bantjes, $\frac{3}{8}$; Bixley, $\frac{1}{8}$; Blackreef, $\frac{1}{2}$; Blaubank, 3s. ; Bothas, $\frac{1}{4}$; Central Langlaagte, $\frac{5}{8}$; Central Roodepoort, $\frac{3}{8}$; City and Suburban, 2*l.* ; Cornucopia, $\frac{1}{8}$; Crown Reef, $1\frac{1}{4}$; Crœsus, $\frac{3}{8}$; Dornkop, $\frac{1}{8}$; Durban Roodepoort, $\frac{3}{4}$; Evelyns, 20s. ; Geldenhuis, $\frac{3}{4}$; Goldfields of South Africa, $\frac{1}{8}$; Golden Kopje, $\frac{1}{8}$; Heriot, $\frac{5}{8}$; Henry Nourse, $\frac{1}{2}$; Johannesburg Pioneer, $1\frac{1}{2}$; Jubilee, 2*l.* ; Jumpers, $2\frac{3}{4}$; Kleinfontein, $\frac{3}{8}$; Knights, $\frac{1}{2}$; Langlaagtes, $\frac{1}{2}$; Ditto Block B, $\frac{1}{4}$; Main Reef, $\frac{5}{8}$; Ditto United Roodepoort, $\frac{5}{8}$; Mays, 20s. ; Modderfontein, $\frac{7}{16}$; Moss Rose, 20s. ; Nabob, $\frac{5}{8}$; New Grahamstown, $\frac{3}{8}$; Oosthuizen, $\frac{1}{4}$; Randfontein, $\frac{1}{4}$; Royals, $\frac{1}{2}$; Salisbury, 3*l.* ; Simmer and Jack, $1\frac{1}{2}$; Spes Bona, $\frac{5}{8}$; Stanhope, 20s. ; Star, $\frac{1}{2}$; Teutonia, $\frac{3}{8}$; United Langlaagte, $\frac{1}{8}$; Van Ryn, $\frac{3}{8}$; Vogelstruis, $\frac{3}{8}$; Western Langlaagtes, $\frac{3}{8}$; Wemmers, $1\frac{1}{4}$; and Wolhuters, $\frac{1}{2}$.

The only rise has been in De Villiers (Robinson) of 3*l.*

Diamonds.

There has been a somewhat disappointing market this week in diamonds. For instance, prices improved on last Friday's quotations, but on Wednesday, Thursday, and again to-day they have given way. Although they do not close so, we fully expect to see them all down on account of a cable being received that the lower level at Kimberley has caved in. Should this be confirmed, the De Beers shares must have a considerable drop.

The following are the closing quotations :—

Anglo African	4 7/8	—	5 1/8
Bultfontein, new shares—	3 7/8	—	4 1/8
Central Dorsfontein	8	—	10
De Beers Consolidated	16 1/4	—	16 1/2
De Beers Consolidated Five-and-a-Half per Cent. First Mortgage Debentures	97 1/2	—	98 1/2
De Beers Options mid March	1/4	—	3/8
end March	3/8	—	5/8
end April	3/4	—	1
Gordon Diamond	19/	—	21/
Griqualand West	6 1/2	—	6 3/4
New Consolidated	23/6	—	24/6
New Jagersfontein	15 1/2	—	15 3/4
South African (Pullinger)	16/	—	17/
Spes Bona (Bultfontein)	5/6	—	6/6
United	2 1/4	—	2 1/2
United Jagersfontein	18/	—	19/
London and Orange Free State Explor.	5	—	5 1/2
London and South African Exploration	17	—	17 1/4
Read's Drift Land Co.	2 5/8	—	2 7/8
Burma Ruby Mines	1 3/8	—	1 1/2pm

Australians.

The chief business in these shares has been in Gympie Great Eastern, and after the very satisfactory circular issued by the directors the shares should certainly go higher. Last week they closed 9s., 9s. 6d. ; have been 11s. 6d., buyers ; and this evening finish at 9s. 6d., 10s. 6d. Day Dawn show a fall of 1/16 ; Ditto P.C., 1s. ; Mosman, 6d. ; and Mount Shamrock, 6d. The only rise is in Gympie Great Eastern—9d. on the week.

Indians.

The Market opened at the commencement of the week somewhat firm, and Mysore, at one time touched 6 1/4 buyers, but notwithstanding the good return the price of the shares was put down, and they close this evening the same as last week, viz., 5 3/4, 6. The Nundydroog return being somewhat disappointing accounts for the fall in that instance.

The following shares have fallen :—Balaghat, 17s. 6d. paid, 6d. ; Mysore Reefs, 6d. ; Nine Reefs, 6d. ; Nundydroog, 3/8 ; Ooregum Ordinary, 1/16 ; Ooregum Preference, 1/8 ; and South East Mysore, 6d.

Foreign Shares.

There has been a somewhat busy week in Foreign shares, apart from the special descriptions already mentioned, and several companies have had rapid alterations in price. For instance, Palmarejo last week closed 10s. to 11s., then rapidly went to 13s. 6d. to 14s. 6d., but close this evening, 12s. to 13s. Callao Bis seems to be going lower, while Colons and Tetuans should have an advance. A rise is shown in Garfield of 1s., Kapanga, 9d. ; Orita, 1/8 ; Palmarejo, 2s. ; Richmond, 1/4, and Victory, 6d. ; whilst the following have receded : Balkis, 6d. ; Callao Bis, 1/16 ; Don Pedro, 3/16 ; Empire. 1s. ; La Trinidad, 1s. ; New Emma, 6d. ; Tetuans and Colons, 6d. ; and United Mexican, 1/8.

Copper Shares.

This has been a most exciting week in copper shares, prices varying every few minutes. Rio Tinto, which made up last account at 18 1/4, have this week varied between 17 1/2 and 14, but close this evening 14 7/16 to 14 9/16 after having been dealt in at 15 1/2 in the morning. From all appearance the market should not go lower during the next week, and, in fact, there is every likelihood of the making up prices on Tuesday next being an improvement on those quoted this evening.

The following list shows the principal changes which have taken place :—

	Last Week.		This Week.	
Carn Brea	14	14 1/2	15 1/2	16 1/2
Cook's Kitchen	11 1/4	11 1/2	11 1/2	12

LATEST FROM THE MINES.

Indian Mines.

Balaghat-Mysore.—The following cablegram refers to crushing during the mouth of February :—"146 tons quartz yielded 258 ozs. gold."

Indian Consolidated.—A telegram from the Colar section of the property announces that during the month of February, 265 tons of quartz were crushed, which yielded 98 ozs. of gold.

Mysore.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of January, which realised 9,283*l*. 17s. 5d. The board have received a telegram dated March 6th, giving last month's return of gold as follows :—"2,023 tons of quartz produced 2,933 ozs. of gold, also 105 ozs. obtained from tailings ; together, 3,038 ozs."

Nundydroog.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the mouth of January, which realised 2,178*l*. 0s. 8d. A telegram dated 6th March gives last month's return of gold as follows :—"280 tons of quartz produced 394 ozs. of gold."

Ooregum.—The company has sold the gold obtained in the month of January, which realised 3,142*l*. 1s. 6d. A telegram, dated March 4th, gives last month's return of gold as follows :—"482 tons of quartz produced 927 ozs. of gold."

Colonial Mines.

Cumberland.—A telegram from the mine states :—"Have commenced crushing 25th February. Will clean up 31st March."

Bonnie Dundee.—Cablegram from the managing director at Charters Towers :—"Have crushed 700 tons from No. 1 south-west level for a yield of 325 ozs. of gold." The approximate value of this yield is 1,050*l*.

Day Dawn Block and Wyndham.—The result of the crushing for the fortnight ending 2nd instant is as follows :—290 tons crushed ; yield of gold, 414 ozs. ; approximate value, 1,430*l*. Fortnight's expenses, 1,232*l*. 15 head of stamps only. Owing to a slight disarrangement of the machinery, crushing at the new mill has been delayed.

Day Dawn P.C.—The result of this company's crushing for the fortnight ending March 2nd is 880 tons, 822 ozs. (value 2,794*l*.) Am crushing at public mill with five stamps.

Durham and Lord Byron Amalgamated.—A cable from the mines, dated Georgetown, March 3rd, states :—"Have cleaned up for month of February, result 560 ozs."

Kapanga.—Capt. Hodge, the manager, sends to-day the following message :—Since last message we have crushed 75 tons ; the yield has been 500 ozs. of gold ; stamps renovating.

Midas.—Two cablegrams have been received from the Midas Gold Mine to the effect that the yield for the fortnight is 150 ozs. (615*l.*), and that the smallness of the output is due to the wash dipping rapidly and to the work having been stopped for three days owing to a slight accident to the machinery.

Mount Albion.—A telegram from their manager at the works states :—"Up to February 21st 570 tons ore raised containing 30,000 ozs. silver (or about 52 ozs. per ton). 408 tons ore smelted, containing 18,000 ozs. silver, producing 70 tons bullion, containing 12,000 ozs. silver. Shipped per Merkara, 18 tons bullion, containing 7,500 ozs. silver. Young is in charge of the works. Change for the better."

Mount Morgan.—Messrs. Laughland, Mackay and Baker, of 85, Gracechurch Street, E.C., London agents of the Mount Morgan Gold Mining Company, Limited (Queensland), have received the following telegram from the company, dated Rockhampton, 4th March :—"We pay 75,000*l.* to-day, being 1s. 6d. per share for February."

Foreign Mines.

Anglo-Mexican.—The manager cabled that the output for the month of February was $62,215.

Cortez.—A cablegram from the mines shows the results for the month of February :—"Production, 34,000 ozs. silver ; expenses, $16,000."

La Trinidad. — Cablegram from Mr. Harvey, the general manager :—"Have shipped this month 13 bars of the value of $17,200. Mill closed 15 days in consequence of scarcity of miners. More here now and on the way. March run much more.—Harvey."

Montana.—Monthly return : The secretary of the Montana Company, Limited, begs to state that the following information has been received by cablegram from the resident director at the mine :—"Total weight of ore crushed during February, 6,134 tons ; yield from the three mills, $108,300 ; working expenses for the month, $49,500." The tonnage of ore crushed is small, owing to February being a short month.

New Russell.—The seventh allotment, representing 4,510 shares, was made on March 5th, making a total of 298,043, out of 300,000 shares in the newly-constructed company, allotment letters being posted on 7th inst. The result of last month's crushings was 57 ozs., the mill being partly idle on account of snow.

Pestarena United.—Gold returns for February :—Pestarena: 401 tons of ore treated, 313 ozs. 14 dwts. 22 grs. of gold produced ; average, 15 dwts. 14¾ grs. per ton. Val Toppa : 404 tons, 126 ozs. 14 grs. ; average, 6 dwts. 5½ grs. Total, 805 tons, 439 ozs. 15 dwts. 12 grs. ; averaging 10 dwts. 22 grs. per ton.

Pinos Altos Bullion.—Telegraphic advice states that the outturn for February was $38,000. The manager reports that the returns for the last part of the month were interfered with by water, but states that everything has been satisfactorily overcome. The out-turn for the week ending 23rd February was $10,000.

Rocky Bar Wide West. — The following cablegram has been received :—"For month of February, mined and milled 450 tons, producing 346 ozs. bar gold, of the estimated value of $5,200."

Rio Tinto.—The company publish the numbers of their five per cent. mortgage bonds (1880), drawn for payment at par on the 1st proximo.

Stafford.—A telegram from Mr. H. B. Tilden, the manager at the mines (March 4th) announces the result of the clean-up for the last two weeks in February :—"Crushed 105 tons, which produced 36 ozs. of gold."

United Mexican.—Telegram :—"San Cayetano property : Gross returns week ending March 2nd, $7,700 ; expenses week ending February 23rd, $6,800 ; loss week ending February 23rd, $400. El Cubo property : Expenditure (including capital expenditure) week ending March 2nd, $5,500 ; gross returns week ending 23rd February, $1,520." The reduction of the capital of the company having been authorised by the High Court of Justice, Chancery Division, all share certificates issued after March 6th, 1889, will be for shares of 7*l.* each, fully paid, instead of as heretofore for shares of 10*l.* each fully paid.

Yuruari.—By the report inserted in another column from the manager of the Yuruari Company, it will be seen that a rich pocket has been struck to the eastward. In this direction the company's property extends for nearly ½ mile. The operations to the westward, where the manager expects to strike the Potosi payshoot, have been delayed for want of adequate air-course, and also miners.

Home Mines.

Halkyn.—The directors will declare the remarkable dividend of 120 per cent. The Halkyn Mining Company has been in existence five years. Only two years were spent in executing preparatory works, but in 1886 the directors were enabled to pay a dividend of 20 per cent. Last year the mine paid 50 per cent., and this year the directors have declared the handsome dividend of 120 per cent. Mr. C. B. Parry writes :—"I may have something in this district to introduce to my friends in the course of a week or two, which is held in very high estimation by practical miners, and which, by a small outlay, may equal the above."

North Levant.—A call was made of 10s. a share. The loss on the two months' working was 1,079*l.*

Metals.

Copper has been disorganised, and prices much lower. Since the 1st inst. the syndicate brokers were not buyers, and the prices of G.M.C. copper on the spot have declined from 77*l.* 15s to 59*l.* 10s. Forward delivery very irregular, and prices almost nominal. The last prices yesterday were spot and March prompts, 59*l.* 10s. ; April, 56*l.* ; three months, 52*l.* All the year sellers, option, 49*l.* To-day prices quite nominal. Sellers, 59*l.* cash. Australian, nominally, 67*l.* to 68*l.* We quote nominally English tough, 65*l.* to 67*l.* Best selected, 67*l.* to 69*l.* Strong sheets, 72*l.* to 73*l.* India sheets, 70*l.* Yellow metal sheets, 7d. Ore, regulus, &c., 11s. to 13s. per unit.

Tin has fluctuated slightly. Straits declined from 96*l.* to 94*l.* 5s., cash ; but improved again to 14*l.* 17s. 6d., closing at 94*l.* 15s., cash ; three months prompts realise from 10s. to 15s. over spot. Australian scarce and commands 20s. over Straits. The Dutch Market has been quiet. 57½fl. to 58fl. for both Banca and Billiton, according to prompt. The Dutch Trading Company announces their usual sale of Banca for 28th inst. in Amsterdam ; 24,300 slabs Banca (of which 3,000 refined) and 1,000 slabs Billiton. English ingots, 97*l.* 10s., to 98*l.*

Tin Plates are steady and quoted 13s. for ordinary coke, Liverpool.

Spelter rather easier at 17*l.* 17s. 6d. to 17*l.* 10s. for ordinary brands, ex ship here.

Sheet Zinc.—Of 120 tons offered in public sale yesterday 75 tons were sold at 19*l.* 15s. nett at the works.

Lead quieter. Soft Spanish, 12*l.* 15s. ; soft English, 13*l.* ; L.B., 13*l.* 12s. 6d.

Quicksilver.—Rothschild reduced his price on the 6th inst. to 7*l.* 10s., at which he is said to have sold 5,000 bottles, but advanced again to 7*l.* 15s. ; second hands ask 7*l.* 10s.

Antimony firm. 48*l.* to 50*l.*

London Metal Market.

4.30.—Closing official report.—Copper : G.M. brands, cash, 55½ ; three months, nom. ; best selected, 58, 62; strong sheets, nom. ; English tough, 57, 61. Tin : Fine foreign, cash, 94⅝, 5⅛ ; three months, 95¼, ¾ ; Australian, 95⅝, 6⅛ ; English ingots, 97½, 8. Spelter, 17¼, ½.

Glasgow Pig Iron Market.

3.15.—Business at 43s. 6d., 43s. 7½d., cash ; 43s. 8d., 43s. 10d., one month ; closing buyers, 43s. 7d. cash ; 43s. 9½d. one month ; sellers, ½d. more. Market firm, fair business. Middlesbro' done 36s. 8d., 12 days ; 36s. 10½d., one month ; closing buyers, 36s. 8d. cash ; 36s. 10½d., one month ; sellers, 36s. 9d., cash ; 37s., one month. Hematite, done, 47s. one month ; closing buyers, 46s. 9d. cash ; 47s., one month ; sellers, 1½d. more.

Dividends Declared and Announced for Week Ending March 9th.

Carried forward.

Anglo-Egyptian Bank	—	5s. per share.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (6th March).—The lode in the 40-fm. level east of junctiou on the north part produces over 7 tons of mundic and copper per fm. In the 30-fm. level west, at a point near the junction, the lode is large; full size uot known at preseut. Here it will produce from 10 tons to 12 tons of mixed ores per fm. No. 2 stope at this level produces for the part laid open 8 tons per fm. The varions stopes iu back of the 40-fm. level east are producing about the usual quantities of mineral. Cook's stopes below the 30-fm. level east have improved during the past week, and are now looking well. There is no change to notice in any other part of the mine.—T. Gregory.

BULLER AND BASSET (5th March).—Copper Hill main shaft; The men employed at the clearage of the 84-fm. level have had to contend with a heavy choke during the week. They have not, therefore, made quite so much progress as during the previous week. The engine and pumps are doing very good duty.—J. H. James.

CARPUAN (5th March.)—The shaft on No. 1 or south lode will be squared down upon the lode in the course of two or three days, after which we shall collar up shaft, hang tackle, and commence sinking on the course of the lode, worth 20*l*. per fm. We have a heavy fall of snow here laying on the ground about 1 ft. deep, which is rather hindering us, but shall push on as fast as possible. The east end of shaft is down upon the lode, which you will be pleased to know is producing rich work. I believe the lode as it uow looks is worth 1 ewt. of tin to the ton of stuff. However, I do not wish to raise your expectations too high, and I will go into this more fully after we commence sinking in the lode.—R. Knott.

D'ERESBY.—The progress which is being made here fully bears out all that the chairman said at the meeting last week. Lead is coming in at all points of operation. A good discovery has been made in the No. 8 cross-cut close to the Gors shaft, and is, without doubt, the same run of lead that there is at No. 9. They have a leader of lead from 12 to 18 ins. wide, which appears to be going south alongside of the level, and may continue for a great distance in that directiou. This is only a small portion of the lode, and what there may be yet in the remaining part nobody knows. There is an improvement reported in the No. 2 sump which may lead to something very good, and the end driving south from the bottom of the new shaft on the heading lode is expected shortly to enter into a good bunch of lead. Looking at all points few mines are making better progress than this is at the present moment, and something strange must occur if it does not shortly get into the dividend list.

DOLCOATH (5th March).—There is no chauge in the engine shaft siuce the last report. Old sump shaft is holed to the 400-fm. level. The principal part of the lode is standing to the north of the shaft at the deepest poiut, aud is probably worth 50*l*. per fm. The 400 east of new east is worth 65*l*. per fm. The winze under the 388 is worth for 9 ft. long, 90*l*. per fm. The 388 east is worth 80*l*. per fm. The 314 east of cross-cut on the south lode is worth 40*l*. per fm. The winze under the 290 is worth for 9 ft. long, 90*l*. per fm. We shall shortly commence to rise over the 314 towards this winze, the 314 end being 6 fms. east of that point. There is no change worthy of notice in the other parts of the mine. The eastern shaft under the 254 was sunk more than 5 fms. last mouth, aud we have only about 5 fms. more to sink to reach the 302-fm. level. The 302 east of new east is 10 fms. short of the shaft, so that we expect to hole in less than two months from this date.—J. Thomas, J. Johns.

DRAKE WALLS (7th March).—We shall complete cleaning out a parcel of arsenic soot this week, so as to take samples. Last parcel of copper ore sold weighed 73 tons 6 cwts.—H. Rodda.

EAST GRASSINGTON.—The following report, dated March 6th, has been received from the manager:—East shaft: The lode in the 74-fm. level west is opening out most satisfactorily. The encasing rock and the matrix are much more congenial and easier for progress; the ore-bearing part is fully 2 ft. wide, carrying limespar, sulphate of barytes, and nice patches of lead ore, being saving work for dressing. A stope in back of the level in a lode 3 ft. wide, and producing 8 cwt. of lead ore per fm. In the intermediate level west of No. 2 sump below Amy's workings the lode is 2½ ft. wide, carrying limespar and gossan, iutermixed with branches of lead ore, worth 20 ewt. per fm. In the same level east we have met a cross-joint, which has temporarily disordered the lode. The lode in the level west of No. 3 sump is to-day 2 ft. wide, composed of limespar, barytes, and gossan, with branches of lead ore, worth 25 cwt. per fm. In the same level east the lode is 2 ft. wide, and producing 10 cwt. of lead ore per fm. A stope in back of the 37-fm. level west worth 10 cwt. of lead ore per fm. Harris main engine shaft: The country rock iu which we are sinking continues extremely hard and tight for progress. We are now down 16 fms. below the water level, and 43 fms. below surface. The machinery throughout the mine is in good trim and working smoothly. The stormy weather of the last week has retarded surface operations. Smelting carried on daily.

GREAT FORTUNE.—The aggregate value of the different points remains the same. In the course of the coming month it is expected they will be ready to commence fixing pitwork for draining the mine to a deeper level, where the agents are sanguine of success.

MID-DEVON.—Report for week ending 2nd March. Surface: Pumping machinery still kept at five revolutions per minute, and doing good duty. The weather has been severe this week; snow and sharp frosts. A shaft: The water is drained 15 ft. below the 80; influx uuabated. C shaft: The 60 east has been driven by nine men 1 fm. 1 ft. 6 ins.; total distance from shaft, 30 fms. 5 ft. The strata is unchanged in its composition, but much harder; still yields arsenical mundic aud copper ore in saving quantities. The 50 east: Stopes Nos. 2, 3, aud extreme point of drivage, worked on by six, six, and two men, are worth respectively 10*l*. 10s., 16*l*., aud 9*l*. 10s. per cubic fm. for copper ore. In the No. 3 stope are large deposits of chlorite embedded in the strata, aronnd which we find large deposits of yellow ore. They are tending eastwards towards an ohlique fissure intersected in the 50 east drivage, and there is every indication of their continuing up to it, which points to a productive section of the lode for some distance.—J. Neill.

PHŒNIX UNITED (5th March).—The setting report gives full particulars of the work in progress. There are 12 tribute pitches at tributes varying from 6s. 6d. to 11s. in the £ for tin.

PRINCE OF WALES.—The report of the general meetiug held on Wednesday last must give the shareholders full details of the work done during the last four months, and of the prospects of the mine, which are believed to be second to none in the eastern part of Cornwall. When the new calciner is completed, which it now soon will be, there will be regular and increasing returns of tin, which it is believed will amply remunerate the shareholders for their perseverance and outlay.

PRINCE ROYAL.—The clearing of the adit is being continued, and although we are without any special information this week there is no doubt the work is well advanced towards completion.

ROMAN GRAVELS (7th March).—Operatious were suspended at the uew south shaft on Friday last, iu order that we might commence the work in main shaft preparatory for the taking out of the present pit work. We are pushing this work on as fast as possible, and hope to fix the new bucket lift at the 125 in the course of a few days. The lode at the 110 south is to-day worth 1½ tons of lead ore per fm. The lode at the 125 south is worth 1 ton per fm., and improving. As stated in previous reports, the veiu is in divisions at and about these forebreasts, and it would seem that they will form a junction again before the shale be reached, and make another rich bunch of lead ore. The 80 north-west on Caunter is not looking quite as well as it did last week, being to-day worth 1½ tons per fm. We see no change elsewhere in the mine. We are sending out samples of 100 tons of lead ore, for sale on the 14th instant.—A. Waters and Son.

RUSSELL UNITED (6th March).—The lode in the 80-fm. level driving west is 5 ft. wide; 2½ ft. of this width produces fair stamping work, worth 2*l*. 10s. per fm.; the remaining part being capels, which contains a little tin with good spots of copper ore, it carries a good regular wall, and altogether, I consider it looks very promising, that as the level is extended it will further improve. The end has been driven 5 fms. in the past month. The cross-cut at this level has been extended 10 ft., the last 6 ft. being through killas, with branches of quartz and mundic, and as this is not yet under the perpendicular of the south lode seeu iu the 67, we shall continue the driving for further trial. The stamps-wheel having been partially repaired, we are stamping some of the stuff recently brought down from Stephen's, which appears to be turning out pretty well. I am pleased again to notice the pumping machinery continues to work satisfactorily.—W. George.

SOUTH CONDURROW (6th March).—The 93 east of King's is worth 7*l*. per fm. The back of the 80 east is worth 6*l*. per fm. The north part of the lode above the 70 is worth 20*l*. per fm. The 60 end east is worth 9*l*. per fm. The bottom of the 60 east is worth 15*l*. per fm. The back of the 60 east is worth 12*l*. per fm. The 50 end east is worth 10*l*. per fm. Three stopes in the back of this level are worth 10*l*. per fm. each. The 40 end east is worth 6*l*. per fm. The stopes in the back of this level are worth on an average 10*l*. per fm. We are pushing on the sinking of Marshall's shaft and the extensions of the 108-fm. level.—W. Rich, W. Williams, H. King.

SOUTH DARREN (7th March).—The 142 end east is without change. The stope in this level is worth 18 ewt. of silver-lead ore per fm. The 142 end west is worth 2 tons of silver-lead ore per fm. We have not all the lode aud it may be worth more; the lode is strong and hard for driving. The stripping in this level is now extended east 6½ fms. from the forebreast, and the lead is still holding back good, worth 1 ton of silver-lead ore per fm. This is being carried from 10 to 12 ft. high, and for about 2 fms. in length where it has been stripped to its full height; it is not so good as we had it from half-way down to the bottom. I do not know that much uotice ueed be taken of this, only I wish to meution that in this place it is not showing so good as it was. The cross-cut in this level is producing good leady stuff, aud it is not yet through the lode. We are hopeful that we shall cut the good branch here in a day or so. The men who were working in the end of au old stope in this level have taken away all the ore that will pay. We purpose putting them to try and find the course of ore we have in the 142 in the 130 west. The lode in the 110 east is not yet cut down, there being about 1 fm. ready to blow down as soon as we get the deads cleared out; the stope in this level is worth 10 cwt. of silver lead ore per fm. In the 100 end west the lode is well mixed with lead, and is producing good saving work for the dressing floors. A stope iu this level is worth 10 cwt. of lead, and 10 cwt. of copper, per fm. Dressing was stopped two days this week hy frost.—J. Mitchell.

SOUTH WHEAL CROFTY (5th March).—The winze under the 215 is holed to the 260, aud a good piece of grouud laid open for stopiug, which we shall commence working ou immediately. We have also started driving three levels by boring machines—the 225, 245, and 260, and shall soon be opening up a large quantity of new ground, which we hope may be fouud to be productive.—J. Thomas, W. Pascoe, J. M. Phillips.

TIN ERA (5th March).—In the past week the men have been engaged putting in new timber in the deep adit, and thus prevented a falling of the roof of same. This work, I am pleased to say, is complete, and the men are again in the end, in which there is no change since the date of my last week's report.—R. Knott.

TREGEMBO (5th March).—We have started the engiue shaft below the 42-fm. level; uo lode has yet been takeu down. The 42 east end is worth 5*l*. per fm. The stope in the back is worth 5*l*. 10s. per fm. In the 42 west of Pinuick's we have not yet intersected the main part of the lode. The 42 east is not yet off the influence of the cross-course, producing low price tin stone. The 30 east is worth 5*l*. 10s. per fm. The stope in the back of said level is worth 5*l*. per fm. The north lode in the adit end is poor. We have met with nothiug in the cross-cuts since my last.—T. Hodge.

WEST GODOLPHIN (4th March).—The engine shaft is 12 fms. 2 ft. 6 ins. below the 107-fm. level, the lode in which is small. I see no change in the ends calling for any remark.—T. Hodge.

WEST WHEAL GRENVILLE (5th March).—After making way for forking lift by clearing débris, timber, &c., we have dropped the same aud drained the water to 4 fms. below the 80-fm. level. While water has been in course of forking the shaftmen have been repairing shaft, cutting ground for making pluuger lift good from 70 to the 50-fm. level, and are now cutting hitches for bearers to carry bottom of forking lift to drop the same in two parts, as it is uow heavy for dealing with all in one length. Poppet heads are being prepared for fixing at Harvey's shaft preparatory to putting skip-road in the same. —T. Hodge, J. Skeat.

WHEAL CREBOR.—At the general meeting on Wednesday last a full and very eucouragiug report was presented. The mine had rather more than paid costs during the last four months, and the extension of the bottom levels may at any time open up good ore ground.

WHEAL GRENVILLE (6th March).—The water is now down to

the 190-fm. level, and I hope by to-morrow that the level will be drained, when we shall stop two or three hours to pack piston, change clack-pack poles aud other necessary work. I have no change in the bargains to report. I hope in less than a fortnight to have the mine drained to bottom, and have all our bargains in full swing.—T. Hodge.

WHEAL METAL AND FLOW.—The water in the engine shaft is increasing, which rather impedes the driving of the 35-fm. level. This, however, is not an unfavourable indication, and will be of help for dressing purposes iu the Flow. The lode is of the same value as for some time past, and the sale of tin this week is expected to be the largest they have ever had. The general meeting will be held on Thursday next, when the agent will be in attendance, and will give full information on all points. Telegram just received "Sale of tin over six tons."

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (22nd Jan.)—The 50 attained a length of 168.9 ft. from the shaft. The winze below 36 on 100 lode attained a depth of 76.8 ft. Connection made : The main lode and 100 lode are together at the 50, but both are utterly barren in the point of connection. We hope to find something farther north, and shall push the driving of the 50 in a north-east direction with all possible speed. February 5th : The 50 driven 187.7 ft. ; the lode continues barren, and of an unkindly appearance.

— (29th Jan.)—The 24 north end San José was driven north, 45 degs. east, 63 ft. Work on this point was resumed only last week. The breast contains about 30 per cent. ore, and about a quarter of it is of a very fine appearance, which I consider a very encouraging improvement in so short a drivage. February 6th : This end was advauced 5.7 ft., and is producing about 25 per cent. of ore of apparently ordinary grade.—Sanchez.

ANGLO-MEXICAN.—The superintendent in his report for week ending 26th January says :—Hidalgo winze : Santa Margarita level ; total depth, 37 ft. ; width of ore, 2½ ft. San Gerardo shaft has been advanced 4 ft. during the past week, and is now 54 ft. below 572 ft. level. East drift : 572 ft. level is lookiug well ; the face shows 6 ft. of high grade ore. The prospect as we advance east is very encouraging. We are extracting ore from the 572-ft. level stopes which continue to look well. There is no change to note since last report.

ASIA MINOR (16th Feb.)—The outpnt for January is 1,520 tons, estimated to yield at dressing floors 182 tons rich silver-lead. Weather permitting dressing operations will be resumed ou the 1st March. 68 men driving, value of ends 4 tons 10 cwt. ; 186 men stoping, value of stopes 11 tons 8 cwt. ; 14 men sinking, 12 men rising, 12 men cross-cutting, 145 labourers, etc. The rise from the back of Petri level has been commnnicated to the end west in No. 4 stope, which has well ventilated that level. In a few days we shall put men to stope the back in a good payiug lode. The winze in the sole of Petri level in air shaft has been holed to the level west from No. 3 stope, and the men are now employed in stoping both east and west of winze in a splendid lode, which is worth fully 2 tons silver-lead per fm. The lode in Petri end west in air shaft is about 9 ft. wide, which is strongly intermixed with lead ore, and judging from the masterly appearance of the lode we are expecting to see a great improvement here shortly. The lode in the bottom union end east maintaius its productiveness, and is producing fully 1½ tons of silver-lead ore per fm.

BRATSBERG (25th Feb.)—Hoffnung Mine : No. 2 adit level is producing ½ ton per fm., and the winze in the bottom 1 ton per fm. We expect to commnnicate with the rise from No. 3 adit level by the end of March. The rise in the back of No. 2 has been resumed ; the lode worth 1½ tons per fm. No. 3 adit level is yielding ¾ ton per fm., and the rise in the back of same is worth ½ ton per fm. The mid-level at Ball's is producing a little ore, but not enough to value. No. 4 level is worth about 1 ton per fm. For convenience in the stoping out the ground above the level, we shall now suspend driving, and run a rise into the excavations in new section. No. 5 level west opens up a strong lode nearly all qnartz, but yielding no ore to value. The same level east is carrying a well defined leader of ore, worth ⅓ ton per fm., and shows indications of a speedy improvement. The mid-level at Murchison's is yielding ¾ ton per fm. The rise in the shallow workings has very much improved during the past week, and now worth ½ ton per fm. 85 mirers employed at this mine. Johannes Mine ; The cross-cut has been advanced during February 15.44 metres, making a total length driven of 57.99 metres. The winze has been sunk 6.90, making the total depth now attained 16.20 metres. I have great pleasure in reporting a considerable improvement here, good patches of ore having been struck against the footwall, which I hope is a begiuning of a remarkable run of ore ground ; 10 miners employed here. Næsmark Mine : Barker's shaft is now down 32.70 metres, 7.20 of which having been sunk during the past working month. We purpose sinking about 5 metres more, when we shall fix pneumatic pump, and drive north and south ; the lode remains unchanged in value, but if we do not strike fresh ore-bearing veins in the shaft before beginning to drive, we shall doubtless get ore in the levels ; four miners engaged in this mine, and four assistants. Surface work and remarks : Machinery erection progressing very well. We compute the ore miued during February at 165 tons 20 per cent. ore, which is very satisfactory, seeing that there were only 22 working days in the month. The Ebenezer has been chartered, and is probably now loading the remainder of the ore from last year. —J. D. Holman.

CALLAO BIS (7th) Feb.)—Unda shaft : The cross-cut driving north at the 250-ft. level has been driven 10 ft. 6 ins., making its total length 48 ft. 6 ins. In this drivage I see no change ; the ground has become somewhat harder, and no signs of meeting with any mineral. Still, water is coming freely from the breast of the cross-cut, which indication has prompted us to continue on to this length, but I have thought for the present to leave this work. The 350-ft. cross-cut has been driven 6 ft., its total length being 25 ft. 9 ins. ; the ground is still exceedingly hard. and very little progress is made. The 350-ft. level has been driven 1 ft. 6 ins., and is now 60 ft. from cross-cut ; this work I have resumed. I see no change in the end, indeed the small seams are seemingly pinching out. Sosa-y-Mendez : I have] asked permission to open the shaft in the Union lands ; it is now cleaned, and we have commenced to drive on the lode there. As seen from side of shaft, there appears two distinct bodies of quartz, and probably these will come together, and after a little drivage I shall be able to determine more or less accurately what they really are. As to the course and dip of the lode, I am quite undecided as yet ; we are in quartz mixed with clay matter, in the level of which I have before written. Judging from the general appearance of the lode as seen at present, it seems quite equal to all I expected. Drivage, 8 ft. 6 ins. in drift ; and 15 ft. in cross-cut.—G. W. Eustice.

COLAR CENTRAL (12th Feb.)—Low's engiue shaft : The 200 ft. east cross-cut has been driven 17½ ft. ; total distance from shaft, 157 ft. ; there is a slight change in the character of the ground here, not that it is much, if any, softer, but the rock works slightly better, and does not break off so short in blasting. We have also passed another small stringer of qnartz, which, though too insignificant and poor to be of account, yet indicates a possibility of change from the hitherto unusually hard rock passed through. Driven by oue rock-drill. The 200-ft. north drive from east cross-cut has been driven 13½ ft., making a total of 34 ft. from the cross-cut. The quartz we followed here, though still unpromising, looks a little more settled, and I intend to contiuue work here for another fortnight at least to see how it holds. Driven by one rock-drill. The 200-ft. west cross-cut has been driven 14½ ft. since last report, making a total distance from shaft of 157½ ft. The water continues to give us considerable trouble here, and the end is very wet and bad to work in, though the water in Darlington's shaft, after draining off about 18 ft., has discontinued going down, and has been standing to the depth of 24 ft. 6 ins. the past four days, having possibly got to the level of the floor, which previously drained it. We may cut into another floor during the next few blasts, and so tap the remaining water. We have also passed a small stringer of quartz here, but the ground continues as hard as ever. Driven by one rock-drill. Underlay shaft : The 171-ft. level has been driven by hand labour 8 ft. ; total distance from cross-cut, 59 ft. 6 ins. ; the lode is still holding the same, and there is no change here since my last report. East boundary shaft has been timbered down right the full depth, 69 ft. The work gave us some trouble owing to the ground constantly slipping. Sinking this shaft has just beeu resumed, and will be pushed on as fast as possible.—A. S. B. Oakley.

COLVILLE.—North Coromandel : The company's agent at Coromandel writes January 26th :—A large amount of prospecting has been done here by tribute in the face of much difficulty owing to the blue tuff which overlies portious of the surface. They have the advantage of a dry summer for surface workiug. East Kapauga : The tributers coutinue steadily driving and stoping on the surface outcrops of the several reefs, hoping daily to come across rich stone of the kind so often before obtained in this mine.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending 5th January :—No. 1 shaft—Underlie : This shaft has been sunk a further depth of 6 ft., making total depth from No. 7 plat 38 ft. ; the formation is 6 ft. wide between the walls, carrying 2 ft. of stone, worth 18 dwts. per ton. I expect to make better progress with the sinking during the coming fortnight. No. 2 shaft—Underlie : This shaft has been sunk a further depth of 5 ft. by the contractors, making total depth below 1,003-ft. level 67½ ft. The 1,003-ft. level east : We are now engaged timbering the level and laying the tram-road, which I expect to have completed during the coming fortuight, when stoping will be commenced on the hanging and footwall reefs. The 639-ft. level : The stopes above are without change, being from 1 to 5 ft. in thickness, and worth about 1 oz. per ton. I have four men employed here, but will increase the number shortly. No. 3 shaft : The contractors have sunk the shaft a further depth of 10 ft. for the fortnight, making total depth from surface 422 ft. ; ground hard granite. The hopper at No. 1 shaft is now completed, and works satisfactorily. New mill on Burdekin River : This mill started to work on 23rd February, as already announced by cablegram, dated 25th February.

DEVALA-MOYAR (11th Feb.)—In the winze sinking below the deep tunnel the lode is 3 ft. wide, with two good walls. It washes well for free gold, and will also yield 3 tons pyrites to the fathom. Tunnels driving east and west of cross-cut will yield respectively 2 tons aud 1½ tons pyrites to the fathom. I shall suspend the latter in order to employ both machines in the former, and communicate it with the winze and open up stoping ground as quickly as possible. In the stopes at the back of the deep tunnel the lode is 7 ft., washes fairly for free gold, and produces a fair amount of pyrites. Crushing of 300 tons : 150 tons yielded 57½ ozs. melted gold, and 150 tons yielded 30 ozs. free gold, the pyrites being reserved for future treatment.—J. Williams.

DON PEDRO.—Mine monthly report for January.—We are very pleased to report that good steady progress has, upon the whole, been made towards draining the old workings to the bottom. After forking the water and clearing the old inclined shaft, preparatory to lowering the sinking lift below the point reached in November last, some heavy inbursts of water and fine jacotinga occurred, which taxed the pumps and machinery rather severely for several days ; having, however, ample power at command pumping was contiuued without any serious interruption, until the accumulation of water in the old stopes north of the shaft drained down, since when no further difficulty from the cause alluded to has been experienced, aud we have succeeded in lowering the sinkiug lift 10 ft., reaching the roof of bottom level. The timbers in the old shaft have not apparently deteriorated but little, if any, since the mine became flooded and filled with fine jacotinga. We therefore hope to find the timbering of the bottom level and stopes in equally good conditiou, which will greatly facilitate the work of re-opening them, and which we expect shortly to commence. The weather continues very hot and dry ; we therefore find it advantageous to work the engine under a low head of steam, to prevent any serious delay through excess of water flowing from the old workings, and to fork accumulations quickly after stoppages, which are occasionally necessary. The usual ruuning work has received the customary attention.

EAGLEHAWK CONSOLIDATED.—The secretary has received the following abstract of reports from the mine, dated the 12th and 17th January :—The bottom level has been extended 35 ft. ; total distance on the course of the reef, 67 ft. The reef is well defined, solid, and carrying metal, but no payable gold. The engine shaft has been sunk 8 ft. in nine days, leaving 7 ft. more to sink before we put the cistern in. The 450-ft. level has been driven south 50 ft., and the reef is fairly defined ; it is from 4 to 5 ft. wide, but nothing payable has been met with yet. I would recommend that this drive be continued, as the reef has not been prospected for over 200 ft. above this level.

EAST AREVALO (MEXICAN) (8th Feb.)—I am anxious to open

an important point before writing my usual report, and shall wait a few days before doing so. I visited the Arevalo tunnel yesterday. I expect they will drain off our water in a few weeks. Nothing new in our mine since my last.—Capt. PRIDEAUX.

EASTERN MYSORE.—Under date of February 12th the mining superintendent writes :—South section—James shaft: Driven north on the course of the lode, 3 ft. The lode is about 2 ft. wide, with branches of quartz 6 ins. wide; the quartz is highly mineralised so far as we have gone. I have a very high opinion of it, and firmly believe it will prove something valuable. Cross-cut east: We have started this to-day. I trust the progress will be very different here from the cross-cut west of Nora shaft about 4 ft. behind the cross-cut. James shaft: There is another branch or lode about 15 ins. to 18 ins. wide. To ascertain its value I have had samples taken for assay. It looks promising; but before doing anything in this lode communication should be made with Nora shaft; then we could manage to prospect thoroughly this lode also. Air shaft: Sunk in the past week 9 ft. 8 ins.; lode, 2 ft. wide. The erratic manner the lode jumps about is something remarkable; every breast head it meets with causes the lode to be thrown west 1 ft. to 2 ft. every time. I like the appearance of the lode very well, and am of the opinion that in depth we shall find the lode more settled, and when that takes place you will find it productive and profitable. Edwards shaft: Ends north and south of cross-cut east: Ground cut in the past week, 4 ft. The lode in the north drive appears to be better defined and showing more quartz. Still both ends have improved since my last, most especially so the end north. North section: St. Stephen's shaft; winze north of shaft sinking in bottom of old works; ground cut in the past week, 2 ft. 6 ins. We are continually meeting with small branches of quartz, and find the rock when broken to present a small layer of quartz in the joints. I am still of the opinion we shall discover the lode again; it is the proper place to find it. To-day I have started a stope north of the shaft: as the lode now stands we shall be able to break a good quantity of quartz. I shall be able to speak more positively about this in my next letter. Northern boundary, Hodgson shaft: Sunk during the past week 18 ft. I am pleased to say our prospects are most decidedly cheering. We have struck a lode the full size of the shaft, not of solid quartz, but branches throughout it. To-day I picked up some quartz, and found visible gold in the stone. I may say, without in any way exaggerating the present out'look, we have something really good here, and shortly you may expect to have a well-defined and solid lode of quartz that will be productive, and a profitable one. New shaft: To the east of Hodgson's we have another shaft, and during the past week we have sunk 12 ft. Here also we have an improvement: although the lode is at present small and disordered, it has decidedly a healthy and promising appearance. I have already expressed my opinion of this part of your property, and I must say, every foot we sink I am more decided in that opinion. Taking the class of ground we have there, and the numerous strings of quartz in the rock at only a few feet from surface, the indications are greatly in favour of meeting with something good very shortly. So far as we have gone, I could not wish for better success. Every effort will be made to get down the shaft as quickly as possible, and then when we get the lode in a solid condition, you will have opened up and have added a profitable piece of ground to your property.

FRYERSCREEK (29th Jan.)—We have not done much work below during the past fortnight. We have only been working seven days. We have two men driving north at the 260-ft. level; also two men laying down a truck road and repairing the 420-ft. level on the eastern line of reef. There are several places in this level I intend to take out trial crushings from; as we have done but very little prospecting in this level, any more than put up three rises to the 320-ft. level. We had stone in all of them, but very small, with a little gold. Here is one leader in the western wall about 130-ft. from shaft, or 30-ft. south of the junction of the slide, and the lode which I shall drive on first. I have the truck road laid down as far as this leader. We have four men driving south at the 520-ft. level. We have not met with any stone as yet, neither do I expect to get any before we pass the slide. I have not measured any ground driven in the mine for the fortnight. Western line of reef 420-ft. level: we have four men driving north at the above level. There is a good flukan and mostly slate country with small seams of quartz making in the back of the drive. We have stone in the face of the 320-ft. level, with a little gold, but very fine, just like paint.

GYMPIE GREAT EASTERN (10th Jan.)—Fortnight report.—During the past fortnight the usual amount of work in the mine was not done on account of the holidays. The winding engine and the machinery at the battery had a general overhaul. At the 634-ft. level the north level has been extended 7 ft.; total, 21 ft.; there is about 2 ft. of crushing stuff showing a little gold. The south level has been extended 7 ft.; total, 38 ft.; the reef here is making larger, but there is not much gold to be seen. In the stopes started above these levels there is about 2 ft. of crushing stuff showing a little gold. The winze at the 580-ft. level in the eastern cross-cut to cut the No. 1 south great eastern reef has been sunk 6 ft.; total, 57 ft.; the country is good hard slate. After the stoppage for the holidays we lost two shifts bailing water. The stopes above the 500-ft. level going north are all showing fair gold. For the past fortnight those going south are not looking as well as previously, as the crushing stuff is getting smaller and shows but little gold. The stopes above the 400-ft. level on the old eastern reef are all showing a little gold. The crushing stuff in the old 364-ft. level going south is much the same as last reported. There are 10 heads of stampers crushing for the Nicholas Lease Gold Mining Company since the 2nd inst. Your winding engine and crushing plant is in good working order. There are 80 men employed, 70 at the mine and 10 at the battery.—J. JAMES.

INDIAN CONSOLIDATED (11th Feb.)—Phœnix section: We have driven 3 ft. in the tramway tunnel, making the total distance from cross-cut 8 ft. At this point we are entirely free from the white quartz, and appear to be entering on a course of rusty quartz, about 3 ft. wide, very similar to the tunnels driven below, being in the run of the shoot of ore. I think it advisable to extend this level for a few fathoms, to see if it will improve. We have four stopes working in back of tramway tunnel, and in all these places the lode will average from 8 to 14 ft. wide, but we have to be careful in selecting the blue rock, in order to keep up the yield as high as possible. Stopes in back of No. 1 and mid-way tunnels: The lode keeps up to an average size of 7 ft., and from appearances I think the yield much the same as for some time past. This portion of your mine carries a fair amount of pyrites.—J. WILLIAMS.

— Mr. R. B. Johnston, mill manager, reports that during the month of January 720 tons of quartz were crushed, which yielded 129 ozs. 14 dwts. of gold, or at the rate of 3 dwts. 19 grs. per ton.

— (12th Feb.)—Colar section.—No. 5 shaft: We resumed the sinking of this shaft below the 360-ft. levels on Monday, the 4th inst., and have sunk during the week 9 ft.; this I consider very good work; the reef is 9 ins. wide, but of low quality stone. The 360-ft. level south has advanced 4 ft., or 47 ft. 6 ins. from shaft; the lode at present is broken, and mixed with country rock. The 360-ft. level, north of shaft, has advanced 9 ft., or 51 ft. from shaft. Since my last we have cut into quartz 2 ft. thick. These drives for the future north and south will be carried on by hand labour. The 300 south stope is being pushed on with all speed by rock-drills and hand labour, but the stone is not so good as for some time past; lode 2 ft. wide. The 300 stope north continues to produce a fair amount of quartz; lode 2 ft. wide. Yesterday I put one rock-drill to rise and stope in the back of the 300-ft. level south; this will be pushed on with all speed. The 230 level south of shaft has advanced 9 ft., or 87 ft. from shaft; the lode is 1 ft. wide; have removed the rock-drill from this drive to the 300 back. This will be continued by hand labour. The winze in the bottom of the 230 north has been sunk 2 ft.; lode 2 ft. wide; low quality stone. We have resumed the sinking of winze below the 155 north. The 156 south level has exteuded 4 ft., or 89 ft. 1 in. from shaft, and owing to the low quality stone, I have suspended this drive, and put the men to drive the 230 south. Davey shaft: The 170-ft. level driving south of shaft has advanced 10 ft. 6 ins. from shaft. In the forebreast we have a vein of quartz 4 ins. wide, shows a trace of gold by washing; as a whole, the lode improves as we advance. The 170-ft. level driving north of shaft has advanced 8 ft. 6 ins. from shaft. In this drive we are also getting quartz; vein from 4 ins. to 6 ins. wide; at present of no value; from the appearance of the drive we are on the eve of a speedy improvement.—T. R. DAVEY.

— Office note: The assays reported by the assayer are as follows:—No. 1, 6 dwts. 12 grs.; No. 2, 5 dwts. 10 grs.; No. 3, 11 dwts. 18 grs.; No. 4, 18 dwts. 7 grs.; No. 5, 5 dwts. 5 grs.; No. 6, 3 dwts. 22 grs.; No. 7, 26 ozs. 15 dwts. 8 grs.; No. 8, only a trace; No. 9, mill tailings, 3 dwts. 16 dwts. The above list has been forwarded on this occasion without stating the points from whence the samples were taken.

JOSEPHINE.—The following telegram has been received from the superintendent :—"900 tons of quartz has been milled duing the past month; yield of free gold, $6,500; value of sulphurets saved, $2,000; total expenses for month, $5,500. The east drift is in good ore. Price assayed samples from 4 in. stringer over $1,500."

— Extract from superintendent's report for week ending February 9th :—During the week the main shaft has been sunk 531 ft. We tapped a small body of water that considerably delayed us, but now have it under control. There is no change whatever in the ground. The 300 drift west has been run 10 ft. without any change. I have concluded since the result of my milling tests already reported, to discontinue this drift for the present, and to run the drift east. During the week I have averaged 15 stamps from rock on the 300 ft. west upper stopes and 300 ft. east stopes. These stopes look fair. On the east side the ledge will average 18 ins., and on the west side 2½ ft.

KAPANGA (22nd Jan.)—I beg to hand you report for the month of four weeks ending 19th inst. :—Six men have risen 24 ft., and communicated the rise above the 500 to the 420, affording good ventilation to the bottom of the mine; these men have also been engaged in sinking preliminaries, fixing, hanging lift with screws, putting on windlass, and clearing up fork, &c. The shaft is now about 9 ft. below the 500, and in full course of sinking by nine men; the actual sinking is now commenced, and will be pushed on, taking care to avoid any interruption. To secure good progress for this purpose we have strengthened our surface gear from pumping engine to shaft. The cross-cut at the 500 north from Scotty's have been extended 16 ft.; we have here cut through the Kapanga reef of no value, and consequently is supended. Scotty's: The 420 south by four men have been exteuded 33 ft. through a vein about 18 ins. wide; a very congenial vein for gold, but nothing payable has been met with. This point has been surveyed to-day, and I find we should drive another 30 ft. south to rise in line of winze in shoot of gold sunk below the intermediate, but inasmuch as the intermediate level going south has drained the water from the 300 above, limiting our waterfall for conveying air to push that drivage. I have suspended driving and put these men with the 420 men making eight men to rise from the 420 to the intermediate in line of reef. We have about 94 ft. to rise, and the bearing on which we shall rise will allow the top of rise to go through our shoot of gold, causing not only good ventilation for resuming intermediate south by a larger force of men independent of water fall, but also allowing all stuff to be discharged at least at half cost. Kapanga lode: The stopes above the 420 south by six men; the reef will average about 15 ins. wide, and is yielding quartz worth 1½ ozs. to the ton. Scotty's lode, intermediate: Four men have extended this level south 23 ft.; the lode in the forebreast is 18 ins. wide. This drivage, now suspended for want of ventilating capacity, will be again resumed on communication being effected from the 420 rise by a larger force of men, the branches of gold gone down below the 300 will be reached sooner than if we attempted to push on, as we were before suspension owing to want of ventilation and the awkward dispatch of stuff at our command. The rise and stopes above the intermediate on Scotty's by four men; the reef is 1 foot wide, and during he past month has deteriorated in value, the quartz yielding about ½ oz. of gold per ton. The reef here may again improve at any moment. The cross-cut west at the 300, towards hanging-wall, was extended 4 ft.; nothing met with it is suspended. The 300 south on Scotty's was extended 11 ft.: the reef here is encouraging; this drivage will be further pushed first opportunity. I calculate in two months from now our new bunch above 300 on Scotty's will be exhausted, owing to the reef being cut off and disordered before reaching the 225-ft. level by a flat head. This fault has quite cut off our supply of quartz, and having now proved the 225 above this point, and found it also poor, workings there are also suspended. On cutting any fresh shoot, however, from our 300, advancing south, we have access to again resume the 225 and follow it up immediately. The ventilation and facilities for discharge of stuff at our 300 south will

not allow us to put more men on to drive that level ; but as soon as our stopes are exhausted it will be pushed by six men, and two men will continue rising to communicate to 225, so as to allow six men to drive uninteruptedly for a considerable distance. The reef stoping by six men on new bunch above the 300 is about 1 ft. wide, and yielding gold about 1 oz. per ton ; in all probability this bunch will hold us two months as referred to above. We have put a stope 18 ft long and 6 ft. height northwards of our rise above the 255-ft. level, it will not pay, and having met a somewhat disturbed strata in the top of rise, it is now suspended. We stamped for the four weeks 130 tons quartz, which gave 555 ozs. of amalgam, and yielded 203 ozs. 5 dwts. of retorted gold, The falling off in our returns is discouraging ; but we must not lose sight of the fluctuating nature of our reefs. All pumping, winding and stamping is going on regular, and I hope some improvement will soon take place.—F. Hodge.

MYSORE REEFS (12th Feb.)—Fortnightly report: Owing to a breakdown with our air compressor, hand labour has been employed during the past two weeks. I am pleased to say the air compressor and rock-drills are now at work. Harvey's shaft : The 320-ft. level north has been advanced 4 ft. ; now 28 ft. 6 ins. from shaft. The rock is very hard and sterile. The 320-ft. level south has been extended 4 ft. 9 ins. ; now 27 ft. 3 ins. from shaft. During the past 6 ft. the hard rock has been intermixed and crossed by patches and branches of quartz intermixed with arsenical pyrites, which appears to be a continuation of the same band we had on the level above. A sample of the quartz gave, according to assay, 2 dwts. 14 grs. of gold to the ton. The rock-drill that was formerly driving this end I have now removed to Taylor's shaft. Cross-cut west of plat, 250-ft. level, has been advanced 5 ft. 9 ins. ; now 113 ft. from plat. The rock is still extremely hard, but I am expecting shortly to see a change for the better, as little water is now issuing from the forebreast. Cross-cut east of the 250-ft. level has been advaneed 7 ft. 6 ins. ; now 124 ft. from level. Small stringers and patches of quartz are intermixed with the hard rock, but of no value. Taylor's engine shaft : The winding engine is at work, also the rock-drills. I hope now to be able to make good progress in sinking. Stopes in back of the 110-ft. level north and south of winze are suspended. The branch of quartz is pinched, and will not pay for working.—M. Scantlebury.

NEW EMMA (16th Feb.)—I have to report work carried on at the mine for the week ending to-day, as under :—Level No. 1 easterly advanced 10 ft. ; total, 182 ft. No change worthy of note has taken place since my report of 9th inst. Rock continues soft and seamy, also is mineralised, and presents fully as favourable appearances. Cross-cut from No. 1 towards hanging wall advaneed 10 ft. ; total, 55 ft. Rock has come in quite hard, and the ore seam has nearly closed up. I, therefore, concluded to stop work in face for the present, and put the men to work making an uprise on the ore seam which extends up from top of cross-cut. Drift from No. 1, towards hanging wall, advanced 9 ft. ; total, 17 ft. Rock is about the same character as in face of level, is soft, and carries considerable quantity of oxidised iron and a very little silver, but as yet not sufficient to save, but am in hopes of meeting with much better material before we advance many more feet. The uprise started from level No. 1, as mentioned in my report of 9th inst., we were obliged to stop because of bad air, hence nothing has been done there ; however, shall start it again as soon as we can overcome the difficulty. Level No. 1 north-west advanced 10 ft. ; total, 179 ft. As mentioned in former letters this level is opening up ground containing fillings, is in the old workings, and requires close and careful timbering. The fillings we are now getting into are improving, and are a better class than those found below. Level No. 3 south-east advanced 10 ft. ; total, 322 ft. A slight improvement is noticeable, the rock, softer the last couple of days, is showing more iron stains, and I am in hopes it will continue to improve. Level north-west from uprise from Attwood winze advaneed 10 ft. ; total, 101 ft. Not any material change to report ; still shows some low grade ore, which we are saving for the mill ; the rock is soft, and looks fully as well as per last report.—H. C. Wallace.

NINE REEFS (11th Feb.)—Mining operations : Malleson lode, main shaft : 310-ft. level north has advaneed 1 ft. 8 in., a total distance from shaft of 85 ft. ; vein, 5 ft. wide ; assay, 2 dwts. 21 grs. gold per ton. Morrison's shaft : Sinking under the 185-ft. level has advanced 3 ft. 2 ins. ; total depth under 185-ft. level, 23 ft. 4 ins. ; the part of the vein in the shaft 6 ft. wide : assay, 2 dwts. 14 grs. gold per ton. Baynard shaft : 310-ft. level north has advanced 4 ft. ; total advance, 44 ft. 6 in. ; vein, 5 ft. wide ; assay, 2 dwts. 14 grs. gold per ton. Malleson lode :—Stopes : No. 1 stope in the back of the 185-ft. level north of main shaft : Vein, 6 ft. wide ; assay, 15 dwts. gold per ton. No 2 stope, also in the back of the 185 ft. level north of main shaft : Vein, 6 ft. wide ; assay, 9 dwts. 18 grs. gold per ton. No. 3 stope in the bottom of the 185 ft. level south of Baynard shaft : Vein, 3ft. 6 in. wide ; assay, 11 dwts. 17 grs. gold per ton. No. 4 stope in the bottom of the 185 ft. level south of main shaft : Vein, 4ft. 6 in. wide ; assay, 7 dwts. 3 grs. of gold per ton. No. 5 stope in the bottom of the 185 ft. level, north of main shaft : Vein, 7 ft. wide ; assay, 3 dwts. 22 grs. gold per ton. No. 6 stope in the back of the 310 north of main shaft : Vein, 6 ft. wide ; assay, 2 dwts. 14 grs. gold per ton. Champion lode : Vyvan shaft : 145 ft. level south has been temporarily suspended, and the workmen employed in driving a cross-cut east to intersect the No. 2 vein seen in the 95-ft. level. The last assay from this drift yielded 13 dwts. 1 gr. of gold per ton. Cross-cut east in the 145-ft. level south of Vyvyan shaft has advanced 3 ft. 6 ins. ; the total distance driven, 95 ft. Level north and south of the cross-cut south of Vyvyan shaft to No. 2 vein has advanced 5 ft. ; vein, 3 ft. wide ; assay, 19 dwts. 14 grs. of gold per ton. Stopes : North end of south stope at the 145-ft. level south of Vyvyan shaft : Vein, 2 ft. wide. South end of south stope at the 145-ft. level south of Vyvyan shaft, 2 ft. wide. South end of south stope at the 145 level south of Vyvyan shaft : Vein, 1 ft. 8 ins. wide. An average sample of these two stopes taken together yields 11 dwts. 17 grs. gold per ton. Hereafter separate samples will be taken.—Capt. Bennetts.

NUNDYDROOG (12th Feb.)—Mining operations : Webb's shaft is now undergoing a process of widening to make it convenient for rock-drills. One rock-drill is employed in sinking Taylor's shaft and one is employed in driving the 370 north of Webb's shaft. We have, however, suspended operations in this end for the present, and are driving the cross-cuts. The stopes below the 370 and the stope in the bottom of the 300 are each in a lode 3 ft. wide, assaying 2 ozs. 3 dwts. 6 grs. and 2 ozs. 12 grs. respectively. The intermediate level has been driven 62 ft. 10 ins. ; the lode is 2 ft. wide, assaying 11 dwts. The stopes in the bottom of the 230 south end the lode is 1 ft. 8 ins. wide, assaying 8 dwts. 18 grs. The lode in the middle level south of Webb's shaft is 1 ft. 8 ins. wide, assaying 7 ozs. 5 dwts. The rise in the back of the 230 north of Webb's shaft, the lode is 2 ft. wide, assaying 1 oz. 18 dwts. 12 grs. The stope in the bottom of the 166 south of Webb's shaft contains a narrow lode of quartz, assaying 1 oz. 3 dwts. The mills and pans are running very well. The machinery throughout the mine is working satisfactorily, and the health of the camp is very good. Weekly samples from the mill :—Rough quartz, 1 oz. 10 dwts. 12 grs. ; smalls, 18 dwts. 12 grs.—B. D. Plummer.

OSCAR (2nd March).—Oscar lode : The sinkers are making fair progress, and are now nearly 70 ft. below the bottom level. The lode is still traversed by small strings of quartz and calcite containing iron pyrites, forming about 10 per cent. of the whole mass. We have not seen any visible gold, but we think the present clean up, which is now taking place, will show there is some. The cross-cut towards the footwall has passed through the lode, and we have stoped a few fathoms east and west of ditto, and have passed the quartz and fines through the mill. The 400-ft. level west is in a good lode of quartz, and promises fairly to lead us into richer ground. The level, which is being driven on No. 3 lode, is in very unsettled ground : we fancy the lode is cut off by a cross-course, and we are therefore cross-cutting to prove if it is so or not. Just at this point a stone with visible gold was found. Daw's lode : The shaft is about 50 ft. below the bottom level, the decomposed stuff previously referred to has turned ore to quartz on the south side, and we think a similar change will take place on the north side in a few days. The bottom level south is not looking so well as when last reported on. In about 10 days we hope to connect it with the winze from level above. The rise and stope in back of same level with the stope in 330 level and rise in 170-ft. level are producing some good mill stuff. To-day we are measuring up the month's work and cleaning up, and will forward result when completed.—J. Daw, junr.

PALMAREJO.—The directors have received a cablegram from Palmarejo announcing the arrival of the chairman and railway engineer. The mine manager reports as follows :—The outlook is brighter than for some months past, and everything inside and outside the mine is moving cheerfully.

— Return for the month ending 26th January :—Amount of ore milled, 449 tons ; assay value of same, $17,800. Amount of fine ore shipped to Europe, 1½ tons ; value of same, $2,838. Amount of concentrates shipped, 3¾ tons ; value of same, $7,969. Profit on working for month, $4,800.

PESTARENA (2nd March).—Caunter lode : The 110-fm. level west is yielding 7 tons of ore per fm., worth 12 dwts. per ton, and east, 5 tons of 14 dwts. ; the latter shows signs of improving. The 110 east is giving 7 tons per fm., at 1 oz. 10 dwts. ; the 90 east, 4 tons, at 10 dwts. ; and the 90 west, 8 tons, at 8 dwts. The 90 east from cross-cut gives 12 tons per fm., at 9 dwts. This is on a new shoot of the Caunter lode, which will probably be about 30 metres long. No. 1 lode : The 140 north is producing 3 tons per fm., at 10 dwts. ; the 130 south, 3 tons of low-grade ore. Winze under the 130 : The ore has died out ; will be holed to the 140 level during this month. The stopes are yielding ore of fair average. Six mills are idle for the present from scarcity of water. Eight others have been stopped for a time owing to a breakage to the water-wheel, but they will be restarted on the 4th inst. Val Toppa : The exploratory work here is being vigorously carried on ; but for the present the various points are poor and somewhat unpromising.—W. Roberts, W. H. Trelease.

POTOSI (7th Feb.)—New lode : The contractors in No. 2 tunnel east have advanced another 20 ft., making the present total length of same 129 ft. The lode in this end is 18 ins. wide, of solid good milling quartz. At No. 3 tunnel, where the men have been engaged in breaking quartz from this lode for a trial crushing, the bulk of which has already been delivered at the mill, have resumed the driving of this point within the last 24 hours ; consequently there is no change to report. No. 2 new lode : Good progress is being made in extending the deep tunnel. Since last writing, it has advanced 37 ft., and this makes the present length of same 65 ft. Should the ground continue so favourable to progress as at present, in my next shall hope to be able to report that we have intersected as well as opened upon the lode at this point. Potosi Viejo, Zeiter's Shaft : This now measures 42 ft. below the bottom level, where the lode is of the same size as when last reported. Although there is not so much coarse gold to be seen in the quartz as was the case when last writing, it is nevertheless good milling rock. But little has been done by way of driving either of the bottom levels from this shaft on account of the men being engaged in stoping up the bottom of the level, in a lode varying from 2 to 2½ ft. in width of good-looking quartz. This has enabled us to complete our parcel, which by to-morrow will have been delivered, and the mill test commenced in the course of a couple of days. Socorro Lode : The contractors have made good progress in driving the deep adit cross-cut, having extended since last writing another 61 ft, which makes the present total length of same 84 ft. We are developing this point with all possible speed, and, as soon as the breaking of sufficient quartz for the trial crushing from this lode has been completed, we shall at once commence to effect a communication with the shaft and the above-mentioned deep tunnel.—J. Prior.

The following is a copy of a telegram received by the directors from Mr. J. Pryor, giving the result of the trial crushings from the several lodes :—"No. 2 new lode, yielding 8 dwts. to the ton ; Potosi Viejo lode, yielding 9 dwts. to the ton ; No. 1 new lode, yielding 14 dwts. to the ton ; Socorro lode, yielding 18 dwts. to the ton ; 272 tons in all crushed ; 167 ozs. of gold remitted."

ROCKY BAR WIDE WEST.—Extracts from mine captain's report week ending 14th Feb.—The ore during this run has shown an improvement in value, and our next clean up will be still larger. The mine is looking first-rate, and I can see no reason why the output of bar gold this month should not exceed that of last.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending February 10th :—Dunderberg : No change to report in the condition of the mine, all the pitches still being small. In the Eagles raise we have advanced 13 ft. during the week, making a total of 118 ft. upraise. We have 28 tributers and six contractors at work in the mine. Lord Byron : We have eight tributers at work in this mine. Little change to report, except that now above the tunnel level we have a streak of ore, 5 ft. long and 3 ft. thick.

SOUTH-EAST MYSORE (12th Feb.).—Mining operations—Lavelle's shaft, end north:—Driven during the past week by coolies, 10 ft. 6 in.; total distance from shaft, 144 ft.; lode still holds forth well, at present 2½ ft. wide. Assays from the lode vary very much: a sample taken during the week gave 19 dwts. 14 grs.; last assay, 10 dwts. 10 grs. It is a fine, strong, productive lode, and opening up a large section of stoping ground; to-day I have put the rock drills there. The reason why we could not all the time is that the ground although hard, requires close timbering; in consequence thereof, I was very much afraid in blasting so many holes together we should run the place in. Stope—In the south end the lode is about 15 ins. wide. We have struck the old workings in the back, and from present appearances the old men worked down on the incline of the lode from surface with a rapid slant north. North end of stope: The lode is fully 2½ ft. wide, and it certainly appears the further north we drive the larger the lode gets. This is very satisfactory indeed; assays this week, 8 dwts. 11 grs. and 7 dwts. 19 grs. Winze below the bottom level. I cannot do anything until I get the pump, and have my hoist at work to get away the quartz and débris. As soon as we get these two pieces of machinery at work we can put between 40 and 50 men stoping in a lode averaging 3 ft. wide, so that a large and continuous quantity of payable stone can be had and sent to the stamps. Rogers' shaft: Sunk during the past week 3 ft. 3 ins.; depth from surface, 272 ft. The lode is still unsettled, but looking promising. The dip of the lode so fast north in Lavelle's naturally throws the best part of it at a deeper level. Since meeting with the lode the shaft has again become very unsafe, and great care is necessary in blasting not to injure the timbers. We shall push on sinking with all possible speed. At the same time due care will have to be taken to prevent any mishaps. Thomas shaft: Winze sinking on west lode, west of cross-cut; sunk during part of the week, 2 ft. 9 ins., depth 10 ft. The lode is small. Frue Vanners: I hope we shall be able to recommence stamping very soon. We have almost completed the fixing of the driving shafting. Machinery, above and below ground, continues to do good duty.—J. M. Rogers.

VICTORY.—The following extracts are from letters received by this week's mail from the mine:—Mr. Larchin, referring to his previous cable as to the crushing, says: The ore came from the bottom of the shaft, where we have driven on the lode 12 ft., and from the tunnel at surface. You will thus see that the mine is now in a really good position, with a lode 5 to 6 ft. wide from the 150-ft. level to surface, capable of keeping 10 stamps going at a handsome monthly profit, and in four to six months 20 stamps can be kept applied. I believe we are on the top of a rich run of ground, and I see no reason now why the mine should not be a regular gold producing and dividend-paying property.

— Mr. Russell, the superintendent, writes: I am glad to be able to inform you that we have now cut the lode. We have run a drift from the bottom of the shaft 10 ft., all quartz, which, though showing little free gold, pans out very well. I have been working in the La Cruz level, and have there cut the same lode as in the shaft, and am now getting out quartz for milling.

WEST TOKATEA (26th Jan.)—The company's agent at Coromandel writes:—During the month Stevens and party have been putting up the rise on the Colville reef. They are in a hard bar of ground, which makes progress slow, but they expect to hole through next week, when the surface will be prospected for new reefs, and the ground laid open between Nos. 1 and 2 levels will be stoped. It would be useless to commence breaking out quartz on the large reefs until extensive crushing power to deal with it has been obtained, and facilities for carriage provided. The county engineer is surveying for a new road from the mine to the mill site, but to work at the cheapest rate the company must have a tramway of its own direct from the mine to the mill.

THE OLD LOUT MINING CO., LIMITED.

In answer to various inquiries, the directors state that since the lode was intersected by the deep adit, the manager has been driving north towards the ore shoot, and also south, with the view of discovering ore bodies in virgin ground. The cables received state that the north drift is now driven a distance of 61 ft., and the south drift 64 ft., and that in each forebreast the appearance of the lode is more favourable for the occurrence of ore. The manager cables that it is impossible to estimate the distance to be driven to meet with the shoot of ore worked in the upper mine. This arises from the circumstance that the dip of the shoot is but imperfectly known, and that it may approach towards or recede from the northern forebreast in a vertical height of 500 ft. of undeveloped ground, it, therefore, follows that the shoot may be intersected almost immediately, or it may be necessary to drive the northern drift some considerable distance further for that purpose.—B. McNeill, Secretary.

THE NEW GUSTON CO., LIMITED.

Since the circular dated the 5th February, 1889, the following information has been received from Mr. T. E. Schwarz relative to the values of cars shipped:—33rd carload (10 tons), second-class, 170 ozs. silver per ton; 34th carload (10 tons), second-class, 200 ozs. silver per ton; 35th carload (10 tons), second-class, 200 ozs. silver per ton; 36th carload (10 tons), first-class, 300 ozs. silver per ton; 37th carload (10 tons), first-class, 400 ozs. silver per ton; 38th carload (10 tons), first-class, 357 ozs. silver per ton.

A cablegram received March 4th states:—"Have shipped a further four cars, Nos. 39 to 42 (40 tons), first-class ore, and one car, No. 43 (10 tons), second-class ore. Have now ready for shipment 40 tons, of which 20 tons is first-class and 20 tons second-class ore." The reports from the mine superintendent continue to be of a satisfactory character.—B. McNeill, Secretary.

Randt Coal Mining and Land Company, Limited, Transvaal, South Africa (incorporated under the Companies' Acts 1862 to 1886).—This company has been formed with a capital of 140,000*l*., in 140,000 shares of 1*l*. each, and the present is an issue of 93,334 shares. The property is known as Van Dyks Drift, situated about 18 miles south-west of Middleburg, and equi-distant from Pretoria and Johannesburg. It covers an area of about 6,700 English acres, and the coal produced has, it is said, met with the approval of the various mine managers who have tested it. The price to be paid for the property has been fixed by the vendors at 80,000*l*., payable as to 33,334*l*. in cash, and the balance in fully-paid shares.

THE GYMPIE GREAT EASTERN GOLD MINING CO., LIMITED.

ENCOURAGING NEWS—LIST OF CRUSHINGS.

Mr. John Garland secretary, in sending to the shareholders the half-yearly report of Capt. John James to 31st December, says the directors regard this report as a satisfactory one, both in respect of work done and future prospects. The intersection of the lode at the 634-ft. level, whereby a large section of ground is being laid open, and which, it is believed, will prove payable up to the 580-ft. level, has greatly added to the value and duration of the mine. It will be noted that Capt. James is sanguine of intersecting shortly the No. 1 South Great Eastern reef in the winze now being sunk below the 580-ft. level in the eastern cross-cut, and as this reef is reported to be yielding 3 ozs. of gold to the ton, and improving as it approaches the Gympie Great Eastern Mine, the company's prospects are undoubtedly most encouraging. As the directors had the opportunity of meeting the shareholders so recently as the 31st December last they do not propose now to hold a general meeting, but to wait until they are in a position to submit the 12 months' accounts to the end of June next.

AGENT'S REPORT.

January 2nd.—The output of stone from the mine during that period was 3,580 tons; and 3,420 tons were reduced at the mill for a return of 6,660 ozs. 14 dwts. 12 grs. of smelted gold, or an average of about 1 oz. 19 dwts. of gold per ton. The work has been principally confined to stoping at the 400, 500, and 580 ft. levels; the crushing stuff above the 580 ft. level is all taken out, and in about four months that above the 500 ft. level will be worked out. I estimate that we have about 500 tons here, which will average about 2 ozs. per ton. There is a large body of crushing stuff above the 400 ft. level on the old eastern reef: this should average about 15 dwts. to the ton. The block of ground under the 580 ft. down to the 634 ft. level is now opened, the crushing stuff will average about 2 ft. I am unable to give an estimate of the value of this lode, but believe it will prove payable. The cost per foot for cross-cutting is 2*l*. 4s., 213 ft. having been done. The winze at the 580 ft. level to cut the 1 South Great Eastern Reef has been sunk 51 ft. at a cost of 4*l*. 10s. per ft.; this includes timbering. There was also a winze sunk on the Great Eastern reef 68 ft., at a cost of 2*l*. 2s. 6d. per ft. The main shaft was sunk an additional 52 ft. at 6*l*. per ft., including timbering. The reef in the adjoining claim 1 South Great Eastern is looking very well. The last crushing gave an average of over 3 ozs. per ton, and is improving in appearance coming towards your mine. I have every confidence in meeting with this reef in a few weeks in the winze we are sinking at the 580-ft. level to intersect it. This, together with the stone to be taken out about the 634-ft., 500-ft., and 400-ft. levels must keep your property a payable one for a long time to come. The mining plant and crushing battery are in first-class order.—J. James, Manager.

List of Crushings and Amount Realised from each Crushing, 31st December, 1888.

Date.	No. of Tons.	Yield of Gold. ozs.	dwts.	grs.	Value of Gold. £	s.	d.

Examined and found correct,
Thomas Smith, Auditor.

Gympie, 5th January, 1889.

LATEST NEWS BY CABLE.

A telegram, dated March 6th, reads as follows:—"We have cut the reef at 110 ft.: the winze in good slate country, showing gold; difficult to form definite opinion yet."

REVIEWS.

Report of the Director of the Mint upon Production of the Precious Metals in the United States During the Calendar Year, 1887. Washington: Government Printing Office. 1888.

This volume gives all the information upon this interesting subject that can be desired, and will be of service to a wide class.

United States Geological Survey, 1887.

This volume is the fifth of the series "Mineral Resources of the United States." It extends the information contained in the previous volumes to include the calendar year 1887. The statistical tables have been brought forward, but with this exception only such information as is supplementary to the previous volumes should be looked for. The volume is characterised by that completeness which is a distinguishing feature of all the official publications issued from this Bureau.

Publications Received.—Transactions of the American Institute of Mining Engineers:—"Coal Transfer of the Mt. Carbou Company, Limited," by W. N. Page, Powellton, W. Va.; "Note on the Koepe System of Winding from Shafts," by John H. Harden, Phœnixville, Pa.; "Rail Sections," by Frederick A. Delano, Chicago, Ill.; "Pig-iron of Unusual Strength," by Fred. P. Dewey, U. S. National Museum, Washington, D. C.; "The Determination of Silicon in Ferro-Silicons, and a Study of its Reactions with Alkaline Carbonates," by Henry J. Williams, Pittsburgh, Pa.; Steel Rails and Specifications for their Manufacture," by Robert W. Hunt, Chicago, Illinois; "A Rapid Method for the Reduction of Ferric Sulphate in Volumetric Analysis: by Clemens Jones, Hokendauqua, Pa.; "A Present Need in the Engineering Profession," by William B. Potter, St. Louis, Mo.; "Hollow Iron Pig-Patterns," by B. F. Fackenthal, Jr., Riegelsville, Pa.

REPORT OF MEETING.

BARRETT GOLD, LIMITED.

ALLUVIAL DEPOSITS OF VALUE—NUGGETS ALSO FOUND AND EXHIBITED—HOPE FOR THE COMPANY.

THE annual meeting was held on Monday, February 18th, at the City Terminus Hotel, E.C.—John S. Prince, Esq. (chairman of the company), presided.

Mr. H. HODGES (the secretary) read the notice convening the meeting, and also the minutes of the previous meeting.

SYNOPSIS OF THE POSITION.

The CHAIRMAN: Gentlemen, in moving the adoption of the report, I would first express to you the pleasure which the directors feel at meeting you here to-day, as it affords an opportunity of giving you a statement of what has been done at the mine during the past 12 months. The statements of accouuts, which have been placed in your hands, I think, speak for themselves, and I do not propose at this point to detain you by entering into any of these details; but I should be glad to answer any questions and give any explanation should there be any points which may not be quite clear to any shareholders. And now, gentlemen, you would like to know what has been done at the miue during the last year. It will be remembered that when this company was re-constructed it was agreed that we should be what is called a prospecting company, and that the money subscribed by the sharcholders should be, in the main, used for prospecting purposes. Well, thc directors have kept this steadily in view, and

A REGULAR SYTEMATIC COURSE OF EXPLORATION

and prospecting has been carried on. The result, I regret to say, has not been quite as satisfactory as we had anticipated or hoped for; but still, I think, as the work has proceeded, and from the experience gaiued, the future looks hopeful. Although a comparatively large sum of money has been expended at the mine, I think it but an act of justice to our manager, Mr. Acutt, to say that his ability in advising, arrangiug, and carrying out the work entrusted to his care has been most conspicuous. His zeal and energy have deeply impressed the directors, and I think I may say, on behalf of my fellow directors, have received their warmest approbation. Now, by far the greatest portion of prospecting work has been done at the Homeward Bound reef, where the best prospects are, after all, still obtained. In the course of exploration various bodies of gold-bearing material have from time to tiue been found and sent to the mill; but the ore was generally of low grade, and the gold result has not been what we auticipated. But the reef or deposit where this ore was obtained has widened out now from a few inches to 8 ft. or 9 ft. It is hoped that as we go deeper better ore may be found, and the results prove more satisfactory.

MINING WORK.

Now, it must be borne in mind that any exploration carried on at the Homeward Bound reef, where the discovery of ore is made, would be of greater value thau even richer deposits at any other portion of the farm, owing to the proximity of the Homeward Bound to the mill; any ore found there would be sent to the mill far more economically and expeditiously than even richer stuff found at other portions of the farm. Now, the work which has been done at the mine consists chiefly of drives and shafts sunk. We have sunk one shaft 70 ft. below the level of the floor, and altogether some 1,500 ft. of shafts and drives have been put in, and now a thorough scooping out of the floor of the mine is being carried on, and which the directors hope may lead to the recovery of the old reef or deposit, the loss of which, you will remember, gentlemen, was the cause of the stoppage of the old company. I come now to a matter which has given the directors a considerable amount of thought and consideration, and that is the throwing open of the farm to prospectors. It will be remeu-bered that at our last general meeting it was agreed, or suggested, that a gentleman should be appointed to assist our general manager. Mr. William Adler, then in London, and shortly about to visit Barberton, was engaged by the company. His duties consisted of periodically visiting the mine, and assisting our general manager in drawing up rules and regulations for the guidance of prospectors and settlers on the farm. After some considerable time, and making a great deal of inquiry, a code of rules and regulations were drawn up, and just about the time that they were to be published our manager made the discovery of what he considered very rich alluvial deposits. He then impressed upon the board the necessity of withholding for the present the publication of those rules. Now the farm was practically open, aud is practically open now, and diggers may work and take out licenses: but the tenure is only a month-to-month tenure, and there is not very much encouragement to settle upon the farm. Under the new regulations that would have been altered, and there would have been fixity of tenure upon certain terms. Under those circumstances, if we had then published those regulations, and men had settled on the farm, as long as they naid their licenses the board would have been powerless to get rid of them. It was then known also that

RICH ALLUVIAL DEPOSITS WERE BEING FOUND

on the property, and we were told that many speculators were on the look-out to peg out claims as soon as these regulations were published, and then to form companies. If that had been the case, and men who had taken out three or more clai ns had paid their licenses, we should have got the license fees aud nothing more, and should have been powerless to turn thcm out. Mr. Acutt then advised the board to withhold the publication until further inquiries had been made, and until he had also ascertained how far the working of the claim-holders upon the property might interfere with the operations of the company itself, more especially as regards the water power. Mr. Acutt, writing on October 30th on this subject, says, "I may be wrong, but if my ideas of the extent of a paying gravel are correct, there is a great future for the company, and I do not want that spoilt by a few obstructive men about." He evidently felt there would have been a difficulty in getting rid of the men, and that we should not have been able to work the alluvial deposits at all; therefore we have hesitated for the present in publishing these regulations. (Chcers.) Now, I think by far the most important discovery of the year has been the discovery of this alluvial ground, and that has been the result of the systematic exploration which we have carried on ever since we were enabled to do so by the money advanced by the shareholders. Now, we have worked this alluvial with very rude appliances, and

THE RESULT HAS BEEN MOST SATISFACTORY,

and augurs well for our future success. The great difficulty is, as I have said before, one of water. A number of dams have been constructed, and one of them is not only a very large one—about an acre in extent—but it has been so constructed that it can be added to, should it be required; and this water is at a high level, which is a great advantage, as most of the alluvial discoveries have been on the highest point of the farm; so the water from this dam will command all the rich ore in the valley and, if necessary, the manager will be able to utilise it also than sluicing or hydraulicing the old mine itself. You will find on the plans marked 1 and 2 there have been about 2 miles of water furrow made, and other similar dams have also been constructed. Whilst upon this point of scarcity of water, I think I will just take this opportunity of saying a few words about a machine I have lately seen in operation. This machine is to be brought out by a company. It is a very inexpensive machine, and to my mind—not being a practical engineer—a perfect machine. This will treat any soil, either alluvial or quartz, without a drop of water, by blast. I have seen it work—I have seen some stuff passed through, and must say it is, as far as I can see, a very good machine. It would make a marvellous difference in the work of our property if we could get a machine to work our alluvial without water. I will not lay great stress upon it. We will see what this machine will do when the water gives out. I mention it because it is one of those things that may revolutionise the whole of the Transvaal mining operations. Now, the directors have also been considering—only within the last few days—the advisability of dealing with

FORMING SUBSIDIARY COMPANIES.

a portion of our property. We have got a very large property—14,000 acres, and it has occurred to us that small sums of money, in the first instauce, might be raised by syndicates, which would prospect the property with a view to hereafter bringiug out larger companies and carrying out works on a larger scale if they were successful. That has only been suggested to us within the last few days, and I think something may come of it. That would also be of great assistance to us. Now, from what I have said I have no doubt you will gather that the directors, though still hopeful, and believing we shall fiud payable reefs, are more sanguine about the immediate result of the alluvial diggings. I think it is so. aud I think, from all we have heard from our manager, that he is now, since he has got the water down, able to drive the alluvial works and have some very favourable results from the alluvial ground, which seems to be of very large extent. And, whilst upon that point, I have brought here a few nuggets, in case any of the shareholders may not have seeu them. We should be very glad to allow them to look at them after the meeting. I should like to place before you

THE FINANCIAL POSITION OF THE COMPANY.

A very few words will explain that. A call of 2s. per share on the old company's shares realises, in round figures, 23,500*l*. That is 500*l*. short of the full amount—24,000*l*. Of this sum, 11,500*l*. was due to the creditors of the old company, leaving some 12,000*l*. available for the purposes of the new concern. To this were added gold produce, licenses, &c., 1,473*l*., making a total of 13,473*l*., from which the total expenses of the year, 5,220*l*., are deducted, and that leaves a balance of 8,250*l*., or thereabouts, in hand. It will devolve upon you, gentlemen, to elect two directors in place of two retiring. Mr. George Reid, who was elected a director at the last general meeting, iu accordance with the articles of association, must retire, but he is eligible for re-election; and it is my turn, gentlemen, to retire by rotation. It will, therefore, rest with you either to re-elect both of us, or, if you should think fit to do so, to nominate and elect others in our places. I do not think I can add anything to what I have said, but I shall be glad to answer any questions and give any explanation. I omitted to say the auditors will have to be re-elected. I am told by the secretary that Mr. Westcott is ill iu bed. and not able to be present at the meeting to-day. I now move, gentlemen, the adoption of the report and accounts. (Applause.)

DISCUSSION.

Mr. ROBERT MORLEY seconded the motion, which was carried unanimously.

Mr. DODD moved the re-election of the retiring directors, saying the shareholders must be all satisfied with the way in which the affairs of the company had been managed by the board. They had worked their hardest, aud though those efforts had not been crowned by immediate success, yet he was confident that every pound spent would be spent honestly, and that the shareholders would get fully twenty shillings' worth of work for it. (Cheers.)

Mr. ARNOLD seconded the motion. which was carried unanimously. The same gentleman proposed the re-election of the auditors (Messrs. W. Westcott and Co.), which was secouded by Mr. HODGES (secretary), and also carried.

The CHAIRMAN briefly acknowledged his re-election as a director.

A BIG HOLDING.

Mr. REID said he held about 4,000 shares in the company, and many friends of his were also large holders. He thought Mr. Prince had stated things in a very fair light, and that they had a very good prospect of something turning up some of these days from a property that could produce the alluvial nuggets they had on the table. They had heard from their manager that the alluvial deposits were unlimited, and it was only a question of getting water supply, which they had been endeavouring to do during the last few months. They hoped this year to be able to report a very much larger quantity of gold than they had had in the past. They would reduce the expenses and carry on the work, he hoped, not only two years, but very much longer. The idea of the chairman as to subsidiary companies he thought very good. If they could get a few syndicates formed to prospect and seek other reefs, he thought there was every prospect to justify it being done. In reply to a shareholder, the speaker added that the nuggets were from quite new ground.

The CHAIRMAN: And since these were found—two days after the water had come down—our manager found a 50 ozs. nugget in perfectly new grouud, that had never been worked before. (Applause.)

A vote of thanks to the chairman and directors was carried, and the meeting terminated.

"NOTES ON INVESTMENTS"

The OLDEST and SAFEST GUIDE to INVESTORS and SPECULATORS

PUBLISHED FORTNIGHTLY. FREE ON APPLICATION.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

J. W.—Bad antecedents.
Exchange, London.—We do not advise you to deal with the person you mention. Keep No. 1, but sell 2 and 3.
Copper (J. A.)—Sell white and yellow, but keep red. As to Australian Mines, we will write to you fully.
G. F. (Leytonstone.)—Everything flat. Hold what you have, but should a rise take place, realise.
A. S. (Willesden.)—White's Asbestos prospectus will be sent to you, no doubt, on Tuesday. Goldfields of South Africa: See full report of meeting in to-day's issue. Shares worth holding.
L. M.—We cannot find anything further about the company you name.
A. P.—No.
P. L. T.—See leader columns.
W. J.—Tho investment is a good one.
F. W. M.—Sell Nos. 1 and 4; retain for the rise Nos. 2 and 3.
Reader (Hull).—Our letter to you was dated Mareh 4th.
T. R.—1,397 tons.
R. B.—Two views are giveu.
J. M.—A committee will do no good.
Carlisle Shareholder.—We think you should support the board.
W. B.—The attempt was very properly defeated.
South African Prospector.—The note struck at the meeting was decidedly in the minor key.
G. W. R.—Thoroughly reliable.
J. T. E.—Send us the prospectus.
B. T. M.—Sell Nos. 3, 5 and 7, but hold for better priees Nos. 1, 2, 4 and 6.
M. T.—He is bound to send you transfer.
Wheal.—The broker you sold your shares to will, without doubt, settle in the ordinary way. We have a high opinion of him.
C. M.—Not a subseriber, and no fee.
A. B. C.—We do not undertake transactions of the kind you mention.
P. Mace.—Send us the name, and we will make enquiries.
Reader (X. A.)—Certainly, we will see what can be done. Do not dispose of the remainder until you hear from us.
R. T.—Full report will appear in next week's issue. We always give readers our *own* opinion.

The Mining World.

LONDON: SATURDAY, 9TH MARCH, 1889.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

POSITION OF THE COPPER SYNDICATE.

THERE has been a serious break in the copper market during the past week. The price of Chili bars has fallen to about 56*l.* per ton, and the quotations of copper shares have naturally given way considerably, especially in those usually most dealt in on the Paris Bourse. In the French capital, indeed, there has been a semi-panic, the effect of which has been heightened by the suicide of one of the directors of the Comptoir d'Escompte, which, as all the world knows, has been one of the principal supporters of the Société des Métaux in its attempt to rehabilitate the position of copper. There has been in consequence a heavy fall in the Bourse prices of all the securities which would be affected by an utter collapse in the copper market. That such a collapse has in fact taken place some of our contemporaries entertain no doubt whatever. They are full of glee in consequence, and they are adopting the We-told-you-so formula ad nauseum. For our own part, however, while we fully admit the seriousness of the fall that has taken place, we do not believe that copper and copper shares are going to die away to the level from which they were lifted 18 months ago.

It is not to be denied that the price of copper was run up extravagantly in the early part of last year, and that in consequence consumption was greatly checked. Nor is it to be disputed that the visible stocks of the metal have grown very rapidly. But, on the other hand, it is well known that every scrap of old copper has been re-manufactured, and that those who use copper have been buying only from hand to mouth in the expectation that the long-prophesied break-up of the combination between the Société des Métaux and the producing companies would enable them to replenish their stocks at something like the old figures. Still, we have to deal with accomplished facts, and there can be no question that means will have to be found of bringing supply and consumption into something like accord. A step in the right direction has been made in the letting down of the price of copper to about 56*l.* a ton. As we have said before in dealing with the matter, it is much to be regretted that the price was ever advanced beyond that figure, for that would have left a fair margin of profit to producers, while it would not have stimulated supplies from all parts of the world, as the quotation reached a year ago did. Such a price would have been fair to consumers also; and would have been amply warranted by the trade demand for the metal.

There is no doubt that much of the trouble in Paris has been caused by the failure of the Panama Canal scheme in its old form, and by the weakness on the Bourse which that failure has induced. Very heavy losses were no doubt sustained in connection with that enterprise, and, in consequence, holders of copper shares were forced to realise, with the result that we have described. But we hear on reliable authority that some of the leading Parisian financiers have come to the rescue of the Société and its supporters, and as we have had many examples of the recuperative power of the French people, we are not disposed to take so gloomy a view of the outlook as some people do. Already, we believe, some of the leading American producers have agreed to stop their supplies for a couple of months, and to modify considerably the terms of their arraugements with the Société, which have yet two years to run; and we have no hesitation in saying that the English copper companies would act wisely in following this example. The adoption of a Shylockian poliey on the part of the producing companies would undoubtedly mean the absolute collapse of the whole business, for there is no doubt that the assistance of such houses as Rothschilds will only be forthcoming if there is a disposition to give and take all round. It is surely better for shareholders in copper companies to get 60*l.* a ton with a modified arrangement than to stick out for their rights, and in the end, perhaps, have to take a much lower price. That is really the common sense of the matter.

Those who have been opposed to the speculation in copper are probably not aware of the fact that over thirty-five millions sterling of British capital, taking nominal value only, are locked up in copper-mining undertakings, and that for two or three years prior to the autumn of 1887 the rate of interest received on this vast amount of capital had been exceedingly low, for with copper at 40*l.* per ton and under very few companies can make both ends meet. The consequence was that nearly the whole of the once valuable copper mines of Cornwall and Devon were abandoned, while even such properties as Rio Tinto, Mason and Barry, and Tharsis had a veritable struggle for existence. These are facts which are either unknown to or are ignored by those who rejoice so greatly at the prospect, which they regard as a certainty, that copper and copper shares are about to drop to the prices which existed a couple of years ago.

BIG RUBY AND LITTLE RUBY.

If it be claimed that whilst, in the issue of the Ruby Mines of Burmah prospectus, Stock Exchange enterprise reached the sublime—in the issue of the prospectus of the "Upper Burmah Ruby Exploration and Trading Company, Limited," it may with equal justice be said to have descended to the ridiculous. From a company with 300,000*l.* capital in 1*l.* shares backed by the Rothschilds to an issue of 40,000 shares at 5*s.*, backed by no one in particular, is an anti-climax indeed. From the Big Ruby to the Little Ruby is a descent so appalling that a Stock Exchange Curtius might even pause before addressing himself to such a leap. The directors of the Big Ruby are men whose names carry weight in commercial circles, but the directors of the Little Ruby are remarkable for nothing in particular, unless it be the temerity with which they have committed themselves to a concern like this. The prospectus may go up, it is true, for, balloon-like, it is filled with gas, but it will not go down with any investor who has mastered the first principles of finance. The Little Ruby Company, with a capital of 10,000*l.* addresses itself to the ambitious task of "opening up and developing the mining resources and trade of Burmah." It also proposes "to acquire and develop ruby mines," but with a contradiction born of the looseness with which the whole of the prospectus has been drawn up, it states (paragraph 6) "It is not proposed to work any of the valuable properties to be explored." It is obvious from this, that the scratch board that has been got together does not know its own mind or is incapable of making it up. Imagination runs riot in the prospectus over the wealth of Burmah, and only breaks down when there is to be the application of remarks to the company in question. Everything is dealt with in general, nothing in particular. There are millions of people, we are told, to be clothed (the prospectus is reticent about the fit), and when the company has seen the Burmese attired in raiment less like than it is at present the modification of the dress worn by our first parents before they began to eat fruit, and when they have provided the indigenous race with flannel waistcoats and moral pocket-handkerchiefs, it will receive in return the finest tea ever drunk in China (!), though, doubtless, a beverage with another name would be preferred. The prospectus surely must have been intended for publication in the comic papers, but by a mistake has got into those which deal with finance. Paragraph No. 7, as it seems to us, reveals the object of the whole affair. The summer is coming on, and people are already beginning to think what they will do, and where they will go. Now it probably occurred to the wire-pullers in the Little Ruby business that they might as well have a trip up the Irrawaddy, but as travelling is expensive, unless you are called as a witness on a special commission, it occurred to them that a gullible public might provide the wherewithal. If they do so it is no business of ours. By a prospectus like this common sense feels itself slapped in the face.

SOUTH AFRICANS—FACTS AND OPINIONS.

South African shares have been subjected to sharp criticism during the past week, and the market has been on the decline. We have never pinned our faith to these ventures, for reasons we have on several occasions set forth and need not now repeat; but we ask our readers to bear two circumstances in mind before they allow themselves to become too greatly prejudiced—that the strictures to which South Africans have been subjected last week in several newspapers are by anonymous writers, and that they fear a strong family likeness; in other words, in describing the authors the singular and not the plural might perhaps more correctly be used. For example, the article which appeared in the *Pall Mall Gazette* on Monday is an ostensible attempt on the part of a "Johannesburg correspondent" to save from ruin many who might be tempted to invest in Witwatersrandt mines at fictitious values; but did it not occur to the writer that had he spoken earlier he had been kinder? The South African ventures he condemns have been before the public for many months, but it is only at the eleventh hour of the day that he comes to warn investors of a fate which some of them have already invited by taking shares in these concerns. We are quite of his opinion, that reliable information in the Johannesburg press is not to be had; and we know that in general conversation the accuracy of the gold returns from Witwatersrandt and De Kaap are openly challenged. For instance, the De Kaap papers despise the statistics of their Witwatersrandt contemporaries; and the Witwatersrandt press hold in derision the so-called riches of the goldfields of De Kaap. We are also disposed to coincide in the opinion of this latter-day critic, that the returns are made from alluvial deposits and not from reefs; in fact, that there is an absence of what would be called true fissure veins. There is also an absence of deep sinking, for no reef has been sunk upon lower than 100 ft., and the statement of our Johannesburg adviser is to the effect that as they go down they become poorer. He is not without reasons for his assertions. Jubilee, Salisbury, and Wemmer originally gave 3½ ozs. to the ton, but now 1¼; whilst Salisbury at one time ran as high as 5 ozs. and Wemmer 8 ozs. He describes the prices of these concerns as ridiculous, but we did this months ago. Ferreira originally returned a few dwts., and the manager was severely blamed; but when he challenged the inspection of his tailings his justification was complete, for he had secured all the gold that could be extracted. This company, we are told, has not been crushing for six months, and, as a property, "has never proved to be payable;" and yet the public have been dealing in it as though it were a Golconda. It comes to this, that a Kimberley and Johannesburg clique has been working in conjunction with a Hatton Garden clique; and investors owe it to the outspoken manner in which the mining press has warned them that they are not more deeply in the toils of the combined forces. We hope that the writer in the *Pall Mall Gazette* considerably overestimates the scrip in circulation at par, when he puts it at eight millions, "all manufactured here (Johannesburg) within the last three years." He is perfectly right in saying that at present prices persons who buy shares are pure gamblers, for the mines can never pay dividends upon them; and he winds up by saying: "Should the London people return the scrip to Africa, the big game would soon be at an end, and revolvers and razors would be in demand!" Other writers have joined in the same hue and cry, and the only person or persons who seem to have come to the rescue of South African mines are Messrs. Tarbutt and Quentin, whose evidence is rather of a negative than of a positive kind, and therefore does not count for much. Almost all that this firm takes for granted remains to be proved, and the only suggestion they have to offer to the investor is to see that "the gentlemen connected with the companies are respectable and experienced;" but how they are to see this these deponents do not tell. The sheep and the goats appear to be too well mixed to be readily discerned the one from the other.

INDIA'S GOLD RETURNS.

As we predicted last week the returns from Indian Gold Mines are extremely satisfactory, and ought to have favourably influenced the shares, but for the depressing news from Paris and from South Africa. The Mysore return in particular is extremely encouraging. Its full significance will be seen on a reference to the subjoined table. It will show that those rich portions of the mine, of which the London manager has so frequently spoken, are now coming into play to increase the value, and we hope ultimately to augment the quantity of the returns being made:—

	Feb., 1889.		Jan., 1889.		Feb., 1888.	
	tons.	ozs.	tons.	ozs.	tons.	ozs.
Mysore	2,023	3,038	2,066	2,193	1,610	1,702

THE BOARD OF TRADE RETURNS.

The Customs' returns of the Board of Trade, issued on Thursday evening, show a falling off for the month of February, but this is partly accounted for by last year having been "Leap Year." The exports of British and Irish productions were valued at 18,609,000*l.*, or a decrease of 2 per cent., while for the two months there is an increase of 4 per cent. Imports were 32,311,000*l.*, and the increase both for the one and two months has been nearly 9½ per cent. The re-shipments, valued at 5,408,000*l.* improved 2 per cent., but the total for the longer period shows as much as over 18¾ per cent. increase. The falling off in our exports is mainly in yarns and textile goods, apparel, &c., which more than accounts for the whole decrease. Metals, however, have also fallen off largely, including all manufactures except machinery, mill work, and steam engines, which have been shipped more extensively. Both coal and wool have been sent abroad more freely, and chemicals and miscellaneous manufactures likewise. On the import side the increase is principally in food products, duty free, and raw material both for textile manufactures and sundry industries. Foreign manufactured articles also figure for a much larger total, exceeding five millions in value. The decrease is represented by metals and chemicals. As regards the former the arrivals were returned as of the value of

1,988,000*l.*, a decrease of 187,000*l.*, and the exports were given as 2,674,000*l.* (including manufactures), or a decrease of 289,000*l.*

The following table gives the results as regards metals, &c. :—

Article.	Quantity Tons.	Value £	Increase or decrease per Cent. Quantity.	Value.
Exports.				
Coal and coke ...	1,903,228 ...	957,928 ...	+ 4.1 ...	+26.6.
Copper	31,934 ...	124,301 ...	—67.0 ...	—65.7.
Iron and steel ...	262,278 ...	1,962,958 ...	— 6.3 ...	— 4.0.
Lead	5,204 ...	71,934 ...	+56.2 ...	+33.9.
Tin	394 ...	39,191 ...	—23.3 ...	—50.6.
Imports.				
Copper ore ...	10,031 ...	78,640 ...	+34.9 ...	+71.0.
Lead	9,423 ...	122,377 ...	— 9.0 ...	—15.9.
Tin	2,116 ...	202,308 ...	—39.9 ...	—64.7.

CARLISLE AFFAIRS.
